Political and Governmental Notes.

Nicola Tesla has been invited by Rear Admiral R. B. Bradford, chief of the bureau of equipment, to submit for trial a system of wireless telegraphy, which he says he has developed. In his annual report Rear Admiral Bradford recommended that the Marconi system be installed on several ships of the American navy, if it could be done at a reasonable cost. No official proposition has been received recently from Sig. Marconi, and the department is not inclined to accept his first proposal to furnish his apparatus to the American navy for \$20,000 each and \$10,000 a year.

According to Admiral Melville, engineer-in-chief of the navy, and other officers of the service, there is grave danger of demoralization on board many of the finest vessels and of serious injury to the highest type of marine machinery, unless there is a more liberal interpretation of the existing personnel law. Failing in this, predictions are made that the engineer corps must be revived to prevent million dollar ships from being rendered unfit for active duty because of lack of proper supervision of the machinery.

Within a week the Legislatures of many states will begin their sessions, and then contests for seats in the United States Senate will hold first place in the arena of politics. The terms of thirty Senators expire March 3, next, and for most of the seats to be vacated, there are several aspirants.

Although strenuously opposed by the Naval Academy authorities, there is some probability that the Annapolis cadet class graduating next June may be commissioned earlier, in order to provide young officers for needed service at sea.

A plan of recruiting sailors for the United States navy from the farms and the country towns is now under consideration at the Navy Department.

Foreign News.

The Boers continued their offensive campaign against the British last week, although Lord Kitchener hurried all his available forces into Cape Colony to head off the invaders. Until General DeWet's force, and the two forces now invading Cape Colony, can be disposed of, the effort to induce the people of the Transvaal and Orange River "colonies" to accept Great Britain's invitation to acknowledge foreign supremacy cannot amount to anything. The press dispatches last week were full of rumors of a general Dutch uprising in Cape Colony, and in some instances uprisings were reported as having occurred. The situation was undoubtedly critical, but Lord Kitchener

being on the ground in person allayed the anxiety of England, as he is considered to be able easily to handle the trouble.

The Chinese Emperor sent a note to the foreign plenipotentiaries acknowledging the receipt of the joint statement of demands, and in turn submitting the following questions: Might not the Taku forts remain standing, though dismantled? Is it proposed to behead princes the same as other offenders? If the demands are acceded to, would the allies cease sending out expeditions? What places do the allies propose to occupy? How long do they propose to occupy them?

The Peruvian Government has granted to two Americans—George Fair and Albert Lee—a valuable concession of two thousand estradas on the banks of Combaspata River. This is equivalent to a grant of three hundred thousand India rubber trees. The concession is for a period of ten years and option of purchase at the end of that time is given. Permission is also given to the Americans to keep an armed force to protect the trees from ravages.

The Turkish government has signed a contract with a representative of Cramps, the Philadelphia ship building company, for the construction of a small cruiser, under cover of which the claims of the United States on behalf of missionaries who suffered losses during the Armenian troubles, are to be paid. The aggregate of these claims is ninety thousand dollars, and this sum will be paid by the Cramps to the United States government.

Lord Kitchener reported on December 30, that the British post at Helvetia was captured by the Boers on December 29, and that fifty of the British were killed or wounded and two hundred taken prisoners. The London *Daily Mail*, commenting upon the Helvetia disaster, calls upon the government to send out at least fifty thousand additional mounted men.

Pekin press dispatches of December 30 state that Li Hung Chang and Prince Ching, the Chinese plenipotentiaries, have been ordered by the emperor to sign the preliminary agreement offered by the powers. The emperor's instructions are to agree fully to the joint note, but to endeavor to get the best terms possible.

Because of the increasing boldness of armed Boxers in creating disturbances in the country around Peking, the allied commander has divided the surrounding territory into districts, and assigned a district to the troops of each of the allies to keep in order.

As a development of the present critical situation in South Africa, it is announced that the Imperial government, which has asked Australia and New Zealand for fresh corps of mounted men, has made a similar request of the Canadian government.

Press dispatches state that eighty thousand people witnessed the ceremony in St. Peter's, Rome, on Christmas Eve, when the Pope assisted in closing the "Holy Door."

The population of Berlin and the suburbs is now 2,369,676 as compared with 2,076,946 in 1895.

Industry and Commerce.

Thomas J. Moriarty of Newport, R. I., has invented and patented in thirteen countries, a submarine torpedo boat to be managed by one man, which he claims will easily be able to cope with the mightiest battleship afloat. A United States naval board is said to be investigating the invention. Mr. Moriarty was for years one of the leading machinists and instrument makers at the government torpedo station at Goat Island, and his previous inventions have been adopted by the government, notably his torpedo finder.

A press dispatch says: A new material will soon be placed among the rare things

mined from the Black Hills. Fuller's earth is a valuable material, found in but few places in America. The finest quality is found in England, which is practically the world's supply. Recently a large deposit of this material has been found in the Black Hills, and it more closely resembles that found in England than any deposit in America.

Captain Heygate of the British army has returned to Kansas City, Mo., and it is stated that he will buy fifty thousand cavalry horses and pack mules. He made his headquarters in Kansas City in the beginning of the Boer war and bought a great many horses and mules. A short time ago he was ordered home, but the renewal of hostilities has made the purchase of more animals necessary.

The executors of the George M. Pullman estate filed a report on December 28 showing that the value of the estate has increased from \$9,000,000 to \$15,000,000 in the last three years they have had the custody of it. This unusually large increase is said to be due chiefly to the general rise in the value of stocks and bonds, of which the estate largely consists.

The Southern Pacific Company has awarded a contract to a local firm for fifty million bricks to be used in lining the tunnels of the new Bayshore road to run through the hills of South San Francisco. It is said to be the largest contract of the kind ever made.

An experiment in telephoning between Key West, Fla., and Havana, Cuba, was made last week. The telephone wires at each end were connected with the gulf cable between the two cities, and the operator at Key West could hear distinctly, but the one at Havana could not.

No horse cars are now running in Boston. The two cars which in the Marlboro Street service have long been the only relics of the old order of street railway things, were taken off at midnight, Monday, December 24.

The American Express Company gave a \$5 gold piece to each of its thirty thousand employes as a Christmas gift.

General News.

The Fish Commission's steamer Albatross, which returned to San Francisco recently after a fourteen months' cruise in the Pacific, made some important discoveries during the voyage. It was found that all the charts of the South Pacific are very inaccurate, and that most of the islands, except the Fiji and Tahiti, are placed from two to twelve miles away from their actual position. The Albatross also discovered that the temperature of the bottom of the sea at all depths from five hundred fathoms to the greatest depth obtainable was the same, 35 degrees Fahrenheit.

That by a decree of Emperor William II. of Germany English should have been put above French as a necessary study in the gymnasiums, French being relegated to the optional section, is a significant fact for the educational and commercial world to contemplate.—*Congregationalist*.

In Europe, where polished floors have so long been popular, it is the custom to polish them carefully, and preferably with a cloth fastened on the shoe. Professional cleaners or polishers have learned to skate about at a great rate and do the polishing quickly and well.

The late Oswald Ottendorfer was a New York alderman thirty years ago. He persistently refused to draw his salary, and it is still on deposit to his credit in the comptroller's office there.

John D. Rockefeller, the founder of Chicago University, gave the institution another million and a half dollars as a Christmas present.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Selected Articles.

The Case of Dr. Brimm.

OUR newspapers for the past two weeks have had a number of fragmentary reports as to the theological position of the Rev. Dr. D. J. Brimm, who has recently been retained in the Presbyterian ministry by the Charleston Presbytery despite his request to be released. These reports state that at the last examination of the graduates of the Columbia Theological seminary, where Dr. Brimm was then a professor, one of the students was found maintaining the theory of miraculous healing and another the doctrine of Christian Science. Both of these students cited Dr. Brimm as authority for their positions. It is also stated in these reports that Dr. Brimm has publicly espoused the cause of divine healing. The recent publication of Dr. Brimm's statement to the Charleston Presbytery throws considerable light upon his position.

Among other things Dr. Brimm maintains:—

"I believe that miracles belong to this whole dispensation, and not merely to the first century of it; that they were given to sustain the truth of Christianity, and not merely to guarantee the deity of Christ and the inspiration of the canonical writers; that they are needed for their apologetic value as much as they were in the apostolic age; that miracles of healing are a special characteristic of this dispensation, and are the special privilege of God's children.

"I believe that these human ills, being part of the penalty that we suffer for sins, are involved in the atonement made by Christ, so that in a literal sense he bore our infirmities, and with his stripes we are healed; but, just as in the case of justification, we get the benefit in accordance with our faith; and so, when we come to God confessing our sin and believing His promise, that we may expect to be healed; that, just as in the case of the healing of soul-sickness God repudiates the assistance of human works, so in the healing of the body He will not divide His honor with human medicines and devices.

"I believe that, if God permits or effects a case of sickness for chastisement, we have no right to try to frustrate His chastisement by the use of medicine, but should repent, and, trusting His mercy, draw near to Him in faith and submission; that, if it be for trial, the way to meet the trial is not by resorting to the most skilful physician and approved medicines, but to God Himself, who is righteously jealous of His honor, and will not divide it with men."

In a later paragraph Dr. Brimm confuses Christian Science with mental science and "Anti-Scriptural Spiritualism." Dr. Brimm closes his statement with the expressed conviction that the teachings of the Scripture on the subject of healing are unqualified and explicit; that the objections sprung against miraculous healing are altogether unreasonable and due to the "evil heart of unbelief" that remains in the people of God; and that we have already run deeply into Christian pharisaism—making void the Gospel through

our traditions—as evidenced by the bitter antagonism to this doctrine.

Any one who has followed Dr. Brimm in the strong and fearless exposition of his position must be impressed with the conviction that he well deserves his reputation of being one of the ablest men in the Presbyterian Church.

However, Dr. Brimm has not as yet reached a clearly defined theological position. There is much in his teachings that is in substantial agreement with the teachings of Christian Science. For example, he maintains that Christian healing belongs "to the whole dispensation, and not merely to the first century;" "that disease, defects, and deformities are, as a whole, the consequence of sin in the world;" "that these human ills, being in part the penalty that we suffer for sin, are involved in the atonement made by Christ, so that in a literal sense he bore our infirmities, and with his stripes we are healed;" that "as in the case of the healing of soul-sickness God repudiates the assistance of human works, so in the healing of the body He will not divide His power with human devices;" that "the Lord Jesus Christ is as powerful and compassionate now as he was when he lived on earth, and will reach forth the helping hand if we cry to him in faith;" that "the fact that God overrules sickness for the cultivation of various Christian graces does not imply that He has efficiently ordained it for this purpose, any more than He so ordains a crime, which He may so overrule;" that "if God permits or effects a case of sickness for chastisement, we have no right to frustrate His chastisement by the use of medicines, but should repent, and, trusting His mercy, draw near to Him in faith and submission;" that "the reliability of human testimony in the case of present day miracles, is as great as in the apostolic age," while making allowance "for the factor of inspiration in the latter case;" and that we have already run deeply into Christian pharisaism in our objections to Christian healing, "making void the gospel through our traditions."

There are other parts of Dr. Brimm's statement which indicate that there is a remnant in his theology of the belief that God is a limited personality rather than the ever-present, all-wise, powerful, and loving Father-Mother, who forgiveth all our sins and healeth all our diseases; in whom we live, move, and have our being; and whom to know aright is life and health everlasting.

Dr. Brimm also fails to reach the heights of the Christian Science position when he admits the possibility of anything so unlike God as disease ever having been caused by God; the possibility of God, Good, producing evil; the possibility of the same fountain sending forth both sweet and bitter waters; the possibility of the perfect Father who is Spirit, Love, Life, and Light, ever sending upon His children other than good and perfect gifts.

Dr. Brimm, in classifying Christian Science in the same category with mental science and spiritualism and in his reference to these "Satanic miracles," indicates that he is condemning an erroneous concept of Christian Science and not the Christian Science taught in "Science and Health with Key to the Scriptures." Christian Science

has no more fellowship with mental science, hypnotism, and spiritualism than the signs and wonders of the Egyptians had with the healing and saving miracles of Moses. Christian Science applies the truths of divine Mind in the Christ-way to the overcoming of sin, disease, and death. It is intensely spiritual and Christian in all moral and religious requirements. Mental science only claims to heal on a human or mortal mind basis. It employs will-power and hypnotic or mesmeric control, the very antipodes of Christian Science.

While Jesus saw that false prophets would come, showing signs and wonders, fortunately he taught us how to distinguish their signs and wonders from the signs that would follow them that believe: "And these signs shall follow them that believe; in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles? Even so, every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit. A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit." Paul tells us what these good fruits, these Christly or spiritual fruits, are: "The fruit of the Spirit is love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance," while the works (fruits) of the flesh are uncleanness, idolatry, witchcraft, heresies, and such like.

Now Christian Scientists, while praying and working for more of the Mind and works of the Christ, simply ask the privilege of being known by their fruits. Those who know Christian Scientists best recognize that they have in a larger measure than any other body of Christians the fruits of the Spirit and the signs which Jesus said shall follow them that believe; that they are "a peculiar people, zealous of good works;" that Christian Science makes people better, happier, healthier, purer, and more Christ-like.

To those who charge that the healing and redeeming works of Christian Science are the works of Beelzebub rather than Christ, the works of evil rather than good, let them ponder well not only this wisdom—"by their fruits ye shall know them"—but let them also learn what this meaneth: "And the scribes which came down from Jerusalem said, He hath Beelzebub, and by the prince of devils casteth he out devils. And he called them unto him, and said unto them in parables, How can Satan cast out Satan? And if a kingdom be divided against itself, that kingdom cannot stand. And if a house be divided against itself, that house cannot stand. And if Satan rise up against himself, and be divided, he cannot stand, but hath an end."

The prophecies of Isaiah and the visions of St. John of a new heaven and a new earth will be realized, and the prayer of Jesus for the will of God to be done "on earth as it is in heaven," will be answered. All things will be brought in captivity to the Christ; and God, Good, will be manifested as All-in-all.

J. R. MOSELEY.

In the *Macon (Ga.) Telegraph*.

A Word in Favor of Science and Health.

Editor *Lafayette Leader*.

Dear Sir:—I have before me a clipping from the *Lafayette Leader* of November 4, wherein you mention the book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

As I am one of many thousands who have found health, strength, and happiness, after years of misery and suffering, by following and living the teachings in this book, I ask the privilege of a little of your valuable space wherein to set the matter before the public in a truer light.

I can sympathize somewhat with your condition of

thought when you proclaim your inability fully to understand its pages, for the material thinker indeed finds it difficult to understand spiritual meanings and properly estimate spiritual values. When the writer took up the study of this work some ten years ago, many of its pages were meaningless; but through patience and perseverance the light came, and with the light an understanding of this wonderful work; then by the practice of its teachings came health and strength. This experience taught me not to condemn that which I do not understand, and thereby avoid the risk of failing to improve the opportunity to entertain an angel unawares.

With the understanding of the teachings of this book, Science and Health, came a newer, brighter, more spiritual understanding of the Scriptures—spiritual values in the Holy Bible, which before were dark, hidden, intangible, became clear and distinct, and doubt as to the inspiration of the Bible was changed to an understanding of its sacred pages as the revealed word of God.

Now the experience of the writer is only one of many, many thousands of spiritually minded, intellectual, refined people, and I feel sure it was not your intention in your article to cast a shadow of reproach upon the good taste and intelligence of the large body of devout men and women known as Christian Scientists.

The book is now in its 200th edition of one thousand copies each, and is daily studied in connection with the Scriptures by thousands of sensible, intelligent, law-abiding people, who find inspiring and healthful mental, moral, and spiritual food therein.

When you say Mrs. Eddy herself does not know the meaning of anything in Science and Health, you are promulgating a misstatement which no doubt you will be willing to allow me to correct. Mrs. Eddy was raised from invalidism to health, strength, and activity by just what she teaches in her book. In addition to this, she healed all manner of diseases by the methods laid down therein, in order to prove their practicability before giving them to the public. In fulfilling this part of her mission she healed thousands of cases, covering the entire gamut of human ills.

WM. BRADFORD DICKSON.

In the *Lafayette (Ind.) Sunday Leader*.

How one Man Obeyed Conscience.

ABOUT one year ago a man named Burt Horton and his wife, Florence, left Skagway, Alaska, for a vacation trip. They had recently been married, and their journey was, in sense, a wedding tour. Procuring a boat and provisions, they set out from the Alaskan town to spend three weeks hunting, fishing, and, perhaps, prospecting for gold. The time they had fixed for their return passed by, but they did not appear. As the days slipped away it became evident to the people of Skagway that something had happened to the young couple. The apprehension was later verified; they were never again seen alive.

Last March, through the efforts of the Salvation Army, one "Jim" Hansen, a notorious Indian rough of Skagway, was converted to Christianity. He had long been regarded with terror by peacefully disposed people, and his personal record, while free from the evidences of crime, was dark with the suspicions of evil deeds that had never been discovered. By his conversion he became a good man. The truths of the Bible teachings sank deep into his heart, and, as is usual with simple people, his faith was very literal to him. No detail of conduct was too small to escape the test of his conscience; the life of religion became for him the one thing worth attaining.

"Jim" Hansen had hardly been converted when he sought out the Captain of the Salvation Army and bravely confessed to him that he, with ten other Indians, had murdered two whites—a man and a woman—on the Lynn Canal, near

Skagway, some months before. He asked for advice, and the Captain told him that it was his duty to give himself up to the authorities. Without a protest Hansen went to the United States Deputy Marshal and told the story of the crime. The marshal got together a *posse*, and, guided by Hansen, went to the spot where the murder had been committed. There, under the snow, they found the bodies of Mr. and Mrs. Horton.

The crime had been atrocious. Hansen, with his ten accomplices, was indicted and held for trial. His confession and the testimony of the others concerned proved that Hansen himself had shot Horton, while Mrs. Horton was killed by another native. Six of the eleven Indians were convicted. Hansen was sentenced to death; the others were committed to prison for long terms. The young Christian alone made no effort to escape conviction.

The judge before whom the case was tried was so impressed by Hansen's nobility that he wrote at length concerning the case to the Honorable John W. Griggs, Attorney-General of the United States. Said the judge: "His [Hansen's] entire conduct during the trial of the other individuals convinced me of the honesty of his confession and the purity of the motives that induced it. That he was moved by a high religious fervor there can be no doubt. At the last act of the drama, when I reluctantly passed sentence of death upon him, in answer to the usual question why sentence should not be pronounced upon him, etc., he answered with undaunted heroism, a benignant smile on his face: 'My brother, I have done my duty; now you do yours.' Such rare fortitude I have never before witnessed."

Attorney-General Griggs has recommended to President McKinley that Hansen's sentence be commuted from death to imprisonment for life. In his recommendation the Attorney-General says: "Hansen was an unenlightened, un-Christianized savage. As soon as his conscience had been enlightened by the teachings of a religious society, with a rare devotion to the standard of duty raised up in his heart, he made immediate disclosure and confession of his crime and submitted himself to the hands of the law. This case is one of exceptional circumstances."

In order to verify the story just told, we wrote to Attorney-General Griggs, enclosing a clipping relating to the case. His reply was as follows:—

The clipping you send me relative to the case of "Jim" Hansen is genuine, and the facts stated therein are true. They are contained in a report which I made to the President respecting this case.

Very respectfully,

JOHN W. GRIGGS, *Attorney-General*.

No one can read of "Jim" Hansen's moral heroism without receiving a spiritual uplift. Here was a man, degraded, callous, worse than dead to truth and virtue, because he had never known what truth and virtue are. When at the plea of Christian workers he opened his heart to receive the inspirings of the Divine Spirit, a great flood of light came to him and he saw himself more clearly than does many a man of ten times his degree of civilization. What was given to him in that moment he could not have got from education, from art, from economic usages of society. In a flash moral responsibility was born in him, and he had the courage to obey the voice of conscience. We honor "Jim" Hansen, Indian savage though he be. His crime has not been mitigated by his confession; it is even well, for the good of society, that he be punished; but the man who stood before the judge and said: "I have done my duty; now you do yours," is not the man who murdered Mr. Horton. A new man has been born in the body of an old.

We trust that Jim Hansen's sentence will be commuted. It almost seems as if he were too useful a man to be confined, although such a spirit as he has shown may even make light a dungeon.—*The Great Round World*.

The Lectures.

At Houston, Tex.

The address of Judge William G. Ewing of Chicago at Bryan Hall, Thursday evening (December 6) upon the subject of Christian Science proved of interest to a large audience; his thoughtful remarks being both entertaining and instructive.

No less interesting was the introduction of the speaker by Hon. John H. Kirby of Houston. Mr. Kirby said in part:—

You have come out to-night to hear a new theory expounded and what is going on in Houston is likewise occurring throughout all Christendom. Christian Science is being examined and tested in every part of the civilized world. If it is the Truth it will prevail; if not the truth it will die the death that comes to all pretence and falsehood.

I am not a Christian Scientist, but merely a truth-seeker. I have been requested to introduce the speaker of the evening, who is a Scientist and will tell you why he is so, and I shall shortly proceed to that pleasing duty. I appreciate the compliment paid me in requesting me to occupy this platform with him and to present him to this audience. I am here just as you are here to listen and to learn. The lecturer comes at the request of First Church of Christ, Scientist, of this city, located over here on Travis Street. I have attended service at this church every Sunday during the past fifteen months when I was here, and attended both the morning and the evening service. This is all the evidence I need to cite in proof of the interest I feel in this beautiful religion.

In their church here you find a membership and an attendance composed of a happy, contented, cheerful, healthful people. They believe everything that other Christians believe and something more. They are not opposed to any other church and if they are wrong, and are doing no good, they are certainly doing no harm when they love their God and their neighbor, and scatter sunbeams into the lives of men.

There is much gross ignorance abroad as to what they believe. They are derided and sometimes abused for their opinions, but they are not angered by these criticisms. Like true Christians they invite an examination of their faith by all who call themselves Christians or desire to be Christians, and seem confident that those who fully understand will accept the interpretation of the Scriptures laid down in their text-book. There are thousands of them in the world to-day, all healthful, happy, working Christians—the Mother Church in Boston having itself over eighteen thousand members.

The author of their text-book, "Science and Health with Key to the Scriptures," is Mrs. Mary Baker Eddy, now residing at Concord, N. H. More than twenty-five years ago she wrote the first edition of this remarkable book and gave it to the world. Since then it has gone through two hundred additional editions and stands to-day the most marvelous work on metaphysics and psychology that has been given to mankind since the days of the apostles. Some prejudice arises against it because a woman is the author. Why should not woman lead us in spiritual matters. She is purer than man, holier than man, gentler than man; her thoughts are higher and nobler, her life cleaner, her nature more spiritual. No community on the face of the earth has ever exhibited the refinements of civilization and social order where woman was undervalued or dishonored.

Mary was last at the cross. She stood by the expiring Saviour when Peter and all the disciples had slipped away. She was first at the tomb. She was first to discover that he had burst the bars of physical death and triumphed over

the gloom of the grave. It was to her that he first revealed himself after the resurrection. Why should not another Mary lead mortal thought back to a correct interpretation and understanding of the words and works of Jesus and his apostles? For my part I think more of this work because it emanates from the thought of a woman.

But I must not detain you. The speaker of the evening and the one you came to hear is Judge William G. Ewing of Chicago. He voluntarily retired from a life of usefulness upon the Superior Court bench of Cook County, Illinois, to begin a life of greater usefulness in spreading the gospel of Christian Science. His character and learning, his high standing in the legal profession, his honesty of purpose and splendid mentality make us anxious to hear the message he brings. Grover Cleveland, a President of the United States who sought always character and ability in public officials, selected him for United States district attorney for the Northern District of Illinois, and there are thousands to testify to the wisdom and fitness of the President's choice. It is now my pleasure to present to you ex-Judge William G. Ewing of Chicago.

Houston Post.

At Eureka Springs, Ark.

Last night (Monday, December 17) Judge William G. Ewing of Chicago delivered a lecture on Christian Science at the Wadsworth-Floyd Hall to one of the largest audiences that has ever assembled in that place. The Judge held the attention of his auditors for an hour and a half. He was introduced by Hon. George C. Christian, who said:

Ladies and Gentlemen:—About the close of our Civil War I went to Bloomington, Ill., to reside. Among the first acquaintances I made there was the Hon. James B. Ewing, a distinguished lawyer of that city and afterwards our Minister to Austria under President Cleveland's first administration. We became intimate friends, and in fact were room-mates for a year and a half. Through him I became acquainted with the speaker of this evening and three other brothers, his sister, and mother.

I was a frequent visitor at the house of the latter for many years and friendships were formed between us all which have stood the test of time and changing scenes. About the time I went to Bloomington, the gentleman who is to address you to-night, removed to Quincy, when shortly afterwards he was elected State's Attorney for that district, a very honorable and lucrative position in Illinois. After serving as such officer for several years he laid down the burdens of office and resumed the practice of law. In this he was so eminently successful that in a few years his ambition led him to seek a more enlarged field of operations. Of course Chicago was the only place which afforded sufficient room for the play of talent and genius of first order.

In 1884 the President appointed him to the responsible and dignified position of District Attorney for the Northern District of Illinois. This difficult position, in one of the busiest courts in the world, he filled with signal ability and with great satisfaction to the people. At the close of his term he again entered upon the practice of his profession, this time in the great metropolis of the West. Here he so conducted his professional labors that about the time I left Chicago, ten years ago, he was elected judge of the Superior Court of Chicago, a court of the same jurisdiction as the Circuit Court. This position he filled to the satisfaction of his constituents and with honor to himself. Declining a re-election, he retired from the scenes of political and professional life which had honored him and he had adorned. He soon afterwards took up the interests he is now serving and has prosecuted them to this day with his accustomed zeal and ability.

I have mentioned these things that you may know that Judge Ewing did not espouse this new movement because

he was a failure in life, but that in the midst of his most popular and prosperous career in official life and in his profession, the greatest of all the learned professions, he enters upon these new fields, solely, as we are convinced, from a sense of duty. As I do not know very much about Christian Science I shall not be expected to endorse it, but I do endorse Judge Ewing, and assure you that he is abundantly able to take care of himself in any field he may choose to enter. I thank this great audience for their presence to-night to hear my friend, and I now take pleasure in introducing the Hon. William G. Ewing of Chicago, who will address you.—*The Daily Times-Echo.*

At Montgomery, Ala.

Mrs. Sue Harper Mims of Atlanta, Ga., delivered a lecture on Christian Science at the Montgomery Theatre Sunday afternoon (December 16). The lecture was fixed for half past three, but long before that hour, persons began gathering at the theatre, and before the lecture commenced every seat in the parquette and dress circle was occupied.

The audience was a representative one, and members of every religious denomination in Montgomery were present. The stage was tastefully decorated with ferns and potted plants. American beauty roses, carnations, and other cut flowers were placed conspicuously about the stage.

Mrs. Mims was introduced by General William C. Oates, ex-Governor of Alabama, who said he doubted the wisdom or appropriateness of his selection, but without expressing any views in regard to the subject of the lecture, he felt confident that it was good, even without investigation, because women, noble women, were interested in it. "The women are always found on the side of right and truth," declared General Oates. "They have been a genuine blessing to the generation, whether in war or peace. They are the friends of humanity, the friends and advocates of religion and goodness in all its forms."

General Oates then briefly referred to the staunchness of the women in the Bible period. "They were the last at the cross and the first at the resurrection, and from that day to this in human effort and the performance of good deeds, woman has always been in the lead."

Continuing, Governor Oates said that but for woman society would be a failure, Christianity could not prosper and progress without her. "On this occasion," said General Oates, "we have with us a lady from our sister city of Atlanta, the wife of its honored mayor, a lady of rare capacity, who has been engaged in the noble work of Christian Science for many years, and is one of the two female lecturers upon this subject. Doubtless you have in store this evening a real treat to listen to her eloquence, learning, and sound philosophy. It is my pleasure and honor to present to you Mrs. Livingston Mims of Atlanta."

Mrs. Mims handled the subject in an excellent manner and held the attention of the large audience a little over an hour.

In her opening remarks Mrs. Mims said:—

"Hundreds of years ago when this fair state was still virgin to the touch of modern civilization, the American Indian roving the forest in the untrammelled freedom of the physical man, gave to this beautiful section of the country the musical name of Alabama—'Here we Rest.'

"But I have come to talk of him who was and is the Way-shower to that sublime rest that remaineth to the people of God, of that freedom which is purchased by the conquest of sin—the freedom of the sons of God."

Montgomery Advertiser.

At Bridgeport, Conn.

A desire to learn something of the much-talked-of doctrine of Christian Science drew the largest audience which

has attended any of the Pan-religious sermons to the First Universalist Church last evening (Sunday, December 16). The building was well filled, but very few seats being vacant. The speaker was Rev. Irving C. Tomlinson of Concord, N. H.

In introducing the speaker, the pastor, Rev. Mr. Dillingham, said:—

Among the modern religious movements there is perhaps none that has been so extraordinary in many respects as that known as Christian Science.

It is extraordinary in the breadth of its claim for the gospel of Christ, viz., that it is still a healing power as well as the word of life.

It is extraordinary in its manifestations or demonstrations of power. It is extraordinary in its spiritual intensity; extraordinary in attractiveness to the divine elements of life. It has spiritualized the selfish and won to itself a host of the most intelligent, cultured, moral, and religious souls. It is extraordinary in its numerical growth, in its power to make generous sacrifices for the cause a passion.

Like every new movement, it is subject to misunderstanding, and must run the gauntlet of prejudice. It has, however, demonstrated its right to a candid hearing and an honest, prayerful judgment. It stands to-day as a mighty force in Christendom, and we are fortunate to-night to have with us one who is authorized to speak in its behalf; one whose Christian life is attested by the many who have known him, as I have known him, in his work for the gospel and the salvation of souls; and I take great pleasure in introducing the Rev. Irving C. Tomlinson, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass."—*Bridgeport Morning Telegram*.

At Lincoln, Kan.

Edward A. Kimball, C.S.D., of Chicago, lectured on Christian Science in the Opera House Tuesday, November 20, to a large and appreciative audience.

Mr. Kimball was introduced by E. D. Smith who said in part:—

It remained for this century, with its process of development, to give the world a new faith which is already having a marked influence. This has been an age of investigation. Spiritual realms as well as physical fields have yielded up their hidden forces, and, as a result, Christian Science has become a mighty factor in religious circles.

I do not suppose that this meeting to-night was arranged for Scientists alone that they might again hear the evidences and arguments in support of a doctrine in which they already believe, but I think that they have a message for those who are not of the faith, and ask for an opportunity to have the truth presented to a liberal-minded audience that the doctrines of Christian Science may stand or fall as they may be true or false.

Ladies and gentlemen, I need not say more of the qualifications of the speaker who will address you to-night than that he is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, and I now have the honor to introduce to you Edward A. Kimball of Chicago.—*Correspondence*.

At Galveston, Tex.

Judge William G. Ewing of Chicago spoke before an audience that filled the hall of the Church of Christ, Scientist, last night (Friday, December 7). Judge Ewing was a lawyer, who was made District Attorney under the first Cleveland administration. Later he was elected a judge of the Superior Court of Cook County, Illinois, and refused a nomination for re-election to become a lecturer

of the Christian Science Church. The judge is a slow, quiet talker, but has a way of holding his audience.

Judge Ewing, in opening, stated that he had been coming to Texas for the past thirty years to visit kinsfolk, and is therefore not a stranger to Texas. He said he hoped nobody would think he was here to do any proselyting to add to the numerical strength of his church at the expense of the others. "The time is too holy, the occasion is too holy, the condition is too well in hand to admit of such a thing," he said. "I am here to tell you of some of the good things that have come into my life."

Galveston Daily News.

At Stillwater, Okla.

Judge William G. Ewing of Chicago, addressed a fair audience at the North Methodist Church, Saturday night (November 24) on the subject of Christian Science. He is one of the best-known lawyers and judges of Illinois, and his address was greatly appreciated by those who heard him.

Judge Ewing was introduced by W. B. Williams of this city, in part as follows:—

Ladies and Gentlemen:—We have with us this evening a distinguished guest, a man who has adorned the legal profession, elevated in public esteem the judiciary, drank from the fountain of literature, loved his neighbors as himself; whose virtues shine forth in eloquence and who will speak to-night with authority.

I take great pleasure in introducing to you the speaker of the evening, William G. Ewing of Chicago, who will now address you on the subject of Christian Science.

Stillwater Gazette.

At Chanute, Kan.

Williams Opera House was well filled with people last evening (Tuesday, November 20) at the Christian Science lecture delivered by Judge Ewing of Chicago. The speaker was introduced by Senator Farrelly, who introduced him as a friend of Lincoln and an able jurist who had resigned a judgeship to preach the doctrine of his faith.

Judge Ewing is a very entertaining speaker. He has a pleasing and delightful manner of speaking, and impresses you with his sincerity. Those who went to hear a vindictive talk against the churches were disappointed, as the speech was very conciliatory and nothing was said that would offend.—*Chanute Daily Tribune*.

Lectures at Other Places.

San Antonio, Tex.—Judge William G. Ewing, December 9.

Notice.

REMITTANCES should be made by post-office money order, express money order, to exchange on Boston or New York Exchange on Chicago and other cities not named above, will not be accepted.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Mch. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for April, May, and June.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Insufficient Freedom."

THE following from the pen of the Rev. Mary Baker G. Eddy appeared in the *New York World* of December 30, 1900. It was written at the request of the editors, and was one of upwards of sixty replies received from prominent thinkers of the world, both men and women, in answer to the query, What is the chief danger, social or political, that confronts the new century?

To my sense the most imminent dangers confronting the coming century are robbing people of life and liberty under warrant of the Scriptures, the rights of politics and human power, industrial slavery, insufficient freedom of honest competition, ritual, creed, and trusts in place of the Golden Rule: "Whatsoever ye would that men should do to you, do ye even so to them."

The Future.

CHRISTMAS-TIME has come and gone and the New Year and the New Century have dawned. *Anno Domini*, 1901, has put in its appearance and we know of no good reason why this calendar year should not receive a hearty welcome at the hands of all. It is, no doubt, destined to be a momentous year; a year full of prophecy for the century which it inaugurates; an introductory to the great volume which is to be written during the twentieth century.

To attempt a forecast of that volume were vain. If it were possible to gauge it by that which has been written since the dawn of the nineteenth century, some dim prognostications might be made; but there is no method of calculation to fix upon. Materially speaking, we are at a loss for a rule whereby to estimate. Spiritually considered, the only rule whereon to hang a hope of certainty is, that God's promises have in the past been measurably fulfilled with mathematical certainty; and we know that future fulfilment is not less certain than past fulfilment; but the time and manner thereof we can only hope and trust for.

That the future holds unfathomable reservoirs of spiritual blessings we know. How rapidly those blessings will unfold themselves to mortals depends on the earnestness and sincerity with which they are sought. Before spiritual growth comes in its best measure there must be a fitness for it. That fitness is not attained without honest effort and single-hearted striving. This striving must be according to the pattern shewed to us in the mount, whereby, during the unfolding future, we may obtain a more excellent ministry, and become the mediators of a better covenant, established upon better promises. For had our fulfilment of the first covenant been faultless, then should no place have been sought for the second. In other words, in so far as our first steps toward spiritual development have been rightly taken, there is no need of our retracing and retaking them; but in so far as they have been mistaken, they must, by the necessity of true growth, be taken over again until rectitude is reached.

The covenant to be striven for is that which will bring us fully within the promise long ago made:—

"For this is the covenant that I will make with the house of Israel; . . . I will put my laws into their mind, and write them in their hearts: and I will be to them a God, and they shall be to me a people, and they shall not teach every man his neighbor, and every man his brother, saying, Know the Lord: for all shall know me, from the least unto the greatest."

We look about for signs of the fulfilment of this glorious covenant, and truly the signs are not wanting. The spiritual horizon is big with promise of fulfilment. The rainbow of hope spans the spiritual heavens with its bright hues—its Christ-light. Wise men can plainly see the Bethlehem star moving on toward the consummation of the promises, and the "glory to God in the highest, and on earth peace, good will to men" is easily seen, by the wise men, to be related to the more ancient promise, re-stated in Hebrews, and that the one is but the new-heralding of the other.

We look forth, then, upon the new century with hopeful eye and stout heart, for we believe this century shall verify the promises in measure so abundant that present conception is powerless to grasp it.

Further Newspaper Corrections.

IN the last issue of the *Sentinel* we published several corrections of misstatements concerning Christian Science. These corrections were made by members of the Publication Committee and originally appeared in the various papers which had published the misstatements. We are pleased to say that in most cases when managers and editors have been requested to do so, they have gladly corrected any erroneous statements that may have appeared in their columns.

We herewith publish some recent corrections of the erroneous statement that Christian Scientists are indifferent about the observance of health ordinances and the matter of sanitation and infection.

NOT DELIBERATE NEGLECT.

Editor The Times:—On November 14, a dispatch from Cleveland was published in your paper regarding the prosecution of Mrs. Lydia Stone, a Christian Scientist, in the Police Court there. I desire to say that the neglect by the Christian Scientist in reporting the case to the Health Department, was merely a technical violation of the health ordinance, and was not deliberate neglect.

Christian Scientists have proved themselves for so many years law-abiding citizens, upholding the local, state, and national government staunchly and loyally, adhering in every respect to the laws prescribed for the benefit of the community, that they cannot now be charged with being a menace to others. There are hundreds upon hundreds of people in Cleveland, O., and in your own city of Buffalo, who testify daily to restored health and better morals, all from Christian Science. The charge against the Christian Scientist in this case was that of violating the health ordinances. I learned, upon investigation, that the sanitary officer gave the Christian Scientist to understand that if she had reported the case immediately after it had been named by the physician, she would have complied with the law, but it was left in other hands and reported later to the Health Department.

Yours truly,

WILLARD S. MATTOX.

New York, December 8, 1900.

Buffalo (N. Y.) Evening Times.

CHRISTIAN SCIENTISTS MAKE A PROTEST.

Editor of The Courier:—Will you kindly record a protest against the mistaken notion, voiced in an editorial paragraph in your issue of the 20th, that Christian Science parents are careless of their own children's health, and

regardless of the health of others. Nothing in the history of Christian Science, in Buffalo or elsewhere, will furnish warrant for any such assumption. Watch the Christian Science families in Buffalo, note the general health of adults and children, and the small death rate; remark on the scrupulous regard for others exhibited by all members of this denomination, and I feel sure that all doubt or conjecture as to the real attitude of the Christian Scientist toward his fellows will give place to a frank admission that such criticism as is made in the article referred to is undeserved.

Christian Scientists do not disregard sanitary regulations, nor any precautions affecting the general welfare of the community in which they live. It is equally untrue to suggest that Christian Scientists "take delight in allowing infected children to run at large." This is a serious accusation, and the writer of it would find it impossible to substantiate or prove such a statement. While Christian Scientists know that God is their support, and that the Christ Mind heals them, they are not careless and indifferent to the matter of sanitation and infection.

WILLARD S. MATTOX.

New York, November 21, 1900.

Buffalo (N. Y.) Courier.

Free Subscriptions to Libraries.

Upon the recommendation of a Christian Scientist who is known to the Publishing Society, the *Sentinel* and the *Journal* will be sent free for one year to any public library having a reading room. Those who request to have the *Journal* and *Sentinel* sent free to public libraries, should state that the consent of the librarian has been obtained, and that the periodicals will be placed on file where they can be readily obtained by those who desire to read them.

It is not intended that those libraries which have paid subscriptions to our periodicals shall be transferred to the free list. These subscriptions should be continued by the local Scientists as they have been in most cases where the Scientists are able to do so. The purpose of this offer is to open up a wider field for our literature, placing it in public libraries which have not been supplied by local Scientists, and in this manner provide genuine Christian Science literature for many persons who might not otherwise have an opportunity to gain reliable information on this all-important subject.

This free subscription may be continued if the recommendation is renewed. Many subscriptions of this character have expired some months since, and if it is desired that they be continued request to that effect should be made, stating that the literature has, in the past, been gladly received and placed where it was accessible to readers.

Sentinels for Free Distribution.

Upon request from the clerk of a church where a lecture is to be given, copies of the *Sentinel* will be sent by mail, postpaid, for free distribution to strangers and inquirers at the lecture. Order blanks may be had from the lecturers, whereon clerks will specify the number of copies required for this purpose. These orders should be sent to The Christian Science Publishing Society early enough to secure delivery of the papers in time for the lecture. If sent by express, they will be sent at the expense of the receiver.

Christian Science makes the gospel of salvation broad enough and practical enough to meet every human need. Because every phase of life is made better by its quickening touch, the faithful disciple of Truth knows from experience that "now is the day of salvation."

Christmas Greetings to Mrs. Eddy.

Concord, N. H., December 25, 1900.

Darling Mother:—It is with much pleasure that I send to thee a gift of love from the children of our Sabbath School, and that the demonstration of sacrifice which they appreciate as of greater value to thee, is going to enrich them abundantly. They think thee may keep this little pen-tray on thy writing-table, and will find it useful, when resting thy pen for a moment. It is the latest pattern, and is better for a fountain pen because it will rest on an incline. I think thee would greatly have enjoyed the demonstrations of the class on Sunday. One little one said she almost tore a thumb nail off in playing, and instantly declared, "There is no sensation in matter," and it stopped paining her right away. Another tot of five years, said he was sledding and fell off and hurt himself, but right away he said, "God is good, I cannot be hurt," and he was not, any more.

Another of six said, "I had a pair of shoes that were too long and they hurt my foot and I just kept saying, 'God is Love and there is no sensation in matter,' and they did not hurt me any longer." Two older boys had overcome sore throats. An older girl gave her head a bad bang against a door jamb, and instantly thought, "How absurd to think that my head has any more intelligence than that jamb," and was relieved at once. One of the mothers said that she forbade her little girl to go across the railroad track to play, and the other day she came to her and said, "Mamma, isn't God on the other side of the track too?"

I invited the children to spend a social evening with us in the Hall on Saturday, and if thee could have looked in at the old-fashioned kitchen trimmed up by Dolly and Frances (my faithful colored maid) in evergreens, and lighted with candles, thee would have seen twenty children playing some old-time games and having a merry time. We told them what the Christian Science thought of Christmas is, and I told them of the boyhood of Jesus, and how they must know that earnest work and pure lives would give them the opportunity and the understanding to make the world better too. We sang "Shepherd;" they had some sherbet and simple cake and went home at nine o'clock, each with a cornucopia of candy which Villa White brought for them from Boston. And now, precious Mother, let me thank thee while I am thanking God for my Christmas day. It was never more beautiful; as I looked out at the early sunrise over the pink and yellow sky, the prayer of my heart was, that I might always live in the *morning* and *be awake* in good, serving God, in Christian Science.

My gratitude to thee for leading me into this way which is in the Kingdom of Love, is greater than I can tell, dear Mother. We appreciate thy thought in sending us Professor Seward's book to read, and we thank thee over and over for all thy graciousness and love.

Thine in tender gratitude,

ANNA.

295 Commonwealth Ave., Boston. Christmas, 1900.

Dear, Dear, Mother-heart:—What can tongue or pen utter when the heart is so full of gladness? Over the whole earth this morning,

Bells are ringing,
Chimes are singing,

celebrating the Christ-Love, our Christmas child, born in our hearts, because you, dear watchful Shepherd, saw the star and followed it and found where the young child lay. Now the tidings have gone through all the lands, the night is gone, and in all its glory is rising the eternal Morning Star! Glory to God in the highest!

With faithful love,

VILLA WHITNEY WHITE.

Darling Mother.—Another Christmas morn has dawned, and again the sweet memory of the Bethlehem child comes to gladden loving hearts. But with infinitely greater joy, comes the realization of the Christ-Truth into the hearts of those who are learning it.

It is not to the infant child that we turn to-day, as of old, but to the impersonal Christ, our present, constant Saviour. So, while the world turns its thoughts to the birth of Jesus, we are celebrating the birth of a new consciousness of Christ in our hearts. For this pure and far more perfect Christmas joy, we thank God.

Lovingly thine,
REBECCA H.

December 25, 1900.

Among the Churches.

Anniversary Celebration at Fitzgerald, Ga.

The Christian Scientists of this city had a very enjoyable service Sunday (November 18), it being the celebration of the fourth anniversary of the organization of the local branch of the Mother Church.

The regular sermon compiled from the Bible and "Science and Health with Key to the Scriptures," was read as usual. In addition to this, three suitable anthems, which were greatly enjoyed, were rendered by the choir, and short addresses were delivered by the First and Second Readers, reviewing to some extent the work of the past four years, showing a yearly increase in interest and number of those who believe in the teachings of Christian Science. The Bible was referred to as the standard and guide of Christian Scientists, showing that the healing of sin and disease requires the same process, though the former is of the greater importance.

The interior of the church was profusely decorated with a great variety of roses and other flowers, interspersed with evergreens, giving it a most beautiful and harmonious appearance.

The services were a pronounced success, and many in response to a request rose in testimony of having been healed by Christian Science.—*The Citizen-Leader*.

The address of John H. Williams, First Reader, was as follows:—

Friends.—I gladly welcome you here to-day to join us in this service celebrating in a quiet way the fourth anniversary of the organization of our church. It seems wise and helpful to assemble here and together take a retrospective view of the past four years and a perspective view of the work for the future. The work thus far done and the ends reached may not seem to deserve special consideration, but upon a thorough understanding of the situation to us, as Christian Scientists, it means much for the present and for the future. It is the laying the foundation, upon which the superstructure of Truth may be built and beneath whose shade and shelter many soul-sick and weary ones may find rest. As Christian Scientists it is not our aim to make a display or an exhibition of the workings of our Cause, but it is our desire to make known to those around us the great beauty and reality of the religion of the humble Nazarene.

We have great cause for rejoicing and we celebrate the day which gave permanent shape to the operation of Christian Science in our midst. Reduced to a scientific Principle and practice, the religion of Christ means a reality of peace on earth and good-will to men, here and now. Not merely in the dim and distant future but to-day God may be revealed to us as a living, palpitating reality, destroying forever agnosticism and infidelity.

Many earnest seekers for Truth repeat the Prophet's ancient question: "Is there no balm in Gilead; is there no

physician there? why then is not the health of the daughter of my people recovered?" And is not this ancient rebuke renewedly administered: "Go up into Gilead, and take balm, O virgin, the daughter of Egypt; in vain shalt thou use many medicines; for thou shalt not be cured." Also, "The diseased have ye not strengthened, neither have ye healed that which was sick, neither have ye bound up that which was broken, neither have ye brought again that which was driven away, neither have ye sought that which was lost; but with force and with cruelty have ye ruled them." It is the mission of Christian Science to answer this question in the affirmative, and to respond to these just rebukes with a system scientific, Scriptural, practical, and demonstrable. There is a balm in Gilead for every aching heart and every troubled breast. The Great Shepherd has said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

There is a physician who healed the diseased and sin-sick ages ago, and who said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

Many people misapprehend the teachings of Christian Science, and it seems well to correct some of the misconceptions held by those who have not taken the time or trouble to give the subject a careful investigation.

Christian Science in no way departs from the teachings of the Bible, but aims to emphasize its ethics and essential points. Our first church tenet reads: "As adherents of Truth, we take the Scriptures for our guide to eternal Life" (*Science and Health*, p. 493). Most Christians admit that sin brought disease, disaster, and death into the world, and when all sin is destroyed, disease and even the last enemy, death, must cease.

Luke, 13 : 15, records Jesus as saying: "And ought not this woman, being a daughter of Abraham, whom Satan hath bound, lo, these eighteen years, be loosed from this bond on the Sabbath day?" It is the mission of Christian Science to loose the bonds of sin and disease and set the captives free, for "ye shall know the Truth, and the Truth shall make you free." I see no reason, save a lack of knowledge, why it should seem strange that religion means salvation from disease as well as sin. Christ's salvation means a full salvation in this world as well as in the world to come. We are thoroughly convinced by experience and demonstration that God forgiveth all our iniquities and healeth all our diseases.

We celebrate the day which marks an important epoch in our religious experience, and turn our faces towards the celestial city with hearts full of gratitude for the great good that has come to us. Most of us have been raised from the couch of pain to health; from the depths of despair to hope and happiness, through the teachings of Christian Science.

We rejoice to see this day when God has again visited His people with apostolic blessings. We rejoice that this light has come to us making our lives brighter and more hopeful. The shadows disappear and the clouds roll back revealing God's love and God's eternal presence. Hope rises higher, courage takes on new strength, and faith reaches greater heights.

We rejoice that God has raised up one in this age whose great spiritual insight has made the healing of disease, like the healing of sin, a possibility through the teachings of Christ. The Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, has for more than thirty years devoted her life in selfless love to the uplifting of the human race, bringing peace and rest to earth's weary wanderers. Thousands of Christian Scientists, as the result of this labor, are ready to bear grateful testimony to the truth of her teachings, and there is scarcely a village or hamlet in all this broad land of ours where Christian Science is not known and appreciated.

The mission of Christian Science is most beneficent. Its aim and effect is to elevate the race, destroy sin, heal disease, relieve suffering, and prove in this age that the Gospel of Jesus Christ has lost none of its healing efficacy. For Paul says: Jesus Christ is "the same yesterday, and to-day, and forever."

God is Omnipresent, the All-presence; Omnipotent, the All-power, and the aim of Christian Science is to lead mortals to a more thorough understanding of His presence and power; to lead them to a deeper faith in God's mercy and goodness; to give them a more spiritual understanding of the Bible, and show them that Science and Christianity are inseparable. Christian Science establishes a deeper sense of God's protecting power and presence, reveals the Father-Motherhood of God and the brotherhood of man, destroys malice, envy, and hate, thus bringing on earth the kingdom of heaven. Love for God and man enables its possessor rightly to apprehend God and man's relation to Him. This destroys the love of sin, disease and its fear, and robs the grave of its victory. It cannot be truly said that this is a new doctrine, for it is as old as the ancient of days, and is for all men to understand and practise.

As Christian Scientists we are glad to assemble ourselves here in celebration of this day. We are glad that we have passed at least a few mile posts on our journey heavenward, and on this the fourth anniversary of our organization as a branch of the Mother vine, we wish to renew our resolves for better living, to reconsecrate our lives to God, and to drink anew in His kingdom the royal wine of Heaven. We realize more fully than ever the great work to be done, and the necessity of rightly employing every moment. Many are the blessings that have come to us through the teachings of Christian Science, and for that reason we greatly desire that others may know its truths and receive its blessings. To this end it is our prayer and purpose to show all who earnestly seek the Truth that the Gospel of Christ means a full salvation from all evil to which the flesh is heir. This the gospel accomplished nineteen centuries ago, and Christian Science has proven to us beyond the shadow of a doubt that in this gospel there is no "variableness, neither shadow of turning."

God's laws are changeless and eternal. His love is forever the same, and sooner or later Christian Science will prove to the world that "the tabernacle of God is with men, and He will dwell with them, and they shall be His people, and God Himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Already the God-inspired hear the distant thunderings of Mount Sinai and rejoice. Divine Love overshadows the spiritually-minded, calling them higher and higher up the mount of revelation. As we enter upon the threshold of a new century the dawn of a brighter day breaks upon our vision. In this dawn of a new day we can say in the words of our Leader,—

And o'er earth's troubled, angry sea,
I see Christ walk,
And come to me, and tenderly,
Divinely talk.

Old theories and beliefs are giving way to higher ideals, and soon their imprint will be washed from the shifting sands of time by the resistless waves of God's love, when "the earth shall be of the knowledge of the Lord, as the waters cover the sea." The eternal currents of God's love will break asunder all unholy ties, mortality swallowed of immortality, making stronger the bonds of goodness, drawing community closer to community, nation closer to nation, and church closer to church, till there shall be one people and one God.

From our Contributors.

The New Year.

BY LISKA STILLMAN CHURCHILL.

WELCOME the glad New Year;
Welcome, thrice welcome here.

Turn from the ways

Of idle days;

All ye who hear,

Welcome new cheer.

Casting old sins away,

Welcome this glad new day.

From God's own hand we came;

Love like His own we claim,

Of Him a part,

Soul, mind, and heart,

All are His gift,

Each voice uplift,

Sing we His praise on High;

His own can never die.

We take our stand to-day,

Facing the Better Way;

Peace and good-will,

Proclaiming still,

To all mankind;

No longer blind,

Holding with all our might,

Good, our Divine birthright.

Perseverance.

BY EDWARD EVERETT NORWOOD.

THE colored preacher's definition of perseverance was, "First taking hold; second, holding on; third, never letting go." It is very true, and the word is one to be understood and demonstrated by all who are trying to be Christian Scientists.

It is only by persevering effort and long continued endeavor that things are accomplished in this world, and in no case is this more true than when applied to those who are trying to look through the seen and temporal to behold the unseen and eternal, who are rising above sense-testimony, and discerning the impersonal Christ.

All spiritual growth, at this stage of progress, is comparatively slow. The abstract belief of the world in materialism, to which may be added the individual's faith in matter and its laws, induced by the seeming necessity of their maintenance, all conspire together to make the way to spiritual dominion over the flesh seem long and the path rough. This is but another reason why those who are making this effort should constantly be on the watch that malicious mental influence should not produce a mental or physical haziness or laziness, blind their intellect, or retard their spiritual growth.

An idle Christian Scientist is anomalous. We have in the life of our Leader, Rev. Mary Baker Eddy, an example of what incessant toil, unceasing and unselfish effort, can and will accomplish. She tells us in "Miscellaneous Writings," "Idleness is the foe of progress," and also "Toil is triumph," two sentences which cover the ground in all human effort.

Jesus was no dreamer. He was continually about his Father's business, and said, "My Father worketh hitherto, and I work," showing us that only by individual effort, and untiring effort at that, are we saved. When we remember that God is the Principle of all action, and that we, by reflection, express this Principle in our lives, we can see that every fibre of our being is filled and thrilled

by this divine Love-force, this ever-present Mind, which is the source of every endeavor, and that so long as we keep in touch with it, we cannot be lazy or go astray.

In the sermon on "Christian Healing," our Leader tells us, "Tireless being, patient of man's procrastination, affords him fresh opportunities every hour." The god of this world, in the abstract, is materialism. In the concrete, it is self. Then it behooves us to be up and doing, knowing that "in due season we shall reap, if we faint not." The Scriptures tell us, "The sluggard will not plow by reason of the cold; therefore shall he beg in harvest." If, cold or lukewarm to Truth, we do not use the mental power we have, and are not constantly seeking to gain more, can we wonder that in the harvest, when the call comes for help, we lack in demonstration, and have to call for help? Then let us, as brave soldiers of the cross, put on the whole armor of goodness, and not the least part of this armor is energy, and energy which is a reflection of the ever-active, divine Principle, Love. God, with all His mighty power, is on the side of every right thought, of every denial of matter's verity and God's allness; and thus, little by little, slowly but none the less surely, and by ceaseless, consecrated effort, shall we discern, understand, and demonstrate the Science of Being, and wake in God's likeness.

A Comparison.

BY F. M.

WE read in the Bible that "God is a Spirit," and that "In him we live, and move, and have our being."

Like much of the Bible, this was incomprehensible until a gleam of light, radiating from the grand and glorious truths of Christian Science, came to me, declaring that Mind and Spirit are synonymous.

If it is in Mind we live, move, and have our being, it must naturally follow that life is not dependent on matter, material law, or physical conditions. Since Mind cannot evolve or produce anything but thoughts, or ideas, then life and all that is life-giving must be the unfolding of the eternal facts or truths of this one all-knowing Mind.

Let us compare each individual consciousness that is dwelling in the darkness of belief that matter and material laws can support and govern life, to a plant that is shut up in a darkened room. The sunshine without is flooding all with light, and if the least little ray is let into the rooms the plant will naturally turn its leaves, so it can drink in more and more of its rightful nourishment, air, and sunshine.

That the meaning of Mind, Spirit, and God is just the same, was the ray of light that first found its way to my darkened sense, and little by little I have realized many blessings as the beliefs of sense and self have been dispelled by this wonderful Light.

The consciousness, to which a faint perception of the Truth of Being has appeared, must feel the invigorating effect. We have only to turn to it, and this light of Truth will mould and fashion us anew until we awake in His likeness. How our hearts swell with gratitude to our dear Leader for the Truth reflected and expressed in a way that is comprehensible to us in Christian Science, for we can never forget that hers was the consciousness to which this Truth appeared.

Science and Health tells us on page 335, "Had his origin and birth been wholly apart from mortal usage, Jesus would not have been appreciable to mortal mind as the Way."

Christian Science has shed a light on us that must grow brighter into the perfect day, where there is no night, for the darkness of mortal, sinful belief of life as separate and apart from God, will be destroyed, and we shall know and acknowledge no reality in that which proceeds not from the one Mind.

Obstructions Removed.

BY MARY B. TREVETT.

I HAD a forcible illustration recently, of how weeds grow apace when let alone. About ten years ago we built a log cabin near the Columbia River and paid two men twenty-five dollars for making a short path to the river through the woods. We went there regularly for several summers, but for the last three years no one has been near it, and this summer, when trying to take some friends to it, it was so overgrown with braks, ferns, and briars, and so stopped up with fallen trees that I could not find the way and had to get an experienced woodsman—a pioneer—to show us. He took his axe and removed some of the obstructions, and he had no difficulty in finding the way, because he knew it.

Some of the obstructions were very beautiful, and it hurt me to see them go. Lovely ferns and brakes in tropical luxuriance; moss-grown logs and incipient forest trees,—it disturbed me to see them hacked and slashed away,—but the experience has given me much food for thought. It has shown me how the errors of the centuries, which have been allowed to grow, have obstructed our path heavenward. But now has come a Way-shower, a guide out of this tangled thicket, and we are thankful we live in this age of great opportunities and great responsibilities, and we rejoice to have our long-cherished errors of opinion—our false gods—demolished, even though it seems to leave us somewhat denuded for a time.

May we all prove faithful, worthy to follow our Leader even though we be called to suffer persecution. Jesus said, "If ye suffer with me, ye shall also reign with me."

It is a great thing, too, to know we are making the path plainer and easier for multitudes who will come after us, that our "labor is not in vain in the Lord," for ourselves and for others. Our Leader writes to our faithful editors in one of the first numbers of the *Sentinel* (Vol. 1, No. 5, p. 3): "Every truth you promulgate, every good and ardent thought you entertain, makes you healthier, wealthier, wiser, and longer-lived, the evidences of the senses to the contrary notwithstanding."

Do we believe this? Then we shall do better work than ever before.

A New Year's Thought.

BY MARY LILIAS BEST.

"RING out the old, ring in the new,
Ring out the false, ring in the true."
So sing the joy bells at this New Year's tide,
And in those words, to each and all,
There comes a message echoing far and wide.

Ring out the pride, the hatred, and self-will,
The thoughts of malice which contain
The poison that doth sting and wound and kill,

And let the love of self no longer stay,
Deny it, and declare it naught,
Then, to the love of Christ it will give way.

Ring in the thoughts of peace, good-will, and love,
The love for God and man alone,
And on our hearts will rest the heavenly dove.

O may this message ringing from the tower,
Be heard by all! And let us then,
Not only once a year, but every hour
"Ring out the old, ring in the new,
Ring out the false, ring in the true."

Testimonies.

Shown the Way in Christian Science.

The spring of 1887 found me in a very bad condition. I expressed to my friends that I could never live through another winter unless some great change was made. Our family physician had said to my friends that it was a matter of little time with me. Three years before I had a brother pass away with the same disease with which I was afflicted, kidney and lung trouble.

In his last days he said to me, "Do not wait until it is too late before you have something done for you, as I have done." For years I had been troubled with a cough and at times it was severe. After a hard attack of bronchitis my lungs were pronounced by the physician to be diseased, and never afterwards was I free from a cough. Also the kidney trouble grew worse.

My brother's death was a severe experience. His loss was almost unbearable and did not have a tendency to better my physical condition. I employed the best physicians in our city but received no encouragement from them. At last pneumonia appeared, and for days it was a close pull. Finally I rallied, which was a surprise to the physician, as also to my friends. Yet it left me in such a state that life was a burden, death would have been preferable. I felt I was without hope or God in the world.

I was reared in the Congregationalist Church, yet I never gained an understanding of God which satisfied. For years I had been hungry for spiritual food, but did not know how to get it. My Bible had become a book of the past. My dear mother would say to me, "My dear child, in your feeble condition I do not see how you dare go to sleep without asking God to care for you." To which remark I made no reply. She did not know, and I could not tell her, how day by day my desire was for God to show me the way. I was truly hungry for spiritual food.

While in this condition of mind and body, a member of our family first heard of Christian Science, and advised me to try it. They could not tell what Christian Science was, they were told it cured people without medicine, and gave the names of two parties who had been cured in this way, and gave the name of the Scientist. But I had no idea of trying it. I felt it was something out of the general line. It might be spiritualism, and above all things, I desired to keep out of that.

But as time passed by the thought would present itself, The physicians can do you no good, and would Christian Science? Finally I decided to see the Scientist and place my case before her, which I did, and the result was I concluded to give Christian Science a trial. Before leaving she placed a book before me and said if I would take and read it, it would be helpful. But I could not see why I should pay three dollars for a book, if she were going to do the healing. I said to her I did not think I would take it just then.

For two weeks I had treatment but failed to receive any benefit. Feeling nothing could be done for me in the line of Christian Science, with tears I told the healer I felt there was no help for me and would give it up. She said she did not think I had given it a fair trial. I had not taken my medicine. That I would not expect help from a physician if I did not take his medicine; that the book she wished me to purchase was to be my medicine, and I refused to take it.

Feeling there was nothing else to go to I thought if I had not given Christian Science a fair trial I would do so, and told her I would take the book, "Science and Health with Key to the Scriptures," and begin treatment again.

As I opened the book and began to read, error said, That book will never do you any good, and you cannot understand it. But my medicine must be taken. I spent much

of my time reading its pages, but could get no understanding of it.

After a few days my cough grew worse, but my healer encouraged me by saying it was coming to the surface and I would soon be better if I continued to read. So I continued to take my medicine. There seemed to be no trouble in taking an overdose, and it had begun to be a very pleasant duty to perform, although I had not as yet begun to understand the nature of the medicine.

I also got out my Bible. Very soon I found the "little book," Science and Health, and my Bible, working in perfect harmony. I was gaining an understanding of God. I was beginning to learn that God was the eternal Mind, and not a person. I could accept of a God in that light.

I had become so engaged in reading the two books I had almost lost sight of my mortal body, and I was being healed. The cough which had occasioned so much fear was the first thing to disappear, and other troubles gradually vanished.

This medicine was the pearl I had been seeking for years, but was unable to find until Science and Health revealed it to me.

My desire for God to show me the way was being answered. The thought of the Psalmist: "I shall be satisfied, when I awake, with thy likeness," was made plain to me. I shall be satisfied when I awake in the understanding of Truth,—for it does satisfy as nothing else can.

I shall always feel very grateful to my healer for her persistency in making me understand that there was something for me to do. I had to work out my own salvation.

The following fall came my first demonstration, which was instantaneous. From that day to the present time I have never had one doubt as regards Christian Science being the Truth.

In 1888 I went through class with one of Mrs. Eddy's loyal students. Thirteen years have passed and my Christian Science medicine has never failed to give relief. But the physical healing is nothing compared with the spiritual uplifting. The understanding Science and Health gives us is more precious than rubies and more to be desired than fine gold.

I might mention many cases of healing which have come through the realization of God's all-power and presence which our dear Mother and Leader has taught us. Words fail to express my gratitude for all the toil and sacrifice she has made for me, for through her I have not only found health, but a better understanding of God. A Principle which when applied gives perfect results. We must work and bear the cross if we would win the crown.

E. F. BARRETT, Providence, R. I.

Instantly Restored to Health.

For eight months I had been a sufferer from chronic female difficulties. I tried all kinds of doctors, all kinds of treatment, all kinds of patent medicines, but grew worse right along. Everybody that came to see me thought I had consumption.

Just the day before I was healed a doctor told my sister that he would have to treat me seven or eight months before he could say whether I was ever to get well. But God had not forgotten me. I was brought up a Lutheran and had studied the Bible, but I did not understand it.

I knew God could cure me, but had not the firm faith that He would do it. I prayed for God's mercy. On Tuesday my sister went to the doctor for me. On Wednesday some Christian Science ladies called on me. I did not know they were Christian Scientists. I told them how long I had suffered and how long I had to suffer, and that I did not know whether I would be well or not. One of the dear ladies said there was no need of my suffering longer; that God could heal me if I only believed it; that

God was just as mighty now as He was nineteen hundred years ago. She asked me if I remembered how Jesus healed the sick. She told me she was healed and God could heal me too if I only believed it. I felt myself not wanted by God, but this lady repeated many sayings from the Bible which I had learned in school, and it all came back to me. When I said, "I know all that," she replied, "Why don't you believe it?" I said then, "With all my heart and mind I *do* believe, and I know that God can cure me," and so it seemed. The pain left me instantly, but I did not quite realize it. The ladies got up to go, and I too got up from my chair without a bit of pain. I stood on my feet for some time and felt so happy to think that I could be cured. After the ladies went I prayed to God for mercy. I thought, "Why cannot I be healed like the woman who only touched his garment?" and right there it became so light to me that I arose, knowing that I was healed.

Then I opened the Bible to Romans, 13 : 11, 12, "And that, knowing the time, that now it is high time to awake out of sleep: for now is our salvation nearer than when we believed. The night is far spent, the day is at hand: let us therefore cast off the works of darkness, and let us put on the armor of light."

I felt so happy after that I went into the kitchen and helped the girl get supper, and when my husband came home I was walking around. I told him, I thanked the Lord I was well. He thought I was insane at first, but he soon realized that God had cured me. The next morning I was up at five o'clock, got my husband's breakfast, and walked to my sister's to let her know I did not need the treatment of the doctor, and, praise God, I have been well ever since.

I read the Bible and Science and Health daily, and oh, what a different understanding I have of the Bible! I have had quite a number of demonstrations. I am only a beginner in Science. I was healed the third of May, 1900.

"I cried to thee, O Lord; and unto the Lord I made supplication. . . . To the end that my glory may sing praise to thee, and not be silent. O Lord my God, I will give thanks unto thee for ever."

Mrs. C. T. ROH, Grand Rapids, Mich.

A Child's Faith Rewarded.

I wish to tell of a case of a severe burn that came to my notice. The prophecy that "a little child shall lead them" was fulfilled in this instance. The little girl whose mother was burned had attended our Sunday School for the first time on Sunday, and on the next Friday the accident occurred. Before sitting down to supper she had put some potatoes in an air-tight can on the stove, intending to make yeast. During the meal, thinking the potatoes were about dry, she went to look at them, and took hold of the can with both hands. As she was removing it the can exploded with a loud report. It being near the Fourth of July the husband thought it was fire-arms or crackers he had heard; but hearing the can fall and thinking something had happened, he went to the kitchen and there found his wife with her hands to her eyes, but so dazed she could not speak. He led her to the sink to wash her face, but she resisted, thinking the water would not be good for the burn, so he picked off the pieces of potato plastered on her face. In the midst of the confusion their little daughter jumped up and down, crying, "Bring Christian Science quick! Bring Christian Science quick!" But they did not heed her plea, and sent for a doctor.

It was found that the potatoes had struck her in both eyes, nose, and cheeks, she had also inhaled the hot steam. The physician applied his remedies, and covered her face with cotton, the applications being renewed several times during the night, and each time the severe pain almost

produced spasms. In the morning the little girl, witnessing the intense suffering, again set up her plea for Christian Science. They finally yielded and the child came for me.

They knew nothing of Christian Science. I had never met either of them. I went into the room where the poor sufferer lay. I asked the husband if he wanted Christian Science treatment for his wife, and he replied, "Yes, if you think you can help her." I said, "God can help her," and requested him to take the cotton and medicine off her face. He did so, and such a sight as met my eyes. The face and head swollen, until she did not look like a human being. The eyelids were black, and the entire face a dark purple. I spoke to her, and she moaned, and said, "Oh, I am blind! I am blind!" I told her God was able to make her see, and I gave her a treatment. She fell asleep while I was treating, and did not suffer to amount to anything after this. That same afternoon she could see out of one eye by pulling it open, and the next day could see out of both. Four days later, she picked pieces of potato out of her eyes, showing that the ball of the eye was burned as well as the outside. In a week she was out in the yard, and in two weeks did he *ashing*. No one who first saw her, thought she would ever see again; but she is healed without a scar.—Mrs. A. C. S., Pana, Ill.

Locomotor Ataxia Healed.

When Christian Science found me, I was almost a total wreck, "driven by the wind and tossed." I sat in an invalid's chair for three years. The doctors said I was incurable as there was no record of such a case being healed. I was suffering from an aggravated case of locomotor ataxia, with all the ills accompanying it. I did not sleep for a week at a time, and when I did my sleep was neither restful nor any comfort. I was in pain all day and night. I was hungry, yet too worried and afraid to eat. I took medicine all the time, but received no benefit. I was ill-tempered, nervous, hysterical, and smoked and chewed tobacco a great deal. I was also given to profanity. What a picture! but it is not overdrawn. Now I look, and the scene is changed; Christian Science has brought Light. Great peace has also come. I walk and work. I go out in all kinds of weather. I can eat what is set before me. I am a better workman; I am better morally. I know more about God—Love. I love my neighbor better, and know who my neighbor is. The evils of tobacco, drink, and profanity have disappeared. Many iniquities have been cleansed, and many diseases healed. My improvement has been wondered at by many, even Scientists remark it.

I cannot express myself, for I have received more than I had hoped to realize. No testimonial is adequate. I positively know that the reading of "Science and Health with Key to the Scriptures," and the work of its faithful students in the practice of Christian Science, has saved me from an untimely grave when other helpers failed, and is now saving me from myself. Through what I have been taught and proven for myself of the truth of the writings of Mary Baker Eddy, I know that my Redeemer liveth. For this reason I do not hesitate to speak of her as "Mother," and to thank God for what good has resulted from Christian Science.

G. E. CAMERON, Cincinnati, O.

In life troubles will come which look as if they would never pass away; the night and the storm look as if they would last forever, but the calm and the morning cannot be stayed; the storm in its very nature is transient. The effort of nature, as that of the human heart, ever is to return to its repose, for God is Peace.—MACDONALD.

Religious Items.

The *Boston Post* publishes the statement that the Rev. William S. Fritch, recently resigned from the pastorate of the Second Congregational Church of Attleboro, Mass., because his religious convictions were no longer in harmony with the Church doctrines. The following declarations of belief, which he is said to have made from his pulpit, show his position:—

"Evil is error, delusion, a mere negation. It is to goodness what cold is to heat. Cold is simply the absence of heat. All life is lived under eternal principles. Doing good brings its immediate reward, and doing evil its penalty. The penalty is corrective. An absolutely evil being would be an impossibility, for absolute wickedness means absolute death.

"A hell of everlasting torment is therefore impossible.

"Heaven means a life of goodness and love. The good and the loving find God and realize His presence.

"Hell means wickedness and remorse.

"Hell is a state, not a place.

"Heaven is a state, not a place.

"The accident of death does not change the principles of life. Life in the hereafter goes on under the same spiritual principles as here. All discipline will be corrective there as it is with us now.

"The judgment day is now. The judging is going on at this moment.

"The devil is a being existing only in our own breast."

In an editorial on "The Administration of Fear," the *Universalist Leader* says: "The attempt has been made in all ages to frighten men out of disobedience and into obedience by a resort to all kinds of intimidation. The ruler, the priest, the pedagogue, and the parent have each in turn figured as alarmists, addressing the strong passion of fear, confronting sin with a display of consequences, real or imaginary, and operating the machinery of terror in behalf of their particular concerns. This reign of terror, so far as religion and theology are concerned, is undoubtedly now passing away—is, in most cases, already gone. But what has been the result, so far as we can judge, of this policy of intimidation—this resort to fear as a saving agency? We risk nothing in saying that in state and church, in school and family, the result has been mainly evil."

A writer in the *Congregationalist* says: "Injustice is hard to be borne. This explains why forgiveness often, not to say usually, is so difficult. Whatever injury may have been done to us, we feel that we have been treated unjustly. Often we are mistaken. But so it seems. And injustice seems to concern not only ourselves, but the whole universe. Not to resent it seems like disregarding the public good, like being untrue to the great principles of righteousness on which the welfare of the race is based. Thus we exaggerate our own importance and that of the injury which we have suffered. Indignation distorts the whole situation. We are bound to forgive. God has commanded us to do so."

In a sermon on "The Spiritual Needs of the Universalist Church," published in the *Universalist Leader*, the Rev. L. M. Powers says: "Our first need is faith in our idea. Not faith in the partial and narrow thought we have emphasized so long, but faith in the full and complete meaning of Universalism, for it needs not much insight to see that if God means well with men by-and-by. He means well with all men now. If it is God's decree that some should be morally debased in this world, I see no reason for prophesying at length a perfect life for all mankind. Either God is a loving and impartial Father to all men now, or He never will be."

A contributor to the (Unitarian) *Christian Register* says: "I think that it was Curtis who said that ideas are the life of a nation. Whoever said it, it is true, and no less true of the individual than of the nation. It is in the life of ideas as distinguished from the

life of mere bodily activity that the higher life of our communities consists. It is a good thing to be strong, quick, deft, and enduring in body, but better to be strong in patience, hope, and faith, quick to see and appreciate things right in the sight of God, deft and enduring in doing them."

In an editorial the (Episcopalian) *Church Standard* says: "When one considers what the Christian religion is, and what the fundamental doctrines are which its ministers are sent to preach, it is not only astonishing, it is utterly confounding, to observe the almost universal heedlessness with which its fundamental articles are ignored in order to give place and prominence to matters of comparatively trivial detail to which there is no sign in Holy Scripture that Jesus Christ and his Apostles ever gave the slightest thought."

The following is from an editorial in a late number of the (Methodist) *Christian Advocate*: "The supreme cure for heart loneliness is communion with God; and it seems some weakens your reason, impairs the tenderness which sorrow brings do we come to appreciate the value, satisfaction, and real meaning of intercourse with the divine Father. . . . It requires loneliness sometimes to convince us that we are not alone, and the darkness to show us the light."

The following is an extract from a sermon published in the *Universalist Leader*: "Our third need is faith in God. But don't we believe in God? you say. No; we only half believe. The best that can be said of us to the present is, that we have made belief in God possible. We have affirmed that God is not a monster. We have declared that the mistakes of earth are not irreparable, and that God will somehow bring good out of seeming evil."

The (Baptist) *Standard* quotes the following: "John Wesley's mother once wrote to him when he was in college: 'Would you judge of the lawfulness or the unlawfulness of a pleasure, take this rule: Whatever weakens your reason, impairs the tenderness of your conscience, obscures your sense of God, or takes off the relish of spiritual things; whatever increases the authority of your body over your mind, that thing, to you, is sin.'"

A writer in the (Baptist) *Standard* says: "What does Jesus mean by 'the pure in heart'? Not what the majority of people suppose. The primary meaning of the Greek word is 'singleness of purpose.' In the heart of him who would see God there must burn and glow one supreme desire, like the sunbeam in the heart of the diamond, and that desire must be to serve God."

The twentieth anniversary of the Christian Endeavor movement is to be celebrated in Portland, Maine, next February, when a bronze tablet, the gift of "Endeavorers" in all parts of the world, will be placed in position on the front of Williston church, where the first society was formed. The organization reports a membership now of 3,636,060.

The *New-Church Messenger* says: "Christianity does not teach that there is any virtue in misery, or in being hated, or despised and persecuted unless it is for the sake of the Lord and the Gospel. The blessing is not in poverty or misery of any kind; but if in striving to be holy these things come upon you, then 'Blessed are ye.'"

An editorial in the *Universalist Leader* contains the following: "Those who believe with all their hearts are the ones who accomplish. You can load them down with discouragements, burden them with sorrow, hamper them with pessimistic prophecies, but you can never defeat them until you break their faith."

A writer in the (Baptist) *Examiner* says: "Kindness, meekness, patience, calmness are not spontaneous graces, springing up

without spiritual husbandry. Through the cultivation of the graces alone do we enter into the peace of God; and the supernal peace is chiefly won at the expenditure of everything else."

An editorial article in the (Baptist) *Watchman* contains the following: "Is it not wise to put behind us the narrow, critical, fault-finding temper; to forsake the negative attitude, and to throw ourselves, our influence, our time, our money, into the supreme cause of advancing the kingdom of God in the world?"

J. R. Miller, D.D., in the (Baptist) *Examiner*, says: "We can be faithful to our sacred calling only by letting Christ himself live in us. Then he will manifest himself in our life of fault and failure, transfiguring it, so that in every feature divine beauty shall shine."

James Taylor Dickinson, in an article in the (Baptist) *Examiner*, says: "In the ultimate analysis, the throbbing heart of all the pathos and the tragedy in literature and in life, from David to Tennyson, from Paul to Browning, will be found to be sin, moral and spiritual dereliction."

"The churches must begin their work with their own members: they have named them Christians, now make them Christian," says the *Universalist Leader*.

"The tokens of an approaching spiritual awakening are evident on every hand," says the *Standard*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*, but not on *Chicago*.

All orders for Journals, Sentinels, Quartermasters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem, Single book, prepaid \$3.00

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN.

"Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER.

A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL.

Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL.

Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH.

By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892.

A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE.

By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp. HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp. THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. One copy or more, each, 6 cents; 12 copies to one address, 60 cents. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

Political and Governmental Notes.

Both branches of the Pennsylvania Legislature met in biennial session January 1, and the first tests of strength between the faction of the Republican party led by Quay and the opposing forces of the Democrats and anti-Quay Republicans resulted in a victory for Quay's supporters. William T. Marshall, who was the choice of the Quay members for speaker of the lower house, was elected by a majority of one vote, and Senator Snyder, a Quay man, was elected president of the Senate by a majority of 23. At a joint caucus of the Quay Republicans of both houses 123 members of the Senate and House pledged themselves to vote for Quay for United States Senator. This number is four less than enough to elect, but it is generally taken for granted that Quay will be elected to the Senate once more.

A New York press dispatch of January 2, says: "Work will begin this week on the vast improvement of the North River water front between Bloomfield and Twenty-third Streets, authorized by the dock board, and which is to cost several million dollars. When the work shall have been finished, ten huge piers will replace the present structures with accommodations for the largest ocean steamships and double the present facilities of commerce."

The monthly statement of the public debt shows that at the close of business December 31, 1900, the national debt, less cash in the treasury, amounted to \$1,099,101,310.

Benjamin B. Odell, Jr., was inaugurated Governor of New York on January 1, succeeding Theodore Roosevelt, the next Vice-President.

Foreign News.

Field Marshal Lord Roberts arrived at Cowes, Isle of Wight, by the steamer Canada, on January 2. He was received with almost royal honors. He landed from the royal launch and was received at the pier by Princess Beatrice in her capacity as governor of the Isle of Wight, and by the Duke of Connaught, representing the Queen. The people cheered rapturously. The party rode in the royal carriages to Osborne House, at the entrance to which an arch of laurel had been erected by the Queen's orders as a special mark of her appreciation of the field marshal's work. Lord Roberts was given a private audience with the Queen, who bestowed on him an earldom, with a special provision by which the patent of nobility may descend to Lord Roberts' daughter or to some special line of succession in default of male heirs. Lord Roberts' only son, a lieutenant in the British army, died of wounds received in South Africa just before his father was asked to take command.

At the railway station in London Lord Roberts was met by the Prince of Wales and other members of the royal family, and in the evening a dinner was given at Buckingham Palace by the Prince and Princess of Wales in honor of the field marshal.

So serious had the Boer invasion of Cape Colony become last week that the colonists loyal to Great Britain had to volunteer for military service to help defend their principal towns. The Boers seemed to be able to go where they pleased gathering recruits from among the disaffected Dutch as they marched, commandeering all the horses they could find and looting the farms of the loyalists. Even in Cape Town the business men have organized a town guard. On January 3 the battleship Monarch landed men and guns to relieve the troops for service northward. The hurried efforts in all directions to get Cape Colony into defensible condition shows that the British officials are uneasy about the result of the invasion.

Alexis E. Frye, the American superintendent of public schools in Cuba, on January 1 was united in marriage to Senorita Maria Teresa Arruebarena, a school teacher of Cardenas. Mr. Frye and his bride first met last June, when the superintendent officially received the young lady together with the other teachers of Cardenas on board the transport which was to take them to Boston to attend the Harvard summer school. The wedding was the most important social event Cuba has known for twenty years. The reception, held in the palace formerly occupied by General Lee in Havana, was attended by Governor General Wood and officials, and by some two thousand Cubans and Spaniards from all parts of the island.

The British Colonial Office has announced the following appointments:—

Sir Alfred Milner to be governor of the Transvaal and British high commissioner. The Hon. Sir Walter Francis Hely-Hutchinson (Governor of Natal and Zululand since 1893) to be Governor of Cape Colony. Lieut. Col. Sir Henry Edward McCullum (Governor of Newfoundland since 1898 and aide-de-camp to the Queen since 1900) to be Governor of Natal. Maj. Hamilton John Gould-Adams, (resident commissioner of the Bechuanaland protectorate) to be Lieutenant-Governor of the Orange River Colony.

A dispatch dated January 2, from Cape Town to the London *Daily Mail*, dwelling upon the gravity of the position in Cape Colony, says:—

"The Boer invaders now number five thousand. They are ranging over immense tracts of territory, necessitating the employment of an army corps to deal with them. Lord Kitchener has poured troops into the disturbed areas, but the fugitive tactics of the Boers have to a large extent neutralized his precautions."

The foreign engagements of the porte for the purchase and renovation of warships and for naval and military artillery now amount to twelve million dollars, says the Constantinople correspondent of the London *Times*. "While the treasury is absolutely empty and internal debts increase daily."

A press dispatch from San Juan, Porto Rico, dated January 2, says: "Thousands of people yesterday witnessed the starting of the new trolley system, the island's first road of that description. The people were much astonished."

The United States Ambassador, Joseph H. Choate, presented the Hay-Pauncefote treaty amendments to the British Secretary of State for Foreign Affairs, the Marquis of Lansdowne, January 4.

Ernest Brenner, the new president of Switzerland, is only forty-four years old, but is one of the ablest international lawyers in Europe.

Industry and Commerce.

The Chicago *Tribune* on January 2, published the following: "Signatures were affixed in this city yesterday to a contract under which a Chicago packing firm will supply the Russian government this year with fifteen hundred barrels of a specially prepared meat to feed the soldiers of the Czar's army. The terms of the contract will exceed \$100,000. The vast field for supplies in Russia and Siberia has been opened to Americans only lately."

The year just closed has been most prosperous in the history of the Indiana oil field. The increase in the number of completed wells over that of 1899 was 740. The cost of the wells put down in Indiana in the last year was \$4,740,800 and the amount expended in drilling dry holes was \$1,624,000.

The wages of the thirty thousand or more employes of the Carnegie Steel Company in its large plants in the Pittsburgh district, will remain the same during 1901 as last year. The employes were expecting a reduction.

Business failures during the past year are put by R. G. Dun & Co. at 10,833 with liabilities amounting to \$174,113,236. For 1899 the failures numbered 9,393, with \$123,132,679 liabilities.

General News.

The twentieth century was impressively ushered in by the people of Boston, who assembled by the thousands in and around the State House on Beacon Hill and joined in the solemn welcome. On the balcony overlooking the Common stood the Governor, the venerable and wise Edward Everett Hale, D.D., a few other prominent men, a chorus of some two hundred singers and four trumpeters. The multitude crowded the State House corridors and front rooms, the broad walks and stone steps leading to the front entrance, Beacon, Park, and Bowdoin Streets, and the Common half way to Tremont Street was closely packed with people, while the balconies and windows of the dwellings and office buildings within earshot of the exercises were filled. Shortly before midnight the trumpets sounded and the great choir and the people sang the following doxology:

Be thou, O God, exalted high:
And as thy glory fills the sky,
So let it be on earth displayed,
Till thou art, here as there obeyed.

Then the well-beloved preacher, Dr. Hale, who is himself past three score years and ten, read the Ninetieth Psalm, and after silent prayer, led the vast audience in repeating the Lord's Prayer. Then the choir sang a hymn written for a similar occasion and first sung at daybreak, January 1, 1701, on the same spot. Out of the surrounding silence came the stroke of the bell in the tower of King's Chapel (itself a relic of bygone centuries), announcing the portentous hour. The trumpets responded in a long drawn blare for each stroke of the bell, which counted out the final hour. Meanwhile church bells were ringing in every church tower and steeple. It was a superb setting for such a celebration. Beacon Hill, the heart of old Boston: the stately capitol with its gilded dome aglow with hundreds of electric lights; the sloping hillside of the Common with its serried ranks of grand old elms; a glorious moonlit sky. It was a scene never to be forgotten.

In every large city in Christendom, the dawn of the new century was publicly celebrated. In every Roman Catholic church throughout the world mass was celebrated at midnight, and nearly all Protestant churches held watch-night services.

M. E. Stone of Chicago, general manager of the Associated Press, in closing an address on "News Gathering Methods" before a Boston audience, expressed the hope that the day was dawning when the tittle-tattle of life would receive less attention in the press and when the higher and better things of the world's history would be deemed news.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Century Retrospects.

Progress in Methods of Travel in a Hundred Years.

THE caravan was typical of the Middle Ages, and survived even in brand-new America until the continent was spanned by railroads and the waterways so united that from the sea we can now in steam vessels penetrate the very heart of the new world. It is in this new world that the most important transportation innovations have originated and been worked to something near perfection. And the beginnings of real progress towards present completeness are not much older than our national life. But the experimental stage, without which nothing could have been accomplished, began much earlier, for Sir Isaac Newton comprehended in some sort the practical power of steam, and in 1680 suggested a way by which steam locomotion was really achieved. From then till boats were propelled by it in the water and carriages driven over the roads, the ingenious minds of the world were busy trying to carry out in practical ways the suggestion of this greatest scientist of the seventeenth century. Indeed, it may be said with entire truth that the record of improvements in the steam engine and steam locomotive is also the history of travel during the two centuries just past. The eighteenth century was that of experiment; the nineteenth that of accomplishment.

During the century of experiment the travel by sea was in sailing vessels; by land in wagons drawn by horses and on horseback. For more than one third of the century of accomplishment these methods were unchanged, though on the eve of change. They were not to any great extent superseded till half the nineteenth century was gone. Now they are all but obsolete. It is quite true that sailing vessels are still numerous on all the seas, but they are not used to any extent for travel. So, also, are horses used in greater numbers than ever before; but they, too, are no longer employed in the service of travel in a large sense. But during all the one hundred and fifty years, from 1680 to 1830, efforts were courageously made so to harness steam as to make it useful in transportation.

The first efforts were to get an engine to run on the common roads. Even in the eighteenth century in France, in England, and in America, were built road engines—automobiles, if you choose—which carried their own weight up pretty steep grades, and other loads besides. The condition of the roadways, whether in town or in the country, made it practically impossible for these heavy machines to do any effective and lasting service. They racked themselves to pieces. Tramways, over which cars were drawn by horses, were already used in the mining countries, and just before the beginning of this century, the inventors who had been experimenting with road locomotives turned their attention to trams or railways.

Richard Thevithick, whose road engine, the "Puffer," had made a sensation in England in 1801, in 1803 put a locomotive on a tramway at Merthyr Tydfil, in Wales, and

went up a heavy grade, winning a wager of £500. In England they said Thevithick was mad because he used high pressure steam, and the influence of James Watt was so potent in opposition that capital repulsed him even in the face of very plain demonstrations of the sanity of his schemes. But he is known to the world to-day as the "Father of the Locomotive," and his fame is secure for all time. In this country Oliver Evans was at work on the same lines as Thevithick. And he did wonderful things. But, like Thevithick, he was quite a generation before a time when there was enough enlightenment to appreciate him. He agitated for railroads in every way that was open to him, and in 1809, said in a public speech: "The present generation will use canals, the next will prefer railroads with horses, but their more enlightened successors will employ steam carriages on railways as the perfection of the art of conveyance." That was a very conservative prediction.

Only men of imagination of the first order, even in the first decade of this century, foresaw a tenth part of what was to be accomplished in the next seventy-five years. The experiments continued, but most of those who were at work only hoped to carry freight and take out the product of mines with their steam engines on railroads. The great steel thoroughfares of to-day were undreamed of. But when, in 1830, a passenger line was opened, things moved with great rapidity. During 1829 a railroad had been built from Baltimore to Ellicott's Mills. The sure motive power was the horse; the hoped-for power was a sail car; the dreamed-of power a steam locomotive. The line was opened—the beginning of the present great Baltimore & Ohio system—on the 22d of May, 1830.

The sail car was moderately successful, the horse entirely so. By the 28th of August Peter Cooper had his very crude locomotive, "Tom Thumb," ready for trial. The engineers predicted that the curves would prevent success. But they were wrong. The man who later became famous as the greatest practical philanthropist of the century, himself stood at the throttle and drew a train of cars from Baltimore to Ellicott's Mills and back. This was the first passenger train that was ever run in the world, and the revolution in modern methods of travel had begun.

To the men who were identified with the beginning and the extension of the Baltimore & Ohio Railroad, the world owes a great debt. They were brave, they were patient, they were resourceful, they were ingenious, and above all, they were American patriots. Progress was making also in England, where the great Stephenson was the foremost man in the new work which was to bind the world so closely that it has now become as one small neighborhood. He had capital at his disposal, and could devote his time to practical work without worrying about the money. Not so these Americans. Their stockholders were impatient and ever on the eve of giving up. But they persevered and asked Americans to make locomotives for them. In New York they sent for Stephenson locomotives, but in

Maryland and South Carolina they preferred home manufactures. And they got them, and got what answered better than those brought over sea. By 1840 the tide had turned, and the engineer, Norris of Philadelphia, sent four engines to England to use on the Birmingham & Gloucester Railway. The English could not make a locomotive that was useful on a grade of one foot in thirty-seven feet, so they had to send to us for them. This was the first exportation of locomotives. In 1899, it is interesting to record, manufacturers in America exported locomotives to the value of five million dollars.

The Baltimore Railway pioneers were also looking out for the comfort of passengers, for we learn from the *Baltimore Chronicle* of October 31, 1837: "The cars intended for night travel between this city and Philadelphia, and which afford berths for twenty-four persons in each car, will be placed on the road and used for the first time to-night."

This was the first sleeping car; this was the forerunner of the modern parlor car, in which one can be almost as comfortable as at home and still be going over land at the rate of forty-five miles an hour. "Dick" Thevithick, with his "Puffer" on the English highways and his little tramway engine in Wales, did not live to see anything like this with his own eyes, though the eyes of his mind may have seen it afar off; but the good Peter Cooper, who drove the first passenger train, did see it accomplished and many more besides, for when the first seemingly insurmountable difficulties were overcome the progress was with the strides of a giant.

Just look at the record. By 1850, in the United States we had 9,021 miles of railway; in 1860, this had increased to 30,635; in 1870, to 52,857; in 1880, to 93,262; in 1890, to 166,653; in 1900, to 188,809. This gives us in this country about one mile of railway to 398 people, while the travel is so great that the total mileage of passenger trains shows that each man, woman, and child, had they all traveled equally, would have gone in a year in excess of two hundred miles.

We are the greatest travelers in the world and require the best accommodations and facilities. In Europe they only have one mile of railway to twenty-two hundred people; in Russia, one mile to four thousand. What is more, our railways have nearly always gone in advance of civilization, ahead of necessity. If a new section is to be settled, first is the railway, then the settlers. This accounts in a great measure for our excessive mileage. Now that there are comparatively no unopened sections, railroad building will not be so rapid. Indeed, there has been a great falling off in the last decade. But while the mileage is not being increased so rapidly, vast sums are expended for betterments. We are getting better engines and cars and much better road beds. This makes for comfort and security. Why, the security is so great at present that a passenger, according to mathematical calculation, would have to travel at the rate of thirty miles an hour for 170 years before getting hurt, and about one thousand years before getting killed. That is safer than staying at home. It is surely much safer than walking in Broadway.

We also have the fastest records in America. The best is a run of ninety miles at the rate of 58.2 miles an hour, including stops, and at the rate of 62.2 miles an hour excluding stops. This train's maximum speed was seventy-five miles an hour. The next fastest record, and probably really the best, is a run of 444.6 miles at the rate of 53.9 miles an hour, including stops, and 54.3 miles, excluding stops. The maximum of this train is 68.5 miles an hour. This is the famous Empire State Express, of the New York Central.

Speaking of the speed of trains, Mr. Depew, the president

of that road, is of the opinion that the final speed has been reached. He does not speak of physical or mechanical difficulties, but of the commercial limit. Faster trains will not pay. In the year of the World's Fair in Chicago, every visitor wanted to take the fastest train available, for each person wanted to participate in the most remarkable thing possible. But in ordinary years only a few persons will pay an increased fare for a quicker train. For the same reason he does not believe that the sumptuous private car will in any sense take the place of the private yacht. It is too expensive. A railroad official can afford it, as his private car is hauled over other roads as a matter of courtesy, but a private individual must pay, besides the expenses of his car, full fare for all the passengers his car could hold.

Now as to the water. We had steamboats before we had successful steam locomotives. Here, too, Americans were the pioneers. Every one knows the story of Robert Fulton. He, like Morse, the father of the electric telegraph, was an artist—a poor artist, but a great inventor. His claim to be the first adapter of the steam engine to paddle wheels for propulsion in the water has been disputed, but the world will always give him the credit.

When Napoleon meditated his fearful descent upon England, Fulton engaged to build him steamboats to take his armies across the Channel. Fortunately, though Napoleon was interested in the scheme, nothing came of this, although Fulton's first steamboat ruffled the waters of the Seine. But the really important work was done in America, beginning in 1807, when Fulton's boat steamed up the Hudson River. This was a commercial success, and passengers have been carried in boats propelled by steam ever since. The first ocean going steamboats had paddle wheels, and these made eight and nine knots an hour, which was not better than the great sailing vessels called "clippers," which ran almost on schedule time. Ericsson invented the screw propeller, which was first shown to the English Admiralty in 1830. But it was not adopted for ten years.

From then till now steamships have been getting faster and faster. Nine-day boats across the North Atlantic became common, then eight days, even seven days, then six days. There, the limit seemed to be reached and at the record stuck for several years. But it has been lowered; now it is not unusual for the best of these wonderful Leviathans to make the trip in a little over five days, while four-day boats are talked of with confidence by the men who ought to know whereof they speak. To me it seems the limit will only be reached, as with railway trains, when a greater speed will not pay.

The interior travel by water has decreased in thirty years. Few travel by water when they can go by rail, except when on "pleasure bent." In the old days, to go from New York to New Orleans, or any of the Gulf ports, it was usual to go by sea or across the mountains to Pittsburg and then down the Ohio and Mississippi on steamboats. No one would do that now, except for an experience to recall an almost obsolete method of travel.

And as we begin a new century we also see the old road engines again coming into use. The automobile would have reached its present stage, no doubt, half a century ago had not the inventive minds of the world turned their attention to railroading.

As to travel in the air, we are still in the experimental stage. Progress, no doubt, has been made, but the accomplishment has been so little, compared with other methods of going about, that we can well afford to be for the moment content with what we have done, and leave that for an historian of the future to record.

A Reply to Dr. Marshall of Raleigh, N. C.

Boston, Mass., November 6, 1900.

To the Editor:—In your issue of the second you reported a sermon on the subject, "Christian Science and Faith Cures," by Rev. Dr. Marshall. He first presented quotations from Mrs. Eddy's book, and that much of the sermon I heartily endorse. He adds: "Mrs. Eddy's book, Science and Health, is not a very readable book, nor one easily understood." No science can be understood without earnest study and application. Even our Master said: "Strive to enter in at the strait gate: for many, I say unto you, will seek to enter in, and shall not be able." This statement implies that it is not easy to understand and live the Truth; and yet ease and harmony always follow such practice. An apprentice often chooses a hard way of doing a thing, which is easily accomplished by a master. Jesus said: "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy and my burden is light." The Master had served his apprenticeship well, and was able to accomplish with perfect ease that which his disciples failed to do, and concerning which they said: "Why could not we cast him out?"

Multitudes of those who are "comparing spiritual things with spiritual," have found Science and Health, the Christian Science text-book, easy of comprehension. Are the people of this denomination better educated than Dr. Marshall, and so more equal to the understanding of this volume? This I do not assert, but would rather attribute the difference between those who so easily take hold of the Science of Christ, and one who evidences his misapprehension only, to the fact that some Christians are more ready to accept the premise of Christian Science—that God is Spirit, Love, Life, Truth—and for this reason are better capable of comprehending conclusions drawn from these definitions of God. It might be wise for our clergymen to refrain from the effort to express an opinion as to the teachings of Christian Science until they too have used the ideas taught in this school with healing results. Only the practical Christian Scientist can intelligently teach this Science. The effort to apostrophize about any science, or any subject concerning which knowledge is not gained from actual experience, is likely to prove a failure.

In answer to the question how it is possible for a system like this to grow as it has done into one of the most remarkable movements of modern times, Dr. Marshall says, "By practising a system of mental healing whereby it is claimed that many who have tried other curative agencies in vain, have, under this system, been restored to health." So far, this answer is correct, but is not complete. While it is true that people have been healed of physical troubles through Christian Science after having exhausted their faith in other remedies, it is also true that they have been healed spiritually as well. Sinners have been regenerated; drunkards have been reformed; sorrow, disappointment, and dissatisfaction have been replaced with joy, happiness, and satisfaction, through the conscious ever-presence of God, as Christian Scientists are taught to realize. I speak from personal experience on this point.

Previous to my study of Christian Science I had become very unhappy—full of doubts and fears, and sceptical even of the truths of the Bible. In fact, I was dissatisfied with things in general; but through Christian Science I have learned to anchor my hope beyond the veil of matter, in God, whom I recognize as the only power and the only influence, and this has dissolved my doubts and fears to a very great extent.

My respect is profound for the orthodox church in which I was reared, and I yet love that church; but base indeed would be my ingratitude if I failed to recognize what God has given me through Christian Science, by the faithful, untiring efforts of its noble Founder, Rev. Mary Baker G. Eddy.

Dr. Marshall asserts, "For the better understanding of the question, I will at the same time discuss kindred phenomena." If he had said, We will discuss kindred phenomena by contrast in order to better understand Christian Science, we might give our approval; for the manifestation of health as produced by Christian Science has no kindred phenomena. There is no system of healing the sick which is in any degree akin to Christian Science.

We note the signification of the effort that is being made by some people to establish the claim that the cause of cures in Christian Science is the same as that which seems to cure under other names. Who knows what heals in Christian Science except the student himself, who applies his understanding of Truth to effect a cure? It requires a great deal of egotism to say to a Christian Scientist, "You do not heal by divine power as you claim, but through hypnotic suggestion."

Dr. Marshall states, "The results so similar must proceed from a common cause; and the sequence between cause and effect is so unalterably fixed by nature that when we see a series of effects agreeing in essential particulars we know that they must proceed from a common cause. Interested parties may deny it, if they will, and disclaim any connection with other cures, but the logic of truth and common-sense compels one to believe that in so far as healings are concerned there is something in common between the patent nostrums, the electropoise, faith cures, Christian Science, hoodooism, and all other forms of extraordinary healings."

I ask, why add to his list the term "extraordinary healings"? What would he name ordinary healings? Does not the patient who has been healed by the use of a drug have the same kind of a "well" look as the one who has recovered in some other way? May we not say with as clear logic and with the same degree of certainty that when a patient is cured by medicine he is not cured by medicine, but by the same cause to which Dr. Marshall attributes his so-called "extraordinary healings"?

What of the Egyptian magicians who produced the same phenomena, to material sense, which Moses effected by the use of the rod? To all physical appearances the effects were the same. Would Dr. Marshall say that the causes were the same? The necromancers imitated Moses up to a certain point, when they failed; then they admitted the superiority of the power which wrought wonders through Moses, saying, "This is the finger of God."

Evil has sought to ape God from the beginning of the world to the present time, and has claimed in all ages. "I can do anything God can do. I can heal just like God; indeed, God has nothing to do with healing. I am doing it through animal magnetism." Many counterfeits of any method do not prove there is no genuine original. Jesus of Nazareth healed in an "extraordinary" way. He used no material remedies and restored the absent to life with whom there was no personal contact, thereby exhibiting a purely mental or spiritual power of healing.

Does Mr. Marshall claim that Jesus, too, was a hypnotist, and that he was reporting a falsehood when he said: "I speak not of myself: but the Father that dwelleth in me, he doeth the works"? I will grant that so far as concerns external appearances the results of various systems of curing the sick may seem similar, but I insist that Christian Science heals purely through the influence of Truth, and is the identical system which Jesus used nineteen

hundred years ago. Nor are the effects of Truth-healing the same as the recuperation through other means, as any one inspired with new life through Christian Science can testify.

I will agree with the doctor's statement: "If it were not true that the natural tendency in all diseases is to recover, the world would have been depopulated long ago;" and would add, for the natural tendency of God's creation is to express Himself, and to be co-existent and co-eternal with Himself; otherwise it would have been annihilated long ago. God is the power behind the throne which makes "the natural tendency of man to health." And through Christian Science the hindrances and obstructions, the doubts, fears, and dependencies upon powers less than God, are put out of the way, and the patient is brought directly under the divine influence; so this natural tendency gains supremacy, and health speedily follows.

It is further stated: "The great majority of sick people would entirely recover if left alone." This would be well said with the addition of two words—with God.

Some diseases may be imaginary, as our friend declares. Some may be more than imagination, as Christian Science teaches; but the troubles which are mountains to our material sense are utterly powerless in the sight of God; and all diseases, imaginary or otherwise, must dissolve in His presence, even as the frost before the noon-day sun.

Our brother asks the question: "Have we reason to believe from the teaching of revelation that by any system of faith that ignores the reality of sickness and death, that denies the existence of matter, and repudiates even the being of a personal God, we may so far master ourselves that disease will become only a dream and death a fiction? Or, to repeat the question in another form: Does the Bible give us any reason to expect healings and cures other than those that result from the recuperative energy of nature, or grow out of the use of a wise system of therapeutics, including the remedies of *materia medica*, and those potential but mysterious influences of our own minds?"

We will allow the Scriptures to answer this question. Jesus was the greatest physician the world has ever known. His system of healing must have been the best, for his success was perfect and he was never known to lose a case. He also said: "I am the way." He did not declare, "I heal sin and sickness by evoking the aid of the Father, but you must depend upon material remedies;" but he said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." "And these signs shall follow them that believe," etc., as much as to say, "He who understands what I understand, and practises as I practise, will be followed by like results." If he made any point in his teaching emphatic it was this, that we should be able through his method to overcome sin and sickness, by depending alone upon the power of God.

He said of a sick woman that Satan had bound her. Elsewhere, on another occasion he declared of Satan: "When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." The vocation of a liar is to give forth lies, and if he is strictly a liar, he does nothing else. In the text just quoted, the devil's own, his offspring, that which is of or belonging to him, is a lie. Will our friend please tell me how much substance, how much reality there is in a lie? A lie is untrue, hence unreal; it has no existence in fact, and dies the moment its opposing truth is revealed. According to Jesus' words we have now proved that the woman, who probably would have been called a rheumatic in medical parlance, was bound by a lie, and was healed by the Truth. We have proved by Jesus' own words that rheumatism, or the like, is a lie, a false claim; and inasmuch as it was the Christ's mission

to destroy the works of the devil, we consider ourselves justified in claiming that sin, sickness, and death, which he surely annihilated, were the works of the devil, hence lies, or false claims.

Will Dr. Marshall kindly explain how a lie is to be destroyed with medicine? Will he also tell me why he proposes to discard Jesus' diagnosis and remedy for disease, while at the same time he seeks to retain his definition and remedy for sin? What is his Bible authority for resorting to material methods for overcoming sickness, contrary to Jesus' example, while he seeks to follow the Master's steps in the overcoming of sin? Jesus said: "For whether is easier to say, Thy sins be forgiven thee; or to say, Arise and walk?"

Now as to the denial of the existence of matter, I propose to prove by the Master's words that he had no more respect for matter than the Christian Scientist. He never had a kind thing to say of the flesh. I will treat this question in connection with Dr. Marshall's statement: "Christian Science teaches that everything real is mind . . . hence there are no stars, no trees, no mountains, and we have no bodies." Such a view is no more acceptable to Christian Scientists than to our reverend divine, and indeed is not the teaching of this Science. The abstract statement that everything we see is unreal does not express the idea of this faith, which teaches that everything in creation, from the least to the greatest, is actual, it being only the human material concept of God's creation which is declared an illusion. We believe that in our present unspiritual condition we have a wrong sense of the universe. This wrong perception is not the creation itself, but a false sense of it, and it is this false sense, not the creation itself, which the Christian Scientist believes to be unreal. Christian Science teaches that sin is only as real as we make it by our indulgence; and it follows that the sinner will never be rid of sin until he stops sinning, for his very indulgence makes evil real to him.

It is stated: "Her [Mrs. Eddy's] teachings go further, and insist that death is only another false notion of the mind, and if the race would outgrow its belief in death people would cease to die." Here again I would call upon our brother to interpret a bit of Scripture. Jesus said: "If a man keep my saying, he shall never taste of death." Was this statement meaningless? Is it possible to keep the saying of Jesus? We admit that in our present material state we are far from that perfection which is necessary to the fulfilment of Jesus' demands, and that we grow sick, suffer, and die because of this. Nevertheless we know the sacred words are true; that the fulfilment of the same is within human possibility in proportion as human will yields to the divine. We also insist that John's vision—a new heaven and a new earth, wherein dwelleth righteousness—will re-appear, though centuries may pass before that time. Also that prophecy: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

To quote further from Dr. Marshall: "Add to this the doctrine that Mrs. Eddy herself is the highest expression of the divine idea in the human form, surpassing Jesus as he surpassed Moses, and you have in brief the doctrine of Christian Science." This is as far from Christian Science as night from day, and there is nothing in the writings of Mrs. Eddy to warrant such assumption. Mrs. Eddy claims absolutely nothing for her personality except that she is "the Discoverer and Founder of Christian Science." She teaches in her text-book that "Jesus was the highest human concept of a perfect man;" that he was the Way-shower; that we are to be saved not only in the future, but in the present through the practice of his teach-

ings. Never is the claim made that her text-book should take the place of the Bible, or that Christianity should be supplanted by Christian Science, but that Science and Health reveals the spiritual significance of the Scriptures and makes Christianity more practical.

Our friend seems to believe that Christian Scientists reject his sense of a personal God. Of this it is difficult to be sure, since he has not defined what he means by the word personal. In Christian Science we prefer not to use the word personal as applied to Deity, since such a term is apt to perpetuate the puerile conception that God is a restricted being with an outlined form. We believe in the infinite individuality of God, that He is an all-wise, self-conscious, rational Being, unlimited and everywhere present. We cannot accept a definition of God which would limit Him in any sense; and it should be remembered that every statement of Christian Science is a deduction from the premise that God is Spirit,—Love,—as the Bible teaches. The Saviour's mission was to overcome the world, the flesh, and the devil; to demonstrate the truth of Being in the presence of mortals, and to prove the truth of his words: "It is the Spirit that quickeneth; the flesh profiteth nothing," in order that mortals might gain the true "Science of Being," and thereby be able to obey the Scriptural admonition, "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of his good pleasure."

The first coming of Christ is the personal Jesus, healing the sick, and proving the power of God; the second coming is the coming to human consciousness of the spiritual Christ,—that is, the understanding of the Truth, which Jesus knew and used in his life work, and by which he healed the sick, cast out devils, raised the dead. His death and resurrection proved that God was his life; his ascension proved that Spirit, God, was his substance, and illustrated his statement that "the flesh profiteth nothing." We know from this that his death and ascension were necessary to demonstrate the Science of Being, which was essential to mortals in order that they might follow his example, work out the same results, and reach the same end, at the "right hand of God." But for his advent in the flesh the world could not have known the Truth. Indeed, every step of his experience from birth to ascension was necessary to teach mortals the way of salvation.

Dr. Marshall makes the statement: "How wicked the claim of this woman, who insists that she has almost banished sickness and death from the world, when hospitals are crowded with weary patients; when the grave-diggers are busy." Mrs. Eddy has never made any such claim. The most that she has said is that longevity has increased perceptibly during the past few decades, according to statistics, and that this increase is co-existent with Christian Science. I know of thousands of people whose lives have been prolonged through Christian Science, and this in itself would decrease the average mortality. It has never been claimed by Mrs. Eddy or any other Christian Scientist that more than a very small percentage of the sickness in the world has been destroyed through Christian Science. It has not even been claimed that Christian Scientists are at this stage in their growth immune from the discords and calamities of earth. Much indeed has been accomplished already through this faith, for which we are grateful, and we will continue our efforts to trust God implicitly, and to hope for better days. Indeed, we believe in a final fulfillment of the Scriptures, that the time will come when God will reign supreme in all the affairs of men, and when there will be no more sorrow, sin, or death.

Sincerely yours,

ALFRED FARLOW.

A Denial.

Editor Buffalo Express:—You quoted editorially in your issue of December 24 a statement appearing in a New York paper concerning Christian Scientists and Surrogate Fitzgerald. This false charge, that Christian Scientists are exerting mental influence to affect the decision of Judge Fitzgerald in the Brush will case, is an accusation common to the hypnotists and mental mal-practitioners in their arguments against Christian Scientists. Christian Scientists never enter another's thought uninvited, and then, never except to destroy sin or sickness. The conflict to-day is between two mental forces, the Christ Mind and the carnal mind, or hypnotism. In this instance, hypnotists are charging Christian Science with their own methods.

It is utterly untrue that a million Christian Scientists (or even one Christian Scientist) are exerting any mental influence upon Surrogate Fitzgerald or any person connected with the case. If the Surrogate is being treated, it is not by Christian Scientists. The statement that this alleged information was given by a Christian Scientist is, on its face, untrue, because a Christian Scientist would know that such practices are impossible in Christian Science, and the Surrogate has heard enough already from the testimony to show him that this is true. If he has not, it will be proved to him before the case is ended. WILLARD S. MATTOX.

Notice.

REMITTANCES should be made by post-office money order, express money order, or exchange on Boston or New York. Exchange on Chicago and other cities not named above, will not be accepted.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Mch. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for April, May, and June.

A century ago, an infidel German countess, dying, ordered that her grave be covered with a solid granite slab; that around it should be placed solid blocks of stone, and the whole be fastened together by strong iron clamps, and that on the stone be cut these words: "This burial place, purchased to all eternity, must never be opened." But a little seed sprouted under the covering, and the tiny shoot found its way through between two of the slabs, and grew there slowly and surely until it burst the clamps asunder, and, lifting the immense block, the structure ere long became a confused mass of rock, among which, in verdure and beauty, grew the great oak which had caused the destruction. Thus truth dislodges error: thus her branches spread in splendor above the ruins of the false, and thus "he that exalteth himself shall be abased."—*Anon.*

A man strives to know the everlasting right, to keep a conscience void of all offence. His inward eye is pure and single, all is true to the eternal right. His moral powers continually expand, and by so much more does he hold communion with his God. As far as it can see, his finite conscience reads in the book the eternal right of God. A man's power of conscience is the measure of his moral communion with the Infinite.—THEODORE PARKER.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Monument to Baron and Baroness de Hirsch.

A MONUMENT is soon to be erected in Central Park, New York, in commemoration of the eradication of racial prejudice. The monument will cost upwards of fifty thousand dollars, and the amount is to be raised entirely by voluntary subscriptions.

The sculptor's conception is highly artistic and effective. A female figure in bronze, heroic size, typifying Philanthropy, is represented holding in her left arm a tablet on which are engraved the features of the Baron and Baroness. Before this figure is a smaller one, that of a child, representing posterity, placing on the tablet a bunch of palms.

These figures will be placed on a pedestal of highly polished pink granite. The pedestal will take the form of an exedra, whose majestic sweep of unbroken curves will be intended to convey the idea of the all-embracing arms of true charity.

The motive which prompted the erection of the monument has appealed to all classes. Many letters from clergymen and laymen, college presidents and publicists, have been sent to the Baron and Baroness de Hirsch Monument Association, indorsing the project. A number of these letters were published in the *New York Mail and Express* of January 1, 1901. The Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, wrote as follows:

The movement to erect a monument to the late Baron and Baroness de Hirsch enlists my hearty sympathy. They were unquestionably used in a remarkable degree as instruments in the Divine Love.

Divine Love reforms, regenerates; giving to human weakness strength, serving as admonition, instruction, and governing all that really is. Divine Love is the noumena and phenomena, principle and practice of Divine metaphysics. Love talked and not lived is a poor shift for the weak and worldly. Love lived in a court or cot is God exemplified, governing governments, industries, human rights, liberty, life.

In love for man we gain the only and true sense of Love for God, practical good, and so rise, and still rise, to His image and likeness, and are made partakers of that Mind whence sprang the universe.

Philanthropy is loving, ameliorative, revolutionary; it wakens lofty desires, new possibilities, achievements, and energies; it lays the axe at the root of the tree that bringeth not forth good fruit; it touches thought to spiritual issues, systematizes action, and insures success. It starts the wheels of right reason, revelation, justice, and mercy; it unselfs men and pushes on the ages. Love unfolds marvellous good and uncovers hidden evil. The philanthropist or reformer gives little thought to self-defence—his life's incentive and sacrifice need no apology. The good done and the good to do are his ever-present reward.

Love is the elevator of the human race; it demonstrates Truth and reflects Love. Good is divinely natural; evil is unnatural; it has no origin in the nature of God, and He is the father of all.

The great Galilean prophet was, is, the reformer of re-

formers. His piety partook not of the travesties of human opinions, pagan mysticisms, tribal religion, Greek philosophy, creed, dogma, or *materia medica*. The Divine Mind was his only instrumentality in religion or medicine. The so-called laws of matter he eschewed; with him matter was not the auxiliary of Spirit. He never appealed to matter to perform the functions of Spirit, Divine Love.

Jesus cast out evil, disease, death, showing that all suffering is commensurate with sin; therefore, he cast out devils and healed the sick. He showed that every effect or amplification of wrong will revert to the wrong-doer; that sin punishes itself; hence his saying, "Go and sin no more, lest a worse thing come upon you." Love atones for sin through love that destroys sin. His God is Love.

We cannot re-make ourselves, but we can make the best of what God has made; we can know that all is good because God made all, and that evil is not a fatherly grace.

All education is work; the thing most important is what we do, not what we say. God's open secret is seen through Grace, Truth, and Love.

I enclose a check for \$500 for the De Hirsch monument fund.

MARY BAKER G. EDDY.

"Heir of all Things."

IN Hebrews we read: God "hath in these last days spoken unto us by his Son, whom he hath appointed heir of all things." Jesus the Christ daily and hourly proved man's sonship with God. Of the "Son of man which is in heaven" he declared, "all power is given unto me in heaven and in earth." He used this power to benefit humanity mentally, morally, and physically. Of himself he could do nothing, but the power which he received from the Father made him the Saviour of the world. He taught that man, separated from God, could do nothing, but with God's help he could do all things.

Jesus claimed no more for himself than it was, and is, the privilege of all mankind to enjoy. Of the believer in all ages he said, "the works that I do shall he do also." The wonderful works which he performed demonstrated the intelligence and power of perfect manhood, not simply the intelligence and power of one man. He revealed man, created in God's own image and likeness, to whom was given dominion over all the earth. He showed that it is possible for man, here and now, to regain his rightful heritage and enjoy the blessings bestowed upon him by his heavenly Father. His life showed what it is possible to accomplish in this present world, and his teachings pointed the way,—showed how those grand results can be achieved.

The understanding of God's presence and power enabled him to do those mighty works. His teachings declare God aright and of his doctrine he said, "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." Since God is unchangeable and is no respecter of persons, it is not claiming too much for God's goodness and love to say that the teachings of the Nazarene, understood and lived, will accomplish the same results to-day that were accomplished nineteen hundred years ago.

Great spiritual growth is necessary before humanity can enjoy all the blessings of divine sonship. One must be born again and grow "in wisdom and stature" "unto a perfect man, unto the measure of the stature of the fulness of Christ." Of the Christ it was said that "as many as received him, to them gave he power to become the sons of God." Paul says, "For as many as are led by the Spirit of God, they are the sons of God. . . . The Spirit itself beareth witness with our spirit, that we are the children of God: and if children, then heirs; heirs of God and joint heirs with Christ."

One must first be awakened to the possibility of grand

and glorious results before he can achieve them. When this awakening comes and opportunities are improved the results are sure. The wise disciple of Truth does not expect to reach in a day or a month what another was years in attaining, but he is content to labor faithfully and receive his reward as he has earned it. The thought that man is heir of all things inspires great efforts and willing sacrifices.

Why should man fear to claim his birthright as a child of God? He has everything to gain and nothing to lose by so doing. It means his salvation, not only from sin but also from sickness and all discord as well. It means that he will one day be able to exclaim, "O death, where is thy sting? O grave, where is thy victory?"

The realization that man is the son of God, made in His image and likeness, brings the greatest measure of happiness to-day and gives the brightest promises for the future. The joy and satisfaction which come as the result of this awakening to Truth is altogether unselfish. Its possessor knows that what he has gained, and hopes to gain, is for all mankind, and he is assured that all the sons and daughters of God will one day realize that they are "heirs of God and joint-heirs with Christ." Then the Fatherhood of God will be understood, the brotherhood of man will be demonstrated, and God's will be done in earth as in heaven.

Among the Churches.

Christian Science in Rockford, Ill.

About one hundred people were gathered at the communion service in the Christian Science Church Sunday morning (December 9). The service which is held in the K. of P. Hall, does not differ from any other, only that there is no preaching. They do not want man to explain and criticise the words of God, but they read those words in a quiet, cheerful, trustful way that seems happy, and there is a wonderful atmosphere of rest and security in the place.

Christian Science as a society has lived for one year in this city, and Sunday the society celebrated its first anniversary. Previous to a year ago there were a number who believed in it and there were many others who had been converted, but there had been no combination on the part of the followers.

Its growth in this city has not been phenomenal, but it has become firmly rooted and the leaders are jubilant and feel that greater success awaits them, not only in this city but in all parts of the world. There were twelve charter members, and during the year new names have been added, so that the society at present numbers thirty members.

Mrs. Weatherwax has had charge of the work in this city, but has been ably assisted by Frank Morgan, E. J. Hollister, and others. In speaking of the society this morning Mrs. Weatherwax had the following to say: "We are very proud of the record we have made in your city and can see nothing but success for us in the future. We have no weak-hearted ones in our midst, but all are firm believers in the faith."—*Rockford Daily Register-Gazette*.

At the annual business meeting of our society our First Reader read the following review of the work in Rockford:

The first step in starting the Christian Science Sunday meetings was taken in the fall of 1897, when a few patients met at the rooms of Mrs. L. V. Weatherwax for the study of the Sunday lesson. In the spring of 1898 Mrs. W. was granted the privilege, under the by-laws of the Mother Church, of holding regular Sunday services, and a card was placed in the church directory of the May *Journal*, 1898.

The meetings were at first held at the rooms of Mrs. Weatherwax, Sunday mornings, Mrs. W. reading from both the Bible and "Science and Health with Key to the Scriptures."

In March, 1899, the necessity for larger quarters arose, and the first business committee was chosen, a hall being secured in the Price Block for our Sunday and Wednesday evening meetings. In the fall of the same year, but little over a year ago, we organized as a Christian Science Society, with twelve members enrolled, electing a board of directors, who elected president, clerk, and treasurer from their number. We held our first communion service in December, 1899.

In January of this year we found it advisable to secure the Knights of Pythias Hall, our present quarters. In July last a lecture was delivered by Judge Ewing, and in the same month there was opened to the public a reading room, supplied completely with Christian Science literature. Within the year over four hundred dollars has been expended for our literature. Fifty-one copies of Science and Health have been sold within the year.

This is our first annual meeting. We may say the past year has been a very prosperous one to us, both in increasing attendance and in growth of spiritual understanding. Many are the sick and heavy laden that have found health and peace through Christian Science, and much of the prejudice of outside thought has been removed.

It is with grateful hearts that we return thanks to our heavenly Father for guiding our infant steps, and for giving us our Mother in Israel, His ambassador.

EDWARD J. HOLLISTER, Clerk.

Church Purchased at Jacksonville, Fla.

An interesting real estate deal in this city has just been consummated in the purchase of the Newman Street Presbyterian Church and lot, by First Church of Christ, Scientist, of No. 1 West Monroe Street, the purchase price being \$5,000.

It is interesting from the fact that this building is known to be one of the old landmarks of the city, and the place of worship for many years of some of Jacksonville's best citizens, and also that a deal of such importance has been made so quietly and unostentatiously by this small body of Christian Scientists.

In order to learn more of the work and progress of this local branch of a denomination which is the subject of so much public attention and discussion, a reporter called upon a representative of the Christian Science Church, and obtained the following facts:—

First Church of Christ, Scientist, began their services as a church organization at No. 1 West Monroe Street, in September, 1895, with an earnest handful of eight or ten people, and the church was chartered under the laws of the state of Florida in June, 1897. Since then members have been received into the church at each recurring communion Sunday, second Sunday in June and December, a number having united last Sunday, until now the membership is over eighty.

Having in view the erection of a church worthy of the cause, a church building fund was started in October, 1898, which has grown to fair proportions. In the mean time, the attendance having so steadily increased and the work of the church demanding more than the one room, the officers have been seeking for some time a more suitable situation, and finally concluded that as a temporary dwelling-place, the Presbyterian property would answer their purpose. The building, which was moved to an adjoining lot by the Presbyterians, will be replaced on the lot in the same position in which it now stands, facing Monroe Street, leaving sufficient room for the erection of a handsome church on the corner in the near future. The building will

be thoroughly renovated inside and out. A reading room and a reception room will be made inside at the front entrance, and other improvements not yet fully arranged. There will be no attempt at unnecessary embellishments, the church being content at present with comfort and neatness.

The method adopted by the members of this church for the raising of funds for any purpose is unique, and might be profitably followed by others, to the saving of time, labor, and many heartaches. No public request is ever made in this church for funds. The members are quietly and privately notified of church meetings. At these gatherings, which are always well attended, the situation is laid before the church, slips of paper passed around, and each contributes what he can, no one knowing what another gives, and the sum contributed has always been more than required, the whole transaction being completed in a few minutes. With the church building fund the same freedom exists; all are made aware of this fund, and then it is left to each one to contribute or not, as he sees fit. This freedom of action necessarily begets unity and harmony, which are notable factors in the progress of this church.

The First Church of Christ, Scientist, is to be congratulated on obtaining one of the most desirable lots in the city.

Florida Times-Union.

Dedication at Santa Monica, Cal.

First Church of Christ, Scientist, which has just been completed, was opened for public worship on the 2d of December. There were two services—the first, or morning, at 10.45; and the evening at 7.45.

Early in 1897 the few Christian Scientists who resided in Santa Monica met at the residence of Mr. and Mrs. E. H. Carpenter on Eighth Street, and on May 11 of that year the church was organized and incorporated with nine members. It has steadily grown with each succeeding week, and about the first of July of this year they felt that the time had come for them to have an edifice at Santa Monica, suitable for the town and the body of believers of which they are a part. The lot on the corner of Seventh Street and Oregon Avenue was purchased, and on September 1 ground was broken for the present pleasing structure, which was formally opened to the use of public worship, as stated above.

The building faces on Oregon Avenue, and is of the mission style of architecture. The exterior is constructed of cement of a gray hue. Entrance to the building is effected through an arched portico opening into the reading room at one side, and at the other into the tower, which is the main entrance to the auditorium.

The interior is divided into four rooms, the main auditorium being 50x32 feet, from which there extends a wing 14x20 feet, which will be used as the reading room.

The main room is richly carpeted, has two hundred and fifty chairs, and is fitted with an abundance of electric incandescent lights.

At the west end the pulpit or reading platform is situated, with two reading desks; and immediately in the rear in an alcove is the vocalion, or organ, which is a superb instrument, having the pipe effect, and is presided over by Mr. O. R. Niskern.

Immediately in the rear of the auditorium there are two rooms for the use of the First and Second Readers, they being Mrs. Violet J. Carpenter and Mr. E. H. Carpenter.

When the occasion requires, the reading room can be thrown into the audience room, furnishing seating capacity for fifty more, and thereby they will be able to seat comfortably three hundred people at any service.

There have been several speakers who have tried the auditorium, and all pronounce the acoustics as nearly perfect as human ingenuity could devise or desire.

The cost of the lot and building was \$3,600, and it is all paid for, there being not a dollar of indebtedness to be raised. In this way the organization starts out without financial burdens to hamper the work.

Besides the Sunday services, experience meetings are held every Wednesday evening; and the reading room, which is cosily furnished with tables and chairs, and is supplied with Mrs. Eddy's works on Christian Science, will be open to the use of all Scientists and the public in general from 2 to 4.30 P.M., daily.

Santa Monica (Cal.) Daily Outlook.

New Quarters at Joliet, Ill.

Wednesday evening, December 5, the Christian Scientists of Joliet, Ill., held services in their new apartments 119 N. Ottawa Street. We have the entire floor, consisting of a large reception room, reading room, practitioners' room, and a hall which will seat between two and three hundred. The walls have been newly and handsomely papered, a new carpet covers the entire floor of the hall, while large Wilton rugs are on the floors of the other rooms.

Our church has maintained a small room open to the public for over five years, but not until recently have we kept all the Christian Science literature on sale.

While to the pioneer workers here the growth has seemed slow, yet faithfulness in the few has made the present possible. Services have been held since the spring of 1892. For about two years the Sunday services were held at the home of one of the students and the mid-week meetings at the home of another. Then a move to the centre of our city to one room, later to two in the same building, and now to four about half a block from our first home.

We were incorporated as First Church of Christ, Scientist, Joliet, Ill., in 1895, with nine charter members, three others being admitted as soon as the organization was completed. There are now thirty members. Several letters of dismissal have been given to people who have moved away and joined other Christian Science Churches. Three of our charter members left us in this manner, and this meant more consecration and faithfulness on the part of those remaining. We feel that the public thought is becoming kindlier toward us; that our church is being recognized as a Christian organization. For all these evidences of "God with us" we are indeed grateful. Our hearts are filled with love for, and gratitude to, our dear Mother, who is leading us out of the darkness of self and has taught us how to read our Bibles.

MRS. L. EMOGENE MOORE, *Clerk.*

Second Church at St. Joseph, Mo.

Second Church of Christ, Scientist, St. Joseph, Mo., was organized in June, 1900, with a charter membership of sixty-three. A suitable hall, centrally located, was engaged and tastefully furnished with one hundred and eighty opera chairs and a handsome double desk for our Readers. Our reading room, which is in connection with the hall in which our services are held, is carpeted and furnished with tables, comfortable chairs, etc., and is supplied with a full line of Christian Science literature and the works of our Leader, Mary B. G. Eddy.

Our hall was beautifully decorated on the day of opening, palms, ferns, and choice flowers being banked around the desk in great profusion. The regular services were impressively read by our First Reader, Mrs. Alice Fairleigh, and Miss Mary E. Cox, Second Reader, and listened to attentively by a large audience. The beautiful solo, "The Holy City," was feelingly rendered by Mrs. Laurence O. Weakly.

Our Sunday School is well attended and the little folks are deeply interested. We notice a goodly number of strangers at our meetings, people who are hunting for

something they cannot find outside of Christian Science. Our Wednesday evening meetings are well attended and many wonderful and beautiful testimonials are given of the power of Truth, and to the fact that we are awake to the loving admonition of the Mother to "work—work—work, watch and pray."—L. D. ARNOLD, *Clerk*.

Organization at Flint, Mich.

First Church of Christ, Scientist, was duly organized at Flint, November 20, 1900, with sixteen charter members. Articles of association were filed and charter issued by the state of Michigan, November 30. The second article of the association reads as follows:—

The purpose for which this society is incorporated is to carry on and transact business necessary to maintain Divine worship in accordance with the teachings of Jesus Christ as found in the Bible and in accordance with "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Last evening, Friday, December 7, a meeting was called for the election of officers, consisting of two readers, five directors, clerk, and treasurer, which resulted as follows: First Reader, Lena Dagg; Second Reader, Annie M. Fitzgerald; clerk, Florence Lomnitz. Services are held every Sunday morning at 10.30 and Wednesday evening at 7.45 at room 3, Loyal Guard building. Strangers are always made welcome, as these services are open to all.

There has been a steady growth of interest since services were first started in Flint more than two years ago.

Flint (Mich.) Globe.

Rapid Growth at Lincoln, Neb.

Fifty-six new members were added to the roll of First Church of Christ, Scientist, Lincoln, Neb., on Communion Sunday. Within a little more than a year the attendance has increased from about thirty to between three and four hundred. The membership, from twelve or fifteen in the spring of 1899, shows a gain of ten members in June and twenty in December, 1899; twenty-two in June and fifty-six in December, 1900. Eight of the fifty-six brought letters from other Christian Science Churches.

The services on Communion Sunday were attended by fully four hundred persons in the morning, and more than three hundred in the evening.—W. H. J., Lincoln, Neb.

Organization at Snohomish, Wash.

First Church of Christ, Scientist, of Snohomish, Wash., was organized and obtained a state charter in April, 1898. Meetings were first held in a small building. At present services are held in Odd Fellows Hall which is elegantly furnished.

Last September a lot was secured for two hundred dollars which was raised by voluntary contributions. We are a small band, but are steadily growing. We have had many grand demonstrations among us, many of the diseases healed were what are commonly called incurable.

We greatly appreciate the efficient work being done at headquarters.—WINFRED E. BAKEMAN, *Secretary*.

Petty cares need great affections to prevent them from disturbing our tempers. Small, insistent, and troublesome tasks require large ends and aims, that they may be diligently and faithfully performed.—HENRY W. CROSSKEY.

Accustom yourself to master and overcome things of difficulty; for if you observe, the left hand, for want of practice, is insignificant, and not adapted to general business; yet it holds the bridle better than the right, from constant use.—PLINY.

From Our Contributors.

The Heart's Desire.

BY A. SOUTHWICK.

HUSH, every mortal sense! Be still!
Now let the Holy Spirit move
Within us freely as He will,
And all our waiting nature fill
With stream of vitalizing Love.

Flow onward, ever onward flow,
O Stream of universal Good!
Delicious all Thy motions grow
As more and more we see and know
Of Thy profound beatitude.

Abide in this refining state
Till carnal dross shall melt away,
And angel thoughts with bliss elate
In highest songs shall celebrate
The risen Sun of Perfect Day.

This silent prayer, O God! to Thee
Shall be repeated o'er and o'er,
Till all within us rises free
From taint of earth's mortality
And erring mind shall be no more.

An Illustration.

BY A. J.

WHEN at school and considered properly advanced to begin the study of algebra my father was asked to purchase a book. But not having any understanding of it himself he wanted to see it before he consented to get the book, so a copy was shown him. But immediately upon looking into it and observing the little *x*'s, *y*'s, and *z*'s, and hearing of the many difficult and perplexing problems that could be solved through its study, he condemned it, for he said he did not believe one word of it, for it did not seem to him to have any sense in it. So he did not get the book, but my teacher was anxious that I should begin, and kindly loaned me a book. After I had gained sufficient understanding to demonstrate some of the problems, I one day handed my father my arithmetic and told him to give me a problem to solve, telling him I was going to work it according to algebra.

After giving out one example after another, and seeing how accurately they could be solved in the "new way," he objected no longer to the study and ever thereafter believed in algebra.

Now I honestly ask where was the lack of sense? Was it in the principle of mathematics, as set forth in algebra, or was it his lack of understanding of that principle?

His experience in this reminds me of those who condemn Christian Science without having any understanding of it. They hear of its wonderful power in overcoming the discords of human life and that much-talked-of book, "Science and Health with Key to the Scriptures," and in some manner procure the book, usually borrow it. They open it, read a few sentences, and because of their material views and its high spiritual teachings they condemn the whole thing and everybody who has anything to do with it. So they decide that, for the benefit of those who might be deluded into its teachings, they had better lecture against it.

Paul had religious views of his own and persecuted the followers of the Christ until the great light of understanding shone into his darkened senses. Then he was willing to suffer the very things he had caused others to suffer.

Christian Science can neither be taught nor demonstrated by one who has no understanding. Those who think they persecute Christian Science only persecute their own erroneous conceptions of it; and those conceptions are so far from the actual Truth that they need condemnation. Those who have an understanding of Christian Science would not exchange it for the whole world.

There are no broken promises, unanswered prayers, and far-away heaven for "all things are fulfilled," "the kingdom of heaven is at hand," and God is seen with men to dwell.

Works.

BY KATE MONTGOMERY BATES.

"THOU believest that there is one God; thou doest well: the devils also believe, and tremble. But wilt thou know, O vain man, that faith without works is dead?" Had not the blind received their sight, the deaf their hearing, the sick, dying, and dead felt the power of Life which is God demonstrated by the meek Nazarene and his disciples, their faith would have been as "sounding brass, or a tinkling cymbal." Works proved their faith to be the understanding of an unlimited, infinite Good, ever-present Mind, Life, Love; and this wisdom was their "very present help in trouble." To them sin, disease, and death were mere shadows, fleeing before the Light of Truth which sustained them; their bread which cometh down from heaven, is the true inheritance of all the sons of God, who are joint heirs with Jesus. The Truth or Christ is ours to understand, demonstrate, and live. "By their fruits ye shall know them," and how completely has the Rev. Mary Baker G. Eddy explained the way to keep our Master's command: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

In "Science and Health with Key to the Scriptures," p. 373, Mrs. Eddy says, "Through immortal Mind we can destroy all ills which proceed from mortal mind." She has taught us how to experience the healing power of immortal Mind. We who have gained a better understanding of God and man through her works, have learned to love our Bible more, and have felt the Christ-healing in hundreds of ways. We can forgive those who revile and persecute Christian Science because in their ignorance "they know not what they do." Perhaps they too will soon be healed of their infirmities by the very religion they seek to oppose.

Science and Health has rolled the stone from many sepulchres and revealed the Comforter to the stricken, hopeless hearts within, and should we not love and revere its author, and let our light so shine that all may see our good works and glorify our Father which is in heaven? Our *Journal*, *Sentinel*, and lectures by Christian Scientists are spiritual feasts in our home, and we keep them busy doing their work of love and healing among friends.

How I was Led to take a Patient.

BY MARY LEE FINDLAY.

AFTER having been through a class in Christian Science, I felt that I could try to do the healing work only in my immediate family. Being afraid I would not make good demonstrations I was really denying the Omnipotence of God and limiting Love. I went along in this selfish way for a while, when one day I was left in charge of our reading rooms. I was not there long before a note was handed me from a lady who was visiting her sister in the city, asking the prayers of all the sisters, as she had been ill for a long time. I answered by telling her to come to the rooms immediately if possible, that I wished to talk with her. In a short while she was brought to the rooms in a buggy. After

talking with her, I found that she believed somewhat in "faith cure," although she was taking all the medicine that her mother-in-law, who was a doctor, knew to give her. She said everything that could be done for her in a material way had been done, and still she could not get well.

I showed her Science and Health, and after telling her what would be expected of her, she decided to wait a while before she began treatment. Error was telling me all the while that if she should want treatment I must get some one else to do the work. Three days after, she sent a note to my house asking me to treat her right away, and come to her at five o'clock that afternoon. The note also said that she was much worse, not being able to be up. Fear seized me immediately, but the next thought was, that God was to do the work, and that I must not shirk my part of it. I wrote her that I would begin treatment at once, and would see her at the appointed hour. When I arrived at her house, she met me at the door with a bright, smiling face, saying that she was very much better. I gave her another treatment and sold her Science and Health before leaving. The next Sunday morning she attended our services feeling, she said, perfectly well. Before she left she bought a *Quarterly*, saying she wanted to know more of this grand Truth.

See not the Lions.

BY SEVILLA MAYER.

WHILE sitting in one of our Christian Science reading rooms one day, thinking of God's protecting care of all His children, my thought was directed to the picture on the wall portraying Daniel in the Lion's Den.

While meditating upon this, I noticed the faces of the lions, each of which seemed to vary in expression. One even appeared to be in a sleeping mood, yet all retained a vicious appearance.

As these thoughts came, it appeared to me, these lions represent to us the various phases of error which are to be met and mastered by Truth.

Then I noticed that Daniel, instead of glaring at these lions, as if expecting every moment to be devoured, stood, his face, calm, peaceful, and pure, uplifted to his God, seeing not the lions.

This surely was a lesson to me which I cannot forget. And we understand from the Book of Daniel, 6 : 10, that as soon as he knew of the least error approaching him, he continued praying to his God, and when the greater trials came, he was ready to meet them also.

Then in the same chapter, verse 22, first clause, we read "My God hath sent his angel, and hath shut the lions' mouths, that they have not hurt me." In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 508, we read "Understanding the control which Love holds over all, Daniel felt safe in the lions' den, and Paul knew the viper to be harmless."

These thoughts of Daniel are truly an inspiration to us day by day, as through the earnest study of Science and Health, the Bible is made plain to our consciousness. I have only studied this book about three years, and am grateful to say it has constantly been a source of pleasure, as well as of practical and uplifting thoughts for daily help.

I have also purchased, "Miscellaneous Writings," and the *Journal*, *Sentinel*, and *Quarterlies*, from which I have gained much in this beautiful Truth.

Every rose is an autograph from the hand of the Almighty God on this world about us. He has inscribed his thoughts in these marvelous hieroglyphics which sense and science have been these many thousand years seeking to understand.—THEODORE PARKER.

Testimonies.

Why I am a Christian Scientist.

My father was a Baptist minister, spoken of by all who knew him as a godly man; my mother a woman qualified in all ways to be a helpmate. I was the only child and my father's companion in his library, and in after years in his church work. This home, expressing so much love and earnest striving for the things that perish not, was the abode of sickness from my youth up. The work so dearly loved was done with a great sense of weakness and bondage to frail bodies. The lack of physical strength to meet life's duties, because I was so like my father, was ever expressed in the home.

As the years passed, added duties and cares were mine. I would go to my work on Sunday and be in bondage to pain and suffering the next day. I pondered over this thought so much: the plan of salvation through Christ must be equal to all things—it is all or it is nothing. I read God's promises in the Bible over and over, and rode on the streets in an invalid chair. For years I had the tenderest care, and most skilful attention a Christian physician could give. At last I submitted to a surgical operation.

All that loved ones in the home could do, the earnest prayers of the church I loved so much, with constant watchfulness from the physician, brought me through still to find myself in bondage. I lived in Michigan, and soon after this occurred came to the home of my daughter in Kansas City, Missouri, trusting the change of climate would help me. I had repeatedly sent my name to faith cures to be prayed for, for I never failed to believe God was able to heal me.

A short time after I came to Kansas City I had a very severe attack of spasmodic asthma. My daughter was interested in Christian Science. I said to her something must be done immediately. You must go for a doctor or a Scientist. I do not think anything could have tested my faith more, for we are often asked, "Can Christian Science meet emergencies?" I thought, "How many times I have said to myself, I do believe God is ever-present help, and if I only knew Him aright, knew how to apply God's promises, I should not be in this bondage. This is my chance to know more of God. Go for a Scientist." To sense my suffering was great. The healer sat by me in silent prayer. After an hour omnipotent Love began to silence error. About eleven o'clock my healer said, "I must go to see another patient before the street cars stop. Do you think you can hold the consciousness of God as ever-present and all-powerful?" I said, "I think I can."

This was the first case of Christian Science healing ever witnessed in my daughter's family. The power of Christian Science was not known then as it is to-day, and much fear was manifested. When the healer returned it was to find that error had continued to yield to Truth. She left me in a short time.

In the morning when she came I was sitting by the grate fire. These attacks had always returned for three successive nights. I asked her if they would in this case. She smiled and said, "We do not promise beforehand, wait on God." I grew less and less hoarse during the day, and by six o'clock was entirely free and never had a more peaceful night's rest.

I have always wished I could say that from that hour I accepted Christian Science, but I cannot. Every step of the way from that time till I did accept it was through the compelling power of my necessities, and under the rod of divine Love.

I returned to Michigan, thinking I would go right on in my church work and take Christian Science into the Bap-

tist Church. I had always felt that the sorrows and disappointments of life were God's means of disciplining His children. I would often say, "My Father, what are you trying to teach me?" I reached the point where I feared to pray, "Thy will be done," lest it be more sorrow. Think of my blindness to Truth, when God's will is Love only.

Death entered my home and soon after I returned to Kansas City to learn and accept the priceless Truth of Christian Science. I had believed from my youth that God was all-powerful, but the truth that God is the only Mind, the only Power and Cause, never dawned on my consciousness till I found it in Christian Science. What I seemed to suffer from my belief that error was real, no one but those who have had like experiences knows. This is why I am a Christian Scientist. I cannot be thankful enough that Truth turned and overturned error—the false understanding of God—and has led me in a small degree to be able to demonstrate this Truth for myself and others.

Can I do less than voice my love for our dear Leader, Mrs. Eddy, and express the wish that is uppermost in my heart to be an obedient follower of the Truth she has revealed to a needy world? Rest comes to aching hearts when it is understood that error is unreal because God never created it.

HARRIET HOSFORD WINSLOW, Atchison, Kan.

Earnest Longings Satisfied.

In the summer of 1894 I went through a class in Christian Science with one of Mrs. Eddy's loyal students. The winter previous to this I had spent in Brooklyn, N. Y., at school, and every letter I received from my mother had something about Christian Science in it,—that it had healed her of troubles of several years' standing, and that she wanted me to investigate it. However, I did not investigate it until I came home the next summer. I did not understand what it was and did not care very much then. But from the time I began to read "Science and Health with Key to the Scriptures" there was not an opposing thought in my consciousness, but on the contrary it appealed to me in the strongest possible manner, satisfying a longing I had always felt from the time I can first remember, for something *else*, something higher and better, and revealing the *ideal* as the *real*.

I had always felt a separateness from things and people, could not enjoy games like other children, and was unhappy though from no definable cause. This Christian Science did away with, revealing to me "that Mind which was also in Christ Jesus."

Many physical ills have been overcome. I have felt the beneficent influence of this Truth in every line of action, and am striving to live so as to be worthy the name of a Christian Scientist.

My heart goes out in grateful acknowledgment to our dear Mother, who stands a sentinel on the watchtowers of thought, for all she has done for the world, and what we may do for others as well as ourselves, through being faithful to the teachings of Science and Health. Gratitude is also due, in large measure, to the faithful workers at headquarters in Boston. The *Journal*, *Sentinel*, and *Quarterly* are doing a grand work all over the world, lighting up the dark places with the "light of Life." The *Sentinel* has found its way to the Philippine Islands to a brother of mine, a soldier, and has been eagerly read by his comrades when he has finished it, thus doing a grand work there. This young man has a pocket edition of Science and Health, and though not an avowed Scientist, attributes his good health to Christian Science. The captain of his company is also reading Science and Health, and said, "That is a good book."

MARY B. POWELL, St. Joseph, Mo.

Healed after Many Physicians Failed.

There is only a small handful of workers in Pierre, S.D., but we hold our meetings regularly Sunday mornings at eleven, and Wednesday evening. My boy, twelve years of age, and myself, being the only members of the Mother Church, are the Readers.

Some good demonstrations have been made. I will state two of these. I am a music teacher, and had a pupil who had very sore feet. Her feet at times became swollen, turned dark, and were so painful that she could not walk. She had been troubled during the summer for years, and the doctors had told her that she would be no better until she was sixteen or seventeen years old. She became so bad that she could not come for her lessons and so one day I went down to give the lesson. I was told by the mother that they had done everything they could, believing, as the doctors had said, that she must wait so many years before she could be free from suffering. I explained Christian Science to the mother as best I could, and did so in the presence of the little one. I told the latter that she need not fear anything. I told her that Christian Science would cure her. The mother said, "Oh, what would I give if she could only be cured!"

She, however, did not tell me to treat her, but I could not think of the little one without knowing she was God's own child, and I did deny the mother's fear, but gave no regular treatment.

The next Saturday the girl came for her lesson and recently played at a recital for me. She has felt no trouble since the day I was at their home. It seems it was instantaneous healing.

The second demonstration of which I wish to speak was made by my twelve-year-old boy. I had been doing some papering and had a severe headache, which became so intense in the night that I was obliged to call my boy to treat me. He did so, and finally I asked him to read from Science and Health. He read a little while; and all at once some load seemed to leave the back of my head. I lay right down and told him I was perfectly easy. I rested beautifully, and though we worked very hard for over a week after this, doing the same kind of work, yet I had no more attacks of the trouble.

I cannot tell how much the works of Mrs. Eddy and the *Journal* and *Sentinel* are to me.

I was a great sufferer from many things, and was wondrously healed after having twenty-seven doctors, among whom were some of the best in Chicago, Minneapolis, and St. Paul. I am trying to do all I can for the Cause in Pierre. I am so glad when I am given the opportunity to do something for poor, suffering humanity.

MRS. HATTIE E. GANS, Pierre, S. D.

A Tribute to Science and Health.

Karlsruhe, Baden, October 5, 1900.

Dear Mrs. W.:—Permit me to tell you in a few words how thankful I am for the nice edition of Science and Health, for the most interesting newspapers, and above all, for the *immeasurable* bliss and joy I have derived from Science since I first attempted to live in accordance with it.

I first heard of it from my sister. I studied with her the "little book" you lent her. It pleased me at once that all material things should be denied, that man was thought to be God's pure idea, perfect and eternal as He is; but I could not believe in the practical use of it, for then I had not understood its true meaning, and doubted, because I could not conceive the highest consequences of it, but I began to prove its effect in the day's work, and I believe.

I never was happier in all my life. Life has now a higher meaning for me, I feel strong and happy. Things which I did not like to do have become agreeable. My

headaches, which often made my studies impossible, have disappeared.

My understanding is, of course, but feeble, but I think there must be a great and holy truth in Christian Science, because I already feel that it makes me free and happy. To-day I told a dear friend of mine all I knew, and she took a warm interest in Science too. I read the book every day, and I always find something which gives me new strength and happiness. For all this, I thank you heartily.—C. B.

A Word for our Periodicals.

The *Journal* has been coming to our home for several years, and the *Christian Science Sentinel* ever since its birth. I take great pleasure in writing, that during that time I have never received one copy of either without finding therein some word or message which has been of untold worth and benefit in some direction of thought. For this blessing which has been mine to enjoy, I wish to express my appreciation, and also for the *Quarterly*.

I recall a circumstance which occurred last winter which opened my eyes, I think, a little wider to the Truth. To mortal sense there was quite a difficulty to surmount and, although rising above it enough to continue my duties as usual, I had by no means become conqueror. All at once I felt impelled to study the lesson for the following Sunday. Taking the Bible, Science and Health, and *Quarterly*, I thought, "Our spiritual healing comes through these sermons, and I *know* there is something here for me." As I proceeded, the spiritual import of the Bible and Science and Health references so absorbed my thought, that when the lesson was finished I had lost the discordant note, and the "mountain" vanished. I arose refreshed and strengthened.

I feel it a great privilege to send these few words of appreciation for the good received through the literature, for it comes to the Field through many strenuous efforts of those who are working for the Cause at headquarters, to whom workers in the Field should lend a helping hand

MRS. MAY E. HARRIS, Portland, Me.

Testimony of a Trained Nurse.

Three years ago I first heard of Christian Science. I was a trained nurse at the time and had been obliged to accept a three months' leave of absence from a hospital position, as my health gave way. I was in a wretched state of mind and body, but when I saw the Truth in Science and Health, the world was changed for me, and I felt once more that life was indeed worth living. I had all my life been longing for something better, though I had at times tried to drown that longing in other interests and ambitions, but I never succeeded till Christian Science came to the rescue.

At first when I began to work in Science as a nurse, I found all my old medical theories and beliefs coming up strongly to tempt me, and I had to work hard, but gradually and naturally they dropped from me, till I now know divine Love to be the only Healer of sickness as well as sin.

I am grateful for both moral and physical benefits which I have received from Christian Science, but most grateful for the moral healing it brings. I know we only need to be humble, faithful, and honest to demonstrate that all things are indeed ours.—E. H. A., London, Eng.

Revelation is not enough, the open top-door is not enough, if the door of the heart is not open likewise.—MACDONALD.

We must not let go manifest truths because we cannot answer all questions about them.—JEREMY COLLIER.

Religious Items.

An article in the Philadelphia *North American* gives information regarding the religious beliefs of the ruling sovereigns of about all nations. The Queen of England is a "Broad Church" Episcopalian. Emperor William of Germany is a Lutheran. The Queen of Holland is a member of the Dutch Reformed Church (Presbyterian). King Christian of Denmark and King Oscar of Sweden are Lutherans. Emperor Francis-Joseph of Austro-Hungary in a devout Roman Catholic. Carlos I. of Portugal is also a Roman Catholic, though apathetic in his adherence to his church. President Loubet of France, the Prince Regent of Bavaria, the King of Wurtemberg, King Leopold of Belgium, and King Victor Emanuel of Italy are all Roman Catholics. The premier of Canada, President Diaz of Mexico, and the presidents of all the Central and South American Republics are Roman Catholics, although in some cases only nominally such. The Czar of Russia, King George of Greece, King Charles of Roumania, and King Alexander of Servia are all adherents of the Greek Church. Menelik II. of Abyssinia belongs to one of the Oriental churches regarded by Roman and Greek Catholics as heretical. Among the non-Christian religions Mohammedanism claims the largest number of rulers, including the Sultans of Turkey and Morocco, the Khedive of Egypt, and the Shah of Persia. The royal family of Japan are disciples of Shintoism, and the Emperor of China's official religion is Confucianism.

The London correspondent of the (Episcopalian) *Church Standard* says: "Mr. Hall Caine, in an address on 'The Old Century and the New,' expressed himself as satisfied that the world is constantly growing better and happier. He claimed that the morality of the world has been loftier in this, 'The People's Century,' than at any previous period. Having christened the coming time 'The Century of Humanity,' he predicted a rapid and glorious march of ever-increasing conquest. 'Every man,' said the lecturer, 'who educates himself is educating coming generations of men, and thereby lifting up the whole world. And this I hold to be the very essence of the Christ idea. To be twenty years of age in 1901, with the prospect of seeing 1950, is to be heir to an inheritance better and greater than the richest millionaire can leave behind him.'"

In one of a series of articles discussing the awakening of religious leaders to the necessity of making the Christian life conform to the standard set by Jesus, the *Homiletic Review* says: "This tendency, which has become so powerful in our day, was admirably expressed in the celebrated sermon preached in 1855 before the Queen at Balmoral by Principal Caird. His brother, Dr. John Caird, says of the sermon: 'Its theme was the necessity of carrying the religious spirit into all the ordinary practices of life, and the hollowness and worthlessness of any religion that wastes itself in feeling, in zeal for orthodoxy, or in the formalities of worship, and fails to consecrate the whole secular existence of man.' If the life is Christian, why should not its Christian light illumine everything on which it falls.'"

An article on "The Power of Good Words," published in the *Christian Register*, contains the following: "The sententiousness of the Bible has been one of the causes of its vast and abiding power. Its quotableness in short sentences has made of it a whole literature, a little compact library held in millions of minds. The preacher's words, his amplifications and expansions, often leave the text where it was,—a nugget of pure gold, saying all in the narrowest compass, portable, adequate, ready to be stored in the poorest memory and brought forth for ready application when needed. The point, directness, and simplicity of texts have given them a circulating power that nothing but money equals. The most ignorant have some of them stored in the mind, if even in a mutilated form."

An editorial article in the (Unitarian) *Christian Register* on "Jesus, the Friend," begins as follows: "Jesus more and more appeals to the common heart and the common conscience as the one who brings into sight and seems to make possible the life that is life indeed. Creeds are falling away. Sacraments are becoming human. Churches are shaping themselves around human needs, and the life of man here upon the earth is becoming more worthy of attention. The hope of immortality is more tender and helpful than ever before. The belief in God as a present and universal helper was never so strong."

"Receiving Correction Meekly" is the title of an editorial in the (Baptist) *Examiner*, in the course of which the editor says: "If we presume to point out to others errors they do not see, we should be obliged to others for pointing out to us errors in ourselves which we do not see. To be angry with him is a contemptible requital of the friend who tells us of our fault. What if he does it awkwardly? Still let us thank him. Even an enemy in anger may give us a salutary lesson. It is of less importance how, or from whom we learn, than that we learn."

The *Congregationalist* says: "What becomes of the Jews of modern times. The *Spectator* says that they have not more than doubled their numbers in fifteen hundred years, and that there are not now in the world more than eight million Jews. As a rule they have large families and their children are well cared for. What becomes of the children? Is the conjecture of the *Spectator* correct that the great majority of the Jews, in spite of their racial exclusiveness, are merged into the nations with whom they live and cease to be Jews?"

The *New-Church Messenger* says: "It is when at last we throw back every bolt, unclose every gateway, remove barrier behind barrier that we have placed between ourselves and our Lord so that there is a clear, shining way to him, and he has an unobstructed way to us—it is when we are ready to give ourselves to him fully, wanting everything he has to offer and repudiating everything else—it is only then that he can do his best for us."

"The Gospel of Book and the Gospel of Man" is the theme of a writer in the (Baptist) *Standard*, who says: "Men will doubt the Bible in these days, but they will never doubt the man who will shed his blood, breathe out his life, lay his all on the altar of humanity's great need. Men will turn away from the book, but they will instinctively and forever turn towards the man of the Book, who appeals to the soul's deepest longings."

Arthur C. Kempton says in the (Baptist) *Standard*: "The double-minded Christian shall never behold the divine vision in its beauty. He scarcely knows whether to serve God or Mammon. To-day he hearkens to the voice of duty, to-morrow he obeys the call of desire. He sings: 'I love thy house, O Lord,' but he shows that he loves the world too. Such an one never sees anything clearly."

In an editorial entitled "God with Us," the *New-Church Messenger* says: "To think of the divine Being as a cold, impassive, and imperturbable Creator, who lives away from the affairs of men, absorbed in the enjoyment of His own inconceivable greatness and glory is inexpressibly sad. Such an idea of God is one of the most deplorable conceptions of His nature that can enter the mind."

The *Literary Digest* says: "Quite apart from the Zionist propaganda, the success of which is as yet problematical, a strongly backed movement exists among all classes of European Jews for reviving Jerusalem as the centre of Jewish life. The London *Jewish Chronicle*, which has continuously opposed the Zionist plans of Dr. Herzl, looks with much favor upon this new movement."

The *Universalist Leader* says: "It is quality of life, rather than many years of existence, that counts in our estimate and comparison of values. The noble and the good of all ages are a holy influence through all time. In lesser or in larger ways the impression of honor, of truth, of fidelity, of sympathy, of sacrifice deepens with the years that make history and leave us memory."

The *Christian Register* has the following: "The Bible men of other times have become the giants of ours. Endless riches are still unmined between the covers of the Bible. There is still new light to break out of the Scripture, even in our day."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

No. 1.—Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

No. 2.—How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

No. 3.—Christian Science: a Lecture. By Joseph R. Clarkson of Omaha, Neb.

No. 4.—Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

No. 5.—Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

No. 6.—Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There's Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18

Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

The Forward Company of London, which was granted exclusive rights for a term of thirty years from 1897 to control navigation on the San Juan River, by a concession of the Nicaraguan Congress, has filed a protest with the British Government against the acceptance of the Hay-Pauncefote treaty. The British Government is consequently delaying the matter. The San Juan River is an important part of the canal route recommended to Congress.

A petition signed by two thousand Filipinos, representing the educated classes of Manila and vicinity, was presented in the United States Senate on January 10, by Senator Teller of Colorado. The petitioners pray the government of the United States to cease "its persecution of men struggling to be free—struggling against greater odds and greater wrongs than those which inspired the fathers of the Republic."

The annual report of George E. Roberts, director of the mint shows that the coinage of the past year was in excess of that executed in any previous year in the history of the service, aggregating \$141,351,960, as compared with \$136,855,676 in the last fiscal year. The value of the gold coinage was slightly below that of the previous year, being \$107,937,110, as compared with \$108,177,180.

Judge Henry E. Burnham of Manchester, was nominated for United States Senator by an overwhelming majority in the caucus of the Republican members of the New Hampshire Legislature on January 10. He will succeed Senator Chandler, the decision of the caucus insuring his election.

The administration bill to reapportion the congressional representation of the various states in accordance with the figures of the last census having been previously passed by the House of Representatives, was passed by the Senate January 11, and was sent to the President.

With a single exception the Minnesota delegation in Congress is giving its united support to the proposed National Park and Forest Reserve in the Leech Lake Indian reservation in northern Minnesota.

An effort is being made in Delaware to bring sufficient influence to bear on the Legislature to have the whipping-post and pillory abolished.

It is announced that the inauguration of Governor Orman of Colorado on January 8, cost exactly five dollars.

Foreign News.

Dispatches from South Africa have contained accounts of battles and minor con-

flicts between the British and the Boers almost every day. The Boers seem to gain steadily in strength and last week they were bold and determined in their attacks. Lord Kitchener, in reporting an affair last week, said: "On the night of January 7 the Boers made simultaneous and determined attacks upon all our posts at Belfast, Wonderfontein, Nootgedacht, and Wildfontein. Intense fog prevailed, and, taking advantage of the cover it afforded, the Boers were able to creep up close to our position. A heavy fire continued until 3.40 A.M., when the Boers were driven off. One officer was killed and three were wounded, while 20 men were killed and 59 wounded. The loss of the Boers was heavy, 24 dead being counted."

Engagements such as the above, of greater or less magnitude, are now a common occurrence, and it is said that without considerable reinforcements the British will not be able to spare enough men from garrison and guard duty throughout the annexed territory, to suppress the quick moving Boer raiders.

The Servian minister to England, according to a London press dispatch, boasts that the Balkan states will henceforth not tolerate interference from Europe. He is quoted as saying that Greece, Roumania, Bulgaria, and Servia are ready to federate for purposes of common defence, and he declares that they have a combined army of three quarters of a million men, perfectly armed and equipped, and that they could go into battle at a moment's notice. These countries make their own rifles, cannon, and ammunition, and the minister says that they have sufficient stores of food, not only for their armies, but for their entire population for at least one year. He says that there is not a pauper in all Servia.

A Manila dispatch says that General MacArthur has ordered the deportation of Generals Ricarto, Del Pilar, Hizon, Ilanera, and Santos to the island of Guam. Nine regimental and four subordinate officers, with eight civilians, including Trias, Teeson, and Mabini, notorious assistants of the revolutionists, have also been ordered deported. It is General MacArthur's intention to hold most of the active leaders of the rebels who have been captured in Guam until the resumption of a condition of peace has been declared.

After the Chinese plenipotentiaries were instructed to sign the "joint note," in approval of the demands therein made, which were to be fulfilled as a necessary preliminary step toward peace negotiations, objection was raised by some influential viceroys, and the Empress Dowager ordered the plenipotentiaries to withdraw their assent to the demands; but after several days of conflicting and confusing counsels, the press reports stated that the demands had been finally accepted.

Industry and Commerce.

Honolulu news dispatches dated January 1, announce that "Wireless telegraphy between Honolulu and various islands of the Hawaiian group will be in practical operation next Thursday. Stations on several islands have been established and tests showing everything is in perfect order have been made. On Thursday commercial messages will be received. The new service and accessories will include all the islands except Kauai. There are three stations, one at Honolulu, one at Hilo, and one on the Island of Lapa'i."

An Altoona, Pa., dispatch of January 7 says: "Four big deals were consummated last week, by which forty thousand acres of coal lands changed hands at a price of a little over one million dollars. The most important of these deals was a sale outright of twenty-two thousand acres of coal lands in Young, Blacklick, and Conemaugh townships, Indiana, at forty dollars per acre flat."

A Philadelphia press dispatch dated January 7, says: "It is reported here that Andrew Carnegie is to build an independent railroad to the seaboard. The road is to run from Pittsburg to Uniontown, then to Wheeling,

W. Va., connecting there with the Baltimore and Ohio. It is said that the contract was signed last week."

The United States produced pig iron to the value of \$238,078,737 in 1900.

General News.

Nikola Tesla, having set up the fascinating theory as to the possibility of communicating with the people of Mars, the London *Daily Mail* sought the opinion of Mr. Marconi, who is conducting experiments in wireless telegraphy near Poole, and Mr. Marconi gave the following reply: "In earlier experiments before my apparatus was perfected I often received signals apparently from nowhere. This was undoubtedly due to atmospheric electricity. One of the greatest difficulties has been to produce an apparatus which would eliminate them, but this I have lately succeeded in doing. I should attribute the alleged signals from Mars to local disturbances in the atmosphere."

One of the few persons in New England who have lived in three centuries is Mrs. Mary Drew Peavey, whose home is with her daughter, Mrs. John W. Tower, at 11 Atlantic Street, South Boston. Mrs. Peavey will be 106 years old May 16th next. Her hearing is but slightly impaired, she sees well, speaks distinctly, and has a good memory. According to the record in the old family Bible, Mary Drew was born in Hollis, Me., May 16, 1795. Mrs. Peavey has lived through the four American wars of this century, 1812, Mexican, Civil, and Spanish-American. Washington was serving his second term at the time of her birth.

Prominent coal men of Pennsylvania have decided to erect a monument of coal to Philip Ginter, who discovered coal at Summit Hill, near Mauch Chunk, one hundred and nine years ago. While out in quest of game for his family, whom he had left at home without food of any kind, he built a fire of wood to roast a fowl, and placed around it some pieces of black rock lying near in order to keep the embers in a good bed. To his surprise the stones began to crackle and glow: in short, he discovered that the black rocks were good for fuel.

In China the alphabet took form about 3500 B.C., or, as some think, possibly 5000 B.C. Confucius, the name being Latinized from Kung-Fu-tze, is the recognized founder of Chinese literature. Bamboo fibre furnished the material upon which writing was made in tablet shape. Paper of rags was used in China 100 B.C., and printing on solid blocks of clay was known as early as the first century A.D. In Greece writing is believed to have been known 700 B.C., and reading and writing were taught as early as 500 B.C.

In an article in the January number of *Success*, Thomas A. Edison says: "Electricity as a science should be made one of the studies in every school in the land. It should rank with spelling and arithmetic; for, the more it is used, the more potent it becomes as an important element in all the world's general affairs, and its value in connection with practical business and business affairs, cannot be given too prominent a place in America's future."

The *National Magazine* says: "Edward Wigglesworth, Hollis professor of divinity at Cambridge, in a little pamphlet published in the portentous year of 1775, must have had a correct idea of the prosperity of this country during the century just closing, as he predicted that the population of the British-American colonies in 1900 would be eighty millions."

The population of Russia was estimated at about 75,000,000 in 1861, the year of the emancipation of the serfs. It is now calculated to be over 136,000,000, according to a statement just published by the ministry of finance. The Russians alone number 86,000,000, or 66 per cent. There are 4,000,000 Hebrews.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Railroad to Frozen North.

THE railroad newly started which is to connect the great lakes with Hudson's Bay will open up a country hitherto to a great extent unexplored. It will tap the resources of a region vastly productive in furs, and will exploit the coal fields of the valley of the Saskatchewan, through which runs a river navigable by steamers, affording every facility for transportation. These coal fields are believed to be among the greatest in the world. Hudson's Bay itself, which is almost a landlocked sea, with three thousand miles of coast line, abounds in whales and fishes commercially valuable.

Hudson's Bay is the southernmost of a great system of sounds which runs up into the Arctic. Its only outlet is through straits which, being in 60 degrees north latitude, are blocked by ice except for two months in the year; and even during those two months they are so obstructed that the passage is difficult and dangerous.

Two hundred and ninety years ago Hendrik Hudson, the famous navigator, had wintered in the bay, after making a fourth attempt to find the much-desired north-west passage to the Pacific, and, being out of provisions, was about to return home, when his crew mutinied. The mutineers set him adrift in an open boat, with his son and seven others—never to be heard of again, though doubtless they perished of cold and hunger—and coolly navigated the ship back to England.

In 1670 Prince Rupert organized a joint stock association, and King Charles I. granted to him and seventeen other noblemen and gentlemen a charter incorporating them as the "Company of Adventurers of England Trading into Hudson's Bay." To this Company he gave lordship over all the country watered by rivers flowing into the bay, with sole right of trading and the privilege of building warships and establishing forts. In return for this enormous grant the association was to pay to the sovereign the skins of two elks and two black beavers annually.

The Company from that day to this has made a great deal of money. Its business is the getting of furs, and chief among these are the pelts of the beaver and the marten. The region's wealth in animals valuable for their skins will be best shown by quoting figures for the year 1890 (the latest readily obtainable), which state the output for that year at 64,246 beaver, 64,689 marten, 8,180 otter, 11,445 lynx, 22,047 fox, 1,388 wolverine, 10,542 bear, 4,237 wolf, 29,363 mink, 574,743 muskrat, 36,286 rabbit, 5,658 fisher, 2,445 badger, 12,583 skunk, and 2,195 hair seal skins. The fisher is a big gray-headed marten, and the foxes are some of them jet black, some silver, some red, some white, and some blue.

Eiderdown and goose quills are by-products of the Company, and another is castorum, which is a substance contained in certain glands in the body of the beaver.

The polar bear is found in the northern part of Hudson's Bay, and elk and the woodland caribou are numerous on the west side of that body of water.

Under its original charter the Hudson's Bay Company was practically sovereign over 4,500,000 square miles—a territory one third greater in area than the whole of Europe. All this vast region is still under the influence of the Company, though nowadays it carries on its business only as a private concern.

The climate of the region, as might be supposed, is exceedingly severe. In winter the thermometer goes down to 60 degrees below zero sometimes.

In summer there are innumerable mosquitoes, which are a great pest, and there is a luxuriant sub-Arctic vegetation which develops with great rapidity.

The principal depot of the Company is York Factory, which has been described as,—

A monstrous blot
On a swampy spot
Within sight of the frozen sea.

The Company's posts are scattered at wide intervals throughout the almost uninhabitable country, and to these places the Indians bring things for sale.

The Company does all it can to prevent the extermination of the fur-bearing animals, by prohibiting the killing of females in the breeding season, as well as the destruction of any such animals in hot weather, when the fur is out of condition.

The Company allows no spirits to be brought into its territory, and it encourages its people, who are mostly French-Canadians, to marry the Indian women, as a means of securing the good-will and trade of the tribes. Thus a considerable half-breed population is growing up, and the young men of mixed blood are educated by the Company and retained in its service when they are capable.

As early as 1640 the French colonists pushed their way into the interior from Lake Superior up the Saskatchewan, established posts, and intercepted the Indians on their way to trade furs with the agents of the Hudson's Bay Company. A combination of these traders in 1783 gave rise to the famous Northwest Company of Montreal, which at one time employed as many as five thousand persons. Hostilities broke out, and for more than forty years the conflict raged. There were many fights, and not a few lives were lost.

A deplorable state of affairs was brought about, until, in 1821, the two concerns united, the Hudson's Bay Company absorbing the other one. In 1869 all the rights held under the original charter by the Company were bought by Canada, and as a sovereign power it ceased to exist.

The governor and directors of the Company reside in London and delegate their authority to an official resident in the Hudson's Bay territory, who is called the governor of Rupert's Land. The Company's officers in the fur country are nearly all of them Scots or Orkney islanders, and are enlisted for five years. Their employment, however, is for life ordinarily. There is a regular system of promotion, and if they are not content with Indian wives the Company will send home to England and provide them with

mates according to specifications. The rank and file of the employees, as already stated, are French-Canadians.

A couple of years ago a lost tribe of Eskimo was discovered by a whaling ship on Southampton Island, at the north end of Hudson's Bay. The people, numbering only fifty-eight individuals, were still living in the Stone Age, knowing no metals, and their houses were built of whales' jaws, put together and covered with skins. Their subsistence was obtained chiefly by catching whales, and from the whalebone they made all sorts of utensils, even to cups and buckets, as well as sleds.—*Boston Herald*.

Map of the Skies.

To photograph and map out the entire heavens—to search, with the camera the profoundest depths of space—to bring to light all the heavenly bodies far beyond the vision of the most powerful telescope—to tabulate and catalogue millions of stars—is the stupendous task which the International Astrographic Congress set itself to perform when it convened in Paris, April 16, 1887.

The work of this Congress is nearly completed, and already sections of the star charts are being printed and sent to the eighteen different observatories interested in the undertaking.

Mapping the entire heavens will prove an epoch-making enterprise. Future generations will chronicle the achievement as one of the greatest of this century, and each astronomer aiding the work will hold a charter to fame.

Fifty-five delegates, representing the fifteen most enlightened nations, deliberated for nine days in Paris in 1887, deciding to make the great star map, and eighteen observatories were appointed to do the work. The meeting was the result of a suggestion made on June 4, 1886, by Dr. Gill, of the Royal Observatory, Cape of Good Hope. It was fitting that Dr. Gill should originate the work, for it was from his famous photograph of the comet of 1882 that astronomers the world over turned their attention in the first instance to star photography.

The new star map is an amazing work. The patchwork of photographs will cover an immense globe having a diameter of twenty-four feet. During the work forty-four thousand photographs will be taken, and a catalogue of two and a half million stars will be made. Each photograph, to avoid errors, will be duplicated. Altogether more than thirty million stars will be photographed.

Previous to the middle of this century such a work would have been considered beyond the bounds of possibility. To tabulate these stars in the ordinary way would take thousands of years, and the stars themselves would change their places before the work could be half finished. It is only through photography that it can be done at all. The entire work could be done in one night, so far as the actual photographing is concerned, but varying conditions of atmosphere, climate, and season have rendered necessary the spending of a number of years.

Wolf's great map of the Pleiades, whereon but 671 stars were shown, took many years of the closest visual observation to complete. To-day, photography, in an hour's exposure shows 1,421 stars of the same group, furnishing accurate data for calculations unattainable by visual means. Telescopic observations during eclipses are now subordinate to photographic records. Rapidly changing objects in the heavens—objects too fleeting to be observed by the eye—are caught on the sensitized plate and stored up for leisurely study.—*New York World*.

Be what your friends think you are; avoid being what your enemies say you are; go right forward and be happy.

BRICK POMEROY.

Selected Articles.

Reply to an Editorial.

Editor the Church Messenger.—The October issue of your paper, containing an article severely criticising Christian Science and Christian Scientists, has come to my notice.

The lecture by Mr. Edward A. Kimball of Chicago, delivered in Convention Hall in Kansas City, and published in full by the *Kansas City Star*, was made a basis for this article.

We are pleased to know that you acknowledge there is a "true Christian Science," and your answer that "it is a knowledge of the doctrine of Christ," is a very acceptable answer, so far as it goes, to a Christian Scientist; but we feel the answer would be more complete to read thus: It is a knowledge of the doctrine of Christ and its practical application. A knowledge of anything is of very little use to us unless we put it into practice.

It is because of this lack of the practice of Christ's teachings that we have so many lukewarm Christians in the world to-day.

Christian Science does not claim to teach any new doctrine, but to show mortals how to make an every-day practical use of the teachings of Jesus, and to obey his commands to preach the gospel and heal the sick, which commands are as imperative to his followers of to-day as they were to his disciples nineteen hundred years ago. An honest difference of views expressed in a Christian and courteous manner is always commendable; but to indulge in slurring personalities and ridicule of others' honest convictions on any subject, is hardly carrying out the Scriptural command, to do unto others as ye would that they should do unto you.

The lecturer is referred to as "High Priest Kimball," and yet we do not know who could better bear to his brethren the words of salvation, not only from sin but from sickness as well, than he who had been lifted from a disease (the ravages of which the best medical skill in this country and in Europe could not stay) by Christian Science—the understanding that God does heal to-day the same as He did ages ago, and that "He is all-in-all and there is none beside;" that it is His will that His children be harmonious and free and never in discord.

The following misquotation from the lecture would lead your readers to have a false impression of what Mr. Kimball would convey, which you would not desire to give.

"No person ever 'caught cold' from 'wet feet.' He caught it from his imagination of fear. A duck has no imagination of fear—*ergo* a duck never catches cold from wet feet!"

We admit the above is more amusing than instructive; but let us give the correct and full quotation:—

"The common belief that if a person gets his feet wet that that occurrence will make him take cold is erroneous and unlawful. It is the universal belief and the concurrent fear, rather than matter, which bring to pass what is termed the cold. The human body very largely consists of water. Now, I ask you is there any good reason why water should take cold when it gets wet? Is there any good reason in scientific cause and effect why the water in a man's foot should take cold when it gets wet, any more than the same water in a duck's foot or in the tail of a fish? Take all the substances that are said to compose the body, such as water, lime, starch, iron, phosphorus, etc., and aggregate them in a mass or body minus the mind, and that body will not take cold or congest. If matter knew enough to take cold when it got wet it would always take cold under similar circumstances, and all bodies would do the same thing.

"It is not material causation, but mental that governs

the case, and such mental influence and procurement is not a necessity under natural law, but is the unnatural and abnormal consequence or penalty of erroneous human belief and fear on the subject."

Mr. Kimball was trying to show that fear is largely the cause of disease. A medical practitioner will always charge his patient to keep calm and keep down all fear, if he would speedily recover. And no one knows better than a Christian Scientist the part fear has in producing disease; and destroying the fear destroys the influence of the disease upon the body.

Mr. Kimball gave here much food for honest thought which, in all fairness, could not be called "bombastic trash."

Among the Christian Scientists will be found the best business men of the country, and people of as high intelligence as can be found in any other religious organization, at least they were so considered when in the other churches.

In that audience were fifty or more Leavenworth people, the majority of whom were Christian Scientists, and to speak thus disparagingly of that immense congregation of people is to cast insinuations upon friends and neighbors and upon members of a sister church, which we feel you would not care to do with any other church in the city.

The Christian Science Church is a religious organization, so recognized by the Congress of Religions at the World's Fair held in Chicago in 1893, and First Church of Christ, Scientist, of Leavenworth, is a legally organized body, holding a charter under the laws of the state. While we may differ from our brothers and sisters of the other churches in our views as to God's care for His children, yet we have the highest Christian consideration for their honest convictions, and wish them Godspeed in their work of lifting mortals into a higher understanding of God, whom to know aright is life eternal.

Christian Science does not teach "matter as the greatest evil," and our highest good in getting rid of it, but that giving up to the demands of matter, and relying upon it for health and harmony instead of trusting God, who is ever-present Good, is where the evil lies, and what we would be rid of, is this false belief that matter and material things can give us real and lasting satisfaction. Jesus said, "I pray not that thou shouldest take them out of the world, but that thou shouldest keep them from the evil."

Christian Scientists are not trying to get rid of matter, but learning to live above its evils by practising daily the teachings of Jesus as he promised we should when he said, "He that believeth on me, the works that I do shall he do also."

In God's kingdom there is no such thing as pain and disease and death, and God's Kingdom is wherever God is, and as He is ever-present, His Kingdom is here and now, and just in proportion as mortals realize this ever-presence of God's allness, are they free from the claims of disease; but so long as they believe they should be sick and in pain and distress, and that God so afflicts them, will these evils be manifested, not as imaginations but as stern realities to their sense of what life is. But nothing is real except what God made, and as He made all that was made and it was "very good," so sin, sickness, and disease, being evil, were not made by God, hence are not real, but are false manifestations of life which are destroyed by the understanding that "God (Good) is all and there is none beside." They are real only to the mortal senses.

If, out of the many who come for Christian Science treatment after all material means have failed, an occasional one should pass away and you should be called upon to conduct the funeral services, we cannot see why you should look upon that one as a "victim" any more than you would upon the many who are daily passing away under the care of *materia medica*, as "victims" for whom you are fre-

quently conducting such services. They were no worse off for trying Christian Science, and were "victims" more of over-drugging than otherwise.

We agree with you that the Church ought to be able to interpret the Scriptures; but it would have us believe they are interpreted and there is nothing more to learn; and when some God-fearing, spiritual-minded man or woman has God's truth come to them, lifting them out of the wilderness of material dependencies into the sunshine of God's love, healing them, not only from sin but from sickness as well, and they would carry the glad tidings of God's word to others about them, the cry of "heresy" is heard.

It were better to heed the advice of Gamaliel: "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

Christian Science teaches that God is the same yesterday, to-day, and forever, and that He has no favored people; and as He healed His children ages ago when they trusted Him (which all Christian people accept), so is He able and willing to heal His children to-day when they trust Him, which Christian Scientists are learning to do.

Christian Science is not a "pious fad," but it is the understanding of God as an ever-present help in all times of need.

It lifts up the fallen, and where sickness, despair, and sorrow reign, it brings health, happiness, and joy by showing that God is a loving Father who careth for His children. Such is the mission of Christian Science.

As the *Messenger* has presented one view of Christian Science, will you kindly give space to another view, that your readers may be better able to judge as to its merits.

EDWARD H. KEACH.
In the *Church Messenger*.

In Reply to Professor Sheldon's Lecture.

St. Louis, Mo., December 7, 1900.

To the Editor of the *Globe-Democrat*.

Sir:—Kindly permit me space to reply to a lecture delivered by Professor W. L. Sheldon, Sunday, December 2, before the Ethical Society of this city, on the subject of Christian Science. In his references to the subject he says: "I am bound to say that I came to the treatise Science and Health with a decided prejudice, judging from various quotations which I had seen from it; and I shall have to own that in my opinions I have not done it justice by any manner of means. One could go through that book and cull any number of beautiful gems of spiritual truth and make of them a chaplet of pearls to wear for all of one's days." He also says, referring to the teachings of Christian Science, "On the practical side there is certainly a great deal of wholesome common sense in what Mrs. Eddy has to teach. Thousands and thousands of persons have probably been helped and made better in body and mind through following her suggestions. One cannot help feeling what a lot of good it would do to have this system tried even on an extensive scale."

So far, the professor's kindness and perception of the teachings of Christian Science are to be appreciated, but I am sure that he will pardon me for differing from him in what I consider to be his misconception of Christian Science rather than any intention to criticise it unjustly.

He refers to the text-book, "Science and Health with Key to the Scriptures," as the "Bible" of Christian Scientists. If he uses the word "Bible" in the sense of its original meaning (book), then Science and Health is a bible or book, for it is the text-book of Christian Science, having its basis in the Bible, but it by no means takes the place of the Holy

Scriptures, for Science and Health reveals the spiritual import of the Bible, making its teachings practical and beautiful.

Then he proceeds to say, "One cannot help wishing that Mrs. Eddy had been just a little more acquainted with the actual theories of the modern physical science which she has attacked so vigorously. In that case her book would be in certain directions more readable and satisfactory." Here he touches the vital question inherent in the beliefs of the centuries—that of the necessity of knowing matter as well as Spirit, yea, of the necessity of knowing both good and evil; the suggestion of the serpent which caused the downfall of Eve and brought the curse upon the race. The understanding of Spirit explains matter, the understanding of Good explains evil, therefore, if Spirit and Good are understood as realities, their opposites must be unrealities.

Christian Science is the Science of the Christ, or Christianity, and, therefore, must be purely spiritual.

Mrs. Eddy does not vigorously attack physical science as the critic avers, but she scientifically explains it. To the wise Pharisees, who were students of the so-called sciences, and, as a rule, familiar with the science of meteorology Jesus said, "Ye can discern the face of the sky and of the earth; but how is it that ye do not discern this time?" thus rebuking their reliance upon material science as their guide.

It will be seen by a careful and unbiased study of Christian Science that its teachings coincide with the Scriptures and with the practice of Jesus and the apostles. There is no record of Jesus ever referring to physical laws as being necessary in any way to his work of healing. He never asked if the disease were hereditary, acute, or chronic, but he healed epilepsy, deformity, blindness, leprosy—in fact, he healed all manner of diseases and sin, and raised the dead, all by the same spiritual understanding, and directly contrary to all material laws. He taught his disciples to do likewise, and commanded that they go into all the world and preach this Gospel of healing from sickness and sin to all nations. He also plainly said, "He that believeth on me, the works that I do shall he do also."

Then the speaker is also reported as saying, "There is always danger in handling familiar words which have lost their concise significance to the average person, like much-worn coins. They seem more readily understood by the half-educated person than by the close thinker." Then he denominates these words used by Mrs. Eddy as "being," "matter," "spirit," "divine," "mind," "science," "love," and "truth," and that they belong, the most of them, to the most abstract or abstruse thought of modern times. It is obvious to the youngest student of Christian Science that the critic does not catch a glimpse of the true import of these words, as used in the writings of the Discoverer and Founder of Christian Science.

Of the above criticisms one might say as the Master said to a teacher and ruler of the Jews, Nicodemus, who failed to catch the spiritual import of the Master's words, and received this reply: "Art thou a master of Israel, and knowest not these things?"

Then briefly touching upon the statement made concerning Science and Health as having been compiled from various philosophies and sciences, and yet not being original with its author, the speaker said that he preferred to go to the original sources, since they had become so diluted in passing through the mind of Mrs. Eddy. I wish to say these same charges have been refuted so many times that it is hardly necessary to refer to them again. Christian Science is the Science of Christianity, and since the larger term for Science is Omni-science, then Science belongs to no age or class, but is of God, and will continue throughout all eternity, without losing any of its truth or reality. Mrs. Eddy does not claim to be the origi-

nator of Science, but she is the Discoverer and Founder of the system denominated as Christian Science, which has divine Principle for its basis. The miracle of Christian Science is, that it is not teaching some new thing, but that through its teachings, life and light are put into that which has been cast aside by scholasticism and much learning.

Professor Sheldon also speaks of Mrs. Eddy as not being a student of the Bible of the new or modern version, or, as he terms it, the "Bible of the scholarship," which he says is far more moving and inspiring than the Bible as interpreted by Mrs. Eddy. In regard to this, I will say that Mrs. Eddy usually quotes from the St. James version of the Bible, because it is more generally in use, and I beg leave to differ from the critic, if he really thinks that Mrs. Eddy is not a close student of all the new or modern versions of the Scriptures, or even of the "Bible of the new scholarship." Her library is complete with all the most useful literature of the day, and it is said by those who know her that she is one of the most diligent students of the age.

In conclusion, the theology of Christian Science is inspiring and regenerating in its character, touching most deeply the spiritual nature of the individual, binding him more closely to the Holy Scriptures, and especially to the teachings of the Gospel of Jesus Christ, and thus inculcating a desire for a purer and holier life.

As to its therapeutics, it is easy to dismiss with a wave of the hand the class of diseases that Christian Science, "of course, cannot heal;" it is not so easy to dismiss the living witnesses in our midst who know whereof they speak, and who exclaim with the blind man, "Why herein is a marvelous thing, that ye know not from whence he is, and yet he hath opened mine eyes." Above all, it is a truly wise man who remembers "how that not many wise men after the flesh, not many mighty, not many noble, are called: but God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are: that no flesh should glory in his presence."

JAMES A. LOGWOOD.

The Lectures.

At Princeton, Ind.

On Sunday afternoon, December 23, an intelligent audience listened attentively for fully an hour and a half to a lecture on Christian Science delivered by Judge William G. Ewing of Chicago. The *Evening News* of this city commented on it as follows:—

Judge William G. Ewing of Chicago, lectured on Christian Science yesterday afternoon at Odd Fellows Hall. The audience was composed of about three hundred people and all gave the speaker the best of attention. The visit and address of Judge Ewing will have much effect in Princeton and will no doubt bring many to the faith which he represents.

The lecturer was introduced by Hon. C. A. Buskirk who spoke in part as follows:—

Ladies and Gentlemen:—The followers of Christian Science are asking for it an honest and intelligent examination. It is that which is false which suffers from close inspection. The search-light of fair investigation serves only to discover more plainly the eternal symmetry and divine energies of Truth. This afternoon, if you recognize any message of Truth knocking at the door of your thought, we trust you are willing to welcome it with hospitality.

To be misunderstood, to be reviled and misrepresented, even to be hated unto the cross, was the lot of Jesus when on earth, loving and lovable as he was; but this was not the real bitterness in the cup he drank. The real bitterness was this: that the majority of men, because of spiritual sloth and indifference, because of opposing self-interests, passions, and appetites; because, in short, of that carnal-mindedness which is enmity against God, refused to come into the gracious temple of Truth, even when its shining corridors invited their steps and its everlasting gates were thrown wide open to welcome their entrance. This carnal-mindedness still walks the earth. But it is the duty of all lovers of Truth to keep their armor unspotted by the rust of discouragement.

You have been invited here to listen to a lecture on Christian Science under the immediate auspices of First Church of Christ, Scientist, of Princeton, Ind. Whatever others may say or think, Christian Scientists know of the blessings, great and manifold beyond description, which have come into their lives as the direct and indisputable fruitage of their understanding of Christian Science. They know that all its literature, its text-book, its accredited periodicals and tracts, its lectures, are ennobling in their influences. They know thoroughly that they can best succeed in demonstrating the limitless power of Truth over error in casting out either moral or so-called physical sickness, as they best succeed in attaining pure hearts and clean lives. They may grievously fail in living up to their ideals, they may stumble upon their way, but they know from experience that their every effort to become purer of heart and cleaner in life brings its blessing, and the light thrown upon their shortcomings by the searching logic of Christian Science proves that it is indeed true, that only the pure in heart can discern God. They have learned more and more, month after month and year after year, to trust God and the immanence of His love. They have learned this by repeated demonstrations over various forms of physical ailments in themselves, their families, and others,—ailments classified in *materia medica* as acute, chronic, functional, and organic. Every one of them has thus learned, from individual experience and observation, just as you learn to trust arithmetical rules after repeated trials of their trustworthiness, that the Scriptural promises are true. It is because of these practical, every-day proofs, or "signs following," as they were called in the days of the gentle Nazarene, that there are Christian Science students in this city, as now in almost every country on earth, who know that it is proven to them, beyond all questioning or doubt, that Christianity as taught and practised by Jesus and the early Christians, who "preached the gospel," "healed the sick," and "went about doing good," is a glorious and unchanging and unchangeable verity, and that materialism, infidelity, agnosticism, and atheism are terrible mistakes. When Christian Science students have gone this far upon the road, they feel that they have no right to hide the light which gives them so much joy and blessing, but that it should be allowed to shine forth before all who are ready and willing to have their way thus brightened.

Men and women need the whole of Christianity as it was taught by our Saviour when on earth, not just a part of it. In order that the Christ-Truth may shine full-orbed and undimmed into all corners of the earth, a Board of Lectureship was established about two years ago by the Christian Science Church of Boston, Mass., and it has about fourteen lecturers in the Field, in the United States, Canada, and Europe. These lecturers are men and women of broad learning and high thinking. Eminent among them is the gentleman here to-day. Whether you agree or disagree, in whole or in part, with what he shall say this afternoon, you will, at least, be sure to carry away with you many uplifting thoughts which will benefit your lives.

I now have the honor and the very great pleasure of introducing to you Judge William G. Ewing.

Correspondence.

At Austin, Tex.

Those who heard Judge Ewing's lecture at the Opera House (Saturday, December 8), on Christian Science, listened to a masterly exposition of a subject which is attracting great attention. The lecturer spoke in a quiet, conversational tone, characterized by great earnestness, and his audience evinced great interest in his remarks. This was Judge Ewing's first appearance before an Austin audience, and he was presented by Mr. Robert L. Ziller, C.S.B., who, introducing him, said:—

I am persuaded that something more than a passing interest has assembled this large audience to hear what may be said on the mighty theme of the Science of Christ, or Christian Science. First Church of Christ, Scientist, under whose auspices this lecture is given, extends a cordial welcome alike to those who are in sympathy with this movement and to the avowed sceptic. We feel that the former will increase their store of faith and understanding, and we trust the latter may depart with prejudice so softened that the windows of their souls will gently open and let in beams that perchance may sometime glorify and illumine their lives with the light of Christ.

In discussing his subject this evening the distinguished speaker will do violence to the opinions of no man. The exponents of Christian Science are not abroad seeking to turn men from anything that brings them health or genuine happiness. But there is a message for those who are looking for something better and higher, and who are not able to find it in philosophies and doctrines which, alas, are too often void of practical results. To such, Christian Science says, in the words of the Master: "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Who could be better qualified to speak of these things and clear away the many misconceptions concerning this Science than one who has experienced the blessings bestowed by God through Christian Science, and been rescued from his grave into which he stood looking while the dull voice of despair mocked his agony? The lecturer who will address you this evening will speak with a conviction born of experience. Anticipating the many things in store for you, I will no longer defer the pleasure of introducing to you the Hon. William G. Ewing, who will now address you.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Limitations.

MORTAL man is painfully aware of the limitations which beset him on every hand, yet he has pictured to himself that state of freedom wherein the days of his existence will move in ever-widening circles until he knows no bounds but infinity. To escape the limitations of material existence has been the purpose of all the scientific researches, inventions, and achievements which have marked the path of progress during the centuries that have passed. All the teaching of the ages, religious, political, and philosophical, had this in view. That he has made great and rapid progress, especially during the last century, cannot be denied; but while he has advanced in some respects has he not lost ground in others? In many instances the very things which he hoped would set him free have bound him, as it were, with fetters of iron.

This is especially manifest in his endeavors to free himself from the bondage of sickness and suffering. Believing that life inheres in the body, and that health is a condition of matter, he has sought to know the laws of matter which, if obeyed, would bring health and a long life. In his investigations he has never hoped to find the fountain of perpetual youth. Of nothing else has he been more firmly convinced than that health would finally become impaired and that life would result in death; but he has hoped that through obedience to what he believed to be the material law of life and health, he would be able to increase the number of his days and enjoy a reasonable degree of health.

But his researches in this direction have not accomplished the desired result. Sickness has increased and the list of so-called incurable diseases has multiplied at an alarming rate. The very thing that it was hoped would deliver from sickness, has greatly increased the fear of it by showing how easily it can be induced. In many instances this has caused mortal man to give up in despair as he contemplates the Herculean task of observing the material laws of health. However firmly he may be convinced that obedience to these laws would save from sickness and suffering, yet he is as deeply impressed with the thought that such obedience is impossible. Thus the invalid oftentimes concludes that he is the victim of circumstances and might as well give up in despair. All this is due to mortal man's limited sense of existence. He must learn to look away from a finite material body for life and health.

Mortal existence is but a finite or limited sense of Being which is infinite. It is impossible for mortal man to comprehend the Infinite. Infinite Life—Life without beginning or ending—infinite Intelligence, Power, and Presence are the very antipodes of mortal man's concept of Being. Thus while he has endeavored to escape the limitations of mortal sense he has looked no higher than matter for help. With an ideal that is limited one cannot hope to make any great progress, for it is certain that one can rise no higher than his ideal. On the other hand, if one has an ideal which is illimitable, and he is inspired with the thought that sometime he will be able to make that ideal his own, who can say what he will be able to accomplish in overcoming the

limitations of the present and gaining a higher and broader thought of life and its environments?

It is evident that human consciousness must greatly enlarge its borders to free itself from the limitations of the mortal and material senses. The all-important question is, How can this be done? How can man gain the mental freedom which will enable him to transcend the limits of the physical senses?

Is it not evident that the contemplation of the finite will not reveal that which is infinite? Then one must look beyond the finite to the Infinite. As he contemplates the Infinite, thought rises above the sense of limitation and catches a glimpse of the real man's heritage wherein there is no error to say to honest, conscientious endeavor, "Thus far and no farther." The apostle James says, "Whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed."

First, there must be the perfect model in thought and then, so far as it is possible, all the affairs of life must be shaped in accordance therewith. Because one is not able to demonstrate perfection is no reason why he should not have a perfect model. Because one's present sense of existence is limited is no reason why he should not look to that which is limitless. The wise man does not claim for himself any more than he has already accomplished. He aims at perfection and works to that end. Whenever he speaks of himself he does so in the words of the Apostle, "Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

He who brought to human consciousness the highest ideal of manhood, and who revealed to the world the "glorious liberty of the children of God," said to one and all, "Ye shall know the Truth, and the Truth shall make you free." The fulfilment of this promise must not be limited by human belief, for it declares the omnipotence and omnipresence of Truth which is able to make all men free indeed. Truth is infinite in every sense of the word and there is no limit to what it can do for man. But to receive the blessings of Truth one must not have a limited sense of Truth. The windows of thought must be opened wide and the sunlight of Truth allowed to enter and dispel the illusions of darkness. If one limits Truth his blessing must of necessity correspond to his limited sense of God's presence and power.

Escape from the limitations of material sense must come as the result of spiritual growth and development—growth in the realization of God's presence and power. The understanding that God is Omnipotence—all-power—takes away the seeming power of evil. Jesus said, "No man can serve two masters," but is not this what mortals are attempting to do when they believe in the power and presence of evil as well as Good? Evil is but the belief that Good is finite, just as darkness is the absence of light. One who closes his eyes cannot see the light, even though the sun may be shining with the brightness of noonday: so when one believes that evil has presence and power he closes his eyes to the Scientific fact that Good is infinite. He who sows sparingly reaps also sparingly. He who limits Good will see good limited on every hand, while he who entertains a large sense of God's presence and power will see that presence and power manifest in a corresponding degree. The great need then is to turn thought away from the mortal and material to the contemplation of the immortal and spiritual.

One must not expect to accomplish this great work in a day, a month, or a year. The work begins in time but is finished in eternity. However, the honest effort of to-day brings a present reward which is sufficient to inspire a

greater effort to-morrow. Thus each to-day foreshadows a brighter to-morrow if thought is rising Spirit-ward and unselfish and noble deeds are keeping pace with uplifting thought. Paul pointed out the way of escape from all evil when he wrote the Philippians, "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

Among the Churches.

Opening Services at Evanston, Ill.

Once more through these columns, which herald glad tidings from field to field, the Christian Scientists in Evanston desire to refer to their new church building. Exclusive of the amount paid for the property, \$7,300 has been expended upon the house, making it suitable as a place for worship.

The opening services were held November 7, but as this building is not regarded as the permanent edifice, there was no dedicatory address; instead the splendid lesson supplying our need was read both morning and evening. The two solos had special import, and were sung in a spirit of love and strength.

Many kind friends from neighboring places, and the welcome stranger too, joined in these services of praise and glory to God, and the heart of every loyal Scientist was filled with joy and gratitude overflowing for the blessing this demonstration has and will bring to all mankind.

In the audience of some five hundred were many who afterwards testified to the atmosphere of holiness and health which permeates the church. Many visited our reading room adjoining the auditorium, where they learned something of its nature and relation to our Cause.

We have a membership of ninety-seven, but our congregation is over two hundred and the number is rapidly increasing.

The interior of the church is unique with its rough, grayish plastered walls, low and arched ceilings, and countless small panes of a soft, amber-shade glass in the windows. The furnishings in green and mahogany, the white wood-work and gold lettering on the walls, lend artistic beauty and simplicity.

Over the Readers' desk and on either side are these texts, "Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ," "Ye shall know the Truth, and the Truth shall make you free," and the one so dearly loved and studied by us all from "Science and Health with Key to the Scriptures," p. 490: "Divine Love always has met, and always will meet, every human need."—E. L. W., Evanston, Ill.

Opening Services at Philadelphia, Pa.

The opening service of the Third Church of Christ, Scientist, in Beth-Eden Baptist Church, corner of Broad and Spruce Streets, yesterday (Sunday, December 16) with a membership that had outgrown the old quarters in Odd Fellows Temple, was a momentous occasion to the little band of Christian Scientists who organized just a year ago. This is the history of all their churches, the Christian Scientists say. First meetings are held in a hall, sometimes in a private dwelling, and then in an almost incredibly short space of time there is a thriving church organization which presently owns its own church edifice. Although their churches are everywhere remarkable for their beauty and great cost, no church building of this denomination is ever dedicated until it is free from debt.

There are four Christian Science Church organizations in the city, and the church edifice which will be hereafter occupied by the Third Church is well known as one of the handsomest in Philadelphia.

The Christian Scientists claim that their growth has been more rapid than that of any other religious body in the world. In its ranks are found some of the brightest intellects, the foremost educators, and the largest capitalists of the country, and prominent judges, doctors, lawyers, and ministers of other denominations are among its converts.

The church has been tastefully fitted up and interior decorations added at a cost of about one thousand dollars. Besides selections which were sung by two noted soloists, letters were read from the other Christian Science Churches in the city congratulating the Third Church upon its auspicious opening and rapid progress.—*Evening Telegraph*.

Valuable Property Purchased at Oneonta, N. Y.

At a meeting held by members of First Church of Christ, Scientist, last evening (January 1, 1901), which has been holding its services in the Tobey Block at 159 Main Street, for the past six years, it was decided to purchase the valuable site at 25 Chestnut Street, known as the Burton property. The lot has a depth of 232 feet, and a frontage of 120 feet, making it a valuable location for a church. Possession will be obtained on April 1, and it is the purpose of the church to remodel the lower rooms of the house, by removing partitions, and making other changes, to provide a convenient auditorium for services. They will also remove their reading rooms to the same location at the date mentioned.

The growth of Christian Science is certainly remarkable and the zeal of its adherents commendable. It is stated on good authority that from four to six churches have been organized monthly in the past few years, and the church attendance shows an average yearly increase of about forty per cent. Engaging in this enterprise with the dawn of the twentieth century should portend a joyous outcome for the future.—*Oneonta Daily Star*.

A Word from Auburn, Me.

The Church of Christ, Scientist, in Auburn, Me., wishes to report a step forward. It had been the desire for some time to find a place where all the meetings could be held in one building. The first of December pleasant quarters were secured in the fine, new Odd Fellows Hall on Pleasant Street, which is a very desirable location. Sunday service is held in the main hall on the second floor. Wednesday evening meeting is in the beautiful parlor on first floor. The reading room is in a sunny, front room on the second floor. Ample room is afforded the Sunday School in the reading room and ante-room adjoining. The Sunday School has been necessarily divided into two classes within the past year. The first service was held in the new hall Communion Day, December 9. There were seventy-eight people present and all rejoiced that so great a blessing had been given to the church.—M. FANNIE WHITNEY.

Site Purchased at Des Moines, Ia.

The Christian Scientists of Des Moines have purchased a choice building lot, 99x124 feet, fronting on West Eighth Street, between School and Crocker Streets. This is a beautiful location and will make the Christian Scientists an ideal building site. The purchase price was \$3,200, which was paid spot cash. The trustees of the church state that the funds are being raised for the erection of a good, substantial church building, the probable cost of which will be about \$20,000.—*Register*.

An Interesting Event.

Detroit, Mich., January 2, 1901.

Dear Brother:—Thinking that the enclosed clippings may contain some thought of interest to the Field at large, I venture to send them, with a copy of the Mayor's letter to myself. It was he who introduced me at my lecture in November, and at its close expressed a great deal of interest in the subject. At his request, I prepared the article referred to, and it was laid away with the others to be opened a century hence, no one but the writers being aware of the contents at the present time, so far as I know.

Yours in Truth,

ANNIE M. KNOTT.

Executive Office, Detroit, Michigan,
WILLIAM C. MAYBURY, Mayor.

December 29, 1900.

Subject: "Growth of Christian Science in Detroit in the Twentieth Century."

My Dear Madam:—I am particularly desirous that those who witness the coming of the twenty-first century shall have every evidence that those who are permitted to see the opening of the twentieth century have appreciated the glorious inheritance of the century closing, and I am desirous that there should be put on record letters from men prominent in the commercial, religious, professional, and moral ongoing of the city and state. The letters so prepared will be placed in a box and sealed, to be opened a century hence. I have therefore asked ladies and gentlemen prominent in these various departments of life's work to prepare for me a paper, yours to be on the subject named above, made as concise as possible, and to be deposited as heretofore stated. I will place in the box with the papers a certificate that each paper was handed to me on the closing day of the nineteenth century, that the box was deposited in the archives of the city on the opening day of the twentieth century.

If such a box had been deposited one hundred years ago, how many facts of the history of Michigan, as well as of Detroit, would be disclosed that are now lost, and things which we now look upon as history would, from such a record, be proven to be but legend or fable.

I believe that the papers which I am seeking to put away in this form will be invaluable in the long future, and that the generation which is privileged to open the box will be grateful for what we have done for them. Please do not disappoint me, but prepare, on good paper, such an article, retrospective and prospective in character, and for the purpose for which I intend it. The paper should be in my hands Monday afternoon or evening, without fail.

Thanking you in advance for your kindly aid in this matter, I am,

Most cordially yours,

W. C. MAYBURY, Mayor.

P. S. Please send your letter sealed, putting the subject and name on the outside of the envelope.

The following account of how Mayor Maybury's unique idea was successfully carried out, was published in the *Detroit Evening News* of January 1, 1901.

Mayor Maybury's office was crowded with the city officials, members of the various municipal commissions, prominent citizens and their wives and families, last night, to witness one of the most unique and impressive ceremonies that has ever taken place in the history of Detroit. It was nothing less than the sealing of the greetings of Detroit of the present to the Detroit, its mayor and government and people, of a hundred years from now.

Mayor Maybury read to those assembled the message to the people of that far-off time which he had prepared in his position as chief executive of the city. To those gath-

ered in the office, it was a time of great solemnity, for the mayor referred to the fact that not one of those present would be present at the opening of the box. Before he had finished the reading the City Hall clock struck the first stroke of twelve, and the waiting crowds outside broke into tumultuous applause and cheering as a welcome to the new century.

Then the mayor finished reading his beautiful greeting, and the listeners cheered. For a few moments the crowd went out upon the front steps of the City Hall, where a flash-light picture was taken by C. M. Hayes. Then they again came within and the box, containing its many documents, was officially sealed by Benjamin Guiney to be kept unopened in the city archives until the beginning of the twenty-first century. The mayor's message to that time and generation is as follows:—

Detroit, December 31, 1900.

To his honor the mayor of Detroit in 2001 and the generation whose privilege, and, I trust, pleasure, it will be to read the contents of this box—health and greeting:—

The papers herein contained, now for the first time brought to light by you, after a retirement of one hundred years, were prepared at my request by men and women prominent in the activities of Detroit at the close of the nineteenth century. Our desire is to convey to you across the long span of the century as clear an insight as is possible, into the social, religious, moral, commercial, and political affairs of Detroit. It will be to you a testimony from living witnesses of the events which they chronicle and conditions which they describe. From testimony so transmitted you will be better able to discern what advancement you have made from the modest beginnings to which we are witnesses.

We are well aware that the century closing has been marvelous in its achievements, and we might be fairly excused for believing that the limit of possibilities has been accomplished in many ways; but on the contrary, we do not so believe, because the past has taught us that what seemed to be impossible has been already accomplished, and we would therefore not be greatly surprised at greater accomplishments in the future.

We communicate by telegraph and telephone over distances that at the opening of the nineteenth century were insurmountable. We travel at a rate not dreamed of then. The powers of electricity have been applied marvelously, and compressed air and other agencies are now undergoing promising experiment. We travel by railroad and steam power from Detroit to Chicago in less than eight hours, and to New York City by several routes in less than twenty hours. How much faster are you traveling? How much farther have you annihilated time and space, and what agencies are you employing to which we are strangers? We talk by long-distance telephone to the remotest cities in our own country, and with a fair degree of practical success. Are you talking to foreign lands and to the islands of the sea by the same method?

And so throughout all the various pathways of human progress, the papers in this box will bring to your notice a knowledge of present conditions, and possibly words somewhat prophetic of the future. How correct our prophecies may be we know not, for we write them in doubt and yet in hopefulness. We write them in the fervent belief that you will stand upon a vantage ground of experience far higher and more resplendent than our own. We ask, therefore, for those who assume to prophesy, your kindest consideration and judgment, especially when we assure you that these prophets are not without honor, even in their own country and in their own time.

'If we may judge from the history of human life and all experience, very few, if any, of the three hundred thousand souls who are now inhabitants of Detroit will exist when

you have opened this box which we have so solemnly closed. And yet it may be possible that much which we accept from faith may be to you then knowledge, and possibly that that knowledge may come with consciousness that we may be witnesses and even listeners to the voices that will interpret the words we have written. Begging that you will accept for helpfulness all that tends to your information and good, and look most kindly upon these which may seem at your time to be at fault, I close this tribute.

May we be permitted to express one supreme hope—that whatever failures the coming century may have in the progress of things material, you may be conscious when the century is over that, as a nation, people, and city, you have grown in righteousness, for it is this that exalts a nation.

Respectfully and affectionately submitted,

WILLIAM C. MAYBURY, *Mayor.*

Young Lincoln's Library.

When Abraham Lincoln was a small boy he had very few books. There was no need for him to consult a list of the hundred best books. His earliest possessions consisted of less than half a dozen volumes—a pioneer's library.

First, of course, was the Bible, a whole library in itself, if properly understood, and containing every sort of literature—stories, poems, dramas, addresses, orations, histories, some simple enough for the youngest child, others taxing the wisdom of the learned. Second was "Pilgrim's Progress," with its quaint characters and vivid scenes related in simple, vigorous English. "Æsop's Fables" was a third, and introduced the log-cabin boy to a wonderful range of characters—the gods of mythology, the different ranks and classes of mankind, and every animal under the sun. Fourth was a history of the United States, in which there was the charm of truth and a more modern tone, and from which were learned the lessons of patriotism that Lincoln's manhood put into action. Last came Weems' "Life of Washington," a queer, stilted book, but one full of detail that made Washington seem a living example.

These five books were the beginning of Lincoln's education; and what wise man has outgrown them all?

From the Bible, "Pilgrim's Progress," and "Æsop" the boy Lincoln learned the power and beauty of plain English words, and saw that the grandest thoughts and most poetic imaginings needed only the strong little words of every day. When, therefore, in later life he wished to be sure he understood any matter, it became his custom to translate it into words such as a child can understand.

Read again the Gettysburg address and the second inaugural, and learn how Lincoln could make the homespun words of common use move the hearts of his fellow-men.

St. Nicholas.

Doing the Disagreeable.

Naturalists say that, when examined minutely with a microscope, it will be found that no creature or object in nature is positively ugly, that there is a certain harmony or symmetry of parts that renders the whole agreeable rather than the reverse. So the most disagreeable tasks in life, when viewed in their proper proportions, reveal a poetic, an attractive side, hitherto undreamed of. Turn on the sunlight of good cheer, the determination to see the bright as well as the dark side, and you will find something pleasant even in the most dreaded task.—December Success.

Every sincere wish and prayer for goodness, every earnest attempt to fulfil difficult duty, is sure to help on our spiritual progress, either directly or indirectly. By one road or another, every such effort brings us nearer to God.

JAMES FREEMAN CLARK.

From our Contributors.

The Gardener.

BY MARION P. HATCH.

He does not say,
As day by day
Passeth without result,
There is no bud in bush,
There is no rose in bud;
Rather, his faith prevails
And he applies himself
To do his part,
Which, if well done,
He knows will bring
In time, the rose;
Though how it grows,
Or where such beauty
Found repose
Before unfolding unto him,
He cannot say—
Unless he knoweth God.

Emancipation.

BY GRACE E. COLLINS.

THROUGHOUT the ages philosopher and poet have searched for Truth, the Real, and only as they have touched the Principle of Being has Truth been revealed.

Jesus said: "Ye shall know the Truth, and the Truth shall make you free." This prophecy is being fulfilled to-day in the true liberalism which Christian Science is giving to the world,—mental, moral, and physical liberty.

To know Truth is to know God, to understand God is to understand the liberty of the sons and daughters of God.

Christian Science educates in true freedom, it teaches us to think good, do good, be good, expect good, and help our neighbor to do the same by seeing him as God's image and likeness; therefore free to work out his own individual salvation.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 123, we read: "Love and Truth make free, but evil and error lead into captivity." In infinite Love is infinite Liberty. Reflecting Love means reflecting the divine Ego. True liberty consists in greater breadth of intellectual attainment, greater liberty of action for both men and women, and the rights of individual conviction.

The character which has been developed through understanding true Liberalism is progressive, generous, expansive, tolerant, and compassionate. Growth into freedom of the Spirit is in proportion to our unity with Infinite Mind.

God's law of Love is perfect; human law can no more protect Love than medicine can protect Life, but in infinite Love is infinite protection.

How vast is the word liberty, men have fought for its attainment, religions have crucified men only to find that human actions, laws, and creeds lead to greater bondage.

Just as each ray of light is independent of every other ray and yet mutually dependent upon the same source of light, so the individual liberty of the Spirit is found, as reliance is placed upon God.

It is almost impossible to conceive what the dawn of spiritual power, divine Law, and universal brotherhood will bring to social relations and a sin-sick world. "Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him."

Where we touch the chord of Love, the vibrations of true harmony are set in motion and we sing in unison the perfect

harmonies of Soul. The tones of Love are *free*, clear, and true, expressing peace, joy, and healing.

Christian Science reveals the joy and freedom of the Spirit, but we possess this freedom only as we give up all mortal desires; then the resting place in Mind is found.

Sorrow, pain, failure, worry, death are concepts of the mortal. Joy, love, honesty, purity are attributes of the Divine, and there is no justification for limitation in the Divine. Every deed of love and mercy sets the soul that does it free, every aspiration for spiritual understanding is a step in true liberalism. Every time self is lost in universal good, liberty is found, and the joy of sharing, of selfless humanhood, is ours.

Watchfulness over all thought, temperance in all pleasures, perseverance in all tasks, leads to spiritual liberty. Obedience to the first commandment will bring the certain results of the promises.

When we wake out of the world's sleep, from the dreams of the night, we shall see the rose of the New Day, the Light of the New Heavens, hear the song of divine melody, and wake to Life *here, now*.

Ever on and ever upward,
Step by step with joyous song,
Making Love our only watchword,
Heaven is come for which we long.

Faith in God.

BY LADY VICTORIA MURRAY.

Be still, and know that I am God.—*Psalm 46:10*.

If we could but realize what this divine command means for us, we should surely hasten to obey it. At first it seems so simple and perhaps easy to fulfil, but when we try to put it into practice, we find it contains much more than is at first seen. It is a command against idolatry, against fear, and against a blind belief unsupported by understanding.

First of all, we are told to "Be still," which means that in our hearts we are to feel perfect ease and rest, without fear or worry, but with peace and trust, conscious of a higher hand guiding our affairs and moulding our thoughts into purer desires and higher aspirations. We must recognize that this demand of trust is made on us at all times and under all circumstances, and it is impossible to fulfil this until we understand who it is that demands our obedience. As we look into our lives to-day, do we find ourselves able to "be still," casting all our care upon God, who indeed careth for us always?

We can but answer no; for we see fear and worry on every side, and why? Because mortal man has no idea of trusting himself or his business to God, but on the contrary, he believes everything depends on himself and his fellow-creatures. He goes on to the end of his days wishing to produce harmony but finding only discord in its various manifestations. Some may think they trust God, but do they?

We have been taught from childhood to fear the so-called powerful enemy, the devil, and have been warned against the power of evil in all its different forms, and to stand in awe of being dragged into its terrible clutches. It is no wonder that in the face of all this, we have found it impossible to feel rest and peace in God; and we never shall be able to obey this command until we renounce the devil as Jesus did, when he defined him as a liar and the father of lies—nothingness! The Scripture declares that the Lord is God, and there is none beside Him.

Christian Science has come to teach us to know with the Master, that God is All-in-all, that He is almighty, and that He has made us perfect, and that we as His children reflect divine power. We are able through the recognition of our true inheritance as sons of God to cast out all manner of suppositional evil, in whatever form it may present

itself. Science and Health teaches us that the only power of evil is our belief in it, and as we work along this line of thought we shall find our faith in its power gradually fading away, till we behold blessings on every side. Then when the darkness of error is closing in and the clouds seem thick around us we must bar the door of thought and strive to realize the immortal presence of God—Good—that casts out all fear, and in the radiant sunshine of divine Love, hear the still small voice of an angel whisper, "Be still, and *know* that I am God."

A Timely Suggestion.

BY ALBERT METCALF.

WE are accustomed to refer to Science and Health as not only the Christian Science text-book, but the book covering all there is to be said on the subject. We of Christian Science cannot dwell too much or too emphatically on the value of Science and Health. It is the *multum in parvo* of our blessed faith. But I want now to plead for a more general and studious reading of our Leader's other publications.

I was surprised recently on reading the last edition of "No and Yes," to find how full it is of genuine education in Christian Science. I gained new impressions of the subject and of its value in making clear to students the doctrines of Christian Science and of the importance of a fuller understanding of doctrines which stand for the immediate uplift of every thoughtful reader. "No and Yes" is good for daily food. It cannot be read too often. Its contents seem fresh at each opening and strengthen our faith in God and in the life and teaching of His Son, Jesus Christ.

And so all the supplementary works of Mrs. Eddy are distinct helps and should not be ignored.

While commenting upon the value of Mrs. Eddy's smaller works in addition to that of our text-book, "Science and Health with Key to the Scriptures," I must not forget to urge upon students the importance of the regular perusal of our *Journal* and *Sentinel*. And let us not be too free to depend upon borrowing these two valuable periodicals, of our neighbors for our weekly and monthly perusal, but let every Scientist be a subscriber to both. We owe it to ourselves as Scientists having the best interests of the Cause at heart, to increase the circulation of all Christian Science literature. It is due to the Publishing Society that the circulation of both the *Journal* and *Sentinel* be greatly increased.

This is due to the Cause of Christian Science. Why? Because these publications convey good tidings to such as read them, and the world is waiting for just this good news. Think of the labor bestowed upon the *Journal* and *Sentinel* by the editors, the judgment used to choose only such reading as shall be Christian and Scientific and therefore helpful. All articles have been subjected to a careful winnowing process and this is known to be pure and elevating. We all want to be helpful in disseminating the doctrines of Christian Science, because they have done so much for us, and we know they will help others just as much. This is one of the ways by which we can be serviceable to mankind and to our dear Leader and Teacher in particular. All we need is to be more thoughtful of our opportunities for service.

The world sits at the feet of Christ,
Unknowing, blind, and unconsolated;
It yet shall touch his garment's fold,
And feel the heavenly alchemist
Transform its very dust to gold.

WHITTIER.

Testimonies.

A Business Man's Testimony.

A little over a year ago I had an experience which I shall never forget. It was in August, 1899, that I found myself face to face with that grim monster death, after having failed to be cured by five different doctors of as many different diseases, any one of which was enough to make the stoutest heart quail.

Under the old regime I had taken medicine until it ceased to act, turned against me, and was rapidly making me worse. Sleep without it was impossible, pain was intense. My agony knew no bounds. Though seemingly brave I thought I realized my position, and that some sort of a crisis was at hand. In my despair I left the hotel to go, whither I knew not, in search of help.

While crossing the street I was suddenly seized with a deep, sincere desire to be a better man. Up to that time I had only thought of myself and money-making. Now I saw that there was something else to live for, and desired to be spared that I might do some good in the world. Immediately there came to me a feeling of relief and sweet repose, and I proceeded slowly on my way. I went down town and entered the office of an old friend who was a believer in Christian Science, although at that time I knew not what it was that took me there, in the hour of my distress. Looking up from his desk he greeted me and inquired how I was.

I told him not very well. He said, "I can see that. Now I'll tell you what you do. A Christian Science practitioner was in my office an hour ago, and if you will go to him he will cure you." As a drowning man grasps at a straw I shot a glance at him and said, "Do you realize what you are saying?" He said yes; and that he meant every word of it.

For me to think was to act. I immediately secured an appointment by telephone and a few minutes later called in person to see this gentleman, who was a loyal student of one of Mrs. Eddy's students.

Being somewhat a judge of human nature, his appearance and words impressed me favorably to begin with. As he was about to depart with his family for a suburban trip for the day I only had a moment to talk with him, but long enough to ask two questions of all importance to me, viz.: Have you ever handled any such cases as mine? and Did they all get well? His answers were yes, and that I could get well in the same way. That settled it with me, and I told him to come to my apartments as soon as he got back. He spoke of the author of "Science and Health with Key to the Scriptures," and advised me to secure a copy of this work at once, whereupon I gave him five dollars and he brought it to me that night.

He explained somewhat the method of divine healing and cited many cases of marvelous cures, yet I was unwilling to give up my medicine until he refused to treat me unless I did. Then I capitulated and Truth began its work. He told me to go right ahead with my work and not to take any medicine at all. This astonished me, sick as I was, but strange to say the next morning I found myself able to do so. From that time on I never missed a day at the office, in fact had a clearer perception and did better than when I was well, and at the end of the month I got on the train and went to San Francisco where I visited friends a couple of weeks and came back feeling better than ever. My healing of six ailments, including sin, was not instantaneous, but lasting. It saved me from a surgical operation that I thought meant sure death.

Now by sticking to the book I keep well and happy, and have been able to make many beautiful demonstrations myself. I have since induced many other sufferers to take

up Christian Science as a remedial agent and they too have been shown the true way.

Possibly this is the work that I was spared to do, for what greater good can there be than thus helping our fellow-man. Besides physical benefits received I have also had some remarkable business demonstrations, which go to show that whenever we have matters of importance to decide we should gently hold back a little and wait for Principle to guide us aright, and it will do it every time.

Among my personal experiences are the following demonstrations which I have been able to make through Christian Science:—

A lady who had a stiff neck and neuralgia of the face was cured by my denials while she was telling me about her sickness and how long it had been upon her. No return of the ailment.

While splitting some wood I hit my thumb with the axe helve by just missing the block with the axe and catching the thumb between the axe and the block. By quickly declaring the Truth all pain disappeared from the bruised member. I seriously burned my right hand on the top of a lighted bicycle lamp, and by earnestly denying the sensation of error and declaring the presence of divine Love, the great truism of man's exemption from suffering was made manifest to me.

Besides these many other helps have been realized in every-day life, until now I have learned to depend entirely on infinite Mind for my physical and spiritual needs. I have not taken a drop of medicine for fourteen months. My wife and child have also received many benefits from Christian Science, and I am very grateful to Mrs. Eddy, the Founder thereof, for the priceless blessings bestowed on me and mine.—W. A. CARROLL, Portland, Ore.

Love's Protecting Power.

Once I was asked if I would trust to Christian Science if my boy had scarlet fever. The disease had at that time made its appearance in the city. "What I shall do in the future," I answered, "I know not. As the day, so shall my strength be; but Christian Science is as much a preventive as a curative, so I see no need of getting to that point."

One Saturday soon after this, I sent my boy to play with a child who had had the fever, and was still confined to the house. Let me add here that the doctor had pronounced all safe and the young son who had been sent away had returned, but still the neighbors feared to allow their children to go in. I would not unnecessarily expose my boy to what mortal mind says is danger. We have enough errors to overcome as it is.

Monday morning as I looked from the window, I saw the fever sign returned to my neighbor's door, and at the same time heard my bell ring. Feeling what was coming, I went to the door myself. There stood the neighbor looking hopeless, and she said, "You've seen it? Don't blame me. I didn't ask you to let S. come in. F. has it. The doctor says we probably did not fumigate properly. Oh, I am so sorry, what will you do?"

By this time, her breath being exhausted, I had a chance to speak, and told her not to think any more about us. My boy was all right and I assured her he would not have the fever. I did not mention the boy's visit to the rest of the family, but went to work to realize Love's omnipotent care, and that purity alone came from and to God's children. This I did each day during the weeks the disease was in the city, and he never showed any signs of the fever.

A year later, the subject of scarlet fever was brought up. My neighbor, telling her experience, mentioned my boy's visit and said, "My mother was with me at the time, and declares scarlet fever cannot be contagious, because of S.'s exposure and freedom." "We should believe he had

taken it," she added, "but we watched carefully and saw him out at play each day."

This is only one case out of many where, for four years, Christian Science has proved able to keep us safe as well as to land us safe after short—very short—trips, compared with mortal mind experiences, on troubled seas. One such experience confined me to the house two days and to the bed one. The same trouble had, under *materia medica*, confined me four weeks.

I desire to express my gratitude, first to God that this Truth reveals a perfect indestructible man; second, to the Master for the love he showed in fulfilling his mission, proving what Truth is and does for man; and third, to the Mother, for living so pure a life, that when the time came she was able to see God's Truth in the Master's life and words, and able to realize the strength of omnipotent Love, by which to give to a waiting world the Principle and rules that enable each, in turn, to prove God "an ever-present help in trouble."

There are yet discords to be silenced by Truth, but I have learned that I must, at all times and under all circumstances say with the Psalmist, "I delight to do thy will, O my God: yea, thy law is within my heart," before I can gain my place in perfect harmony.

MRS. M. FLORENCE EUSTIS, Chelsea, Mass.

An Illusion Dispelled.

While my entrance into the understanding of Christian Science was not through physical healing, I yet belonged to that large class who suffer from the many ills to which mortal flesh is heir, and to whom the changes of weather and the succession of the seasons bring, with dreary regularity, a train of ailments, fears, and miseries. As I look back to those days of bondage, from which, through Christian Science, I have happily escaped, I can readily understand why it is said of mortal mind that it deceives and deludes us, that it lulls to sleep and terrorizes with frightful dreams, calling them realities. Under its fatal spell the evil tares were so mixed with the good wheat, that life was often a burden—the winter was too cold, the summer was too hot, the spring too wet, or the autumn too dry and chilly—in short, the days were never just right. Now, however, in this blessed thought, all days are good and all seasons are healthful.

A trouble which held me firmly for many years was that of hay fever. I will not go into the details of its seeming symptoms and the absurd belief as to its cause and prevalence. Some years ago it was asserted that ripe peaches were the cause of the malady, and so we confiding victims religiously avoided that fruit just when it was most tempting and delicious. Last August I had forgotten about the hay fever, when some one still afflicted by it began to tell me how badly he was suffering, and while I denied its reality, that very night I was attacked by the old enemy. In the morning I went to Science and Health and armed myself with the Truth. Then, recalling the fable of the peaches, I put into practice my denial of the reality of the trouble by deliberately buying several peaches and eating them during the day, and that night the trouble entirely disappeared.

Now, the point of the above, and the lesson of it to me is, the illusive evidence of the so-called physical senses. It might be said that the Truth cured me of this disease; but this experience taught me to go further, and to assert that there was no disease to cure! To recognize it as a physical malady to be cured, would be to give it a reality, whereas it was only a delusion of mortal mind, not to be treated or dealt with, but simply to be mastered. It came from nowhere, it went nowhere, it never existed. Therefore, without a cause, without existence, there was nothing to cure. Here is the glory and power of Christian Science, that it opens the understanding, that it purifies the thought

from all error, and reverses the old order of living by transferring the source of health and strength from the "beggary elements of the [external] world" to the inner spiritual consciousness.

EDWARD H. TOBEY, New York, N. Y.

Saved from Injury.

One evening my husband, little daughter, and myself were riding in a street car. My little girl's hat blew off, and acting on the impulse of the moment the child sprang out after it; the car was running very fast. My husband and two men who jumped out when the car slowed up as they thought sufficiently were thrown down.

As I saw the child fly through the air, I sat perfectly still declaring the Truth until they brought her back to me. The first thought that presented itself was the beautiful words of the ninety-first Psalm: "He shall give his angels charge over thee, . . . they shall bear thee up in their hands." I heard as in a dream the expression of mortal mind, "Did you hear that crash? She came down on her head." They brought her back to me and put her on my lap, perfectly conscious, scarcely soiled, and presenting no appearance of injury, only very white. We rode about twenty minutes longer, and when my husband lifted her from the car she insisted on walking home, a distance of one long block. I saw no bruise on the body except two small spots on each side of one of the elbows. She slept peacefully, and only seemed to suffer from a sense of the shock for a couple of days, which manifested itself in inability to retain food. She said there seemed the first night to be a large lump at the back of the head. I did not look for anything, and she said the lump was gone before she slept the first night, and there was no sense of soreness.

I should like to add that after the first expression of fright from the occupants of the car, which was full of people, the calmness was remarkable, and when we got out several remarks were made, "She is all right;" "Just see her walk." I have seen the conductor several times since and he calls it a miracle.

MARY I. DEGROFF, Port Richmond, N. Y.

Many Reasons for Gratitude.

I was an invalid for more than six years. At last I was stricken down with nervous prostration, and was in bed eight months under the doctor's care, but received no relief. On hearing of Christian Science, I accepted its teachings at once.

I have experienced many wonderful demonstrations. On one occasion I jumped on a board which had a three-inch nail in it, the nail going through my shoe and into my foot as far as it could. It took some exertion to free my foot from the board. My healer was sent for, and the next day I could walk just the same as ever. I was perfectly healed.

Another demonstration was the overcoming of escaping gas. My mother, two children, and I were the only ones in the house at the time, and all were sound asleep. I wakened suddenly, to find the evidence of the senses very terrible; but through the power of Truth, we were all saved and recovered very quickly.

But the most marvelous demonstration which I have had is that over limitation. I have to depend upon my work to support myself and one child, and knowing that God is the source of all my supply, I find that I am daily loaded with benefits. This sense of limitation was not met in a day, but I have had to work out the problem during the five years that I have been in Science.

The Bible and Science and Health are my daily companions. I am thankful to God every day, and grateful to all my dear friends, who have been very kind to me.

ADALINE M. APER, Detroit, Mich.

Religious Items.

"What if we Believe in God?" is the significant title of part three of a serial article in the (Unitarian) *Christian Register* by Rev. C. F. Dole. A portion of one paragraph reads as follows: "The innermost secret of life is to love. We have said that God is love. Is it conceivable that it makes no practical difference whether or not we believe this? When we do not believe it, we are not half alive. When we see this it is as if the universe were behind, lifting us. It is as if an infinite Friend were at our side and holding our hands. We give ourselves to the motion of the sublime good-will; and we are in that instant alive,—complete men, sons of God. Did any one ever try this, and find it to fail? Ask yourselves at what times you have most completely lived, at what times you have best known peace, gladness, and the fulfillment of your being. Were not these the times when Good-will, or Love, had free course in you, and you only did what God bade you do?"

In an article on "Temptation" the *Universalist Leader* says: "We may feel assured that there are multitudes of men, for example, who pass daily and almost hourly by gilded and glittering saloons, to whom they are no temptation, in whom they excite no desire for strong drink, and on whom they impose no duty of resistance. They are passed by unnoticed, or with no other notice than that of sorrow and regret. They are no lures, but rather awaken a sense of repulsion, since in such men the appetite is in full accord with the moral sense. It is the subjective, or inner conditions that decide the matter and makes them superior to temptation."

The (Methodist) *Christian Advocate* says: "How difficult it is to keep self from having too prominent a part. Is it easy for the preacher to keep self out of his sermon? for the singer to keep self out of the song? for the worshiper to keep self out of the prayer? Nature clamors for self. While the spirit seeks after God and the good of others, the flesh still pushes self to the front. If we could only understand, and have courage to trust the philosophy of the gospel, we should have little trouble about self. The science of Christianity reverses nearly all the maxims of the world and all the wisdom of the sages."

The *Homiletic Review* says: "It is affirmed that much of the preaching of the day is shallow, dealing with things rather than men, with externalities rather than with the perplexing problems of the mind, the anxieties of the heart, the profound concerns of conscience, and the deep thoughts of Scripture. Vital experiences are neglected, while the times, the politics, the sensations, the general occurrences of the day are discussed, as if the newspapers were taking the place of the Bible in the pulpit. What rules the day may pass away with the day, and he who lives for it has a bubble's life."

The (Baptist) *Examiner* says: "No greater folly ever entered the mind of man than the notion that it is desirable for young men to 'sow their wild oats' before settling down to sober living. For what is that but to say that several years devoted to sinning is a better preparation for life, than the same years spent in following after righteousness? As well might it be said that the best way to begin the study of arithmetic is to learn a wrong set of rules or the study of painting by cultivating the worst possible taste in art. The best way to begin life is to begin it right."

In an editorial the (Unitarian) *Christian Register* says: "The garment of God is unrent. It is one, indivisible. It is only the mechanic mind of man that, on a theory, parcels it, divides it into epochs, periods, ages, centuries. It is a seamless robe wrought into close and even texture, all interdependence, unity, and harmony. It is one with eternity, this time of which we speak. There is no welt or joining where one ends and the other begins. Like the star-sown vault of ether, it has no bounds."

The (Baptist) *Standard* says: "Eloquent tongues have failed. Brilliant prophecies have come to naught. Profound knowledge has limped away from a soul humiliated and vanquished. Shrewd schemes, plausible methods, elaborate plans, have all gone to the wall. Hundreds of ministers have made but little real headway, and their regrets at the same are sincere and pitiful, but I do not believe any man who loves God better than man, and loves every other man better than himself, ever made a failure."

An article in the (Baptist) *Watchman* headed "A Christian Science Service," begins as follows: "The size of the audiences, composed of well-to-do and presumably intelligent people, that attend the Christian Science Church in Boston disturbs some of the common notions about making a service attractive. . . . There is no sermon and the main part of the service consists of passages of Scripture read by a woman, and passages from Mrs. Eddy's book, *Science and Health*, read by a man."

Rev. Julian C. Jaynes says in the *Christian Register*: "So it runs through all the history of humanity,—first the struggle with the earth, then the struggle with the animal instincts, then the struggle to bring in the kingdom of heaven. So it runs through the life of the individual man,—first the conquest of physical forces, then the conquest of the demons of self, and then the vigorous life going back to win the cause of those who have fought and been defeated."

Rev. J. M. Foster gives in the *Outlook* some of the reasons why the Reformed Presbyterian, or Covenanters Church refuses to vote or hold office under the Constitution of this land. Mr. Foster says, "We cannot conscientiously swear to support the Constitution because it does not acknowledge God as the source of all authority, the Lord Jesus as the ruler of nations, and the Bible as the fountain of all law."

The *Sunday School Times* has the following: "The worst that anybody's malice can do for us is to make us malicious; and the great thing to fear, in any encounter, is that we may be the authors of hatred rather than the victims of it. Emerson said of Lincoln that he had a heart as large as the world, but there was not room in it for the memory of a wrong."

The *Sunday School Times* says: "We date time from the birth of Jesus Christ, as if there had been no years before he was born. There were many long centuries before that time—no one knows how many. But somehow centuries without Christ do not count for much. The years seem like long rows of ciphers with no numeral preceding them to give them value."

The *Universalist Leader* says: "It is, after all is said, the good life which is law unto itself, and that passes along from day to day, in the peace and joy of obedience. But such a life does not come in answer to an idle prayer; nor as the atheistic school of thinkers would have us believe, from the force of intellectual culture. It is a Christian growth."

The *Christian Register* says "The mission chapel is a species of condescension that many resent. The exclusive spirit must break down if the church is to regain its hold upon the world, which, some think, it is now losing. Brotherhood must become a more vital principle, and a common feeling of need and of mutual helpfulness must prevail more largely."

In an editorial article the (Baptist) *Watchman* says: "Covetousness alone of sins is identified with idolatry, because, as Marcus Dods says, there is more choice in it than in sins of the flesh, it is more a sin of the will and of the whole man unresisting. Above all others, it proves that the man in his heart is choosing the world and not God."

Zion's Herald has the following: "God seems to put the sunniest dispositions into

many souls who dwell in the shadiest corners of life—for the same reason, doubtless, that pink arbutus blooms under the edge of a snowdrift, and stars are visible in the daytime from the bottoms of deep pits."

The Scriptures are now translated into more than four hundred languages. Nine-tenths of these translations are the product of Christian study and labor in the century just closed.

"Doubtless we must work as well as wait; but there is no work like subduing our own selfish will," said Dr. Cyrus A. Bartol in an article quoted by the *Watchman*.

"We be brothers all, is the watchword for our time and all times. Till we believe that we shall plunder and trample one another," says the *Universalist Leader*.

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

How Men of Affairs View Christian Science. Composed of selections from among the many introductory speeches of prominent men who have introduced the official lecturers of the Mother Church.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfillment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies two cents each, post-paid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution, may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
- Two to Twelve books to one address, each, prepaid . . . 3.00
- Twelve or more books to one address, each, prepaid . . . 2.75
- Full Sheep, stiff covers, Bible paper, marbled edges, each,
prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Morocco, limp, round corners, gilt edges, convenient for
pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 5.00
- Twelve or more to one address, each, prepaid 4.75
- Levant, divinity circuit, leather lined to edge, round corners,
gold edge, silk sewed, each, prepaid 6.00
- Twelve or more to one address, each, prepaid 5.75
- Orders for Science and Health in lots of twelve or more to one address,
may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing
articles written by the author and published in the CHRISTIAN
SCIENCE JOURNAL since 1883, with revisions and additions.
- Price (cloth) each, prepaid \$2.25
- Twelve or more books to one address, each, prepaid . . . 2.00
- Morocco, limp, round corners, gilt edges, convenient for
pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 4.00
- Twelve or more to one address, each, prepaid 3.75
- Levant, divinity circuit, leather lined to edge, round corners,
gold edge, silk sewed, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75
- Orders for Miscellaneous Writings in lots of twelve or more to one
address may include any or all of the different styles of binding.
- No discount will be allowed on orders for twelve books which
include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

- An illustrated poem,
Single book, prepaid \$3.00
- Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

- A biographical
sketch of the author. The way she was led to the discovery of
Christian Science; its growth and fundamental idea; 120 pages,
cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half
dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

- A unique work of importance in the
history and to the readers of Christian Science; containing
Dedicatory Sermon delivered at the Mother Church, and scin-
tillations from the press on that occasion; 132 pages. Price
by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

- It lays the axe at the root of error, elucidating
and enforcing practical Christian Science, thus affording inval-
uable directions for all true Scientists. The following are
some of the topics treated: SEED-TIME AND HARVEST, DEEP
THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFF-
ERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80
pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50
half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00
each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

- An interesting and valuable
book, containing a brief and concise statement of Divine Science,
alias Christian Science, in the form of questions and answers.
It is a very succinct statement of Christian Science; 35 pages.
Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00
per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM.

- The Pastor Emeri-
tus' Message delivered at the Communion Season in the
Mother Church in Boston, June, 1898. A clear and strong
refutation of the charge that Christian Scientists are Pantheists.
Leatherette covers; 21 pages. Price by mail, 26 cents; per
dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

- The annual message
of the Rev. Mary Baker G. Eddy to the Mother Church on
Communion Sunday, June, 1900. Leatherette covers, deckle-
edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

- A brief statement of very important points in
Christian Science; 56 pages. Pebbled cloth covers. Price by
mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

- A sermon delivered in Boston; 17
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

PEOPLE'S IDEA OF GOD.

- A sermon delivered in Boston; 14
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

FEED MY SHEEP.

- Written by Mary Baker G. Eddy. Music
by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per
dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIP-
TURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder
of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in
Boston, Mass.

The Journal is published on the first of each month, and con-
tains interesting reports of cases of Spiritual and Physical healing
as well as instructive discussions of the Principle and the Practice
of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United
States, Canada, or Mexico. Two Dollars per annum; One Dollar
for six months; Single Copies, Twenty Cents; Foreign Subscrip-
tions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday
Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one
address, one year, each, 50 cents. Foreign Subscriptions, one copy,
one year, 60 cents. Postage prepaid to any part of the United
States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies
or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour."

- Words by
REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHN-
SON. Price, 50 cents per copy; \$5.00 per dozen. Words used
by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER.

- A Poem by MARY
BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For
soprano or tenor, C sharp to A; for lower voices, B flat to F.
Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL.

- Containing the By-Laws of the Mother
Church, also list of members. Price, one copy, \$1; six copies
to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL.

- Cloth, per copy, pre-
paid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half
Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half
dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH.

- By JOSEPH ARMSTRONG. A History
of the Building of the Mother Church, The First Church of
Christ, Scientist, in Boston, Mass. 103 pages. Illustrated.
One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

Political and Governmental Notes.

Matthew Stanley Quay, after a short absence from the United States Senate, owing to the success of the reform forces in creating a deadlock at the last session of the Pennsylvania Legislature, was again elected last week in spite of determined and influential opposition in his own party, and the known coldness of the national administration toward him.

Thomas M. Patterson of Denver, editor of the *Rocky Mountain News*, the most important free silver Populist-Democratic paper in the West, was elected last week to succeed Edward O. Wolcott as one of Colorado's representatives in the United States Senate. Mr. Patterson has been a leader of the anti-Republican political elements in his state for many years. He is an able lawyer and an effective speaker. Senator Wolcott, who is the state leader of the Republicans, received but eight votes.

George Frisbie Hoar was re-elected United States Senator by the Massachusetts Legislature for the fifth time last week. He received the votes of all the Republicans of both branches of the Legislature, which were fifty-four votes more than he needed, and five Democratic votes besides.

W. A. Clark, the Montana multi-millionaire mine owner, who was turned out of the United States Senate last year after an investigation which showed that trickery had been practised to secure his election, was again elected by the Montana Legislature on January 16, on the first ballot.

William P. Frye, the veteran Republican Senator from Maine, was re-elected last week for another term. Senator McMillan of Michigan, and Senator Tillman of South Carolina was also elected last week to succeed themselves.

The complete record of exports and imports for the year 1900, published last week by the United States Treasury bureau of statistics, shows a volume of international trade unparalleled in the history of the country. The exports amounted to \$1,478,050,854, against \$1,275,467,971 for 1899, and \$1,255,546,266 for 1898. The imports amounted to \$829,052,116 against \$798,967,410 for 1899, and \$634,964,448 for 1898. The favorable balances for three years thus stand at about \$1,672,000,000, which is far beyond the estimated charges against the United States for freights and interest on foreign capital invested in this country.

Attorney-General Knowlton in his annual report, gives his views upon the subject of capital punishment in language which amounts to a recommendation that the death penalty be abolished in Massachusetts. He says: "It is a relic of barbarism, which the community must surely outgrow, as it has already outgrown the rack, the whipping-post, and the stake."

Alexis E. Frye, who has been superintendent of schools in Cuba for a year and a half, and who was married on New Year's Day to a Cuban schoolteacher, has resigned his post because the military authorities framed a law which deprived him of the power requisite to carry out his plans for education in the island.

General Francis V. Greene, grand marshal of the presidential inaugural parade, has invited the sons of former presidents to serve as aides on his staff on March 4. Robert T. Lincoln, Fred D. Grant and U. S. Grant, Webb Hayes, Harry Garfield, Chester A. Arthur, and Russell B. Harrison are in this class.

At a dinner given last week at the Waldorf-Astoria in New York by the Holland Society, Ex-President Cleveland was present as a guest, and made a formal speech on anti-imperialism, which has been highly praised by former leaders in the Democratic party in all parts of the country.

The army reorganization bill passed the United States Senate by a vote of 43 to 23 on January 18. The bill was then turned over to a conference committee appointed by the two houses.

Foreign News.

Lord Roberts has issued from the British War Office a stirring appeal to the country for a prompt response to the call for five thousand yeomanry, whose past services in South Africa he highly commends to the gratitude of the nation. The authorities seem to recognize that vigorous measures are necessary in South Africa. The proclamation of martial law throughout almost the whole of Cape Colony, Lord Kitchener's strong measures against the population of the republics, the placing on reduced rations of the wives of men on commando, and similar measures go to show that there is still heavy work ahead.

The State Department was advised January 16 of the formal signing by the Chinese plenipotentiary of the Peking agreement. The next step probably will be a reconvention of the ministerial council at Peking, and it is probable that the gathering will be attended by the Chinese representatives, so that the proceedings will from this point on follow closely in the line of the usual form of peace negotiations.

A Peking press dispatch of January 15 says: "This afternoon the French railway engineers have made a breach in the western wall of the Chinese city, through which they will bring in the Paotingfu railway. The Tientsin line will be extended to the line of the Tartar city."

The two hundredth anniversary of the founding of the kingdom of Prussia was celebrated in Berlin and all parts of the kingdom on January 18. Emperor William made it the occasion for awarding a number of patents of nobility and other kindly honors.

The marriage of Wilhelmina, the young Queen of Holland, to Duke Henry of Mecklenburg-Schwerin will take place in Amsterdam February 5.

The British War Office rigidly declines to issue further permits for newspaper correspondents in South Africa.

Industry and Commerce.

Engineers are now at work upon plans which contemplate the draining of extensive swamp lands in Louisiana and reclaiming the land of three entire parishes to the uses of agriculture. A month ago \$250,000 worth of bonds were sold to raise the money for this purpose, and within a year a system of canals will have been put in operation in the parishes of Rapides, Avoyelles, and St. Landry, whereby the waters which cover a large portion of them for a great part of the year

will be drained off into the Red River and lakes in the interior.

M. Alfred Picard, president of the Permanent Commission on Customs Values, in a review of France's foreign trade, says that France and the United States alone among the great countries show that their exports are increasing more rapidly than their imports, though France's increase is not nearly equal to that of the United States. England, Germany and Belgium show that their imports are increasing more rapidly than their exports.

Mexico buys more American books than does France, and nearly as many as Germany. Much of this trade is due to the large resident American population to be found in Mexican cities, and to the demand from mining camps where Americans are living, and not a little is due to the growing spread of English among the Mexican people. There is a strong tendency in favor of popularizing the English language.

The Carnegie Company has taken the first step to fight the American steel sheet company, the \$52,000,000 combine now controlling the steel trade, by awarding contracts for machinery for a thirty-mill plant at Duquesne on the Monongahela River, above Homestead. The plant will be larger than any single one owned by the combine. Estimates of the cost of the plant place it at \$2,000,000.

General News.

The *Saturday Evening Post* says: "The arid region of this country is larger than the entire area of some of the nations of the earth. It includes portions of Montana, Wyoming, Colorado, Utah, Nevada, Arizona, and New Mexico, and smaller portions of North and South Dakota, Nevada, Kansas, and Texas, hundreds of thousands of acres in California, two-thirds of Oregon, one-third of Washington, and almost all of Idaho—altogether a total of over a million square miles, enough, in fact, to accommodate one-half the people of the United States when the land is made productive."

Thorough demoralization seems to have come upon Leland Stanford, Jr., University. Following the enforced resignation of Dr. Ross last November because his teachings regarding property rights displeased Mrs. Stanford, and that of Professor George E. Howard on January 14, came, on January 15, the resignations of Professor William H. Hudson, Charles O. Little, and Boiton Coitt Brown, and on January 19 Professor David Spencer, formerly of Harvard, tendered his resignation. It is hinted that all the students may leave.

Plans for the erection of Chicago's Art Palace and Lake Front Exposition Building are fast nearing consummation. According to the members of the Chicago Commercial Association and the committee of citizens devising ways and means, the outlook is bright, and it is likely that final action placing the project on a satisfactory basis will be taken at a meeting to be held. It is the intention to build the two million dollar structure on made ground east of the Illinois Central Railroad, as this is under the jurisdiction of the State.

In response to an appeal from Mayor McGuire, Andrew Carnegie has agreed to give two hundred thousand dollars to the city of Syracuse, N. Y., for a public library. Each year during his five years' service as head of the city administration, Mayor McGuire has written Mr. Carnegie urging the need in this city of an adequate public library.

The greatest bill for darning on record will be presented to the French Government for payment when the mending of the State tapestries, just commenced, is completed. There are in all ninety of these artistic properties, and it is said that the cost of restoring them will approximate one hundred and fifty thousand dollars.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Buried City in Mississippi.

Supposed Habitation of Some Prehistoric Race.

ONE of the scientific puzzles of the state of Mississippi is the Brandywine Stone Wall. It has long been a problem that is yet unsolved. Some time ago Mr. Thomas Watson of Hazlehurst, sent Governor Longino a pencil drawing of an immense pile of stone in the southeastern portion of Claiborne County, suggesting that the stone might be utilized in building the new capitol.

In a letter which accompanied the drawing Mr. Watson stated that these stones piled high on each other, cover an area four miles square. Each stone is six feet long, three feet wide, and two feet thick, and they are joined together with an excellent quality of cement. No man knows how they came there. They may have been there for thousands of years.

The builders must have been some prehistoric race—it could not be otherwise. This structure is supposed to be a continuation of the great "Chinese wall," which seems to begin below Raymond, in the southern part of Hinds County, and which is traceable through Copiah. It is broad enough to accommodate two or three wagons abreast, and is one of the wonders of the world.

Mention of this remarkable exhibit, says the *Hazlehurst Courier*, has elicited no little comment—in fact, has brought a letter to Mr. Watson from the warden of the United States penitentiary at Leavenworth, Kan., and also a letter to Dr. T. B. Birdsong from another distinguished source, it being known that the latter some years ago investigated the matter. Mr. Watson, however, has given the subject more patient thought and gone over the ground more thoroughly than any one else.

He calls it the Brandywine Stone Wall, and says this wonderful and massive structure or parts of structure of masonry done in stone, which has withstood the ravages of time for, perhaps, many thousands of years, still stands an enduring relic of a prehistoric civilization and a knowledge of the art of building not inferior in many respects to the present day. These stone buildings lie, for the most part, buried in the earth in the southeastern portion of Claiborne County, and lying against the Copiah County line, on the slopes overlooking the valley of the Brandywine Creek from the west side.

These walls run from northeast to southwest. They are built of white or grayish white stone of immense size, weighing from two to three tons, measuring from six to eight feet in length and three feet wide by two feet thick.

These blocks or slabs are laid in a very fine quality of cement and as perfectly as brickwork. The joints are perfect and very close.

At one place the wall is exposed by the earth being washed away to a width of sixty feet and a length of ninety feet; this exposure has the appearance of a brick hearth.

At another place the stone has been quarried for domestic use to a depth of three layers of slabs, which is six feet, a width of twenty-four feet, or eight blocks, and a length of twenty-five blocks, or one hundred and fifty feet. The

length of this wall, as indicated by the croppings, is about one thousand feet.

At another place about five hundred yards away from the place just mentioned, is a wall jutting from under a slope for a distance of nearly two thousand feet. The stone work is exposed in a great many places over an area of four miles.

The sides and angles of the blocks of stones are so perfect that they resemble pressed brick. The tops of these walls are perfectly horizontal and without regard to the unevenness of the earth's surface. The seams between the tiers are perfectly straight, and each block of stone is perfectly horizontal in position, and these blocks are smoothly dressed on the edges and ends, while the broad surfaces are rough, showing a broken surface brought down to a level plane, but not dressed. They are held so firmly together by the cement that it is with great difficulty that they are broken up.

A personal inspection of these great structures as they lie partly buried in the earth would relieve the minds of the most sceptical of all doubt of it not being the work of the hands of man.

In all that is above mentioned in connection with numerous cavings-in of the earth's crust, which represent the existence of underground caverns, abundant evidence is found to bear out the theory of the existence of a great buried city in that locality.

The information above given is vouched for by other parties who have visited the scene in recent years, and bears out the theory advanced by Mr. Watson. Truly, there is work for the scientist here.—*Boston Herald.*

Aerial Navigation.

COUNT ZEPPELIN, whose new airship now has the world in a flutter, has received from Uncle Sam a patent for a flying locomotive which will draw in free air a vestibule train of aerial trailers loaded with men and freight. Inasmuch as he made good his original ambition to give the world a steerable airship which would transport men, there is some substantial foundation for the anticipation that we will all—early in the dawning twentieth century—be riding about in his aerial express trains of detachable cars—trains which literally run upon "air lines."

Now, this is how the successful airship inventor promises to build his vestibule train of flying cars. The details are set forth in his own specifications, now filed in the patent office. The locomotive and trailers are all to be Bologna sausage shaped, and similar in general appearance to the Zeppelin airship now being tested. Beneath the aerial locomotive and each trailer is to be placed a gangway or running board rigidly connected to the main framework. Along this the conductor is presumably to walk while collecting fares and directing operations. The crew is to use this passageway to gain access to all parts of the train. From it rope ladders run up the sides and to the roofs of the cylindrical bodies of the respective vessels.

The locomotive for this Zeppelin train is to be the only

vehicle provided with motive power. At each side are to be placed two air screws like large electric fans, held free from the sides by brackets resembling the outriggers of racing boats. Then there are to be rudders above and beneath at the prow. The locomotive is to be connected with the forward trailer, and the trailers are to be joined to one another by couplers extending from the centre of each balloon cylinder's rounded end and jointed to bend in any direction. Thus connected, a long train a la Zeppelin will have the appearance of a string of giant sausages. The vestibule at each point of juncture will be a covering sheet allowing free movement, but preventing wind from blowing in between the trailers and causing resistance. With these coverings in place the connected train will appear like a gigantic elongated worm.

The passengers, crew, cargo, fuel, and supplies of this queer aerial train are to be carried in what appear to be little open rowboats, two of which are attached to the gangway under each balloon cylinder. Between these boats and from the centre of each balloon hangs a long pendulum with a round weight at the bottom. The locomotive and each trailer are provided with this novel balancing gear.

The Express Gazette.

The Ideal Life.

THE ideal life is to be found only in work. That work must satisfy our mental powers and make use of all the heart power of which we are possessed. It must be a work that we go to eagerly in the morning and look upon with satisfaction in the evening. We must have an object in view. It need not necessarily be a material object; we only need to feel it within ourselves. It may be to lead a pure, harmonious life, so that others, seeing how we adjust ourselves to the stones, or flowers, as it may chance, found in our path, will take heart and cease to strive against the inevitable. We will not only assume cheerfulness, but will be the embodiment of a cheerful spirit. Like the flowers, we will turn our faces toward the sun and, like them, give to the world heartsease. We will realize that we can do no greater thing for humanity than to live cheerfully, hopefully from day to day. How few of us realize the good one pure, well-rounded life does in a community. If we did there would be fewer restless, longing hearts among us.

Even in this ideal life there will be barriers here and there to check our progress. It will take time to remove them, but instead of falling back in despair we will wait with patience, and "we will fill all the stops of life with tuneful breath." We will be content. We will feel that the place we occupy is our niche in the wall humanity is building for eternity, and we will be busy beautifying it.

We will live not only among the people, but be one of them, taking a living, active interest in all, as a whole and individually. Our home, in which each member will feel a personal interest, will be a place of peace, sweet peace, and abiding love,—a home that will satisfy the heart,—a home into which is brought from the world nothing but charity, and where love for all mankind is fostered. Our home life will be the strongest link in the chain that connects us with the eternal home.

Our life will be so full we shall have no time for yearnings after the unattainable. No folding of the hands, looking and seeing not, dreaming that life is beauty, but feeling that it is duty. We will take up the duty nearest with a willing hand and cheerful heart, and will find in it a hidden beauty.

JULIA M. DALTON.

In the Galveston Semi-Weekly News.

The truth of things is indeed the only refuge from the look of things.—MACDONALD.

The Lectures.

At Minneapolis, Minn.

Edward A. Kimball, C.S.D., of Chicago, delivered an address on Christian Science at the Metropolitan Theatre yesterday afternoon (Sunday, January 6) under the auspices of First Church of Christ, Scientist, of Minneapolis. The theatre was crowded, and the address was an interesting one and well worth hearing, even to the uninitiated. Mr. Kimball is a member of the Christian Science Board of Lectureship. His address yesterday received marked attention throughout. It was interesting, instructive, and to the point.

Mr. Kimball gave a clear exposition of the postulates of the faith in which he is a firm believer. The power of Mind over matter was the keynote of the address. Christian Science, he stated, was an actual, demonstrable Science, and one that had withstood every test during its comparatively brief history. He declared that every known disease had been cured in hundreds of instances by the aid of Christian Science; on the other hand, *materia medica* admitted there were many incurable diseases.

"Christian Science," said Mr. Kimball, "penetrates every nook in every walk of life, and is the most practical thing that has touched the consciousness of any age."

The speaker was introduced by W. G. Hollis, chairman of the board of trustees of First Church of Christ, Scientist, of Minneapolis, who referred to Mr. Kimball as "a living witness to the power of God to heal the sick through the understanding of divine Love, as taught in Christian Science."—*Minneapolis Times.*

At Little Rock, Ark.

An appreciative audience met in Concordia Hall, Tuesday, December 18, to hear a lecture by Judge William G. Ewing on Christian Science. All we have heard from were delighted with his presentation of the subject.

Governor Daniel W. Jones of Arkansas introduced the lecturer with the following remarks:—

Ladies and Gentlemen:—On the question of Christian Science, I will confess myself to be an agnostic. I do not profess to believe in it or disbelieve in it, because I know nothing about it, but I have come here, possibly like some of you, for the purpose of learning something about it. Among our people, we are always willing to listen to any man of intelligence who may wish to present what he thinks is true, consequently it is a great pleasure for me to introduce to you a gentleman of high character and whose integrity warrants me in saying to you that you will have a good talk, and no doubt we shall all learn something more than we have known. I believe, so far as I am concerned, I shall know more about this matter than I have ever known before. I know that you, as citizens of Little Rock, as it is customary to do, will give your most profound attention to this gentleman, and I therefore have the pleasure of introducing to you Judge William G. Ewing of Chicago.—*Correspondence.*

Lectures at Other Places.

Oklahoma City, Okla.—William G. Ewing, November 26.

Shamed be the hands that idly fold,
And lips that woo the reed's accord,
When laggard Time the hour has tolled
For true with false and new with old
To fight the battles of the Lord!

WHITTIER.

Selected Articles.

The Ideal and its Realization.

It is nineteen hundred years since the Christian era dawned. The Christ appeared as man upon the world's arena, reversing all human laws, ways, and means, establishing a new code for human government, teaching it in the clearest, most unmistakable language, and illustrating it in his own life and works. That code was Love—unselfish, self-sacrificing Love.

So far above the apprehension of the majority of his hearers was it, that it aroused the bitterest antagonism, not only in the world secular, but the religious authority of that day, and its following went far beyond the world—so-called—in the condemnation of the new teacher and his strange, and to them blasphemous, teaching.

The ideal of the good, the true, and the beautiful, his own consciousness, he could not impart to others. He could only give to each one who received him, the power to become a son of God, through the realization of the same perfect ideal. Striving with purest, most self-sacrificing, patient love, to reveal God to man as Life, Truth, and Love; and man to himself as the offspring of this one true God, capable of fulfilling the perfect law of Love—of Good—because it was his true and only Life.

Looking back through the long vista of nineteen centuries, we see how this perfect ideal has been slowly working its way into human consciousness, in men and nations. Or better, how it has been working outwardly from man's innermost thought. Following the line of Light and of Life that runs in golden gleams from then to now, we see—from the awful tragedy of Calvary, and the subsequent demonstration of Life as supreme over death—Love proving itself superior to even the most cruel manifestations of hate; blessing mortals even in their fierce, strenuous enmity against the benefactor and the blessings he gave; Truth establishing its own eternal laws, despite the angry protests of error; the growing ideal of the one altogether lovely, the manifestation of that ideal, the man, Christ Jesus.

With the Pentecostal baptism, the divine consciousness wrought wonders in and among men, the same Life and Love and Truth manifesting itself in deeds of power and lives willingly sacrificed to the high Ideal that had come, to be sooner or later realized upon earth.

There are many names deeply graven on the tablets of fame. Not a century has passed that has not been illumined by heroes animated by this pure and high ideal, who have helped to lift the standard of men and nations higher. And uncounted hosts who are all unknown to fame on earth, "whose names are written in Heaven," "of whom the world was not worthy," have received the perfect ideal and blessed the world that has not known or honored them.

Through these individual lights along the often fearful darkness of the long vista of the added years, the consciousness of nations has been quickened into life. Hegel, in his "Philosophy of History," calls it growth in "Self-Conscious Freedom of Spirit." The pure ideal of man as the Son of God—all men the offspring of Spirit—of God, the Father—manifesting this God—good, pure and perfect Life, was an ever-growing consciousness of good that would make man more and more a law unto himself. In this "self-conscious freedom of spirit," the law or life of liberty has grown into a high realization of itself, especially in this, our own America "sweet Land of Liberty," where the true law of liberty has not only been proclaimed in and by the fundamental law, the constitution of these United States, but the law of the Spirit of Life, as Love and Truth,

has been here re-discovered, as the true law or Life of man individually and collectively.

Never was this principle declared, as the absolute rule for the government of a nation, "that all men are created free and equal," until the Declaration of Independence was given to the world. Yet even then its authors were holding their fellow-men in slavery, and well we know the awful conflict that was necessary to set free the slaves of this free nation.

The question is certainly a pregnant one: "Are we pagan, or Christian?" Never in the history of the world has the ideal, Christ Jesus, been so exalted, revered, adored, and longed for as to-day. That the ideal is not nationally realized we grant, but in truly "self-conscious freedom of Spirit;" in truly realizing the universal freedom of man as a Son of God; seeing and following with intense earnestness and practical desire to reach the ideal; in the realization of the Truth of Being, in being and doing right; being practically Christian, in thought, word, and deed; there are multitudes of earth-born, in ever-growing numbers, proving themselves Christian.

Whatever uncovers the error in practice, showing how far short of the ideal we as a nation are, will aid in the destruction of error, for each individual who lifts his own individual standard higher, will help to raise the national standard to a higher plane of thought and action. Is there not a grave responsibility with every individual of this nation to do this? The forces of evil seem in fearful league as ever "against the Lord, and against his Christ."

It is much to have a high ideal. It is more and better to work up to it with constant faithfulness. Love is as diametrically opposite to selfishness and greed, as it was nineteen hundred years ago; Truth is the very antipodes of error; Life cannot know death, or anything that leads to it; hence if we are to reach the ideal of the perfect life on earth it must be in the footsteps of him who overcame all human error with divine Truth, Life, and Love: healing the sick, raising the dead in trespasses and sins, cleansing the leper, casting out demons.

In the World's Congress of Religions the most glorious manifestation of spiritual progress the world has ever given to the world, was heralded, when all the religions of the world, including those of so-called heathen, pagan, infidel nations, with all the leading sects of Christendom, met with fraternal greetings and proclaimed the great principle of the "Fatherhood of God, and the Brotherhood of man," as the one true platform upon which all could meet and love each other.

That the nations there represented, have not yet reached the practical application of this glorious perfect principle, only goes to prove how the glorious ideal of men and nations goes before them with radiant light, calling on the great and good of earth to follow it despite all fears, doubts, difficulties, and seeming disasters, knowing that the goal can and will be reached by each one who is faithful to it.

Thus through individual faithfulness to Principle, Life, Truth, Love, in every clime, on every continent, in every age,—the grand ameliorative work has gone on, and to-day we can stand on a glorious height in the world's history and see how all the revered leaders, through whom the radiant "Light that lighteth every man that cometh into the world," has shone forth, have helped onward the blessed consummation we behold at this pregnant hour.

Even to name those that are best known would take page upon page. Antediluvians, prophets, historians, philosophers, poets, artists, princes and peasants, apostles, popes, and pensioners; never a heart, however lofty or lowly, yielded in self-sacrificing love to the one high and

perfect ideal, that has not added its iota to the glorious consummation we see now unfolding to us, as we turn from the retrospective soul-satisfying view, to gaze enraptured on the Promised Land, where "nation will no more war against nation," where all men will truly love each other, because each will be truly lovable, fully manifested as the offspring of Love.

This one Life, or unity of Principle, being the only basis upon which practical realization of liberty, equality, and fraternity can be successfully demonstrated, the immense practical importance of the re-discovery of the spiritual law, which Jesus proclaimed and applied in the most practical way possible, in destroying everything contrary to the perfect harmony of man, as the Science of Christ, or Christian Science, can in a measure be seen.

The ideal of man as the veritable son of God, and of the earth as the arena upon which this ideal is to be brought into visible, tangible presence, because man is here and now spiritual and immortal, is the ideal that is "taught, illustrated, and demonstrated," in the words—oral and written—of Mary Baker Eddy, the Discoverer and Founder of Christian Science.

The practical application of this spiritual law, if spiritually understood and scientifically applied, will enable man to establish the Kingdom of Heaven, which has many synonyms, the Kingdom of God or of Good, the Kingdom of Christ, of Truth, of Love, of Peace, so long prayed for on earth.

Through this teaching man is now doing this, and proving himself to be the man made in the "image and likeness of God," to whom his Heavenly Father gave in the beginning dominion over all the earth.

Knowing Christ Jesus as his elder brother, he is able to obey his commands, and to do in some measure the works he did, making love the law of his daily life, and proving that man and men—all men—can fulfil the heavenly law of Life.—*Dayton (O.) Herald.*

What Christian Scientists Believe.

Jersey City, December 26, 1900.

Editor *The Observer*.

Dear Sir:—There seems to be a general impression, gathered from various sources, that Christian Science is not in accord with Scriptural teaching; that its text-book is used as a substitute for the Bible, and that prayer is of no avail. It may be that some of your many readers would like to know something of this religion, which is not only attracting the attention but drawing within its folds many of the brightest intellects of the day; and as quite a number of persons in this city are becoming interested in it, I beg space in which to correct the false impressions made upon those who are not familiar with the teachings of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Mrs. Eddy does not deny the personality of God, except as that term implies a humanly circumscribed form. Inasmuch as "no man hath seen God at any time," what presumption it would be for any human being to pretend to determine for mankind the precise form or outline of God, or to clothe Him with material attributes? All Christians, including Christian Scientists, believe that God is omnipresent; that He fills all space. Here is a common ground of belief; but Christian Science teaches—and logically so—that to outline Omnipresence would be to define the limits of limitless space. Conversely it may be stated that if the supposed outline or form of the person of God is not coincident with the infinity of space, then He cannot be what He is declared to be—omnipresent. This paradoxical illustration can be explained only by admitting that finite sense cannot grasp the Infinite, nor can the under-

standing of God be reached through material comparisons. There is no ground for claiming that prayer is of no avail, simply because Christian Science teaches a spiritual sense of Deity, instead of adhering to the prevalent idea that God has a form and is located somewhere, instead of everywhere. Jesus said, "The hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth."

That the prayers of Christian Scientists do avail is evidenced beyond doubt by thousands upon thousands of cases of healing, of all manner of diseases, in a large percentage of which *materia medica* had failed. This accumulated testimony proves the superiority of Mind. It also accords with the Scriptural teaching, "the prayer of faith shall save the sick," and this exact result was promised by Jesus when he said, "The works that I do, shall he do also." Christian Science being based solely upon Scripture, has divine authority. Its text-book was never intended as a substitute for the Bible; but by its spiritual interpretation thereof, it has imparted to the sacred pages a new light, giving to this age an understanding of "the mystery of godliness."

The world has for ages been seeking a religion based on a fixed principle. A religion suitable for all the needs of humanity in every-day life; capable of healing the sick, reclaiming the sinner and comforting the distressed. That Christian Science is such a religion can be as satisfactorily proven as that two and two make four. Jesus affirmed that the healing work he accomplished was not of himself, but of the Father. He never employed drugs, and yet he healed all who were brought to him. The inference is that his work was governed by a principle, which must have been divine—hence eternal—that is, forever existent; both before and after his appearance on earth. If eternal, it is quite evident that it exists now, and is as operative to-day in healing the sick and sinful as it ever was.

This is the discovery made by Mrs. Eddy in 1866, and named by her Christian Science. To deny this conclusion is to admit that God is changeable, and also a respecter of times, places, and persons. It may truly be said of those who understand this ever-living presence and power that they have found "the pearl of great price." Surely the "great and precious promises" were not made to deceive humanity, but rather to bless and to save all who believe them.

To emulate the ways of Jesus and to imitate his works is the ideal which Christian Science inculcates, and which he enjoined upon his followers. To obey him is certainly Christianly Scientific and requisite in attaining a knowledge of what God is and what He does for man.

Yours very truly,

T. W. BURGER.

Defends Christian Science.

To the Editor of the *Standard Union*.

Dear Sir:—On the assumption that the Rev. E. P. Marvin was correctly quoted in your issue of the sixth of November, as having spoken against Christian Science, I beg your permission to correct the false impression which may be given to your readers by the statements credited to this gentleman. Mr. Marvin finds fault with Christian Scientists because they have "not a solitary foundation in physical science." Christian Scientists stand on a surer basis than man-made philosophies or humanly evolved sciences. The first chapter of Genesis, wherein it is recorded that God, who is divine Mind, Spirit, created all that was made, is the foundation upon which Christian Science rests. In this account of creation there is no hint about a physical origin of the universe.

The Science of Mind is the understanding of God as

Spirit, of His universe and man, and man's relation to his Creator. If an understanding of the causation of all things be not Science, and if a faithful adherence to Christ's commands be not Christian, then, indeed, Christian Science is a misnomer; but such is not the case. The Rev. Marvin concedes that many Christian Scientists are "moral, intelligent men and women." He should give credit where credit is due, and an investigation would show that the morality and intelligence which he notices are due to a closer communion with God, and a better understanding of man's spiritual reality, as given by Christian Science.

The criticism that Christian Scientists are "derationalized" can have no force when one meets in the daily walks of life the hundreds of men and women whom Dr. Marvin has found to be moral and intelligent. The further fact mentioned by Dr. Marvin, that "Christian Scientists have made more converts during the last ten years than have all the other denominations put together," ought to mean something, even to the biased or prejudiced mind.

Mysticism has no part in Christian Science. The Bible is interpreted spiritually, and the profound truths which have for centuries been clouded by dogmatic assertion, cloaked in scholastic beliefs, and hidden under a material, human concept, are brought out in all their simple grandeur by Christian Science. The eternal facts of Being, that God is Good, and that He "made all that was made" and pronounced it good, and that man was made spiritually, in the image and likeness of his Creator, are the only doctrines of Christian Science.

It is absurd to say that the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, does not contain a sentence that is grammatical, or that has any meaning. If our critic fails to understand it, it is for the same reason that he has failed to understand Jesus' words when he said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do." "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils." The Christian Scientist believes and knows that this was meant for all time, and that there has never been a special dispensation when the word of God applied to His children only afterwards to become null and void; for God's word is eternal and changeless.

Yours truly,

— WILLARD S. MATTOX.

Doctrine of Christian Science.

PEOPLE who do not understand Christian Science have the opinion that it is an idealism, incapable of practical application and demonstration. Its followers, who have made it a study, do not think so. On the contrary, they maintain that it is as logical and capable of demonstration as a problem in mathematics.

Its operations extend to the simplest minutiae of our daily lives, lifting us above the worries and cares of life. Even a little child can prove its efficacy. On the other hand, it solves the most abstract and momentous questions of the Science of Being. It heals the sick man and reforms the sinner. It brings peace to the desolate, comfort to the broken-hearted, and purifies the consciousness of the evil-minded. It is a rebuke to vice and sin of every name, and an effectual one, for it goes to the root of the matter, and shows the wrong-thinker there is no pleasure in sin, and in proportion as this is understood its power over him diminishes.

One of the leading tenets of Christian Science, as given in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is that "happiness is spiritual, born of Truth and Love," and is never gained from a material

basis or from sense-testimony. Christian Scientists believe with Paul, that the powers that be, are ordained of God (Good) and there are no other powers. God is all, the all and in all, and the only power there is. Mankind has been believing so long in two powers that it seems hard to overcome the fundamental faith in materiality. This is done individually. We do not change things. We simply change our concepts of things. God's universe is spiritual. Because we have been looking through a glass darkly, we seem to see it materially. What remedy have we, then, but to follow Paul's injunction and "be transformed by the renewing of your minds"?

Jesus the Christ taught and practised the Science of Being. He demonstrated that so-called material forces should be and are in entire subjection to spiritual power, and that this power was not a gift, but the application of an understood Principle. He was the Master Metaphysician. By his scientific understanding of cause and effect, his life of purity and goodness, and his clear understanding of his sonship with God, he was enabled to make the most surprising demonstrations of history.

Christian Scientists of to-day are but beginners in this new-old religion, just beginning to learn its alphabet, hence their limited realization of good. Yet the writer has seen nearly every so-called incurable disease healed by Christian Science, and that, too, after the patients had been given up by the physicians.

Christian Science is a beautiful religion, an uplifting, practical, powerful, and provable religion, one that lifts its followers to spiritual heights hitherto undreamed of, and this, too, not from a basis of emotional ecstasy, but a reasonable, rational understanding of divine Principle. Christian Scientists cordially invite all who are not entirely satisfied with their present spiritual state to examine the teachings of Christian Science.

EDWARD E. NORWOOD.

If this is done it will insure the prompt delivery of the *Quarterly* for April, May, and June.

The Diamond Cutter.

As sires and sons, through lines of long descent,
At weary labor sit in joyless lands,
With piercing, straining eyes, and steady hands,
With honesty which is like sacrament,
With patience which defies all accident,
And, on the whirling disk, with shining sands
Of diamond, shape the diamond till it stands
At last a perfect gem, for which are spent
Whole kingdoms, that some boastful king may call
The stone his own,—

So crystal truths are wrought,
Patient, unnumbered, and unnoted all
As autumn leaves, whole generations fall
To shape and polish one immortal thought,
Which some chance king will think that he has bought.
Selected.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Letter to the Children.

Pleasant View, Concord, N. H., December 27, 1900.

To the Sunday School Children.

Beloved Children:—It was very lovely in you to remember me on Christmas and send me a pretty pen tray. Among my rare gifts none seemed sweeter than thine. When I saw it I said in my heart I wish I could see those dear children, I wish I knew their sweet faces on the street that I might bow to them, and I hope sometime to see them at our Hall in Concord and address them there.

May the loving Christ still keep you, dear ones, in his arms, and give your young lives love, purity, peace, health, holiness—is the prayer of her who loves you.

Ever yours,

M. B. EDDY.

The Joy and Satisfaction of To-day.

THE mission of Christianity is to bring joy and gladness into the lives of mortals. "For God sent not his Son into the world to condemn the world; but that the world through him might be saved." The world has nothing to lose but everything to gain by the advancement of the true idea of Christianity. If the world has opposed the Christian religion or has been indifferent as to its acceptance, it is because the life and teachings of its Founder were not understood.

A thought that frequently presents itself to the man or woman of the world is that Christianity, while it may prepare one for death and insure a happy and harmonious existence beyond the grave, it will take away the joy and satisfaction of living in the present. This thought is due to a misconception of the character and mission of Christianity, and when this false sense gives place to the true it is seen that Christianity bestows all things and deprives man of nothing that is real and eternal.

Jesus' mission was to give to the world the true idea of God—what He is; what He can do and will do for humanity. Mortals read that "God is Love," that He is unchangeable, "the same yesterday, and to-day, and forever," and yet how little do they realize of what there is in this Scientific statement of God's character to bring heaven down to earth. The thought of serving God through fear rather than through love is the idea of Christianity entertained by many. They think of God as an all-powerful personality who inflicts terrible, and perhaps endless, punishment upon those who do wrong. They can hardly conceive of a person choosing to serve God because they love Him and because they find their greatest joy and satisfaction in so doing.

When this thought gives place to the understanding that "God is Love," then it is seen that "He is a rewarder of them that diligently seek him." Neither the fear of punishment nor the hope of a future reward is the motive which inspires one to serve the Giver of every good and perfect gift. The fact that such service brings the greatest joy

and satisfaction *to-day* is a sufficient reason for accepting and putting into practice the teachings of the Master.

Paul declared that the kingdom of God is "righteousness, and peace, and joy in the Holy Ghost," and Jesus said, "the kingdom of God is within you." If these sayings be true, then the Christian has a right to expect peace and joy and harmony and satisfaction, here and now. The Psalmist sang, "In thy presence is fulness of joy; at thy right hand there are pleasures forevermore." "Fulness of joy" and "pleasures forevermore." What then would not man give to abide in the presence of the most High?

Since Christianity offers so much for the present as well as everything for the future, then that teaching that will enable man to take a firmer hold upon Christianity or cause Christianity to take a firmer hold upon him is worth more than anything else, more than all that the world has to offer. That Christian Science is accomplishing this grand work thousands upon thousands of living witnesses are daily testifying.

Christian Science is demonstrating that the saving power of Christianity is a present salvation. It brings God nearer to human experience, or rather it opens the blind eyes and causes them to see that God is here, an ever-present help. It shows how it is possible for man to trust God implicitly and to know that He does give the needed help.

That Christian Science heals after all material means have failed is no longer an open question. That it has brought joy and peace into the lives of thousands of those who were bowed down by care and sorrow is also an established fact. That these same persons believe more firmly in God than ever before, and that Christianity is to them no longer a theory but that which is capable of proof at all times, is evidence of the practical worth of Christian Science.

Ask any person who understands Christian Science, if he believes in God and has faith in Christianity, and he will tell you that he believes in God more firmly than ever before, because he understands more of what God is and he sees more clearly what is man's relation to God. He will also tell you that his faith in Christianity was never so strong as it is to-day, because it brings him richer blessings in the present and promises infinitely more for the future.

In Christian Science he has found health and strength. Whereas he was once burdened with the weight of many cares now he is joyous and free, all because of the understanding of Truth he has gained. Who can say to such an one, Your faith is vain, or you do not believe what you profess? He knows in whom he has believed and he has within himself the assurance that his faith is not in vain.

When he recalls how he was restored to perfect health after the physicians had said there was no hope; when he remembers how that at one time there was not even a silver lining to the dark cloud above him, and now he has been restored to health and the dark clouds have disappeared and he enjoys the glorious sunlight of God's unchanging love, is it any wonder that he is often heard to exclaim in the language of the Psalmist, "Surely goodness and mercy shall follow me all the days of my life: and I will dwell in the house of the Lord forever"?

This has been the experience of thousands and it may be the experience of all who are willing to seek diligently the understanding of Truth which Jesus declared would make free indeed. Christian Science emphasizes the Scriptural teaching that God is Love; that He is unchangeable; that He is no respecter of persons. This thought of God lifts one above the discords of earth and causes him to sing with the Psalmist, "O come, let us sing unto the Lord: let us make a joyful noise to the rock of our salvation. Let us come into his presence with thanksgiving, and make a joyful noise unto him, with psalms. For the Lord is a great God, and a great King above all gods."

Among the Churches.

Reading Room Opened at Troy, N. Y.

The new free reading rooms of the Christian Science Church were opened for public inspection yesterday (January 1, 1901) from 3 to 9 P.M. Several hundred persons visited the rooms during the afternoon and evening and were cordially received by a committee of members of the church. The rooms are the finest of the kind in northern New York. They are located at No. 15 Second Street, near Broadway, and although not entirely completed were handsomely decorated for the opening. The furnishings of the interior are artistic and most inviting. The visitors were cordially received, and after a thorough inspection of the rooms, were ushered into the reception parlors. A feature of the evening was an interesting address by Mrs. E. K. Betts. She said:—

It has seemed good to begin a new branch of the work of Christian Science in this city, viz., the opening of free reading rooms in a locality easily accessible to all.

In these days of modern research and scientific thought, the demand is made that whatever is accepted and believed by man must be so done on the ground of its reasonableness. Heretofore, religion has been to some extent exempted from this requirement. Religion is taught as a system of faith more than one of understanding. Yet, surely, if it be true, it must be grounded on a scientific basis. All God's creation is formed and governed by and through law. It is impossible to break God's law. Any attempt thereto must, and invariably does, result in suffering. The only guarantee of safety lies in knowing what the law is, that it may be obeyed. It would be unreasonable and foolish to work in any of the sciences without first acquiring a knowledge of the principles which govern them. How much more absurd it must be to attempt to comprehend Christianity, the Science of sciences, without an accurate statement of the Principle which underlies it, as well as the understanding of its rules and their application.

The acquisition of the knowledge of scientific fact is generally gained through books and lectures. Those who have learned true things teach those who would learn them. For this purpose academies, colleges, universities, and libraries abound in civilized lands. The Science of Christianity should not depart from these rules. Books are mainly the medium through which the knowledge of true things can be gained. There are few things which bring greater delight to humanity than the appeasing of man's insatiable hunger after knowledge. If it be possible to learn the underlying facts that govern the universe; yea, more, the laws that govern man's spiritual estate and the methods by which he may surely gain success, peace, heaven, then, surely, there can be no higher delight than the discovery of these laws and methods. It is with a hope to expedite such discovery that these reading rooms are opened in our city.

Christian Science is having a phenomenal growth. It appeals to all sorts and conditions of thought. It alleviates suffering, elevates mankind, giving purer ideals and disclosing a certain method of attaining them. It departs from accepted theories and practices in a marked manner. It teaches that Life is God, and is never in matter nor at its mercy.

Evolution is the generally accepted theory of mankind as an explanation of progress; supposing Life to be in the atom and thence to go on developing until the full spiritual perfection of man is reached. Can it be really possible for God to be in an atom? If Life could be put into atoms or matter in any form, would not God be divisible? Christian Science teaches that He is forever intact, perfect and complete, and that His universe is but the reflection of His being.

The man of Galilee was intensely Scientific. He knew the truth about God, Life, and Love. He knew how to demonstrate his understanding. He lived to teach this Truth and show to his brethren the way out of sorrow into peace.

Christianity as he taught it was Scientific. From the mountain, where he spake the beatitudes, he descended to the valley to heal the sick. He demanded of his disciples the proof of healing. Unless they could show the superiority of Mind over all conditions of disease, they could not give the required proof of discipleship. Because of the marvelous power his students attained as the result of his careful instruction, the Church grew and thrived in the first century.

Can it be possible that law, which once operated, has since ceased to act? That the gospel, which once saved the sinner and healed the sick, cannot to-day repeat these mighty works?

The discovery of the Divine rule of salvation has been made in this age. It seems at first abstract and impracticable. It is hard to believe that thought, directed by the divine Mind, can alter the secretions of the human body, assuage pain, even produce chemical changes in the system.

Once Galileo declared the world was round and was ready with his proofs. Cardinal and priest read in the Holy Scriptures of "the four corners of the earth," and condemned the man who stated a great truth, because their interpretation of the Bible was material rather than spiritual. Yet truth survived, and later their folly became apparent. Even so to-day, Truth forces man to a higher basis of understanding.

If Christian Scientists have laid hold of a better conception of Being; if they have really discovered the uselessness and illusive nature of disease and sin, ought they not to bend endeavor to bring this knowledge to their fellows? Among their ranks are to be found thousands who have been entirely healed of what is called incurable disease, through mental methods alone. You cannot convince a man who has been cured of consumption in its last stages—a man whose once decayed lungs have been replaced by healthy tissue, and through Christian Science alone, that he is deceived by vagaries and falsities; nor the woman who for years has been confined to her bed or chair by paralysis, but who now walks free and happy, through knowing that God is the only Life and that she reflects Him, that Christian Science is a fad—a criminal invention of money-making people. It is the constantly increasing number of such cases that daily swells the ranks of those loyal, earnest, grateful followers of the dear Teacher and Master, Jesus the Christ.

These are the reasons for our opening these free reading rooms. To give to the people, who are in great need of freedom, an opportunity to examine into this system. To offer them a quiet and attractive place where they may think and study and learn. If there be no Science of Christianity, the sooner this is known the better. Let Christianity go if it be not true. But if it be true—if it be founded on a purely Scientific basis, should not those who have, in a small degree, apprehended this Science offer it to those who have not yet found it?

We hope the public will understand that we have not entered into a crusade against the high benevolence that has for centuries actuated the best thought of advanced men and women. For all the good the past has given; for the devotion and unwearied efforts to benefit mankind, we thank the heavenly Father and His loyal workers. We feel, however, that this new study will help all others, as it has helped us, and in the spirit of our common humanity we hope to work side by side with all Christians. We particularly invite professional men to come and examine the system of Christian Science. What we all need is Truth—nothing less can satisfy us.

All the Christian Science literature, including the writings of the Discoverer and Founder of Christian Science, Mary Baker Eddy; and the publications of The Christian Science Publishing Society of Boston, will be accessible to the public. It will be our constant and earnest endeavor to give unto others what we have ourselves gratefully received.

Troy Record.

Progress at Ottawa, Ont.

The annual meeting of First Church of Christ, Scientist, Ottawa, was held last evening (Tuesday, December 4) in Christian Science Hall, 123 Sparks Street, a large number of the members being present. This church is incorporated under the statutes of Ontario, the purpose of the organization being to impart to mankind "the spiritual understanding of the Bible as taught in the text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, which enables mankind to follow in the footsteps of Jesus the Christ in preaching the gospel and healing the sick and the sinful as did his disciples."

The reports of the different officers were most gratifying, the membership during the past year having increased nearly three hundred per cent.

From the statements of the Christian Scientists it would appear that the movement is making rapid progress all over the world, and its followers may now be found in the five great divisions of the globe. The text-book, *Science and Health*, has now reached its two hundredth edition of one thousand copies each and the sale has doubled in the past five years.

The officers of the church were, for the most part, re-elected for another year at last night's meeting. The congregation expects to enter its newly acquired premises at the corner of Metcalfe and McLaren Streets for the Christmas services.—*Ottawa (Ont.) Citizen.*

In welcoming the congregation and the strangers present to the new chapel Mr. Ormond Higman spoke in part as follows:—

On behalf of First Church of Christ, Scientist, Ottawa, I extend to you a cordial welcome to this the first anniversary service of our organization and the opening of our new chapel home. To those who are members of other denominations and who are attending a Christian Science service for the first time, we extend a loving greeting, and trust that your prejudices—should you have any—may be dispelled and that you may be so impressed as to yearn for more of the uplifting and healing Truth of the Gospel that these services are intended to proclaim. To the citizens of Ottawa generally, we come with a message of peace, good-will, and love.

Christian Science is no new doctrine; but is the religion taught and practised by Jesus Christ and his disciples nineteen hundred years ago, and which Jesus said might be demonstrated in all ages by all people who followed in his footsteps.

The growth of our church in Ottawa during the past year has been truly remarkable, not alone in point of membership, for that of itself is of comparatively little value if the fruits which the Master said should follow his teaching are absent; but the efforts put forth to lift poor, suffering humanity out of sickness and sin have indeed been blessed of God. The harvest truly is great but the laborers are few.

We are, however, encouraged by our growth in numbers, and the increase of nearly three hundred per cent during the past year is a bright augury for the future. To this little band who compose the membership of this church is vouchsafed the inestimable privilege of being pioneers of

this great reform movement in the Ottawa country. As such it behooves us to guard sacredly the message that has been given us by that noble woman, the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science. For thirty years she has labored to clear away the accumulated debris of centuries; so that to-day the healing religion of the good and pure Nazarene is again being preached by the wayside. Let us guard this great trust sacredly, let us watch and pray that we enter not into temptation.

The new chapel occupies the whole of the first floor of the building, and on the second floor are reading rooms, which will be open to the public every day. The handsome oak reading desks in the chapel are the gift of a member of the congregation.—*Correspondence.*

Christian Science in Cedar Rapids, Ia.

The year 1900 was eventful to the Christian Scientists of Cedar Rapids, in securing an audience room for the exclusive use of the Church of Christ, Scientist, and establishing a free public reading room adjoining, centrally located, on the same floor as the public library in Dows' Building, opposite the post-office.

The walls and ceilings are in tints of green, with beautiful mottoes in gilt, taken from the Bible and the text-book of Christian Science, "Science and Health with Key to the Scriptures."

Mahogany folding opera chairs, double desk for the Readers, rugs, library table, rocking-chairs, steam heat, electric lights, screens, and awning make it complete in all its appointments.

The expense incident thereto together with the current expenses of the year, which include two free public lectures, one given in the Opera House, and one in the new Auditorium which were heard by about eighteen hundred people, amounts to \$1,527.14 which, together with \$160.72 added to the permanent building fund, makes a total for the year \$1,687.86.

This sum of money has been realized without personal solicitation, all coming freely from those who have received benefit from Christian Science, spiritually, morally, and physically. The church finds itself free from debt with a surplus in the treasury, indebtedness not being permissible in Christian Science churches.

The object of the lectures given by one appointed to the Board of Lectureship is to correct false impressions that prevail concerning Christian Science.

The object of the reading room is to place the literature of Christian Science before the public. The following is a list of books written by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science:—

Science and Health with Key to the Scriptures; *Miscellaneous Writings*; *Christ and Christmas*; *Retrospection and Introspection*; *Pulpit and Press*; *Unity of Good*; *Rudimental Divine Science*; *No and Yes*; *Christian Science vs. Pantheism*; *Message to the Mother Church*; *Christian Healing*; *People's Idea of God*. These, together with *The Christian Science Journal*, a monthly magazine, and the *Sentinel*, a weekly newspaper, are found in the reading room for perusal as well as for sale.

The public is cordially invited to come in hither and to investigate this literature, not only in theory, but in reality, even to the healing of sin and disease. The gospel of Truth has never changed. It is manifest to this age "with signs following" as written in Mark, 16 : 17, 18, thus proving its validity.

The reading room is open daily from 2 to 5 P.M., except Sunday, with a Christian Science practitioner in charge.

Cedar Rapids Evening Gazette.

A New Year's Reception.

January first was a happy occasion for the Christian Scientists of Lima, O., for it marked the opening of their reading room in its new quarters in the recently erected Masonic building. This building is the finest office building in the city, and is very complete and well arranged. The Masonic lodge opened the building formally on New Year's Day, inviting the public to inspect it. This opportunity was appreciated by the Scientists, who hastened to occupy their new rooms and open them to the public also. The reading room is on the second floor over the main entrance, and its door is the first to meet the eye as one steps from the elevator or comes up the stairway. It is a room 16x26 feet, with two large windows. The door stood invitingly open, revealing the cozy interior, with its large table, easy chairs, writing desk, bookcase, etc., and hundreds of people came in to sit a moment or to inquire what place it was. All received a cordial greeting from the Scientists, and few departed without literature for future perusal. Many were the kindly comments and testimonials given by the visitors, many of whom spoke of friends who were interested in Christian Science. Others had been benefited by reading our literature, and were glad to take more.

The audience room, which opens from the reading room and hallway, was open for inspection also, though as yet unfurnished, and many were the expressions of surprise and pleasure over its bright and pretty aspect, giving promise of so much when furnished. We feel sure that the Field will rejoice with us in our possession of a new home and will be interested to hear further when it is complete.—MRS. JULIA D. LINNEMAN, Lima, O.

Change of Location at Ouray, Col.

The Christian Science society of Ouray has moved from the A. O. U. W. Hall to a room of its own in the Munn Building on Sixth Avenue. The room has been nicely carpeted and two new reading desks have been donated to the society by the Sunday School. The room is electric lighted and is comfortable and cozy.

We intend, in a very short time, to open our room as a Christian Science Reading Room through the week, due notice of which will be given later. Our Sunday evening services begin at eight o'clock, and any one wishing to attend will be most welcome.—GEO. A. BROWN, Clerk.

In the *Silverite-Plaine* dealer.

Property Purchased at Glens Falls, N. Y.

The First Church of Christ, Scientist, has purchased the property at the southwest corner of Warren and Jay Streets belonging to Mrs. Amy Shields, where eventually they expect to erect a church edifice. The lot has a frontage of 65 feet on Warren Street, 135 feet on Jay Street, and is 81 feet wide in the rear. The society will take possession about April 1, and purpose to use the present building for a year or two for the meeting place of the society, and then to erect a handsome church there. The price paid for the property was \$6,000.—*Glens Falls Morning Star*.

Was that Somebody You?

Somebody did a golden deed;
Somebody proved a friend in need;
Somebody sang a beautiful song;
Somebody smiled the whole day long;
Somebody thought, "Tis sweet to live;"
Somebody said, "I'm glad to give;"
Somebody fought a valiant fight;
Somebody lived to shield the right.

Was that somebody you?—*Selected*.

From Our Contributors.**True Freedom.**

BY IDA FULLER MOORE.

THE freedom of a Son of God
Is mine, who am "joint-heir"
With Him that with the Spirit's rod
O'ercame the world's great care.
Free to express Good every hour
Free always to deny the power
Of lust, and hate, and greed,
In thought, in word, in deed;

How free we are to prove we're free;
How free t' enjoy all good;
How free to have true harmony
And true love, if we would.
Free to reflect the perfect One,
Why should we longer serve
An evil lie, its errands run?
From Truth why ever swerve?

Why cleave to wrong, when Right we know?
Why love in chains to be,
Fettered and bound, when we might go
So joyful, loving, free?
With truest freedom ever told
Let's run the heavenly race,
The truest Life we may behold
Reflecting face to face.

Redemption.

BY M. BETTIE BELL.

THERE is music in the word redemption. It means rest from all our labors. God has promised to redeem His people. They *shall* be redeemed "from the curse of the law." The curse of the law is sin, and "the wages of sin is death." Redemption removes the curse, overcomes mortality, abolishes death, and reveals true Being in the light of Spirit.

To be redeemed, we must understand both the letter and spirit of Christian Science. Divine Science teaches that both are necessary to our redemption and salvation. To be redeemed, we must learn how to overcome self, through understanding the Principle and rule of Christian Science, and demonstrate unselfishness and spirituality. Unselfish love redeems and saves us. Growth, knowledge, and understanding awaken us from the dream of unreality, and purify us through the Word of God. "And he shall redeem Israel from all his iniquities."

Repentance, regeneration, spiritual baptism, demonstration, and understanding are steps leading to redemption. Justice, true judgment, righteousness, faith, hope, and charity are the pillars of redemption.

Repenting of, and overcoming sin takes us through the fires of affliction and purification, consumes the dross of evil, and redeems us through the revelation of the Christ idea.

To circumcise the heart is to repent of sin, overcome the laws of mortal mind, and rise in newness of thought to behold the Christ idea through the lens of spiritual affection.

When we look to drugs to heal us, we are *desolate* of spiritual light, and when we look to scholastic theology to save us, we are robbed of our redemption. Revelation of our innocent selfhood in Christ comes through our understanding, sacrifice, prayer, and the blood of the Lamb. We must realize that we are washed clean in His redeeming love.

A child who is petulant, headstrong, wilful, and stubborn needs the fiery trials, the sharp thorns, and the cross. Every chastisement seems to be grievous, but every trial is needed to advance our redemption. Step by step we grow into a manifestation of real manhood and womanhood.

The road is straight and narrow. Can we leave our time-worn habits and let the scales of human theory peel from the faculties of thought? Are we willing to part with superstition? Do we deplore our ignorance? Are we willing to subject the old man to tests of persecution, until we can lay him off, and rise with David to say, "I shall be satisfied, when I awake, with thy likeness"? If so, we are ready to advance. Taking one step compels us to take another. There is no going backward; "no cloak for their sin." The narrowness of the road often causes a sense of nervousness, and the straightness a sense of impatience, but we cannot turn to the right or left, for the road is straight and narrow. By-and-by we get accustomed to it, and find ourselves praying that nought shall turn us away from its straightness and narrowness.

Along the road grow the flowers of patience, meekness, humility, love, tenderness, faith, joy, and courage. The thistles of discouragement, sadness, and despair; the thorns of pride, conceit, and selfishness, peep up from the soil, and prick our feet, and hurt our heart, but near a thorn the lily says: "I am beside thee," and near a thistle the rose is saying: "See how sweet I look," and thus, as we advance, thorns prick on one side, and flowers shed their perfume on the other, when, finally, the road broadens, until there is no road at all, and no thorns at all, but God is everywhere, and All-in-all, and His flowers are sprinkling their dewdrops under our feet and in our hearts, and we shall find ourselves redeemed.

Money.

BY HANSON W. WHEELER.

MONEY typifies the dominant thought controlling mortals. The miser and the spendthrift are governed by the same motive,—the gratification of desire,—though manifested differently. The man dwelling in poverty is in bondage to the belief that money is power, just as truly as is the rich man who is striving to gain more.

Then it is not money, but the "love of money," or the controlling thought, that is the "root of all evil." The poverty bound is just as much in bondage as the grasping rich, for in both cases they are worshipping "gods that are no gods," the one believing in a power to deprive and the other conceiving that his worldly gain is a satisfactory protection. A man may give a fortune to what he *thinks* is God's work and yet not render unto God His due. That man who thinks that because he is poor financially he will escape the law that declares that a rich man can hardly enter the Kingdom of Heaven, is deceiving himself, for he is placing a value upon his thought that is little less than self-righteousness.

The rich man does not strive to increase his wealth because he needs it, but in order to gratify ambition or some other impelling motive. Men sacrifice money to uphold or maintain cherished opinions, beliefs, or doctrines, in politics, business, and religion; and religious opinions bind men more relentlessly than any other. Opinions fastened upon the mind by tradition and the teachings of years are exalted above everything else, and the acts of mortals are made to justify their beliefs, thus fulfilling the law of sin and death.

The Pharisees of old refused to surrender their preconceived notions of God and His manifestation, and fought Truth at every step, despite the fact that Jesus and the disciples demonstrated their time-honored teachings to be erroneous. They would make everything subservient to

their material interpretation of God and His universe, including man.

It is plain that the only thing a man really possesses is what he holds in thought. The insane may have untold millions, but if he believes he is penniless he cannot be made to accept the situation in any other light than as he thinketh. The young man turned sorrowfully away from Jesus because he was unwilling to surrender his possessions. "Verily I say unto you, Whosoever shall not receive the Kingdom of God as a little child shall in no wise enter therein." The Master knew that adults could become as little children only in thought,—i.e., surrender their human opinions and humble themselves and be willing to accept his teachings with childlike faith. In Isaiah, 55 : 2, is a rebuke to the spending of money and labor for that which profiteth not. Mortals follow their own conceptions or wills (minds many), seeking harmony through self gratification, but all emanating from the false sense—selfishness. Paul says, "And be not conformed to this world: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect will of God."

God is Love.

BY BERTHA L. RICE.

Yes God is Love; a thought like this
Can every gloomy thought remove.
And turn all tears, all woes, to bliss,
For God is Love, for God is Love.

THERE are no better words to express my heartfelt gratitude for all I have received, than by quoting the above verse from one of our hymns. Knowing aright this God of Love has turned my "woes to bliss."

When, two years ago, burdened with the yoke of bondage, our God of Love heard my continued cry and set me at liberty, I had been sentenced by two able physicians to a life of uselessness. After having been under the care of two of Boston's best oculists for nearly a year, I was told by the last one employed that I must go to California a year at least, for a complete change, or I would lose my sight altogether. Just at this time I met a lady, who heard me say I was going to California in a short time for my eyes, and with the hope of regaining my health, and she said to me, "Do you know anything about Christian Science? if so, you need not go to California to gain help." That was the beginning; the end is not yet. Never hesitate, dear one, when God prompts you to deliver His message; no word of Truth is ever lost. That dear disciple found one of her friends and asked her to call me to her to hear of the Truth that makes free. A message came to me the next day from this stranger asking if I would come. I went immediately to hear, I knew not what. Although I had lived in Boston for the past twelve years almost within sound of our church chimes, yet I was nearly ignorant of the name Christian Science. Love so filled this dear little woman, and was so clearly reflected by her, that it was instantly received into my hungry heart, and my eyes, health, and happiness were made perfect that same hour.

Having worn glasses for fifteen years, and having been unable to use my eyes at all for the past year, it seemed so glorious to lay aside my thick prism glasses, never to see them again except to put them in their cases.

After having spiritually starved for twenty years, no one but a Scientist knows how complete and abundant my life now is. When I sit in the dear Mother Church the spiritual illumination fills to overflowing my former barren life. It seems as if the whole world itself was not big enough to hold God's love that has come to me. He makes His face to shine upon me, and gives me peace.

Yes, dear hungry-hearted and heavy-laden one, "God is Love."

Testimonies.

Awakened to Health and Happiness.

About four years ago I was liberated from bondage by the still, small voice of Truth. When I first heard of Christian Science I was at a sanitarium. The physician told me that a doctor who would say I could be healed, either knew nothing about his profession or had no regard for the truth. That night my pillow was wet with tears. Suddenly the sweet thought came, "The doctor is mistaken, you will get well." The tears were wiped away and I rested sweetly.

In a short time I received a letter from my mother, which told me of the healing of a friend, who had been an invalid several years, and whose case was considered hopeless. She had been under the constant care of prominent specialists in the north, and finally, when all material means had failed, she, as a last resort, had Christian Science treatment and was healed. She sent me the name and address of the lady who had treated her, with the request that I apply to her for help.

The thought of Christian healing appealed strongly to me, but I did not understand how a lady in Chicago could help me, and I so far away. I thought if this is God's work, why cannot I go direct to Him for help? This I decided to do. I went home, and while using material remedies, I prayed to a corporeal God to bless them, and to please let me get well.

Seeing that our prayers and remedies were unavailing, we decided that travel and a change of climate would prove beneficial, so we went to Texas, traveled from place to place, drank mineral waters, and consulted physicians. Finally, we went to San Antonio, and I was placed under the care of a noted specialist. After four months faithful work he gave up the case. He was puzzled to note that the medicine had the opposite effect from that intended. The last physician who treated me, gave me morphine in large doses to quiet the terrible agony I suffered at times. He did not hope to cure me.

About seven years from the time I first heard of Christian Science, I was visiting my mother in Mississippi. A young lady called, whose presence animated me with hope. I had met her in San Antonio a few months before, where she had gone for treatment, and judging from appearances, I thought she would never get well. At the time of her visit she seemed the very embodiment of health and happiness. I said at once, "What has brought about this wonderful transformation?" She told me about her healing and about "Science and Health with Key to the Scriptures," and that many were healed by simply reading it. I saw in the expression of her face, and felt by the mental touch, that she was in possession of the Truth for which I was famishing. I said, "What you have I want." I ordered the precious book from the nearest available point. So hungry was I that I could scarcely wait for it to come. When it did come, on my birthday, I gave myself up entirely to its perusal. Day by day I read and pondered the words in my heart and was *awakened*. Never shall I forget the sweet uplifting that came. I forgot I had been sick, I forgot all else, in a sweet realization of the ever-presence of Love. In a short time I was healed. The last four years have been years of health and happiness, and I owe it all to Christian Science.

This summer it was my privilege to attend services at the Mother Church, the church at Concord, and the First and Second Churches of New York. Ever since I was healed I have so longed to look upon the face of the one whom God chose to explain the spiritual law to this age. On the 14th of July my desire was granted. Twice I saw her sweet face, and once I was very near her.

We went from Galveston to New York by water. On

Saturday the thought came to me to hold Christian Science service on the ship. At once I made all preparations necessary, and then, accompanied by a young lady Scientist whom I met on the vessel, went to the captain and asked his consent. This was readily granted, and on Sunday morning, July 1, about sixty passengers listened attentively to our Lesson-Sermon. The captain joined us in the responsive reading and the singing of the hymns. During the voyage several troubles were overcome for passengers. I was able to prove, to my own consciousness, that seasickness is an illusion, and does not exist in Truth. Love afforded me protection from that trouble.

To say that I enjoyed my sweet Sabbath of rest, is but feebly to express the happiness that has been mine. I return to this field with heart overflowing with love and gratitude to the Giver of every good and perfect gift, and my earnest desire is to become a more able instrument in my Father's hands, for the furtherance of the glorious gospel of "peace on earth, good-will to man."

The Cause of Christian Science is prospering in the Lone Star State. On last Easter Sunday, First Church of Christ, Scientist, of Houston Tex., held its first service in our lovely little building. This house was erected for Sunday School purposes, and has a reading room. When we grow to larger needs, a church edifice will be erected on the adjoining corner, space having been reserved for that purpose. In point of beauty, symmetry, and harmony, our little temple of worship is a fitting symbol of the "structure of Truth and Love" (Science and Health). Much healing is being done, and some are healed at the services. May our Father-Mother God bring each one of us into conscious at-one-ment with Him and with one another.—JENNIE MAY MYERS, Houston, Tex.

Learning the Lesson of Patience.

One morning last summer I seemed to have a great sense of depression and discouragement. The day was sunny and most beautiful, but I felt as dark as possible, and went about my usual duties in a mood anything but joyous. When these duties were finished I sat down to study my Sunday lesson, but, instead, I found that I was sitting idly, thinking of myself.

For some time I had been trying so hard to bring out a particular demonstration, and not only did I seem farther than ever from the desired result, but error was trying to make me think that it was of no use to keep on; that I had tried in the best way I knew, and nothing seemed to have been accomplished. That I had better own myself defeated.

I opened my books almost perfunctorily. As I looked, the Bible was opened at Psalms, and my eyes rested on the fourth verse of the one hundredth Psalm, "Enter into his gates with thanksgiving, and into his courts with praise." At once I felt the rebuke, and my awakening came. How could I expect a happy, harmonious result when the very beginning of my work had been at fault. I was given explicit directions how to "enter," and I had failed at the first test.

At once, there came to my thought a multitude of things for which I should offer thanksgiving and praise, and after all these proofs of the Father's love and care, I was still doubting and ungrateful. I was saying with Philip, "Shew us the Father, and it sufficeth us," forgetting the many proofs of His ever-presence which Christian Science had brought me.

I then carefully studied the Psalm, only five verses, but if we know only those five verses we shall still have a wonderful sense of the allness of God—Love—and of man's relation to Him.

Are there not many of us who need to learn the beautiful lesson of patience; many of us who become querulous

when our prayers seem not immediately answered? Do we remember that which Paul tells us in the twenty-fifth verse of the eighth of Romans, "But if we hope for that we see not, then do we with patience wait for it"? and do we remember that the patience of the Christian has always the quantities of cheerfulness, thanksgiving, and praise?

That lesson has been of such benefit to me, and has remained so forcibly with me, that I want to share it with those whose joy it is that Christian Science has given them an understanding of the vast difference between the reality of good and the unreality of evil, thus showing them how all God's children may "enter into his gates with thanksgiving, and into his courts with praise."

E. P. F., Dorchester, Mass.

A Tithe of Gratitude.

It was in November, 1897, that I first heard of Christian Science, and looking back over these three years and more, I feel so grateful for what has come to me that I cannot but send this testimony forth, trusting it may prove helpful to some one walking the same path.

It was not physical ailments that turned me to the study of this perfect working Principle, but spiritual unrest. I had always read the Scriptures conscientiously, and in my earnest, honest desire to understand the Old and New Testaments, I had attended, winter after winter, Bible classes conducted by one of the best-known Presbyterian clergymen in my native city (New York), and further, one winter, a course of twelve lectures on Bible subjects, for which the person who presided over them received remuneration. All this, however, seemed to plunge me deeper and deeper into the quagmire of doubt and despondency, and the only light I gained that could at all break this spell, was, that at some far-distant day, when I had "shuffled off this mortal coil," I might know the deep meaning of the precepts and promises, and thus the reading of the Bible was simply perfunctory. I entered a class in Christian Science taught by one of our Leader's faithful students, and the last two days being devoted to written questions, mine was, "Why is it that I find myself always turning to Science and Health instead of to the Bible as has been my habit?" for at that time I was earnestly studying our text-book, but it had not yet become to me the "Key to the Scriptures." This winter has changed this attitude, and the Bible and Science and Health go hand in hand. The pages are illumined and the old truths, spiritually discerned, are indeed "a lamp unto my feet, and a light unto my path." Had Christian Science brought me nothing else, I can never be sufficiently thankful to our Leader for what she has done in revealing to me a Bible which is indeed the Word of God, and an ever-present help.

This winter has seen full many triumphs over error along many lines, and the character-building has gone steadily on. One great gain has been putting down fear to some extent, and learning more and more to trust God and lean not to my own understanding, realizing that each day is sufficient. "Thanks be unto God for his unspeakable gift," which I have found in Christian Science as interpreted in "Science and Health with Key to the Scriptures" written by Mary Baker G. Eddy, and unfeigned gratitude to her for her message to me and all mankind.

S. G. P., New York, N. Y.

The Value of Science and Health.

Looking backward over fourteen years many rich blessings come before me as evidence of the knowledge gained through the Christian Science text-book, "Science and Health with Key to the Scriptures." Often the privilege has been given to present these beautiful truths to those suffering from sin in its many forms and always a benefit if not a perfect healing was realized.

The great value of this book was once shown me when a gentleman who had consumption in its last stage invite me to his bedside where I was permitted to remain a short time. He was so much benefited and interested that he purchased Science and Health, and kept it by him day and night. It proved a great benefit, mentally and physically. All felt his stay here had been prolonged. The suffering lessened, and the family blessed.

A sea captain with his wife came to live in our street. One day he was kicked by a horse on the leg and was unable to do anything for six weeks. After getting out for a few weeks a relapse placed him in bed six weeks more. At this time the trouble was baffling the skill of the physician and a consultation was resorted to. The leg as far as the knee was so black and swollen that amputation was thought necessary.

At this stage of affairs a member of the family invited me to call. The wife told me what the physicians had decided upon and asked what I should do. The Truth was unfolded as given in our text-book, finding eager listeners for three hours, when the pain had ceased, and each was in a happier frame of mind. The husband was anxious to see the wonderful book at once and the wife went home with me to get it. I also loaned them *The Christian Science Journal*. These books were read faithfully, and improvement continued from that hour. Two weeks later he was able to leave his home. The healing was complete.

Since 1887 *The Christian Science Journal* has been a welcome visitor in our home and the cases of healing given therein harmonize with our own work.

Truly the day of miracles has not passed, the same work is as natural to-day as when Jesus worked in harmony with divine Law for our example.

MRS. ADDIE TOWNS ARNOLD, Lawrence, Mass.

What the Study of Science and Health will Accomplish.

It has been more than four years since I was healed of a sickness of nearly seven weeks duration by Christian Science. The trouble was brought on by overwork, and resulted in a state of great weakness and discouragement. After nearly seven weeks of doctoring by a physician, a dear Scientist lifted me into health and harmony with one week's Christian Science treatment.

I have not had the privilege of class instruction, but have been a systematic student of "Science and Health with Key to the Scriptures," which has enabled me to make a number of demonstrations, of two of which I will speak.

After wearing glasses for two years for astigmatism, I took them off without any inconvenience. Several years before I came into Christian Science, my children had the measles and whooping cough. My eldest daughter's eyes were affected, and she was taken to a prominent oculist in Chicago, who required her to be kept out of school for a whole year, and to wear glasses. He also said she would have to use glasses during the whole of her school life (she was nine years old at that time) and possibly as long as she lived. Through my understanding of Christian Science I was enabled to destroy the seeming necessity for glasses, as well as the opposition of mortal mind to their being removed. At this time (July, 1900) it has been more than two years since she discarded them. I thank God for Christian Science, and I wish to show my love to Mrs. Eddy, by being faithful in living the Truth as she has revealed it in Science and Health.

Religious Items.

One who met the late ex-Governor Roger Wolcott of Massachusetts at Oberammergau last summer reports him as answering the query "How did the Passion Play impress you?" thus: "Mr. G., I was so deeply impressed as to be overpowered. I was obliged to go to my room and think it over." The admiration of the foreign delegates to the International Congregational Council for the governor of the commonwealth, who welcomed them in Tremont Temple and later in his own executive chambers at the State House, knew no bounds. Many of them who had seen European monarchs and nobles said that they had never seen a kinglier or more knightly man. Wherever he went he reflected honor on mankind and his native home. Dr. Donald of Trinity Church, Boston, says of him that he was the noblest specimen of American manhood he has ever known in public life.—*The Congregationalist*.

Rev. Alberto A. Bennett, in an article on "New Elements in Revival Work" in the (Baptist) *Examiner*, says: "Religious awakenings of whole communities do not occur now, and simultaneous movements of different sections of the country are not found. It used to be that a revival would start in one place, and spread through all the adjacent country; now it dies where it begins. And evangelists tell us privately that it is increasingly harder to draw a crowd, or to move a crowd when it is drawn, and the difficulty grows greater year by year."

After some speculation in regard to the cause of the conditions described, the writer says he believes that in future "religious movements in churches or in communities will originate, not in the spontaneous action of a company of people who hardly know what they are doing, but in the conscious and voluntary action of individuals who know what they are about, and propose to do it."

The (Baptist) *Standard* says: "Better living; kinder living; gentler words; more patience toward the unthankful and the evil; more sunshine in the home; brighter faces at breakfast; more jokes and fewer complaints at dinner when one is tired; more sympathy with the small troubles of childhood; more tolerance for the people who do not like us; more conscientiousness in the performance of small tasks when we are not watched; putting more heartiness into some little duty that we are prone to shirk; a more careful honesty in meeting small debts; a more scrupulous regard for the feelings, the prejudices, the little, harmless self-conceits and vanities of others; in short, so to live—to-day, not year after next—that everybody will be glad we are alive. That is the kind of life that wins men to Christ."

In a sermon published in the (Unitarian) *Christian Register*, the Rev. Dr. Lyon says: "Every sacred book has three stages of life. First, it is an open plain, on which and from whose quarries men build their fortifications of dogma. Then, when doubt has come, it is a battlefield, beaten hard with the tread of fierce warriors, these attacking, those defending, the strict historic verity. Then it becomes a beautiful meadow, blossoming with symbols and poetry. To most of us the stories of the nativity which are still ringing in our ears have reached this last stage. We do not care much what the higher criticism shall say about them. They have a deeper meaning in our eyes than they ever had before. We judge them, not by dogmas of theology, but by canons of art."

In its leading editorial recently, the (Episcopal) *Church Standard* said: "Unless our Church is to become a Babel of contending factions—and much more if its members are to be cordial friends—it is simply indispensable that all schools and parties should loyally accept the comprehensive, and reasonable, and truly catholic principle on which the Church stands. The truth is that the Church can spare none of the parties which co-exist within her bosom; and yet the historical fact is that too great a pre-

dominance of any one of them has always brought, as it will always bring, an impoverishment of the Church."

A writer in the *New Church Independent* says: "The present currents set in powerfully towards individualization; and the rapid accumulation of knowledge diffused through cheap and ever-increasing channels, bids fair to bring the minds of men to a common level, so that great men are already becoming as plentiful as blackberries. Not one in ten thousand will reach the topmost round of the ladder in the universal estimation, and ambition is becoming the most toil-some and thriftless of all speculations. We pity the man, from the bottom of our heart, who aims to be great with all the fearful odds now butting against him."

Under the department heading "Christian Life," the *Christian Advocate* says: "No man shall ever find happiness while seeking it for himself. The self-centred man cannot be happy. He may find gold, he may acquire knowledge, he may achieve fame, he may have pleasure in the world, but all these cannot pour one ray of genuine bliss into a self-centred soul. Let one who is unhappy do what he can to relieve the sorrows of others, and his own sorrow will be turned into joy. Let the burdened soul do what he can to bear the burdens of others, and his own burdens shall become light as air."

The *Southern Christian Recorder*, organ of the African Methodist Episcopal Church, says: "Basing our calculation upon the supposition that we have averaged 15,000 members per annum since our existence, we enrolled upon our church records 1,610,330 during 113 years and we have now a membership of over 700,000. We have in Africa over one hundred missionaries with twenty odd connectional schools and colleges in existence, from which scores graduate every year."

The *Congregationalist* says: "Bishop Potter of New York City, in an address on Civic Righteousness, given in New York recently, said that the thing that disheartened him most as he faced the task of aiding in the cleansing of the metropolis was the pessimism and unbelief in the supremacy of good over evil which he meets with as he talks to men whom he has a right to count upon as allies. Such despair he brands as rank infidelity, whether uttered by nominal Christians or not."

Some years ago I resolved to cultivate habitual cheerfulness, under all circumstances. It has not been an easy task, but I have succeeded, and now, drifting on to my eightieth birthday, burdened with heavy cares, stripped of those nearest and dearest to me by death, I am not sorrowful. I am not "going down hill," as people say of the old, but "up hill" all the way, and am sure that life is better farther on.

MARY A. LIVERMORE.

Rabbi Charles Fleischer of Boston, in a recent sermon said: "I believe it is true of man, that as long as he keeps in touch with heaven, with ideals, with institutions affording inspiration and stimulating aspiration, he is invincible and capable of infinite growth. Degeneration and decay and death await him when he is cut off from uplifting influences, and given, body, mind, and soul, to things of the earth alone."

In the column "For Endeavorers" in the *Congregationalist*, the Rev. H. A. Bridgman says: "I see also more religion in the world. Not necessarily more ecclesiasticism, but more real love to God and to one's neighbor. I believe that the religious impulse will more profoundly affect individuals and masses of men in the coming century than ever before."

A writer in the *Universalist Leader* says: "Christianity has not done so much to sharpen the intellect as to put moral might and manhood into the action of the intellect. Christ's religion has not needed any addition

of cleverness, for men would be clever when cleverness was iniquitous and criminal. If the world could have been saved by cleverness it would have been saved long ago."

The (Baptist) *Watchman* says: "In the flood of laudation of the achievements of the century just closing, let us not forget that wisdom was not born with the telegraph or the telephone. Our fathers and grandfathers were not able to communicate their ideas so swiftly, but perhaps they were not therefore without ideas to communicate."

In an editorial, the *Universalist Leader* says: "One of the most gratifying signs of the times is the desire to have our churches supported by direct contribution instead of through the entertainment bureau. Why should not our churches stand for respectable, direct support? If they are not worth it they are not worth much."

The *Universalist Leader* says: "What can such a little handful do?" might have been said by the twelve disciples of old, but it was not; they simply went and did, and we have entered into their doing. Those who are in earnest can do anything."

The municipality of Odessa has voted for a church in honor of St. Nicholas as a memorial of the Czar's recovery from his recent illness.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston, exchange on Chicago or cities other than Boston or New York will not be accepted.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

Political and Governmental Notes.

"A lot of rumpus is being made," said a retired commodore to-day, "about the army suffering all sorts of things by the abolition of the canteen, and predictions are frequent that troubles will be encountered in securing enlistments because it is no longer to exist. The navy has no canteen and sailors have very little chance to get drinks, and still we have no trouble in getting all the material we wish for the service. Just after the Civil War, when there was unquestionably a great deal of intoxication in the navy, both among the officers and men, the grog system was abolished by act of Congress, and since that day not a drop of liquor is allowed sailors when on board ship."—*Boston Transcript's* Washington correspondence.

As interpreted by War Department officials the canteen clause of the army reorganization bill will result in abolishing the sale of liquors on all military reservations, whether used by soldiers or purchased by others. Orders will be issued immediately on the passage of the bill, shutting up every bar-room at military stations and refusing hotel proprietors at Fort Monroe, West Point, and Fort Leavenworth, which are maintained on land belonging to the government, the further sale of all liquors.

The reports of the National banks to the comptroller in response to his call for a statement of their condition at the close of business on December 13 show that the total resources of all the National banks in the United States, including Alaska and Hawaii, amounted to \$3,601,385,072. The individual deposits amounted to \$2,623,997,521.

The Senate on January 23, ratified the treaty with Spain for the acquisition of the islands of Sibutu and Cogoyan, of the Philippine group, at a cost of one hundred thousand dollars. The treaty was made necessary by the failure to include these islands in the original negotiation by which we acquired the Philippines.

After two searching investigations concerning hazing at the West Point Military Academy, one conducted by a military court and the other by a committee of Congress, the students, at a meeting of the entire corps, on January 19, resolved to abolish hazing.

The consular and diplomatic appropriation bill provides \$20,000 for purchasing land at Pekin for the United States legation there, Minister Conger having advised the extension.

The first number of *The Commoner*, William J. Bryan's weekly paper, was published January 23.

Foreign News.

Queen Victoria, the beloved ruler of Great Britain for nearly sixty-four years, passed away Tuesday evening, January 22, and her oldest son, previously known as the Prince of Wales, became king, choosing the name Edward VII. In addressing the Privy Council, the new king declared his intention of following closely in the footsteps of his mother, and of being, in the strictest sense, a constitutional king. When the word was sent out that the Queen was dying, her grandson, Emperor William of Germany, was one of the first to hasten to her bedside. He desired that no official notice be taken of his arrival, as he wished to be received merely as a grandson. His unaffected love for the Queen and sorrow for her loss, has endeared the Emperor to the hearts of the British people, and won for him the enhanced regard of all persons who loved the English queen. Many of the kings, queens, and other rulers of Europe announced their intention of being present at the funeral.

The financial effects of the Queen's death will be widespread and in the aggregate enormous. The most direct penalty falls on the insurance companies, nearly all of which suffer. The Queen's life was never insured in American fashion, for the benefit of her children. It was, however, insured by hundreds, probably thousands, of persons in no way connected with her, but whose business would suffer by her death. It is possible to insure against almost any imaginable contingency in England, if sufficient premium is paid. Most of the theatrical and other amusement managers, and the proprietors of fashionable shops, were accustomed to insure the Queen's life at the outset of the season, in order that they might recoup the heavy loss her death would entail.

The Rothschild family is at present represented by these barons: Nathaniel, Alfred, and Leopold, who are located in London; Alphonse, Gustav, Edouard Adolph, in Paris; Nathaniel in Vienna, and Wilhelm, who has just died, at Frankfurt. Each of these men is among the richest in Europe, and the combined wealth of the family is estimated at anywhere from one to two billions of dollars. Their loans to Spain make them practically owners of that nation and country.

The recent census of Germany shows phenomenal gains in city population, owing to the industrial development of the empire. Nuremberg, ancient and conservative, has gained fifty per cent during the past five years, which is a rate which few Western towns in this country can excel.

Industry and Commerce.

At the session of the National Board of Trade January 24, O. P. Austin, chief of the treasury bureau of statistics, delivered an address on a project for an around the world floating exposition by the merchants and manufacturers of the country, which should carry samples of American products and manufactures to the principal seaboard cities of the world, for the purpose of giving the merchants and others of these countries an opportunity to examine American goods. He suggested that a half dozen vessels be loaded with properly selected samples of American merchandise and sent from port to port around the world in order to give foreign merchants a better acquaintance with American products and American business methods.

In Box Canyon, just above the hot springs of the Jemez River, Arizona, is a dam extending from one wall of the gorge to the other. This dam is nothing more nor less than a massive wall of pure soda, rising to a height of one hundred feet, and probably six hundred feet from end to end. Nature's forces started their work of construction away back in the dim and distant past, when deposits of soda contained in the water thrown off by the springs were made at the base of what has since developed into one of the natural wonders of the West.

The Geneva correspondent of the *London Daily Mail* credits an engineer named Planta with the invention of a mechanical brake which will stop a train running twenty-five miles an hour within eight yards, and one running fifty miles an hour within twenty yards. Passengers can apply the brake by pulling an alarm cord. The shock is said to be less than that caused by existing brakes. The correspondent adds that the Government will adopt the invention on trains through Switzerland.

The crews of the Canadian sealing fleet for 1900 comprised 386 white men and 646 Indian hunters, employing 114 boats and 316 canoes. The total number of fur sealskins taken by Canadian sealers during 1900 was 35,523. Of these the vessels took 34,159 and the coast Indian canoe catch was 1,364 skins. This result is larger by 177 skins than that of the previous year, which in its turn largely exceeded the catches of 1898 and 1897.

General News.

Several weeks ago Mrs. Nation, a temperance reformer of Wichita, Kan., applied to the police of that city to close the saloons, which were openly doing business in contempt of the state law which prohibits the sale of intoxicants except on a doctor's prescription. The police would not notice Mrs. Nation's complaint, and she took the law into her own hands. Entering the most expensively furnished saloon in the place, with rocks concealed under her cloak, she began smashing mirrors, decanters, and oil paintings, and before she was stopped had damaged the saloon to the extent of a thousand dollars or more. She was sent to jail and refused bail. In a few days she was released, and taking one or two other women with her started on another saloon wrecking tour. Two saloons were wrecked, but they were driven out of the third one at the point of a revolver. The women were again arrested, but being again released, Mrs. Nation started out on a tour of the state. On January 24, she wrecked a saloon in Enterprise, Kan. She takes the ground that the liquor sellers are in a criminal business and that their saloon property is not under protection of the law.

Advices from Dawson and the Yukon Valley report that that section of Alaska has just passed through the coldest weather recorded since the white men inhabited that country. January 16 the thermometer at Dawson fell to 68 below zero. A message from Forty-Mile the same day said it was 78 below. The coldest recorded before this was in 1896, when it was not quite 68 below near Forty-Mile. The average for the seven days ending January 16 at Dawson was 32 below zero. All the time a dense fog hung over the entire valley.

Mrs. Dua Desedora Gonzales de Botello, of Carrizo, Tex., is probably the oldest woman in the United States. She was 114 years old on November 14, 1900. She still has much physical strength and is in full possession of her mental faculties. Mrs. Botello was born in Guerrero, Mex. The date of her birth and baptism are recorded in the ancient records of the old Catholic Church at Guerrero.

An Associated Press dispatch says: "Proof that a man may live with a bullet in his heart has been afforded by the use of the X-ray upon Charles B. Nelson of Cardillac, Mich., formerly a Chicagoan. Under the fluoroscope the ball in Nelson's heart could be plainly seen rising and falling with each pulsation of the vital organ. The bullet has been there since the night of July 1, 1896.

A San Francisco press dispatch dated January 21, says: "Five Chinese slave girls were sold by public auction in Frisco's Chinatown Saturday, as publicly as though they had been in Canton, where such human slavery is a recognized institution. These girls are the property of Gong Gow, an old Chinese.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Brief History of the United States.

BRIEFLY told, here is a history of the whole country, with interesting notes on the origin of names, when each of the states was admitted to the Union, the original thirteen, area of states in square miles, etc.

Alabama is named after its chief river. The name is of Creek origin, and means, "Here we rest." The state was once a part of the territory of Georgia except a strip along the coast, which was held by Spain as part of Florida. This territory was made a part of the territory of Mississippi in 1798; separated from Mississippi in 1817, and was admitted to the Union in 1819. The first settlement was by the French in 1702. Square miles, 52,250.

Arkansas takes its name from the Arkansas River. The word is undoubtedly derived from the Indian word Kansas, which means smoky water; the prefix arc being from the French, a bow. First settlement by the French in 1685, admitted to Union in 1836. Square miles, 53,850.

California takes its name from the Spanish *caliente fornalia*, "hot furnace," in allusion to the climate. The coast was explored by Sir Thomas Drake, 1578-79. The first settlements were Spanish missions at San Diego in 1768 and at San Francisco in 1776. The territory was acquired from Mexico in 1848. Admitted to Union in 1850. Gold was discovered in February, 1848. Square miles, 158,360.

Colorado received its name from the Colorado River and its grand canyon; the name signifies ruddy or blood-red, the color of the water of the river, although the river is not within the state. The territory was acquired in part by the Louisiana purchase and in part from Mexico; organized as a territory in 1861, and admitted as a state in 1876. Square miles, 103,925.

Connecticut was so called from the Indian name of its chief river. Connecticut is a Mohegan word, signifying long river. The first settlement was by the Dutch at Hartford in 1633, but they soon sold out to the English. Other settlements followed at New Haven, Windsor, and Weathersfield, by people from Massachusetts. One of the original thirteen states. Square miles, 4,990.

Florida was so called because discovered on Easter Sunday, "Feast of Flowers." Ponce de Leon and his followers landed at or near the site of St. Augustine in 1513. A fort was built there in 1565. The land was explored by De Soto in 1539. Pensacola was settled by Spaniards in 1696. Florida was ceded to Great Britain by Spain in exchange for Cuba in 1763; ceded again to Spain by United States, treaty of 1783; restored to the United States by treaty in 1819; possession taken in 1821. Florida was the home of the Seminole Indians until 1842, when, after a seven years' war, most of them were sent to the Indian territory. Admitted to Union in 1845. Square miles, 58,680.

Delaware was so called from Delaware Bay, in 1703, which received its name from Lord de la Ware, who died on this bay. The Delaware River was discovered by the Dutch navigator Hudson, in 1609. The first settlement

was made by thirty Hollanders, under De Vries, near Lewes, in 1610, and destroyed by the Indians three years later. The next settlement was by Swedes and Finns, in 1638, who called the country New Sweden. Their forts were captured by the Dutch in 1655, and the land came into English possession in 1664. It was governed as part of Pennsylvania from 1683 to 1703; declared itself independent of Great Britain in 1776, and was the first state to ratify the constitution, December 7, 1787. One of the original thirteen states. Square miles, 2,050.

Georgia was named after George II. of England. The first settlement was at Savannah in the spring of 1733. One of the original thirteen states. Square miles, 59,475.

Idaho is an Indian name, meaning "Gem of the Mountain." The first settlement was by Cœur d'Alene in 1840. Admitted to the Union in 1890. Square miles, 84,800.

Illinois is of Indian derivation, meaning "tribe of men." The region was explored by the Frenchmen, La Salle and Marquette, about 1760. Admitted to Union in 1818. Square miles, 56,650.

Indiana, named for the Indians, was settled by the French at Vincennes about 1700. Admitted to the Union in 1816. Square miles, 36,350.

Iowa takes its name from its chief river, an Indian name meaning "the sleepy ones," and said also to mean "the beautiful land." It was included in Louisiana territory, claimed by France and sold to the United States in 1803. The first settlement was in 1788-89, by Francis Dubuque, a Frenchman, who opened a lead mine near where the city of Dubuque now stands. Admitted to Union in 1846. Square miles, 56,025.

Kansas is taken from Kansas River; Indian meaning, "smoky river." Originally part of the Louisiana purchase. Admitted to the Union in 1861. Square miles, 82,080.

Kentucky takes its name from its principal river, signifying the dark and bloody ground. Explored by Daniel Boone in 1769. Made a county of Virginia in 1776, admitted to Union in 1792. Square miles, 40,400.

Louisiana is named after Louis XIV. of France. Explored by De Soto in 1541, Marquette in 1673, and La Salle in 1682. First settlement at Biloxi in 1699. Admitted to Union in 1812. Square miles, 48,720.

Maine was under Massachusetts for nearly two hundred years. First called "Province of Mayne" by charter of Charles I., 1639. The first settlements were at Monhegan and Saco, about 1623. Admitted to Union in 1820. Square miles, 33,040.

Maryland was so called in honor of Henrietta Maria, Queen of Charles I., in his patent to Lord Baltimore, 1632. Settled in 1633 by two hundred people brought over from England by Lord Baltimore in two vessels, called Ark and Dove. There was for a long time a dispute between Maryland and Pennsylvania over their boundary line. This was settled in 1760 by what was called, from the names of the

surveyors who located it, "Mason and Dixon's line." One of original thirteen states. Square miles, 12,210.

Massachusetts was so called from Massachusetts Bay, and that from the Massachusetts tribe of Indians, in the neighborhood of Boston. The tribe is thought to have derived its name from the Blue Hills of Milton. "I had learned," said Roger Sherman, "that the Massachusetts were so called from the Blue Hills." First settlements at Plymouth in 1620; at Salem, 1628; at Boston, 1630. In 1628 a number of English Puritans who were intent on planting a Puritan colony in New England, obtained from the council of Plymouth a grant of land bounded north and south by parallel lines drawn three miles north of Merrimac River and three miles south of Charles River, extending from ocean to ocean. The next year King Charles II. gave them a charter confirming the grant and conveying powers of government to the grantees, who were styled "The Governor and Company of the Massachusetts Bay of New England." What is called "the great emigration" was made in 1630. It was the royal intent that the company should remain in England, but it transferred itself, charter and all, to the shores of Massachusetts Bay, thus merging the company in the colony. At first the assembly consisted of all the freemen, but a representative legislature was established in 1634. The freemen chose one of their number Governor. In 1684 the King's judges in England declared the charter of 1629 forfeited, and the King attempted to make Massachusetts a royal colony, but the people resisted the attempt, and in 1691 the crown granted a second charter, less liberal, however, than the former one, which continued in force down to the revolution. This charter merged Plymouth, New Hampshire, Maine, and Nova Scotia in Massachusetts. Nova Scotia and New Hampshire were soon detached; Maine continued a part of Massachusetts until it became a state in 1820, while Massachusetts and Plymouth were never again separated. One of the original states. Square miles, 8,315.

Michigan is an Indian name, signifying "The Lake Country." It was part of the Northwest Territory, and formed part of Indiana from 1787 to 1805. The first settlement was a French mission, founded by Fr. Marquette and others at Sault Ste. Marie. Admitted to the Union in 1837. Square miles, 58,915.

Minnesota is derived from the Indian "Minasota," meaning whitish or sky-colored water, as applied to the St. Peter River. Minnesota was explored by the French under Hennepin and La Salle, about 1680. It was claimed as part of Louisiana territory; organized as a separate territory in 1849, and admitted as a state in 1858. Square miles, 83,365.

Mississippi, from the river of that name, which signifies "Father of Waters." The southern part of Mississippi was once held by Spain as a part of Florida. The rest was claimed and settled by the French. Part of the territory was conveyed by Napoleon to the United States by the Louisiana purchase in 1803. Admitted to Union in 1817. Square miles, 46,310.

Missouri was named after the river of the same name, also a tribe of Indians. Name signifies "muddy water." The state was admitted to the Union in 1821. Square miles, 69,415.

Montana was a part of the Louisiana purchase; organized as a territory in 1864, and admitted as a state in 1889. Square miles, 146,080.

Nebraska, named from Nebraska River; derived from the Indian *ne*, water, and *bras*, shallow, and means "Shallow Water." The state was admitted in 1867; was part of Louisiana purchase and Missouri territory. Square miles, 77,510.

Nevada derived its name from the Spanish, which signi-

fies "snow flying." Part of territory acquired from Mexico in 1848; organized as a territory in 1861, and admitted as a state in 1864. Square miles, 110,700.

New Hampshire is the name given to the territory conveyed by the Plymouth company, to Captain John Mason, by patent November 7, 1629. First settlements at Dover and Portsmouth in 1623; annexed to Massachusetts in 1641; became a separate province in 1741. One of the original thirteen states. Square miles, 9,305.

New Jersey was so called in 1664 from the Island of Jersey on the coast of France, the residence of Sir George Carteret, to whom the territory was granted. The first settlements were made by the Dutch at Bergen and Fort Nassau, 1617-23. One of the original thirteen states. Square miles, 7,815.

New York was so called in 1664 in honor of the Duke of York and Albany, to whom letters patent were issued by the King of England. Hudson River discovered by Henry Hudson, 1609. First settlement of New York on Manhattan Island by the Dutch in 1613-14. The island was bought from the Indians in 1626 for \$24 and a copper kettle. One of the original thirteen states. Square miles, 49,170.

North Carolina derived its name from the original charter of Charles II., to the "Lord Proprietors of the Province of Carolina." It is also claimed that it was named in honor of Charles IX. of France, by John Ribault, who built a fort on an island in the harbor of Port Royal in 1562, but which he vacated shortly afterward. Carolina was at first considered a part of Virginia. Settlements were attempted before 1600, but all were prevented or destroyed by Indians. The charter given by Charles II. covered a strip of territory from the Atlantic to the Pacific Ocean. Nobody knew then how far apart the oceans were, and people made maps largely by guess. Afterward for a time the state's boundary was the Mississippi River. Carolina was divided into North and South in 1729. One of the original thirteen states. Square miles, 52,250.

North Dakota was admitted as a state in 1889. Square miles, 70,795.

Ohio was so called from an Indian word signifying the "Beautiful River." It was a part of the Northwest territory. The country was ceded by France to Great Britain by treaty in 1763. The first permanent settlement was at Marietta in 1788. Admitted as a state in 1802. Square miles, 41,060.

Oregon derived its name from an Indian word signifying "River of the West." Part of territory possession of which was secured by treaty with Great Britain August 6, 1846. Became a state in 1859. Square miles, 96,030.

Pennsylvania was named after William Penn, and was called "the Keystone State" because if the original thirteen states (of which it was one) from New Hampshire to Georgia were placed in the form of an arch, Pennsylvania would occupy the middle position, being seventh from either base. Square miles, 45,215.

Rhode Island, one of the original thirteen states, was named for an island in Narragansett Bay, which is believed to have been the "Vinland" visited by the Northmen about A.D. 1000. The first settlement was by Roger Williams at Providence in 1636. Square miles, 1,306.

South Carolina, was one of the original thirteen states. Square miles, 30,570.

South Dakota became a state in 1889. Square miles, 77,650.

Tennessee derived its name from the Indian settlement named Tanassee. It was once a part of North Carolina. The first permanent settlement was near Knoxville in 1756. Became a state in 1794. Square miles, 42,050.

Texas was originally part of Mexico, but declared its independence March 2, 1836. The massacre of the Alamo took place March 6, 1836. Texas was an independent republic from 1836 to 1845. Its annexation to the United States in 1845 was the cause of the war between the United States and Mexico, 1846-47. Square miles, 265,780.

Utah was part of the territory acquired from Mexico in 1848. It was settled in 1847 by Mormon emigrants, whose leader was Brigham Young. Became a state in 1894. Square miles, 84,970.

Vermont was so named by the inhabitants in their declaration of independence, January 16, 1777, from the French *verd mont*, green mountain. It was largely settled from New Hampshire and Massachusetts, and was claimed for a long time by New York and New Hampshire. Vermont was the first state admitted (March 4, 1791) into the Union after the formation of the government. Square miles, 9,565.

Virginia takes its name from Elizabeth, Queen of England; the "Virgin Queen." One of the original thirteen states. First settlement was at Jamestown. First negro slaves brought here from Africa in 1619. Square miles, 42,450.

Washington was named in honor of President Washington. Became a state in 1889. Square miles, 69,180.

West Virginia received its name from Virginia being only a geographical distinction from the mother state. It became a state in 1863. Square miles, 23,000.

Wisconsin was so named from its chief river, and that from an Indian word, *ouisconsin*, meaning "wild, rushing river." It was a part of the Northwest territory, and was at first under the government of Michigan. Admitted to Union in 1848. Square miles, 56,040.

Wyoming was largely included in the Louisiana purchase. It became a state in 1890. Square miles, 97,890.

Christian Scientist Acquitted.

The charge filed yesterday against I. N. Woods, the Christian Scientist, for practising medicine without a license, was decided by Justice France at eleven o'clock this morning (Thursday, January 17). He found for the defendant, after having had the case under advisement since yesterday noon. This is probably the first time that the question in its present form has been brought before a court of justice in this state, and the grounds upon which an acquittal are based will prove interesting to the public in general. Justice France handed down his decision in writing, the full text of which is as follows:—

In the cause of the state of Indiana against I. N. Woods, for practising medicine without first having procured a license, as provided by the laws of this state, after due consideration, I find as follows:—

Section 8 of an act regulating the practice of medicine, surgery, and obstetrics, approved March 8, 1897, reads as follows: "To open an office for such purpose or to announce to the public in any way a readiness to practise medicine in any county of the state, or to prescribe for, or to give surgical assistance to those suffering from disease, injury, or deformity, shall be to engage in the practice of medicine within the meaning of this act."

Without stating here the evidence as elicited from witnesses, the evidence shows that the defendant is a Christian Scientist; that his treatment is by silent prayer, etc.; that he waited upon and treated the child of Mrs. Miller on Saturday, January 12, as such Christian Scientist; that he never prescribed medicine, never diagnosed the disease or sickness, and never held himself out with an announcement of a readiness to engage in such practice.

In the case of Nelson vs. State Board of Health (57

S. W. Rep. 501) the court of appeals of Kentucky, on June 20 last, decided that a college teaching osteopathy, which is a method of treating diseases by kneading or manipulation of the body, is not a "medical college" within the meaning of Kentucky statute (section 2613), and that a person practising osteopathy, using no medicine or surgical appliances, was not a practitioner of medicine and required no license from the State Board of Health in order to follow his profession. The court considered that osteopathy was rather in the nature of trained nursing than of the practice of medicine.

Using this authority as a guidance, I consider it my duty to give effect to the intention of the law-making power as embodied in the statutes.

In the construction of penal statutes a well established rule is that words and phrases must be taken in their ordinary acceptance and popular meaning, unless a contrary intent appears, and if there is a reasonable doubt as to whether the acts done are within the meaning of the statute, the party accused of its violation is entitled to the benefit of that doubt. Therefore, to my mind, it follows that the offenses complained of are excluded from the operation of our present statutes.

Medicine, in the popular sense, is a remedial substance. The practice of medicine, as ordinarily or popularly understood, has relation to the act of preventing, curing, or alleviating disease or pain. It rests largely in the sciences of anatomy, physiology, and hygiene. It requires a knowledge of drugs, their preparation and action. But prayer for those suffering from disease, or words of encouragement, or the teaching that disease will disappear and physical perfection be attained as a result of prayer, or that humanity will be brought into harmony with God by right thinking and a fixed determination to look on the bright side of life, does not constitute the practice of medicine in the popular sense and within the meaning of our present statutes. I therefore acquit the defendant of the offense of which he stands charged.

Messrs. George Louttit and Howard Hanthorn represented the defense in all the cases tried on the issue in Justice France's court.

Fort Wayne (Ind.) Weekly Sentinel.

Our Grandfathers' Letters.

George Washington never saw a postage stamp or an envelope, says the December issue of *Success*. They were unknown here until 1837, after Rowland Hill had introduced them in England. Letters were written, folded, and addressed, all on the same sheet, and stuck with a wafer or with sealing wax. Our early statesmen could hardly have dreamed of the millions upon millions of portraits of themselves that would some day be distributed broadcast by a great postal system. In 1800, the mail routes included a few cities in Maine, Georgia, New Hampshire, New York, Pennsylvania, Maryland, Kentucky, and Virginia, making tri-weekly deliveries in summer and bi-weekly in winter. There was no postmaster-general in the Cabinet until 1829. Letters were charged twenty-five cents postage for anything over four hundred and fifty miles; half a century later, ten cents, prepaid, carried a letter three thousand miles, and, under that distance, five and three cents. The popular pen was the good gray-goose quill. It was not until 1819 that we got our first steel pens from England, where Perry had just begun their manufacture. Henry Clay learned to write by tracing the letters on sand with a sharp stick, and Daniel Webster's first pen was surreptitiously plucked from his mother's pet goose, his ink being soot mixed with water. A few individuals were the envied possessors of gold pens which were made in Europe, but the majority used "Dutch quills."

Selected Articles.

Christian Science not Hypnotism.

Austin, Tex., January 5, 1901.

To the Editor of the *Tribune*.

In your issue of January 2, there appeared in the editorial column an article entitled, "Scientists in Court." I am pleased to note that the *Tribune* is not responsible for the statements therein made, inasmuch as they are, for the most part, quoted from the *New York Times*. Nevertheless, as our good citizens have gained a wrong impression from this article, which places Christian Science, as well as the members of the Christian Science Church, in a wrong light, you are asked in simple justice to insert the following correction:—

The opening statement, "Christian Scientists contend there is no limit to their influence," is entirely erroneous. I assert without fear of contradiction that no true Christian Scientist ever made such a statement. Christian Science teaches that the government of the universe, as well as of man, rests with God alone; that His influence alone is limitless, and to Him alone do we look in every need. Personal power, in the direction above indicated, does not enter into the calculations of a true Christian Scientist. In the part quoted from the *New York Times* the statement is made: "Their efforts to coerce the Surrogate by their mental treatment illustrates a phase or side of Eddyism to which little attention has been paid." Continuing we read: "Eddyism is precisely the same thing as voodooism, and the followers of the new cult, like those of the older one, believe that they can injure as well as aid, can punish enemies as well as reward friends."

The natural inference from these statements is that those who accepted the religious tenets of Christian Science have identified themselves with some sort of an organization or church in which Christianity is obsolete, and hypnotic influence, incantations, and mystic mummerly usurp the place of reason and dignity. Let us hope the statement was the result of profound ignorance concerning the subject rather than malice which ill becomes the dignity of the press. To accuse men and women whose Christian lives and eminent respectability are above suspicion, and among whom are some of our best-known and oldest citizens, of attempting to influence people by mental methods, like a hypnotist, for evil ends, is a serious charge, and one not lightly to be passed over without correction.

Will-power and hypnotism are the polar opposites of Christian Science, and to make evident the truth of this statement I quote from the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. "Every Christian Scientist, every conscientious teacher of the Science of Mind-healing, knows that hypnotism is error" (p. 448). "Any hypnotic power you may exercise will diminish your ability to become a Scientist, and *vice versa*" (p. 74).

Referring to the charge that "they can injure as well as aid," I again quote from the above named text-book. "Acting from sinister motives destroys your power of healing from the right motive. If you had the inclination or power to practise wrongfully, and then should adopt Christian Science, the lesser power would be destroyed, and *vice versa*" (p. 440). "Man is properly self-governed, only when he is guided by no other mind than his Maker's. Man's rights are invaded when this divine order is interfered with. The mental trespasser necessarily incurs the penalty due to his crime" (p. 286). "Whoever practises the Science the author teaches, through which Mind pours light and healing upon this generation, can practise on no one from sinister nor malicious motives without destroying his power to heal and his own health. . . .

The heavenly law is broken by trespassing upon man's individual right of self-government. We have no authority in Christian Science, and no moral right, to attempt to influence the thoughts of another, except it be to benefit him, or we are personally requested to give him aid" (pp. 443, 444).

No better authority on this subject than the text-book from which these quotations are made can be given, and it is hoped that the many erroneous concepts gained through the perusal of the article in question, will be replaced by a knowledge of things as they are.

Very truly yours,

ROBERT L. ZILLER.
In the *Daily Tribune*.

A Protest.

Boston, Mass., January 12, 1901.

Editor of *The Times*, Marlboro, Mass.

Dear Sir:—In your issue of December 27, you state, "The Christian Scientists are starting a crusade against vaccination on the ground that smallpox is an imaginary disease."

It is true that Christian Scientists have little faith in material remedies, for they have proved that Christian Science is not only a better cure, but a better preventive of disease than anything which they have heretofore employed. I know of two cases where two members of the same family were afflicted with smallpox at the same time, and one in each family died under medical treatment while the other was healed through Christian Science. I have a friend who was afflicted from childhood with a serious disorder as a result of vaccination, and who found no relief until healed through Christian Science.

This is a small per cent of that which I have observed in my experience as a Christian Scientist, and mine is doubtless a parallel with that of others of this faith. Do you wonder that Christian Scientists have little faith in vaccination? Nevertheless it should be understood that they have long ago given up any fight on this question, and have agreed to allow vaccination. Indeed, it is the advice of the Founder of this movement that Christian Scientists shall submit to the requirements of the law and depend upon the influence of the gospel to deliver them from whatever evil effects might accrue. I do not question your sincerity in speaking of the vaccination crusade as being conducted by Christian Scientists; nevertheless, they have nothing to do with any such movement. Besides, it is not the proper statement of Christian Science to say that smallpox or any other disease is imagination. Christian Science teaches that disease is a physical manifestation of the mental condition; that it is based largely upon fear, conscious or unconscious; and that for this reason it may be overcome by bringing to the consciousness of the patient a sufficient realization of the divine power and presence to overrule the power and fear of disease.

The multitudes of people who have been healed through this faith are living testimonies to the fact that Christian Science correctly diagnoses disease. However, we recognize the physical appearance of disease in all its insidiousness and fatality, and that it must be dealt with accordingly. Care and discretion must be used in respect to the sick, whatever may be the constituency of disease, until the danger therefrom is past. It does not lessen the efficiency of prayers to be careful in respect to the spreading of disease, and the Christian Scientists do not recklessly rush into its presence. I have seldom known a case of contagion from the patient of a Christian Scientist, for he succeeds in destroying contagion as well as disease.

ALFRED FARLOW.
In the *Marlboro Times*.

A Comparison.

Editor Star:—In some of the city dailies of January 15, there appeared the annual report of one of our city churches, showing a membership of 658 and ten deaths, which is not, I believe, considered a larger death-rate than the average. It is presumable that the ten received the best medical aid, and that all possible means known to their friends were used to save them. We have not been informed of any inquests having been held to investigate into any suspicion of ill-treatment among them.

First Church of Christ, Scientist, Toronto, has a membership of about five hundred, and up to the time of their annual meeting there were no deaths during the year; but one has been reported since—that of Miss Margaret Cain, upon which an inquest has been ordered. It is charitable and reasonable to assume that the coroner and jury, as well as the whole community, are desirous of learning what is the real cause of such a remarkable fact as the preservation of a body of five hundred people for a whole year without material medicine. Christian Scientists give all the credit of it to no other power than God, the Father of all.

WESLEY SPAULDING.

The Lectures.

At Riverside, Cal.

It was a magnificent audience which greeted Dr. A. A. Sulcer last evening (Sunday, January 13). Every seat in the Loring was filled, and those present listened with closest attention to an address of two hours upon the subject "Christian Science Applied." Dr. Sulcer is a clear and logical exponent of the doctrine of Christian Science. He is a pleasing speaker, and his audience, whether in sympathy with his belief or not, must agree that he presented his subject in a fair and impartial manner. C. B. Webster in a short introductory talk introduced Dr. Sulcer.

Riverside Daily Press.

The introductory remarks of Mr. Webster, who is an attorney of the city, were as follows:—

Ladies and Gentlemen:—To have the privilege, on behalf of the members of First Church of Christ, Scientist, of greeting this large and intelligent audience, is indeed a special honor. We come to hear no new theme. Christian Science is no stranger to this community. It has become firmly established—is a fixture here. Its beautiful teachings have influenced the thought and won the conscience of many of your citizens who are beginning to understand the eternal verities of Mind's kingdom and the realities of the true Science of Being. Ignorance of what Christian Science teaches was at one time so universal as to pass for knowledge, but that time has gone. No well-informed person, at this day, with the ample means offered for study and research, can fail of being familiar with its teachings. Its light is not hid under a bushel, nor is it clothed in mysticism. It loves the light, and courts investigation; for it claims to be the Christ-Truth. Its adherents found their faith upon understanding, and base their understanding upon demonstration. It seeks not to proselyte, but it would not be misunderstood or misrepresented.

To correct erroneous impressions and false statements as to what Christian Science really is, a Board of Lectureship under the auspices of The First Church of Christ, Scientist, in Boston, more familiarly known as the Mother Church, has been formed, whose members are employed by the various Christian Science Churches in the Field. We have with us to-night an accredited member of this Board who will speak to us on the subject, "Christian Science Applied." I will not further presume upon your patience,

but will now have the very great pleasure of presenting the speaker of the evening, who needs no introduction to a Riverside audience, Dr. A. A. Sulcer.

At St. Johnsbury, Vt.

There was a good attendance at Music Hall Friday evening (January 11), when Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., gave an interesting and instructive discourse on the subject of Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist, of St. Johnsbury. The speaker was introduced by George P. Moore, who said:—

The object of this gathering to-night is not to bring together Christian Scientists to hear again the arguments in support of this doctrine of Christian Science, which are so familiar to them, but we have invited you here that we might correct false impressions made by incorrect and misleading statements, as to the teaching of Christian Science.

There are thousands all over this broad land of ours who are testifying to the healing power of this Christ-Truth. It heals the sick and sinner alike. It purifies the impure and creates a desire in the human heart to live for God. Jesus said, "Ye shall know the truth, and the truth shall make you free." We are all seeking this Christ-Truth, this pearl of great price.

The Mother Church, The First Church of Christ, Scientist, in Boston, has established a Board of Lectureship for the purpose of giving the people a correct knowledge and understanding of Christian Science. We are fortunate in having with us a member of this official Board who will speak on this subject to-night. It is with pleasure that I present to you the speaker of the evening, Irving C. Tomlinson of Concord, N. H.—*St. Johnsbury Caledonian*.

At Meadville, Pa.

An audience of good proportions listened to a lecture from the Christian Science standpoint Tuesday evening (December 18) at the court house. The speaker was Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., a member of the Board of Lectureship of The First Church of Christ, Scientist, of Boston, which is the fountainhead of the Christian Science movement. Mr. Vosburgh was introduced to the audience by Irving Beman, who spoke briefly of the various curative agencies in operation to correct spiritual and physical defects. He introduced the speaker as representing a movement which claimed to have found the right method of treating such troubles. Mr. Beman, although not himself an adherent of the Christian Science faith, bespoke for the lecturer an unprejudiced hearing.—*Morning Star*.

Notice.

REMITTANCES should be made by post-office money order, express money order, or exchange on Boston or New York. Exchange on Chicago and other cities not named above, will not be accepted.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Mch. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for April, May, and June.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Victoria.

THE following dispatch appearing in the afternoon daily newspapers of Tuesday, January 22, announced an event of world-wide importance and sent a thrill of sadness throughout Christendom:—

OSBORNE HOUSE, Isle of Wight, January 22, 1901.
This official bulletin was issued at 6.45 P.M.:—

"Her Majesty the Queen breathed her last at 6.30 P.M., surrounded by her children and grandchildren."

Queen Victoria's demise after so long and successful a reign is a fact in the world's history whose significance is eclipsed only by her wonderful life. Well may the hearts of her subjects everywhere be filled with sorrow and regret, for, as a whole, her long reign was a most beneficent and exemplary one, the good results of which have stamped themselves upon Great Britain's destiny for all time.

In her private life Victoria was a true and deeply affectionate wife, a fond but wise mother, and a kind and considerate ruler of her household. Her thoughtful and often affectionate attitude toward her trusted domestics is a matter of common knowledge. In her public life she represented the highest type of a constitutional monarch, going as far in the direction of extending the widest personal liberty to her subjects as the form of government obtaining in Great Britain enabled her to do, and this form of government is in itself liberal. It is generally believed that none of her predecessors on the throne had a better understanding of the English constitution, the system of government, a broader intelligence in its administration, or a more honest purpose to promote the best welfare of her subjects, than the late Queen.

Allowing for such infirmities or shortcomings as pertain to human nature, her character nevertheless stands out in bright colors before the world, and adds a lustre to the page of history eclipsing that of all past monarchical rulers, and which will remain undimmed throughout the future.

Her life was that of a sincere Christian, fully conscious of the great responsibility devolving upon her as the ruler of over three hundred millions of people and an area of territory so vast that the sun never sets upon it, covering one sixth of the earth's surface.

Queen Victoria—or Alexandrina Victoria, to give her full name—was born May 24, 1819, her father being Edward Augustus, Duke of Kent, fourth son of George III., and her mother Victoria Mary Louisa, fourth daughter of Francis, Duke of Saxe-Coburg Saalfeld, sister of Leopold of Belgium and widow of the Prince of Leiningen. Her father died when she was only eight months old.

HER ROYAL DESCENT.

She was the niece of William IV., who was the brother of George IV., who was the son of George III., who was the grandson of George II., who was the son of George I., who was the great-grandson of James I., who was the son of Mary Queen of Scots, who was a cousin of Queen Elizabeth, who was a daughter of Henry VIII., who

was the son of Elizabeth of York, who was the daughter of Edward IV., and, by the way, she was also the queen of Henry VII., and he was the grandson of a man that married the widow of Henry IV., who was a cousin of Richard II., who was the grandson of Edward III. Then, again, Edward IV. was the great-great-grandson of that same Edward II., and, beginning again with him, he was the son of Edward II., who was the son of Edward I., who was the son of Henry III., who was the son of John, who was the brother of Richard Cœur de Leon, who was the son of Henry Plantagenet, who was the grandson of Henry I., who was the son of William the Conqueror.

Victoria, however, when but a child, worked it out from the other end, and when she got down to herself she stopped, and, after looking around a little among the sources of information that had been carefully prepared for her use, she said, gravely and earnestly,—

"Mamma, I cannot see who is to come after William, unless it is myself."

When her conclusions were confirmed she spoke, of her own accord, of the solemnity and responsibility that would be hers, and, with a strange mixture of childishness and solemn, precocious dignity, lifted her little hand and said, "I will be good."

Surely she made good this childhood pledge and fulfilled the prophecies of her youth.

THE ROYAL MARRIAGE.

The royal marriage had been studiously planned, the most active in the project being King Leopold of Belgium. The husband selected was Francis Albert, Prince of Saxe-Coburg-Gotha, three months the junior of his bride, accomplished, athletic, and very popular.

The Queen's high station made it necessary that the proposal of marriage should come from her, and this fact, together with the popular conviction that, although it was a state marriage, personal attraction played a most important part in it, created a romantic interest in the match and in the stately bridegroom; so that he had a good start in the affections of the people, and his somewhat anomalous and trying position as a foreign prince in intimate companionship with the ruler of the land was made a little easier for him.

They were married February 10, 1840. Lady Lytton says of the royal bride: "Her look of confidence and comfort at the prince as they walked away as man and wife was very pleasing to see."

The Queen herself wrote to Baron Stockmar, who, as private secretary to King Leopold, had been the confidant of more than one episode of love and marriage among the royal families of Europe, such words as many an humbler bride has echoed: "There cannot exist a dearer, purer, nobler being in the world than the prince."

Four years later, when the prince lost his father, the Queen wrote: "My darling stands so alone, and his grief is so great and touching. He says (forgive my bad writing, but the tears blind me) I am now all to him." The two weeks after this was the longest time that the royal pair were separated during the lifetime of the prince, and they kept up a constant, affectionate correspondence.

QUEEN'S CHILDREN.

The first child of this union was the princess royal, Victoria Adelaide, afterward for a brief time, in 1888, Empress of Germany. She is the mother of Emperor William, the present ruler. She was born November 21, 1840, and, though she was welcome indeed, there was significant rejoicing about a year later, when Albert Edward's birth made the next sovereign's sex a certainty.

Among the "letters of courtesy" filed in the State Department at Washington is the following:—

Victoria, by the grace of God Queen of the United Kingdom of Great Britain and Ireland, Defender of the Faith, etc., etc., etc.

To the President of the United States of America, sendeth greeting:—

Our Good Friend:—The proofs which we have already received of your friendship, and of the part which you take in all that concerns our person and family, do not permit us to defer announcing to you that the Almighty, in His infinite goodness, has been pleased to grant us a prince, who was born at Buckingham Palace at twelve minutes before eleven o'clock on the morning of the 9th inst.

In communicating to you an event so highly important to our people and so joyful for ourselves and the Prince, our Consort, we embrace the opportunity of assuring you of our constant friendship and of our cordial wishes for your welfare and prosperity. And so we recommend you to the protection of the Almighty.

Given at our court at Buckingham Palace, the thirtieth day of November, in the year of our Lord one thousand eight hundred and forty-one, and in the fifth year of our reign.

Your good friend,

(Signed)

(Countersigned)

VICTORIA R.
ABERDEEN.

The other children of Queen Victoria were Alice Maud Mary, Grand Duchess of Hesse, born April 25, 1843; Alfred, Duke of Saxe Coburg Gotha, Duke of Edinburgh, born August 6, 1844; Helena, Princess Christian of Schleswig Holstein, born May 25, 1846; Louisa, Duchess of Argyll, born March 18, 1848; Arthur, Duke of Connaught, born May 1, 1850; Leopold, Duke of Albany, born April 7, 1853; and Beatrice Mary Victoria Feodore, widow of Prince Henry of Battenberg, born April 14, 1857.

The Prince of Wales was married to the Princess Alexandra of Denmark. The Princess Alice, second daughter of the Queen, married the Grand Duke of Hesse in 1862. She died December 14, 1878. Her daughter, Victoria Alice, married the Emperor of Russia in 1894.

Prince Alfred married in 1874 the Grand Duchess Marie of Russia; Princess Helena married in 1866 Prince Frederick Christian of Schleswig-Holstein; Princess Louise married in 1871 the Marquis of Lorne, since made Duke of Argyll; Prince Arthur in 1879 married the Princess Louise Margaret of Prussia; Prince Leopold in 1882 married the Princess Helen of Waldeck-Pyrmont; he died in 1884; Princess Beatrice in 1885 married Prince Henry of Battenberg who died in 1896.

Prince Arthur was named after the Duke of Wellington, who was his godfather; the honor thus bestowed upon the Iron Duke being unprecedented in European history. Princess Louisa was born a few days after the arrival of the royal refugees, the historic "Mr. and Mrs. William Smith," who came from France to throw themselves upon the hospitality of England. The name Louisa was bestowed upon the princess as a delicate compliment to Louis Philippe and his unfortunate family, and did much to make their welcome sure.

EXPRESSIONS OF CONDOLENCE.

As a matter of course, expressions of sorrow and condolence upon Queen Victoria's death, as well as of the highest appreciation of her life and character, have come from all nations. The President of the United States was among the first to pay tribute to her, as appears from the following:

WASHINGTON, D. C., January 22, 1901.—President McKinley sent the following message of condolence this afternoon to King Edward VII.:—

"His Majesty the King, Osborne House, Isle of Wight: I have received, with profound sorrow, the lamentable tidings of the death of Her Majesty the Queen. Allow me, sir, to offer my sincere sympathy, and that of the American

people, in your personal bereavement, and in the loss Great Britain has suffered in the death of its venerable and illustrious sovereign, whose noble life and beneficent influence have promoted the peace and won the affection of the world.

WILLIAM MCKINLEY."

The Senate and House of Representatives of the United States promptly passed appropriate resolutions, as appears from the following dispatch from Washington:—

WASHINGTON, D. C., January 22, 1901.—The announcement of the death of Queen Victoria to-day was recognized by the Senate in the adoption of the following resolution, offered by Senator Allison:—

"That the death of her Royal and Imperial Majesty, Victoria, of noble virtues and great renown, is sincerely deplored by the Senate of the United States of America."

The resolution was ordered to be engrossed and forwarded to the prime minister of Great Britain.

In the House Chairman Hitt of the Foreign Relations Committee offered the following:—

"Resolved, that the House of Representatives of the United States of America has learned with profound sorrow of the death of Her Majesty, Queen Victoria, and sympathizes with her people in the loss of their beloved sovereign.

"Resolved, that the President be requested to communicate this expression of the sentiment of the House to the government of Great Britain.

"Resolved, that as a further mark of respect to the memory of Queen Victoria the House do now adjourn."

The reading of the resolution was listened to with impressive silence. Mr. Hitt stated very briefly that this resolution followed the precedents in similar cases. It was, he said, copied almost literally from the resolution adopted upon the occasion of the death of the President of the French Republic, and followed the expression adopted upon the death of the Czar of Russia. He did not, he said, think that the occasion called for any extended remarks, and asked for a vote.

The resolution was unanimously adopted, and the House adjourned until noon to-morrow.

Expressions of a like character from prominent public men, as well as private citizens are being universally made.

The Hon. William J. Bryan, democratic candidate for the Presidency in the late campaign, feelingly expressed his regrets and appreciation as appears from the following dispatch:—

LINCOLN, Neb., January 22, 1901.—The Hon. William J. Bryan said to-night:—

"The death of Queen Victoria will be regretted in all lands. Her personal virtues won for her the love of her subjects and the respect of the world. Her successor will find it difficult to fill her place in public esteem."

We feel sure that Christian Scientists everywhere will mingle their feelings of sorrow and regret, as well as love and appreciation, with their fellow-citizens. We might write at much greater length, and would if we were to express the full measure of our own feelings, but we forbear, well knowing that this duty will be pre-eminently performed by thousands of others.

Albert Edward, formerly Prince of Wales, is now the King of England, taking the official designation of Edward VII., King of the United Kingdom of Great Britain and Ireland and Emperor of India.

The Accession Speech.

KING EDWARD VII.'s ascension address is, in these days of bewildering rhetoric, a marvel of simplicity. If it truly reflects the real nature and character of the new king, he is certainly a safe ruler in whose hands to entrust the destiny of his many millions of subjects. This speech is in marked contrast with the stilted and coldly formal utter-

ances of many monarchs, and especially of some of King Edward's earlier predecessors.

In point of brevity, modesty, and evident sincerity, this address may well stand as a model of its kind.

Following is the address:—

Your Royal Highnesses, My Lords, and Gentlemen:—This is the most painful occasion on which I shall ever be called upon to address you. My first and melancholy duty is to announce to you the death of my beloved mother, the Queen, and I know how deeply you and the whole nation, and I think I may say the whole world, sympathize with me in the irreparable loss we have all sustained.

I need hardly say that my constant endeavor will be always to walk in her footsteps.

In undertaking the heavy load which now devolves upon me, I am fully determined to be a constitutional sovereign in the strictest sense of the word, and, so long as there is breath in my body, to work for the good and amelioration of my people.

I have resolved to be known by the name of Edward, which has been borne by six of my ancestors. In doing so, I do not undervalue the name of Albert, which I inherit from my ever to be lamented, great, and wise father, who by universal consent is, I think deservedly, known by the name of "Albert the Good," and I desire that his name should stand alone.

In conclusion, I trust to Parliament and the nation to support me in the arduous duties which now devolve upon me by inheritance, and to which I am determined to devote my whole strength during the remainder of my life.

Queen Victoria's Accession Speech.

WE herewith republish Queen Victoria's accession address, which was likewise a marvel of simplicity, reflecting the character of her who was destined to reign for so many years. Thus early in life she realized that of herself she was unequal to so great a mission, and in simple language she affirmed her faith in God as able to sustain her in the performance of her great work.

The address, which was as follows, was delivered at the Court at Kensington, the 20th day of June, 1837, and was reported in the *London Times* the following day:—

The severe and afflicting loss which the nation has sustained by the death of his Majesty, my beloved uncl., has devolved upon me the duty of administering the government of this empire. This awful responsibility is imposed upon me so suddenly, and at so early a period of my life, that I should feel myself utterly oppressed by the burden were I not sustained by the hope that Divine Providence, which has called me to this work, will give me strength for the performance of it, and that I shall find in the purity of my intentions, and in my zeal for the public welfare, that support and those resources which usually belong to a more mature age and to longer experience. I place my firm reliance upon the wisdom of Parliament, and upon the loyalty and affection of my people. I esteem it also a peculiar advantage that I succeed to a sovereign whose constant regard for the rights and liberties of his subjects, and whose desire to promote the amelioration of the laws and institutions of the country, have rendered his name the object of general attachment and veneration. Educated in England under the tender and enlightened care of a most affectionate mother, I have learned from my infancy to respect and love the constitution of my native country. It will be my unceasing study to maintain the reformed religion as by law established, securing at the same time to all the full enjoyment of religious liberty; and I shall steadily protect the rights, and promote to the utmost of my power, the happiness and welfare of all classes of my subjects.

The Papyrus.

A MECHANICALLY neat and clean looking little monthly publication is *The Papyrus*, published at Stamford, Conn. We have before us No. 2, Vol. 1, December, 1900. It is published and edited by the students of the Manor School.

This number republishes from the *Sentinel* the Thanksgiving words of the Rev. Mary Baker Eddy, which first appeared in the *Boston Globe*. It also contains an interesting address by Mr. Carol Norton to the students, the first of a series to be delivered by members of a Board of Visitors who are to go to the school "at stated intervals to talk informally to the boys on topics most likely to prove helpful to them."

Among the Churches.

Annual Meeting at Concord, N. H.

The second annual meeting of First Church of Christ, Scientist, in Concord, N. H., which was held last night (Thursday, January 17) in Christian Science Hall, was largely attended. The reports of the officers showed that the year 1900 was one of marked progress and prosperity for this growing church. The treasurer reported the total receipts for the year to be \$2,996, all debts paid, and a balance in the treasury.

The following were the officers elected for the ensuing year: First Reader, Rev. Irving C. Tomlinson; Second Reader, Miss Mary E. Tomlinson; Clerk, Miss Mabel C. Gage; Treasurer, Mr. George H. Moore; Trustees, Rev. Irving C. Tomlinson, Dr. Alfred E. Baker, Mr. George H. Moore, Mr. Horace Boutwell, Mr. Joseph A. Moore. Directors: Mrs. Anna B. White Baker, Miss Mary E. Tomlinson, Miss M. E. Thompson, Mrs. George H. Moore, Mrs. Fred A. Piper. Auditors: Mr. Fred A. Piper, Mr. J. Wesley Plummer, Mrs. Edward A. Grover.

The meeting united in sending to Mrs. Eddy a resolution of love and gratitude.

We extract the following from the annual address of the president, Rev. Irving C. Tomlinson.

The record of a Christian Church is not told with pen, it is written on the human heart. God alone knows the entire work of this branch of His church.

Our first word is one of gratitude to God for the unnumbered blessings that have come to us from Him through our Leader, the Rev. Mary Baker Eddy, whose pure life nobly exemplifies our religion. This branch of her planting has richly shared in those fruits which are the product of her loving care and her unwearied labors.

The year has been one of growth and progress in all departments of our beloved church. The present membership is 128, fifteen new members having been received the past twelve months.

The attendance upon our morning service became so large during June and July, sometimes overflowing into the vestibule, that a second service was inaugurated in September, which has proved eminently wise.

All Christian Scientists well know the deep desire of our Leader to bring "them that sit in darkness out of the prison house." In obedience to this thought, work at the county jail was begun last June. Regular Sunday services have been held and great good is being accomplished. One prisoner, who had been healed, bought a copy of our textbook, saying, "I can go without eating, but I cannot go without a copy of this blessed book."

God's bounty has been sufficient for every need. The Sunday collections for the year were \$905, and the income from annual subscriptions and from visitors, \$2,091, making the total receipts \$2,996.

From our reading room there have been sold 81 copies

of Science and Health, and 141 copies of other writings of our Leader, making a total of 222 volumes sold of Mrs. Eddy's writings. The total receipts of the reading room for 1900 were \$472.80.

There were registered at Christian Science Hall the past year 1,337 visitors, representing all parts of the United States and Canada, besides England, Scotland, Germany, Norway, Australia, and China, the representative from China being Mrs. Conger, the wife of our United States minister. It is a conservative estimate to say that Concord has entertained during the year three thousand visiting Christian Scientists from this and foreign lands.

We are not unmindful of the debt of gratitude we owe to Miss Villa Whitney White for her service of song. Not only are we helped by one, who in Scripture language "sings with the understanding," but the prisoners at the jail are comforted by her presence each Sunday.

Reviewing the work of the past year we can but praise God for the riches of His bounty. Looking forward to the work which lies before us we say with the apostle, "Not as though we had already attained, either were already perfect: . . . but this one thing we do, . . . we press toward the mark for the prize of the high calling in Christ Jesus."—*People and Patriot*.

The following is the letter to Mrs. Eddy above referred to:—

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Mother:—With loving gratitude to God for all the manifold blessings that have enriched our lives through your self-sacrificing labors, the members of First Church of Christ, Scientist, in Concord, New Hampshire, send you glad greeting.

We again recognize the new life that is ours through your entire devotion to God. We thank you for that inspired revelation, our text-book, "Science and Health with Key to the Scriptures," and for your continued utterance of the Voice Divine.

The Sunday service with its message from God, and our blessed Wednesday night meetings are your gift. Nor would we, your Concord children, forget your loving thought in sharing with us, at our Wednesday night meetings, the grateful letters from loyal hearts.

We appreciate the privilege and responsibility of residence in Concord. We know the best thanks we can offer you, are the Christian lives we manifest. That we may be ever loyal to the trust confided to our care, we promise to "work, work, work, watch and pray."

Per order of the Church,

IRVING C. TOMLINSON, *President*.

MABEL C. GAGE, *Clerk*.

Concord, N. H., January 17, 1901.

Handsome New Chapel at Baltimore, Md.

The chapel of Second Church of Christ, Scientist, Mount Royal Avenue and Cathedral Street, which was opened on Christmas Day, is one of the handsomest buildings of its kind in the city and forms an attractive improvement in that section. It is a two-story building with a basement and has a frontage of thirty-six feet and a depth of fifty feet. It is designed to be one of a group of three structures, chapel, church, and tower, to be erected on the lot, which has a frontage on Mount Royal Avenue of ninety feet. The entrance is on the side and a temporary wooden vestibule has been built where the tower will be located.

The chapel is a substantial structure built of the very best material and of the most approved patterns and designs. No expense has been spared to make the building as perfect as possible, and over twelve thousand dollars has already been expended on the building and furnishing.

The general style of architecture and interior finish is a combination of Gothic and Colonial.

The architects are the Co-operative Building Plan Association of New York, and the contractors, Messrs. Henry D. Rullman and C. S. M. Williamson, jointly, of Baltimore.

The second floor is an auditorium which is intended to be a Sunday School room when the church is built, but will be used for the services at present. It contains one hundred and twenty-five seats, a platform with two pulpit stands for the readers, and a handsome upright grand piano. The seats are oak folding chairs with cane seats and backs finished to match the rest of the woodwork. The reading desks on the platform are of oak with dark green plush upholstery. The ceiling is sixteen feet high, and the space between the rafters is plastered, making a panel effect. The windows are of beautiful stained glass, giving a soft, mellow light, and were paid for by the Sunday School children. They consist of three Gothic windows and two large rose windows, one of which has a cross and crown, and the other a seven pointed star as centre-piece. The rear of the auditorium has handsome oak panels, and the room is brilliantly lighted by electricity.

The first floor has a wide hall with stairways leading up and down stairs. The reading room is the largest room on this floor and has two bay windows with quartered oak panel backs, which are very beautiful. The conversation, or reception, room is a projecting room of the reading room, and has a curved bay window. This room has a Pompeian brick fireplace, and will be handsomely furnished. Three small offices open into the reading room, which will be occupied by practitioners. There is also a cloak-room leading off the hallway. All the windows, doors, and transoms on this floor are glazed with leaded glass of exquisite designs of different kinds of white and opalescent glass.

In the basement there are two toilet rooms and a hallway; also a cemented cellar containing the hot-water heater, electric exhaust fan for ventilating, coal and ash bins, and for general storage. There is also a basement entrance from the rear.

The interior woodwork is Indiana quartered oak finished in old English oak style, and is very handsome. In the basement cypress is used. The floors are also of Indiana quartered oak, except the hall, which is white marble mosaic, and the basement, which is yellow pine. The hardware is black iron finish of a colonial pattern. The gas and electric fixtures are all wrought iron of special design. The glassware is twisted opalescent, and the gas candles twisted porcelain. The main lighting is by electricity, but gas is also installed, mainly for emergencies. Ceiling domes with clusters are used, as well as combination gas and electric fixtures, and a handsome newel post is in the first-floor hall. There are ninety-three electric lights and fifty-six gas jets.

The building is heated by means of a hot-water system, and ventilated by means of an electrically operated exhaust fan, connected with flues running to the auditorium and reading room. The plumbing is of the best, and is finished in white marble trimmings and nickel plated pipes and fixtures. The washstands are supplied with hot and cold water. The walls are sand finished in tinted plaster of a delicate cream green, and the cove ceilings of white plaster.

The furniture will be of quartered oak in old English designs and finish.

The walls are built of light gray selected Falls road stone, and have buttresses at the corners, giving a massive effect. There is a projecting one-story room and three bay windows. The roofs are of olive green Spanish tiles and the cornices, rain spouts, and finials are of copper. The main roof has four gables with eyebrow Louvre windows for ventilation. The windows are all of stained glass of very beautiful and strikingly original design, and harmonize throughout. The outside woodwork is painted a

greenish gray to harmonize with the stone and windows. The basement windows are screened with handsome wrought iron grills.

The sidewalk is paved with concrete and there is a row of maple trees near the curb. The space around the building has been sodded and planted with grass seed and shrubbery, presenting an attractive appearance.

The Readers of the church are: Miss Ellen E. Cross, C.S.D., First Reader; Mr. Hermann S. Hering, C.S., Second Reader. Christian Science services are held in the chapel each Sunday morning at eleven o'clock, a testimonial and experience meeting each Wednesday evening at eight o'clock, and a Sunday School Sunday morning at ten o'clock. The reading room on the first floor of the chapel is open to the public on week days from 10 A.M. to 6 P.M., Sundays from 3 to 6 P.M., and Tuesday and Friday evenings from eight to ten. Copies of all authentic Christian Science publications will be kept on hand for those who desire to read or purchase them, also literature for free distribution. The reading room is in charge of a librarian.

Baltimore Sunday Herald.

[An account of the opening services giving the addresses of Miss Ellen E. Cross, First Reader, and Mr. Hermann S. Hering, Second Reader, will appear in the February *Journal*.—Ed. *Sentinel*.]

Organization in La Junta, Col.

On December 12, 1899, First Church of Christ, Scientist, in La Junta, Col., was organized with five members, and duly incorporated under the laws of the state. Error seemed to say, You are few in number and you had better wait; but understanding that Christ—Truth—was the Rock on which to build, we worked steadily on, knowing that victory would come at last, if we waited patiently. We now have a membership of fourteen, and our congregation is more than double that number. The interest in Christian Science is steadily growing here.

MARY E. CHEATHAM, *Clerk*.

New Year's Hymn.

STANDING at the portal of the opening year,
Words of comfort meet us, hushing every fear;
Spoken through the silence by our Father's voice,
Tender, strong, and faithful, making us rejoice.
Onward then, and fear not, children of the day!
For His word shall never, never pass away.

I, the Lord, am with thee, be thou not afraid!
I will help and strengthen, be thou not dismayed!
Yea, I will uphold thee with My own right hand;
Thou art called and chosen in My sight to stand.
Onward then, and fear not, children of the day!
For His word shall never, never pass away.

For the year before us, oh, what rich supplies!
For the poor and needy, living streams shall rise;
For the sad and sinful, shall His grace abound;
For the faint and feeble, perfect strength be found,
Onward then, and fear not, children of the day!
For His word shall never, never pass away.

He will never fail us, He will not forsake;
His eternal covenant He will never break.
Resting on His promise, what have we to fear?
God is all-sufficient for the coming year.
Onward then, and fear not, children of the day!
For His word shall never, never pass away.

From the *Christian Advocate*.

Heavenly Peace.

BY E. A. EMERY.

THE shadows lengthen in the west,
The night-wind croons a lullaby;
Upon the water's placid breast
I drift beneath the starlit sky,
While o'er me steals a peaceful rest,
That fills my soul with ecstasy.

Th'eternal, heavenly peace is here,
I am not tied to earth's dull clod,
But, freed from every mortal fear,
Awaken and behold my Lord.
I now can read my title clear,
Through his sweet grace,—the child of God.

The Way of Escape.

BY GRACE STEPHENS WRIGHT.

WHAT a wealth of helpful suggestion there is in many sentences of the Old Testament if we allow them to lie in our minds and unfold to us! I find that it is only by dwelling upon a sentence at a time for many weeks perhaps that a hidden meaning is revealed and becomes a practical help.

Several weeks ago I read Genesis, 19 : 17: "Escape for thy life; look not behind thee, neither stay thou in all the plain; escape to the mountain, lest thou be consumed," and the thoughts have been coming one by one to make it of value to me. One definition of escape is "to get free from that which confines or holds," so we have "Get free from that which confines your life." Now in Christian Science we know that mortal beliefs are the only things that confine us, that keep us from knowing Life as God, that without them—beliefs of fear, of prejudice, of unkind criticism, of sensitiveness which is selfishness, of irritability, of unwillingness to do our duty and the legion of other beliefs—we should realize harmony or Heaven here and now.

How often we have tried to get rid of these faults by agonizing to break through them as if they were a plaster cast tight about us; our feelings have been many in our efforts to dispossess ourselves of our unpleasant characteristics—pent up, grimly determined, wilful, hopeful, and discouraged by turns. But the derivation of the word escape brings out the Christianly Scientific way to free ourselves from these mortal beliefs. Escape is from the Latin *ex*, out of, and *cappa*, a cape or cloak, so to escape is to slip out of one's cape or cloak. Now do these faults not cover our real selves as a cape rather than as a cast, and is it not easier and wiser to slip out of them by applying Jesus' rule of Love than to try to break them by hitting them in one place and whacking them in another? I have tried in some cases the latter method, but have ended in weariness and discouragement. Then I have let go all the feelings that seemed to be in my heart, as it were, have "slipped out of my cape," by letting Love take possession and thereby have proved the truth of our Leader's statement in "Science and Health with Key to the Scriptures," p. 97: "The way to extract error from mortal mind is to pour in Truth through floodtides of Love," and the result has been a calm in place of the tension of mind, joy and peace instead of anxious effort.

But how do we apply this law of Love? the question comes again and again. Often we hear, "I know we must overcome evil with good, must love our neighbor as ourself; but how do you do it?" The how is always more difficult than the what. The command is, "Look not be-

hind thee;" we are to keep our gaze ahead on the real self, not behind on the false self, with its beliefs and feelings and desires and loves.

"Neither stay thou in all the plain; escape to the mountain, lest thou be consumed." Then, too, we are to get out of our ordinary, every-day way of living and thinking, whether it be of the easy, even sort, or of the tumultuous, hurried kind. We must "turn aside," as Moses did to see the burning bush, if we would have God speak to us. We must leave the daily duties and devote time in the very midst of them to the study of the Bible and our text-book. A steadfast purpose to do this, conscientiously carried out, brings us to the mountain of high ideals, loving thoughts, and selflessness, where we shall surely talk with God as Moses did, and the pattern for our tabernacle will be revealed to us.

All this we must do, lest we be "consumed," as the text says, or lest we be spent, absorbed in material things and their consequences, and be farther and farther from the happiness and blessedness that the whole human race is seeking—from the peace that passeth understanding.

Christian Science.

BY G. H. HYDE.

It is the sweetest theme ever spoken. I would not exchange my understanding of it for any earthly consideration. I have tried it for almost five years, after everything else had failed, and I can recommend it. If you are sick or in discord or disorder of any kind whatsoever, come to Christian Science. If you will try it faithfully and honestly you will find that "'Tis Onward Christian Soldier." There is no risk in trying it, you will not be filled with drugs or medicine, or covered with blistering plasters or withering caustics. You will not be told that desperate cases require desperate remedies, but you will be told that God is good, that He is everywhere, able and willing to heal.

There are multitudes of good, sober, honest Christian Scientists ready to testify to this great healing and saving power. Come and listen to these witnesses, come and get this understanding, and then you will love everybody. You will know that your Redeemer liveth, and realize what that means. You will have your remedy at hand. The medicine of Christian Science is peace, divine Love, divine Mind. You will understand how it is that the Christian Scientists are good, healthy, and happy people. We are aware that there are a large number of people (I used to be one of them) who seem to object and feel irritated at the frequent and friendly manner with which we speak of our Leader. Let me say to all who feel that way, in all sincerity, that when you have been led from darkness to the sunshine of Christian Science, when you have been raised from a couch of pain, reclaimed, redeemed, and largely relieved from physical suffering, when, like many, very many, Christian Scientists, you have been led away from an untimely grave by the hand of Christian Science and made to rejoice, then you will understand our attitude toward her. Oh! I wish Christian Science could be brought to your immediate understanding; there is a joy and gladness, a lingering sweetness about it that can never be explained, it must be experienced to be understood. "Taste and see that God is good." He will forgive you again and again. He "forgiveth all thine iniquities and healeth all thy diseases."

I quote from our Hymnal:—

Walk with your God, along the road
Your strength He will renew;
Wait on the everlasting God,
And He will work with you.
Ye shall not faint, ye shall not fail,
Made in the Spirit strong;
Each task divine ye still shall hail,
And blend it with a song.

As I am thinking especially about those who are not acquainted with Science and are strangers to it, for their information I wish to mention that we Christian Scientists are being persistently charged by men standing in high places of not accepting Christ. We certainly do accept Christ as no other class does. Christian Science is spreading its sheltering and healing wings over the whole world. Every church that is organized is called a "Church of Christ, Scientist." Every member has solemnly promised to watch and pray for that Mind which was also in Christ Jesus. Moreover, we do heal the sick after the manner, and by the command of, that Mighty Conqueror, the Prince of Peace, Jesus of Nazareth.

Is Your Armor Impervious?

BY A. F. BLUNDELL.

OUR beloved Leader has said in one of her beautiful letters that "Good thoughts are an impervious armor." As we try to demonstrate for ourselves the truth of this statement, we gain a great deal of experience and also learn that we must put on the full suit of armor, as any missing part leaves us vulnerable at the point left undefended.

If we only occasionally think a few good thoughts and frequently allow some questionable ones to enter our consciousness, our armor will be scant and insufficient to offer reliable protection. To be clad in the full armor we must deny constantly every thought of error, no matter in what form it presents itself. The nearer we come to doing this, the more complete is the protection we receive, and as we strive earnestly for the whole armor, we are rewarded by being able to realize that we are really working out our own salvation, in the true sense.

It is easy to understand that if we constantly deny all that is unlike God and declare for the Truth at all times, we become good sentinels, always on guard at the door of consciousness to refuse admittance to any suggestion or desire that cannot clearly and promptly give the true countersign.

Until we learn to do this, we must expect error to find an opening or flaw. Its manifestation will perhaps be the means of calling our special attention to the need of investigation to ascertain at what point we are vulnerable. If the search is made carefully and thoroughly, the weak place will be found and the proper remedy applied, not only to this particular case, but the probabilities are that others of the same kind may also be found, and after a few sharp experiences will, if we are wise, make us more watchful, more earnest, and more systematic in our methods of working. Our lives gradually become a constant demonstration of our beautiful teaching, as good thoughts govern all our actions, whether in connection with our private, domestic, social, or business experience. We constantly strive to keep in mind that God is our Intelligence to answer every question and solve successfully every problem which presents itself, our strength to perform every daily duty, and our ever-present help in every kind of seeming difficulty.

New mercies, new blessings, new light on thy way;
New courage, new hope, and new strength for each day;
New notes of thanksgiving, new chords of delight,
New praise in the morning, new songs in the night;
New wine in thy chalice, new altars to raise;
New fruits for thy Master, new garments of praise;
New gifts from His treasures, new smiles from His face;
New streams from the Fountain of infinite grace;
New stars for thy crown, and new tokens of love;
New gleams of the glory that waits thee above;
New light of His countenance full and unpriced;
All this be the joy of thy new life in Christ!

HAVERGAL.

Testimonies.

Pronounced Incurable, but Healed in Christian Science.

On the Fourth of July, eight years ago, I was lying in the hospital in Baltimore, Md., in charge of the doctors, and suffering from a cancerous growth on my breast and under my arm. On this Fourth of July, 1900, I tell it with joy, I am free of all doctors, free of all drugs, free of all medical care.

About four years ago, when on my return from San Francisco to Salem, I asked a lady in the car to raise the window for me, which she kindly did; she then asked me what was the matter with my arm. I told her. She asked me if I had ever tried Christian Science. I told her I had never heard of it before, but the name of Christian Science sounded very beautiful to me, and I should like to know something about it. She then told me of her mother who had been an invalid and was confined to her bed for eight years. She was pronounced incurable by several doctors and given up to die. As a last resort a Christian Scientist was sent for, and with one week's treatment, her mother was restored to perfect health. It had been five years since her mother was healed, and they had not employed a doctor since.

The very moment that lady named Christian Science, I knew it was what I was looking for; I could not grasp it quickly enough. While she was repeating the story of her mother, the thought came to me very forcibly, "There is help coming to me, for God is no respecter of persons. If He heard her mother's cries He will hear mine also." The thought of help coming to me never left me, so great was my faith in the ever-loving Father. A short time afterward I read "Science and Health with Key to the Scriptures," and was perfectly healed without a single treatment.

About one month ago I received a letter from Doctor H., surgeon-in-chief of the Johns Hopkins Hospital, Baltimore, Md., where I was a patient eight years ago. He desired to know how I was getting along. He said, "If you are not able to write yourself, ask your physician to write for you." But thanks be to God who has given me the power and the strength to do my own writing, even without the aid of glasses. I was sixty-seven years old January last, and wore glasses constantly from the age of fourteen up to a few months ago. Since then I have done all my reading, writing, and sewing without glasses. My heart is overflowing with love to God that I have been healed by Truth and am gaining the light of Christian Science.

I cannot tell the number of physicians at the hospital who pronounced me incurable and a cripple for life. Before leaving the hospital, the head nurse referred me to the best so-called surgical doctor in the house. I asked him if he thought I would recover. He shook his head, saying, "Your age is against you." I then asked if he thought I would have the use of my arm again. He placed his hand on the top of his head, and said, "You will never do this." The day I was healed the first thing I did was to throw my arm over the top of my head. My arm has been in a normal condition ever since, and my health is perfect.

Had I known of Christian Science before I went to the hospital I never would have submitted to the knife. For four long years after passing through this severe surgical operation, I suffered intense agony day and night. I went to bed every night with a pillow under my arm, but did not know what it was to have one restful night. While my friends were sleeping around me I was walking the floor or on my bended knees asking God to relieve me of my suffering. I used to think I prayed as earnestly as others did, and thought my prayers were acceptable unto God, and sometimes I wondered why God did not hear the

prayer of His humble child, for I was willing to sacrifice everything to get relief, but I lacked the understanding that God has given me through Christian Science. I cannot express my gratitude to our dear Mother for the light of Christian Science. I shall try to work more earnestly for our glorious Cause in the future than I ever have in the past. My greatest desire and my prayer is that my life may be a shining light for the glory of God.

MRS. A. J. ANDERS, Salem, Ore.

A Demonstration in Dentistry.

My daughter, a girl of fifteen years, has from childhood shown great fear of a dentist's chair. I have seen her get up and hurriedly leave the room if the subject was mentioned. She declared she was more afraid of one than of a rattlesnake.

She had been healed of many physical troubles through Christian Science treatment, but I had not seen the importance of overcoming this fear until it was manifested in the teeth decaying, and they appeared very discordant.

I then said to her, "Mary, we have had too many proofs of God's love to let this thing continue. You are going to have this work done, and done harmoniously."

About this time she was attending the Home School for Scientists, at Washington, Ga. Although she had been there only a few months, she had grown much in obedience and gentleness, and so answered me, "Mamma, give me a little time and I will apply my Science to the best of my knowledge." From then I felt perfectly satisfied that the demonstration would be made.

I treated her for two weeks, declaring God's protecting love was sufficient to destroy the claim of fear, and at the end of that time she wrote that she and one of the Christian Science teachers had been to the dentist and made an appointment.

When the dentist made an examination of the teeth he expressed himself as much shocked at their condition. The overcoming of pain, etc., was so pronounced that he began asking questions (the patient carried Science and Health with her, reading every chance she got). He used his instruments in any way he chose, and remarked, "She is beyond all feeling; just look at this pink nerve and how I can draw my instrument across it."

When the difficult work was ended, he declared it to be one of the most excellent jobs he had ever done, and best of all proclaimed to many the power of Christian Science to relieve the pain of dentistry.

Many of the children of The Home School have had beautiful demonstrations with this same dentist, and he says they are his most agreeable patients.

MRS. MATTIE WOOD, Jacksonville, Fla.

Many Troubles Healed by Reading Science and Health.

In May, 1899, I first heard of Christian Science. By reading the Bible and "Science and Health with Key to the Scriptures," I have been relieved of a growth, and many other ailments have been overcome which would have prostrated me had it not been for this Truth. My husband has been healed of smoking and the liquor habit, and of Bright's disease, pronounced by the physicians to be in its worst form. Many other troubles have been healed by the studious and diligent reading of Science and Health.

I know that God is with me in this work. I feel His presence by these uplifting thoughts, and know that I am dwelling under the shadow of His wings and He is bearing me up with His hand lest I dash my foot against a stone. Under His protection, all fear disappears and the sunlight drives away the clouds which would hide the beauties of the spiritual universe wherein man reflects his Maker.

MRS. JOHN W. MAY, Manchester, Ia.

Religious Items.

William J. Bryan, in a contribution to the *Christian Herald*, says: "There are many reforms which I hope to see realized during the new century. I suggest a question which ought to receive more attention during the coming century than it has during the last few years, namely: How can the coming of the brotherhood of man be hastened by those who acknowledge the Fatherhood of God? Love of God can best be shown by the exhibition of a brotherly love broad enough to include all God's creatures. The Bible denounces as a liar the man who says that he loves God and yet hates his brother."

"I can conceive of no greater reform than that which would apply the eleventh commandment, 'Thou shalt love thy neighbor as thyself,' to all phases of human experiences. It would put an end to injustice, whether practised on a small scale by individuals or on a large scale through the operation of bad laws."

One of the contributors to the (Episcopal) *Church Standard* quotes the following from a sermon by Canon Mozley: "The ignorant and poor in the realm of the natural feelings of the human heart stand on a par with the foremost of the world's society. And in the sense of the relationship they stand in to God, in the feelings of awe, of worship, of dependence upon their Maker, and of the sense of His majesty, greatness, and immeasurableness, in all the foundation of religious instinct in the soul, they are on a level with the best-educated of society. There is no sense of a Divine Power in the world which a scholar, a learned man, an accomplished man, a man of letters, may have, which a poor, and, as we say, uneducated, man may not have in as full force."

In a review of the recently published "Life of Phillips Brooks," the (Unitarian) *Christian Register* says: "One thing becomes clearer than ever as one reads on, that Phillips Brooks was not a theologian, not a deep thinker, not a teacher, but an inspiration. This was always clear to the hearer who, after one of his sermons, undertook to tell a friend what he had just heard. He found a strange difficulty in retelling the ideas which ought to be fresh in his mind. The fact was that it was his spiritual nature rather than his intellectual that had been fed. Not that the sermon had not been thoughtful and even original, but that the predominating characteristic effect had been to uplift and cheer and strengthen."

A sermon printed in the (Baptist) *Standard* contains the following: "If this world were all, we should have a very different standard of morality, and the qualities of character which involve self-sacrifice and the surrender of life for the sake of principle would have much less value than now. Draw a line about a man's seventy years. Tell him there is nothing beyond that line, and he naturally concentrates his whole attention on the narrow territory he occupies. He will get out of his circumstances all the comfort and enjoyment they can produce at any cost, either to his honor or to his neighbors and competitors. A narrow prospect makes a narrow man."

The Rev. Paul M. Strayer says in the *Christian Endeavor World*: "In an engine-room it is impossible to look into the great boiler and see how much water it contains. But running up beside it is a tiny glass tube which serves as a gauge. As the water stands in the little tube, so it stands in the huge boiler. If the tube is half full the boiler is half full. When the tube is empty, so is the boiler. Do you sometimes ask: 'How can I know I love God? I believe I do, but I want to know.' Look at the gauge. Your love for your fellows is the measure of your love for God. You are no more right with God than you are with man."

The *Christian Herald* says: "Among the minor sins, if there are any, must be included a disposition to be meddlesome. The fussy and intrusive person who meddles is

probably perfectly honest and truthful. He would not take your money or malign your character, but he interferes with your comfort, is officious in giving advice, and makes comments where he is not privileged to be critical or caled upon to speak at all. The homely proverb about minding one's own business is rather rude, but there is a great deal of good sense wrapped up in its short and pithy sentence."

The (Baptist) *Standard* publishes the following bit of irony: "We wonder if any men with white skins are called to the ministry after the fashion described by Booker T. Washington in his autobiography now appearing in the *Outlook*. He says: 'A colored man in Alabama, one hot day in July, while he was at work in a cottonfield, suddenly stopped, and, looking toward the skies, said: "O Lawd, de cotton am so grassy, de work am so hard, and the sun am so hot, dat I b'lieve dis darkey am called to preach."'"

Lyman Abbott, D.D., editor of the *Outlook*, in a recent sermon he preached in Boston on "Religion," said: "Religion is the art of living—nothing else. It is the art of life of the whole man—nothing else is religion. Be loyal to God and be true to your fellow-man. That is the whole thing in a nutshell. Live for others rather than for self, be humble and be good, follow the footsteps of Christ, embrace the spirit of faith and hope, and learn to love that you may be happy."

The *Christian Work* observes that the German Baptists, known as Dunkards, have a rule which requires the deacons of the several congregations to make semi-annual visitations to every member in good fellowship, and ask, among other questions, "Are you in complete harmony and peace with every member of your church?" In this way the Dunkards show their appreciation of the Pauline teaching that we are "all members one of another." Is that such a bad plan?

The Watchman.

"One hundred and thirty pounds (£130) a minute," is the way a London banker expresses the expense of the South African war. In the outset, when Mr. Chamberlain and Cecil Rhodes were augurs, the cost of the then prospective war was placed at £50,000,000 as an outside possibility. Already five hundred millions have been absorbed and the end is not yet. Wars are the most expensive as well as the foolish and wickedest of national vices.

Universalist Leader.

A writer in the (Unitarian) *Christian Register* says: "A glorious change took place in the thoughts of men when, following the teaching of Jesus, they transferred the day of judgment from a future time to the present, and the kingdom of heaven from a future world to the present earth. With the thought that the kingdom of God is here and now, came a new impulse of humane feeling, a new sympathy for those who are in the outer darkness, when they might dwell in a present heaven."

Commenting on the "Church of the Twentieth Century," a writer in the (Baptist) *Examiner* says: "That power from on high will put the Church of Jesus Christ where it ought to be—in the lead. It has been too apologetic and on the defensive. It has been throwing up redoubts and holding forts, after the fashion of a certain general who was greater with the shovel than with the sword. On every moral question the place of Christ's Church is at the front."

The *Congregationalist* says: "Isaac Watts' fine hymn, 'O God, our help in ages past,' was sung at the inauguration of the Australian Federation, January 1, voicing now, as it did in Watts' day, the sense of dependence upon God as the King of kings and Lord of lords, which people of English stock take with them wherever they go and wherever they set up commonwealths."

The *Examiner* says: "We need to wait before God, not in struggle of soul to persuade

God to give, but in silence of soul to receive; not for some outward blessing for others, but for the inner renewing of our own strength, so that we shall have something to give to others."

The (Baptist) *Examiner* says: "Let it not be forgotten that what we do and become in the world is determined by what we are in ourselves. Tincture and color our conduct as we may by affectations and deceits, its quality will be that of the heart from which it issues."

In an editorial the *Congregationalist* says: "The dry rot of indifference and intellectual self-indulgence is manifest enough to-day, but the forces of faith and service are relatively far stronger and better organized than they were a hundred years ago."

Bunyan's "Pilgrim's Progress," has now been translated into two hundred and three languages.—*The Christian Herald.*

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is It Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies two cents each, post-paid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that back numbers of the *Christian Science Journal*, for free distribution may be procured at five cents a copy. Orders for special numbers of the *Journal* cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem, Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

The second number of the *Commoner*, Mr. Bryan's new paper, was issued January 29. It already has a large circulation. The most interesting feature of the second number is an editorial commenting on Ex-President Cleveland's recent proposition to increase the President's term to six years and limit him to one term. Upon this he says: "To lengthen the President's term is simply to enlarge the stake for which great interests play. Trusts could increase their campaign fund fifty per cent if they could secure the control of an administration for six years instead of four. A four-year term is long enough for a good President and too long for a bad one."

The army reorganization bill, which was finally passed and signed by the President on February 2, will be immediately carried into effect. It raises the permanent strength of the army to about one hundred thousand men, which will consist of fifteen regiments of cavalry, a corps of artillery, and thirty regiments of infantry. The army will be officered by a lieutenant-general, six major-generals, fifteen brigadier-generals, and the usual regimental and company officers.

Major-General Arthur MacArthur will be relieved from duty as the commanding general of the division of the Philippines in April next, and will be succeeded by Brigadier-General James F. Wade. General MacArthur is anxious to return and the authorities are willing that he should be relieved, especially as he has not succeeded in throttling the insurrection with the expedition the administration had looked for.

Senator Frye gave notice in the Senate January 29 that he intended to keep the shipping bill to the front, even as against appropriation bills, not yielding to them without the vote of the Senate. It indicates a disposition on the part of the Senate leaders to force to an early issue the question whether the shipping bill is going to pass at this session.

Tom L. Johnson is now seeking for the Democratic nomination for the mayoralty of Cleveland, O., on a platform of opposition to an extension of street railroad franchises and in favor of municipal ownership and three-cent fares. He announces that he has retired from business and will devote his life to Democracy.

Foreign News.

For some weeks a force of several thousand Boers under General De Wet hovered near the boundary between the Orange River Colony and Cape Colony, successfully dodging the British. On January 30 De Wet eluded General Hamilton's force, broke

through the British lines, and marched on to join the other Boer invaders in Cape Colony. This is now the seventeenth month of the war, and while the British are in a position to be certain of winning eventually, the Boers are so persistent in fighting that no one seems to expect peace to be established very soon. Some of the London anti-Boer newspapers have begun to urge peace. The *Daily News* points out that the present moment would be auspicious for making concessions toward the Boers. It is rumored that Emperor William is willing to mediate, and his recent visit to England under circumstances which touched the hearts of all the British, has doubtless won for him the confidence of the nation.

The funeral of Queen Victoria was held Saturday, February 2. It was undoubtedly the greatest pageant of the kind the world has ever seen. Not only the British, but all the world sought to do honor to the character of the grand woman whom millions loved to acknowledge as their queen. The earthly form was followed to its temporary resting place at Windsor, by kings, queens, emperors and princes, royal personages and republicans; and all were united in sentiment. Love and respect for the queen prevailed to some extent even among those people who are at war with the nation she ruled.

King Edward, during the first week of his reign, appointed Emperor William a field-marshal of the British army. British and German newspapers have generally expressed great satisfaction at this indication of friendliness between the two monarchs. The newspapers of Russia and France ridicule the appointment.

Industry and Commerce.

The Standard Oil Company has organized an international oil company at Yokohama, to own and develop the kerosene oil industry in Japan. This company is now acquiring the largest producing wells in the Echigo district, and will enter other fields. The new company has a capital of ten million yen in shares of ten yen each. The minority of stock will be owned by Japanese already in the oil business. The Standard Oil people will furnish capital for further development.

The total gold production of the world in 1900 amounted to \$256,462,438, compared with \$313,645,534 in 1899, the decrease being entirely owing to the stoppage of gold production in the Transvaal by the war. The United States took the lead with \$78,658,785, Australia ranking second with \$75,283,215. The production in the Klondike has put Canada in third place with a total output of \$26,000,000, while Russia was fourth with \$23,000,862.

Eastern capitalists, with unlimited capital at their command, are planning to develop northern Georgia on a huge scale. They have purchased fifty thousand acres of land in five counties which is said to be rich in mineral resources. As yet there is no railroad in that section, but negotiations are under way for a line which will aid the enterprise mentioned.

General News.

The *New York World* says: "It is interesting to speculate on what the annual expenditures of the leading civilized nations will be at the end or even at the middle of the present century if they keep on increasing at the pace set by the nineteenth." According to the *World's* figures Great Britain is now spending money, not including the Boer war expenses, at the rate of over \$500,000,000 a year, an increase of 400 per cent for the last century and of 84 per cent since 1871; France spent about \$900,000,000 in 1900, which is almost four times the annual expenditures of that government during the stupendous wars of Napoleon, and yet the population has increased only thirty per cent since 1815; the German Empire, created 39 years ago, has trebled its expenses, the budget for 1900 footing up nearly \$400,000,000;

Russia's expenses have risen from \$200,000,000 in 1877 to \$700,000,000 in 1900, and the United States since President Buchanan's time, has increased its yearly expenditures from \$70,000,000 to over \$500,000,000. These enormously increased expenditures largely represent money used for war and in preparations for war.

Some time ago the State of Missouri began proceedings in the United States courts against the State of Illinois and the Chicago Sanitary District Board to prevent the further use of the Chicago drainage canal by way of which the waters of Lake Michigan flow through Chicago in great volume, carrying with them the sewage of the city. The canal empties into the Illinois river, which is a tributary of the Mississippi, and the contention of Missouri is, that the flow of the canal pollutes the drinking water of St. Louis. On January 28, the United States Supreme Court decided in favor of the State of Missouri. The case will now be tried in equity to determine what injury, if any, has resulted to the people of Missouri by reason of the flow of the canal waters through the Mississippi. The canal cost \$35,000,000 and has been in use for about one year.

President Pritchett, of the Massachusetts Institute of Technology, has an interesting article in *The Popular Science Monthly*, in which he computes the population of the United States for ten centuries hence. According to his figures the population of 1900, of 77,472,000, will have become 385,860,000 in 2000; 1,112,867,000 in 2100; 11,856,302,000 in 2500, and 40,852,273,000 in 2900. On the basis of these figures President Pritchett makes the following remarks:—

"With the growth of population our civilization is becoming more and more complex and the drafts upon the stored energy of the earth more enormous. As a consequence of all this, it would seem that life in the future must be subject to a constantly increasing stress, which will bring to the attention of individuals and of nations economic questions which at our time seem very remote."

The financial status of the Menominee Indians of Wisconsin is excellent, and their bank account seems to be increasing rapidly. About ten years ago the United States government secured to the tribe, which numbers about fifteen hundred members, the right to dispose of the timber upon their reservation, which at that time contained between 300,000,000 and 400,000,000 feet of pine. Since then the Menominees have cut from 13,000,000 to 20,000,000 feet a year, receiving for it as low as \$8.33 per thousand, during the depression of 1893, and as high as \$16.25, last year's figures. The deposited trust funds of the Menominees have increased from \$134,000 in 1890 to \$1,220,000 at the present time, while the Indians still have several years of profitable logging ahead of them.

The *New York World* says: "After searching six months for the oldest persons in the world, the committee on vital statistics of the Hundred Year Club of this city has prepared a report that shows that the oldest man is Izai Rodofsty of Moscow, Russia, who is in his 136th year, and the oldest woman, Mrs. Nancy Hollifield of Battle Creek, Mich., who is 117. Rodofsty was reported by Dr. Joseph Jernossky of Moscow, who says the old man comes of a long-lived family. His father died at 120 years. Rodofsty's sight is good, but his hearing is poor. He was never ill. Dr. Wood of the Battle Creek (Mich.) Sanitarium reports that Mrs. Hollifield has lived a temperate, simple life, doing household work for years."

Governor Sayres sent a message to the Texas Legislature January 29, making a report of the Galveston relief fund. The report says that \$978,414 were received by the Governor, and funds received at Galveston, Houston and other places increased the amount to \$1,988,414. Every nation in the world contributed in some form to the fund.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

American Inventions of the Nineteenth Century.

THE dead nineteenth century has been a marvelous one, so far as inventions are concerned, and, what is more remarkable still, the United States, the youngest of nations, heads the list both as to number of inventions and their scope and ingenuity. No other country can compare with the United States in this respect; in fact, France, England, and Canada united just about equal the number of patents obtained in America during the nineteenth century.

In one hundred years, 650,123 patents were granted in the United States. France comes next, with 308,558; England next, with 278,129; Belgium, with 154,155; Germany, 126,114; Austria-Hungary, 82,933; Canada, 65,510; Italy, 49,990; and Spain, 22,314. From the birth of the Patent Office in 1790 until 1836, 9,957 patents were granted. In the latter year, 109 patents were issued. In 1890, when high-water mark was reached, 26,292 patents were issued. As far as states are concerned, Connecticut is the most prolific, while Thomas A. Edison heads the list of individual patentees, with 727 patents issued and more pending. Besides, there are about forty other inventors each of whom has more than one hundred patents to his credit.

But leaving the number of patents aside, the quality of the inventions is as remarkable as their quantity. The steamboat owes its origin to American ingenuity. It was Robert Fulton, its inventor, who went to the great Napoleon, offering to put it within his power to conquer England with a fleet of steam-propelled vessels. The Corsican laughed at the ridiculous idea and—Britain eventually conquered the scoffer of Fulton.

Morse annihilated space with his American-invented telegraph. Field united two continents by cable. Edison reproduced sound. He enabled telegraph operators to send four different messages on the same telegraph-wire at the same time. Bell enabled human beings miles apart to converse with each other. The first steamer to cross the Atlantic was the American *Savannah*. McCormick invented the reaper, making it possible for harvesting to be done with great speed, where formerly it was carried on in the most primitive manner. Americans first made watches by machinery. Smith and Wesson invented the magazine firearm. Sleeping-cars were first constructed in this country, being the invention of Woodruff. Iron floor beams were first used in frame construction, in the building of Cooper Institute of New York City. Howe invented the sewing-machine. Otis constructed the passenger elevator. The first barbed wire fence was erected in the United States. Ericsson invented the iron-clad battleship. And so on, in endless numbers almost.

Perhaps the most important of all inventions has been the application of steam to moving machinery. Steam is the primary power which moves our engines, runs our presses, does our work—is our servant. While the invention of the modern steam engine itself dates back to 1784, when James

Watt obtained his patent, yet the steam engine of to-day is of much more recent origin. The cut-off valve, which saves two thirds of the steam, the various gauges, the numerous rotary engines—in fact, most of the principal improvements to the engine of James Watt—are of American origin.

The steam fire-engine, such as every city in America possesses, is American, having been invented in 1841 by a Mr. Hodges. The great locomotives which draw our trains up to 112 miles an hour are all built on American lines. The total steam horse-power of the world is estimated at about 65,000,000, of which the United States can lay just claim to almost one third.

Next to steam, electricity has made the most wonderful progress. At the end of the eighteenth century practically nothing was known of this subtle fluid. A hundred years later, marvelous doings can be recorded. What steam fails to do for us electricity does. It rings our bells, propels our cars, raises our elevators, transmits our messages, reproduces our voices, plays our pianos, lights our streets and homes, and performs a thousand other functions. All these marvels owe their origin to the discovery of the electro-magnet, an indispensable adjunct to all electric contrivances, by Professor Joseph Henry of Princeton, N. J. Samuel F. B. Morse, utilizing Henry's invention, discovered the telegraph and the system of signalling which bears his name. Joseph B. Stearns of Boston discovered the duplex system of telegraphing and Edison the quadruplex. Royal C. House, another American, invented the printing telegraph, now used in every broker's office in the shape of the famous "ticker." Still another invention of American origin is the fire-alarm system, discovered by Channing and Farmer of Boston. Burglar alarms, district messenger calls, railroad signals, and hotel annunciators are also American by birth.

So far as dynamos are concerned, the first patent in this line was granted by the United States to Saxton, a citizen. Since then, Edison, Tesla, Westinghouse, and others have proven to the world that American inventors are unrivalled in the construction of new electrical contrivances.

The greatest step forward in electricity has, however, been in the propulsion of cars. Here, again, the American blazed the way, for Professor Henry, the inventor of the electro-magnet, also constructed the first practical motor. Dr. Page, another American, built the first electric locomotive, which, in 1851, drew a train from Washington to Badensburg at the rate of 19 miles an hour. To-day, there are in the United States about twenty thousand miles of electrical railways.

In electric lighting, too, America stands first. The greatest searchlight in the world is near Pasadena, Cal. It is of three million candle-power and can be seen for a distance of one hundred and fifty miles. The first incandescent lamp we can also claim, it being the invention of a Mr. Starr. Moses G. Farmer lighted his home at Salem, Mass., with electricity in 1859, being the first in the world

to put electricity to such a use. Since then, electric lighting has been so developed and has become so popular, that to-day there are about five hundred thousand arc lights and twenty-five million incandescent lights in active use in the United States.

The telephone dates to 1874, when both Professor Bell and Elisha Gray applied to the Patent Office for protection. After much legal wrangling, the prize went to Bell. To-day there are 772,989 miles of telephone wire in use, connecting 465,180 stations, and giving direct employment to 19,668 persons. In 1899, the Bell Telephone Company answered 1,231,000,000 calls.

Next to steam and electricity must rank printing and all its kindred industries, from the production of books to the development of the newspaper and magazine. Printing presses, or rather improvements which have made possible the modern paper, are all due to American ingenuity. The Washington hand-press, still in use in most printing offices, was invented by George Rust in 1829. R. H. Hoe was the greatest worker in this line of endeavor, however, for he it was who invented the web press, which feeds endless strips of paper into the press. From a few hundred an hour, these machines have advanced until they can now turn out ninety-six thousand eight-page papers in an hour, completely cut and properly folded.

With increased rapidity in printing came a demand for an increase in the quickness of composition. Here America once more distinguished itself, for it was Mergenthaler of Baltimore who invented the wonderful machine which bears his name. Hand in hand with the linotype, as this machine is called, came the discovery that wood, ground into pulp, could be converted cheaply into paper. As a result, paper has improved in quality and increased in quantity, and has materially decreased in cost.

United with the art of printing is the use of the typewriter. The first practicable typewriter—there had been half a dozen impracticable ones—was that of A. E. Beach, an American, who obtained his patent in 1847. Since then, thousands of other patents have so improved the typewriting machine that Mr. Beach would not recognize his invention, were he alive to see it.

Sewing machines have also played a prominent part in the inventive life of this country. In 1826 one Lye obtained a patent for such a contrivance, but it proved too cumbersome and was abandoned. The first practicable machine was that of Elias Howe, patented in 1846. From this has grown the complicated machine of to-day, which has greatly diminished the cost of clothing, of shoes—of everything that was formerly sewn by hand and is now stitched by machinery. It is estimated that Howe's primitive machine has grown into an industry which produces about eight hundred and fifty thousand machines a year and gives employment to more than one hundred thousand persons in this country alone.—*Collier's Weekly*.

The Lectures.

At Worcester, Mass.

The lecture on "Christian Science, the Panacea for the World's Unrest," given at Association Hall last evening (Thursday, January 17), under the auspices of First Church of Christ, Scientist, of Worcester, was attended by a most appreciative audience. The speaker, Rev. William P. McKenzie, was introduced by Dr. Moses H. Harris of All Souls' Church (Universalist).

Dr. Harris recognizes the practical results of Christian Science, and generously gives credit where credit seems due. He concluded his remarks by saying that Mr. McKenzie had come to Worcester with a message that all would be glad to hear.

Mr. McKenzie prefaced his address by a cordial acknowledgment of Dr. Harris' generous remarks.

The introductory address by the Rev. Dr. Harris, was as follows:—

Ladies and Gentlemen:—It is a most pleasant duty to which you call me this evening hour, in the privilege of standing upon this platform to give you glad welcome and look into your expectant faces. I can assure you that it is a sweet pleasure for me to mingle with such a company of good people, for men and women in Science must be good people. I am interested in what you are accomplishing for distressed humanity. Your expansive power as a church is simply marvelous. I rejoice with you in the growth and progress which you are making in foreign countries as well as here at home. The helpfulness you are bestowing upon men, no one but the good God can truly weigh and rightly estimate. I have seen a man bound soul and body with beastly appetite, whose influence and act were only ruin to himself and others. I saw the angel of Science confront this man, and speak to him, "The Truth shall make you free." I saw this Truth unloose his bonds, and he became conscious of a new spirit possessing him; he looked out upon a new world; he saw the faces of friends and brothers where only an enemy had looked upon him before; and his life was gradually transformed into a Christian life.

I have seen a woman careworn, despondent, and disheartened with the burden-bearing roadway which she was compelled to travel. Along this roadway the angel of Science came singing one day. This poor child of God paused for an hour and listened to the sweet music. Its inspiration was an uplift to her soul. She came out from the sorrow-stained paths, and stood upon the hill of vision where she saw and understood as never before the God—Love—whose healing touched her life with a new impulse, divine strength, and the beauty of cheerfulness. She was made whole from that day.

Sisters and brothers in Science, I recognize the great good you are doing in the broad realm of humanity, in lifting the veil of indifference from human hearts, which were cold towards man, sceptical in regard to the Bible, and enemies of our Lord and Master. The healing touch of Science tore the veil away, infused a new spirit into the heart, so that those men have become devoted helpers of man, ardent students of the Bible, and lovers of Jesus Christ and his Church. May your Truth reach out in still wider circles and win greater victories for God and man.

My friends, I now take great pleasure in presenting to you the Rev. William P. McKenzie of Cambridge, who comes with a message to-night. That message is, "Christian Science, the Panacea for the World's Unrest."

Correspondence.

At Hartford, Conn.

Judge William G. Ewing of Chicago addressed a large audience at Parsons' Theatre yesterday afternoon (Sunday, January 27) on Christian Science.

The audience was made up of many attendants of the churches of the city and was most attentive. It completely filled the lower part of the house and several hundred persons were in the first gallery. The platform was tastefully decorated with palms, and on the table was a large bouquet of roses.

Judge Ewing was presented to the audience by H. W. Brown, Second Reader of First Church of Christ, Scientist, who said:—

Friends:—On behalf of First Church of Christ, Scientist, of Hartford, I extend to you hearty greeting and thank you for your generous response to its invitation to this lecture on Christian Science. The words Christian and Science are the two most significant words in the

English language, and their meaning in connection with the mighty movement they designate, seems little understood by mankind in general.

The world at large at this hour is crying for more of the Christ teaching and practice given to us by our Master in the Sermon on the Mount. More of the love he lived and less of material law. More of the Mind that was in Christ Jesus and less of the material aids that he never used.

It argues for those who minister, to heal the sick as well as the sinful, and to replace the old law of an eye for an eye by that divine law of loving one's neighbor as one's self.

In introducing the lecturer who is to address you, it is only needful for me to say that he is a loyal Christian Scientist, and that he has long been a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., the Mother Church of Christian Science, thus qualifying him to speak with authority.

It gives me great pleasure to introduce to you the Hon. William G. Ewing of Chicago, who will now address you.
Hartford Daily Courant.

At Whitman, Mass.

Only a few years ago if a lecture on Christian Science had been given in Whitman it would not have attracted a dozen people. Since then a society has been formed in town which holds regular Sunday and mid-week meetings and which is growing in membership with each month. There are a large number of people who are reading up on this subject, and they gladly took the opportunity to hear the lecture which was given at Village Hall on Tuesday evening (January 15), over two hundred being in attendance. Several of the surrounding towns were represented in the gathering. E. H. Keens, minister of the Unitarian Church, who has been a deep reader on the subject, consented to act as chairman of the meeting, and in his opening remarks gave the Science quite a strong testimonial and said that the study would benefit and not injure any one. The lecture was thoughtfully prepared and very interestingly delivered, and was given by Rev. Irving C. Tomlinson, an official lecturer of The First Church of Christ, Scientist, in Boston. The lecture will be found on another page.—*Whitman Times.*

At Columbia, Mo.

Thursday evening of last week (November 15) at the Haden Opera House, a good-sized crowd heard the earnest talk of Judge William G. Ewing of Chicago, in his plea for Christian Science. The lecturer was introduced by Mrs. Julia Hewitt. By his kindness of manner and fair treatment of the other churches, Judge Ewing won the sympathy of his auditors at the very outset. He had no war to make on any denomination, and said nothing that would offend the most sensitive person.

Missouri Statesman.

At Lawrence, Mass.

The doctrine of Christian Science was ably expounded in the Opera House yesterday afternoon (Sunday, January 20), by Judge William G. Ewing of Chicago. About twelve hundred persons gathered to listen to the speaker, who was distinct and expressive in his delivery and logical in his argument. The local Scientist Church conducted the affair.

The meeting opened at half past three, a few words of introduction being spoken by Lawyer Louis N. Bennett of Boston.—*Lawrence Daily Eagle.*

Lectures at Other Places.

Dawson, Minn.—Edward A. Kimball, January 7.

Selected Articles.

A Reply to a Pamphlet on Christian Science.

THE writer requested a hearing before the Ministers' Alliance to save them from the humiliation of publishing statements in regard to Christian Science that were both untrue and unjust. The hearing was not granted, and this article is written to correct what surely are unintentional errors.

"What shall we say about Christian Science?" by Rev. Frank S. Bayley, a pamphlet sanctioned by the Ministers' Alliance of this state and widely distributed, contains erroneous statements about Christian Science.

If the pamphlet were a true statement of its teachings, we would agree with its author that it was "vitiated by deadly errors." But it is not a true statement. The author admits that "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is the standard text-book, and then quotes several pages from spurious literature, diametrically opposed to the methods of this Science, and makes deductions from these quotations.

The literature from which these quotations are taken bears the same relationship to Christian Science that the gnosticism of the early centuries did to the teachings of the primitive church. We would not call Christianity and gnosticism "twin sisters." John said, "They went out from us, but they were not of us; for if they had been of us, they would no doubt have continued with us: but they went out, that they might be made manifest that they were not all of us."

The following are a few points given to show that Christian Science follows in the footsteps of Jesus Christ:

Mrs. Eddy says in "Science and Health with Key to the Scriptures" that the Bible was her only text-book; she states: "I had no other guide in the straight and narrow way of this Science." If the source was the Scriptures, the result must be Scriptural. Like produces like.

Man's mortal life is his conception of God made manifest. The Puritans' hard, severe idea of God was manifested in the expulsion of Roger Williams, and in their method of dealing with Salem witchcraft. The Himalayan tribe that worships a god of murder, kills as many people as possible. The Friends manifest their God in peace and brotherly love. It is clear that our acts are the product of our thoughts, and we are no better than our beliefs.

It is acknowledged by our brother that the beautiful lives of many of its adherents win his admiration, and he recognizes them as devout Christians. Jesus said: "The tree is known by its fruit." If the fruit of Christian Science is shown in many beautiful Christian lives, as the brother affirms, the Science is Christian.

It is stated that "it is not scientific because its methods and conclusions are diametrically opposed to the accepted science of to-day."

We admit that Christian Science is opposed to some of the science of to-day; but does that prove that it is, therefore, not scientific? True science, or "knowledge classified and made available in the work, life, or search for truth"—*Webster*—comes from God, and has ever been at variance with this world's methods. Paul said, "The wisdom of this world cometh to naught." If you depend upon the five senses and their deductions for evidence, you do not know there is a God. You have faith there is, but faith steps into the region of the unseen away from the evidence of material science. You must believe either the material evidence of the senses or the spiritual evidence of the Bible.

The spiritual science of Jesus' healing never failed. It reached all manner of diseases. It gave the only genuine

prescription for prevention, "Go, and sin no more." So-called material science was overcome when Jesus raised Lazarus from the dead. If you accept his teachings, you must recognize the fact that there is a spiritual, scientific law that was used by Jesus which annulled all those methods of observation and deduction gained through the physical senses. If you believe in his life and methods of work, you cannot sanction those of material science.

Our brother speaks lightly of the spiritual interpretation of the Scriptures as given in Science and Health. To one who has no knowledge of the vocabulary of chemistry, H₂O does not readily interpret itself as water, but to the chemist it is a clear language.

The priests were so incensed at Jesus' interpretation of the Scriptures that many would have killed him. "Then opened he their understanding that they might understand the Scriptures." He expounded some portions of it to them alone, for the masses could not comprehend it. Paul in Rome, appointed a day at his lodging when many came, to whom he revealed this new interpretation of the Scriptures. As it is to-day, some believed and some did not. When Paul addressed the learned in music, sculpture, painting, and books at Athens, his exegesis and metaphysics were to them as strange as Mrs. Eddy's teachings are to-day to those who do not understand them, for we read, "Some mocked." Mrs. Eddy's interpretation has awakened thousands of people to the spiritual truth of our dear old Bible.

Christian Science states that there is no sin in reality—not that it does not exist to our human sense. Anything to be real, must be permanent, enduring, and substantive in its existence. Christian Science teaches that all sin will be overcome at last. Therefore, it is not real; God never created it; it has not a permanent, enduring, and substantive existence. Christian Science belittles sin by overcoming it. Our friends, the clergy, are trying to-day to overcome sin. If they believe it to be real, and that God created it, are they not following a forlorn hope?

To the morphine eater, his desire is real. The attraction of the drug overpowers all else, but through the power of God, as manifested in Christian Science, the desire leaves him. Then it is no longer real, but unreal. So it will be with all sin, when the law of the Spirit of life in Christ Jesus has made us free from the law of sin and death.

Many books have been written and long sermons preached, explaining the meaning of the Lord's Prayer. The writers and clergy have never been classed as "presumptuous" for giving to the world their best thought on this subject. Science and Health gives the spiritual interpretation of this prayer, but does not change it. The Lord's Prayer, as used to-day in other churches, is a part of our service.

It is a common experience in our churches that during the reading of the Bible and its explanation in Science and Health persons are healed of their ailments—physical and moral.

We are told "the prayer of faith shall save the sick." Jesus' prayers healed the sick. Christian Science prayers heal the sick. Which prayer subverts Jesus' teachings? the one that heals or the one that does not?

James tells us, "Faith without works is dead;" and he also says, "Thou hast faith, and I have works: shew me thy faith without thy works, and I will shew thee my faith by my works."

The brother states he will frankly confess he has no explanation for some of the cures. "Why should it be thought a thing incredible with you, that God should raise the dead?" Is the Lord's hand shortened that it cannot save, and His ear heavy that it cannot hear? Has God changed? What authority is there in the Bible for the

statement that the healing work was for a past dispensation? And, if that be true, will God change again? for in the word of St. John we are told that the time cometh when there shall be "no more death, neither sorrow, nor crying, neither shall there be any more pain." No, God is the same yesterday, to-day, and forever. It is only darkness—ignorance of God—that has hidden from us the fact that He healeth all our diseases.

Jesus said of a certain woman that Satan had bound her. He did not tell her she was incurable, or refer her to one who would use chloroform and perform a surgical operation. But he unbound her by the one power, which is of God.

Christian Scientists are trying to do, and are doing, in the degree that they love God above all else, this same work. Why condemn them? It is because of a misapprehension of the teachings of Christian Science that it is condemned.

The brother states, "I believe the power of this new teaching is due in no small part to the neglect of the ministry and churches to teach and give out these very truths." Then would not this very neglect of duty and spiritual darkness, which our brother so honestly laments, make them incapable of seeing the dawn of Truth through Christian Science? Jesus spoke of the same gross darkness of the people in his time. "Why do ye not understand my speech? even because ye cannot hear my word." The thirty-fourth chapter of Ezekiel fully explains the present situation. If the shepherds are in that condition now, are they any more capable of judging the same Truth as taught in Christian Science? We are told, "In thy light shall we see light." "But if we walk in the light, as he is in the light, we have fellowship one with another, and the blood of Jesus Christ His son cleanseth us from all sin."

The brother attempts to demolish the structure of Christian Science by criticism of its use of the word infinite. He does not base his argument on the teaching of the text-book, but introduces a man of straw, from writings the direct opposite of Christian Science teaching. Then he proceeds to destroy the man he erected.

The brother states that the premise, "'God is all,' is plausible, but false." God will become all to a mortal just in the proportion that one loves God with all his heart, and with all his soul, and with all his might. To understand this requires a spiritual growth, gained only by a life of unceasing prayer. In the ratio that self decreases, God increases, until finally we all shall sing with the true children of Judah, "Hear, O Israel: the Lord our God is one Lord," and God will be to us, all. "Unto thee it was shewed, that thou mightest know that the Lord he is God; there is none else beside Him." Our collegiate educations, polished oratory, and scholarly arguments, help not one iota to the spiritual understanding; but a life of prayer, honesty, purity, and sincerity, will open our hearts until God will be to us, all.

The newness of an idea, and the misapprehension which always provokes censure and accompanies every advance in religious thought, when it departs from established rules, must rest upon Christian Science. Some of our number have come out from other churches, but are thankful for all the light they received there. Large numbers are coming to us from non-church-going people. These people were shown the power of God, and accepted the Bible. They had turned from other churches, or never been with them, so how can our brother ascribe their "moral momentum" to anything but the spiritual awakening coming through Christian Science? We cannot agree with the brother that "They were attracted by the Truth, not harmed by associating with erroneous thought."

Paul clearly states, "Evil communications corrupt good manners," and he tells us we are to "bring into captivity

every thought to the obedience of Christ." Truth and error cannot assimilate. If there were error in the Christian Science teaching, it would be exemplified in the lives of its followers, and they could not, as is stated here, "live beautiful Christian lives."

Human opinion is to-day put to awkward shifts while trying to explain how Christian Science heals the sick, for its intelligence is at a discount when it finds anything unexplainable. So it calls Christian Science healing auto-suggestion and will-power. The fact is, that Science teachers impress upon their students the evils arising from hypnotism, and practitioners know that they would lose all their healing power if they used it.

The material sense can never define nor understand spiritual healing, but the Christian Scientist understands the rule of his Scientific prayer, and he can discern and explain the difference between this method and hypnotism.

Hypnotism heals through the influence of will-power. It is claimed that it can be used for both good and evil. Christian Science is the law of God, and heals through the action of this Divine law. Coming from God, its effect can be for good only. A study of the text-book, Science and Health, makes clear the separation between these two methods. To a Christian Scientist, hypnotism in all its forms is both dangerous and demoralizing.

It is interesting to note how the same aspersions are applied to Christian Scientists as to the Master and his followers. Jesus was called "a stirrer up of sedition." Paul was accounted insane. "They are of the devil and cast out diseases through Beelzebub, the chief of the devils." The very words of nineteen centuries ago we hear concerning them to-day.

Christian Science invites a candid inquiry into its tenets. It is not a beautiful speculative theory that carries you through a dreamy chaos of celestial delight, but is a practical guide that leads you in the straight and narrow path, and helps you to overcome sin, sickness, and death in the degree that you understand its Principle.

Courtesy Due Christian Scientists.

To the Editor of the *Leader*.

I notice in your issue of November 12, an interview with Rev. Dr. Banks, pastor of the Methodist Episcopal Church, and his views in reference to breaking the law were given. Let me say in answer to same that all Christian Scientists would uphold such views because they emphatically do not believe in breaking the law.

However, he states that the so-called Christian Scientist has an insane belief and he assumes that he is superior to the laws of nature. Such a statement could hardly be believed by any one. Does not God give all life? Does not the universe reflect God in life? Are not the laws of nature the laws of God? Doubtless there is no class of people in the world who love nature as the Christian Scientists do. They love all nature, for they see God's handiwork therein; they see that God is the divine Principle of all and they have an understanding of the spiritual creation which He has made. It is, therefore, out of the question for any one to think for a moment that a Christian Scientist or any one else is superior to God.

Dr. Banks treats flippantly the prayers of a Christian Scientist, calling them mummeries. It seems incredible that this good man, the representative here of the beloved John Wesley, that famous circuit-rider, should make such a statement and call the prayers of any one of whatever faith, "mummeries." Christian Scientists pray as the Master taught them in the Scriptures.

I wish also to correct a statement made in the same

article which intimates that the Christian Scientist refuses to protect innocent people from contagious diseases. I can only reiterate that the Christian Scientist is quick to observe the laws of local boards of health, and never interferes with the "life, liberty, and rightful pursuit of happiness among other people." They recognize that the rights of others should be upheld and they follow strictly the Golden Rule. They are willing to accord the same protection to others as they would expect themselves.

Representatives of all orthodox religious beliefs have frequently harmonious religious intercourse and manifest brotherly love. Should not the same courtesy be extended to Christian Scientists, who believe that God is Love, and that man, made in His image and likeness, reflects Him?

The Perfect Peace.

BY CHARLES H. GLIDDEN.

PEACE that floweth as a river,
Calm, and deep, and wide, forever;
Peace that comes of selfless Love,
Peace all other peace above.
Father, give this peace abiding,
To Thy sons, in Thee confiding.

Peace and Love are ours forever,
These from us no power can sever.
Like the ether Love surrounds,
Truth alone man's being bounds.
Peace eternal, rest abiding,
Come to us in God confiding.

Peace that passeth power of telling,
In the heart a spring upwelling;
This the peace we may command,
Holding ever God's right hand.
In Thy secret Place we're hiding,
O, great Heart of Love, confiding.

Notice.

REMITTANCES should be made by post-office money order, express money order, or exchange on Boston or New York. Exchange on Chicago and other cities not named above, will not be accepted.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Mch. or, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for April, May, and June.

Don't Be Sparing of Your Love.

The power to love is one of the greatest gifts to humanity. It generates the sunshine of the moral universe, without which life would be a desert waste.

Use this divine power without stint. Be prodigal of your love. Let it radiate freely. It will brighten the dark places. It will gladden the sorrowing. It will lift you above the petty, grinding cares that so soon corrode the mind and sap the energies. It is the golden key that will admit you to the palace of the true life.—*Success*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Meeting In Memoriam.

At a special meeting of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., held January 31, 1901, this letter from our *Pastor Emeritus*, the Reverend Mary Baker G. Eddy, Discoverer and Founder of Christian Science, was read, and the following resolutions unanimously adopted as fully expressing the sentiment of the entire church of nearly twenty thousand members.

Pleasant View, Concord, N. H., January 27, 1901.

Mr. Benjamin Johnson, C.S.B., Clerk.

Beloved Student:—I deem it proper that the Mother Church in Boston, Massachusetts, the first church of Christian Science known on earth, should, upon this solemn occasion congregate. That a special meeting of its First Members convene for the sacred purpose of expressing our deep sympathy with the bereaved nation, its loss and the world's loss, in the sudden departure of the late lamented Victoria, Queen of Great Britain, and Empress of India,—long honored, revered, beloved. "God save the Queen" is heard no more in England, but this shout of love lives on in the hearts of millions.

With love,

MARY BAKER G. EDDY.

Whereas, we have received, with deep regret, information of the deplorable calamity which has befallen Great Britain in the loss of their much loved Queen; therefore, be it

Resolved: that we hereby express our deep sympathy with the bereaved nation in the loss of their benign ruler and much loved Sovereign, Queen Victoria.

Resolved: that as Christian Scientists, we are profoundly sensible of the influence on the whole world of the Christian character, and lofty womanhood manifested by the late Queen; and that we express our appreciation of the golden virtues which, for more than sixty years, have adorned so exalted a position.

Resolved: that the clerk of this Church be authorized to convey this expression of sympathy of the Church to the government of Great Britain; and also that the same be published in our denominational publications.

At the suggestion of Hon. Ormond Higman, of Ottawa, Can., the American flag and a British flag (which he presented to Mrs. Eddy two years ago) were placed at half mast, at Pleasant View, Mrs. Eddy's home in Concord, N. H., on February 2.

Memorial Meeting at Concord, N. H.

A UNION service of the churches in Concord, N. H., in memory of Queen Victoria, was held Sunday evening, February 3, 1901, under the auspices of the different pastors of the city. The local orders of Sons of St. George and Scottish clans, with their auxiliaries, attended in a body.

The occasion was a notable and significant one, tending in the direction of brotherly love and Christian unity.

The principal addresses of the evening were as follows: "The Mourning of the Anglo-Saxon Sorrow," the Rev. J. H. Robbins; "Victoria as a Christian Monarch," the Rev. John Knox Tibbitts; "Victoria in Private Relations," Roland Rhodes; "Victoria's Death a World Loss," the Rev. G. H. Reed.

In connection with this meeting the following letter which was published in the *Concord Evening Monitor*, from Mrs. Mary B. G. Eddy was made public:—

It being inconvenient for me to attend the memorial meeting at the South Congregational Church on Sunday evening, February 3, I herewith send a few words of condolence, which may be read on that tender occasion.

I am interested in a meeting to be held in the metropolis of my native state, in memoriam of the late lamented Victoria, Queen of Great Britain and Empress of India. It betokens a love and a loss felt by the strong hearts of New England and the United States. When contemplating this sudden international bereavement the near seems afar, the distant nigh, and the tried and true seem few. The departed Queen's Royal and Imperial honors lose their lustre in the tomb, but her personal virtues never,—those live on in the affection of nations.

Few sovereigns have been as venerable, revered, and beloved as this noble woman, born in 1819, married in 1840, and deceased the first month of the new century.

The Bright Side of Life.

It has been said that no person ever sinks beneath the burden of to-day; it is only when to-morrow's burden is added to that of to-day that it becomes heavier than one can bear. Mortals are naturally pessimistic, ever looking on the dark side of things and fearing the worst. They are continually saying in the language of Job, "The thing which I greatly feared is come upon me, and that which I was afraid of is come unto me." They are inclined to think and talk of the discords, the unpleasant things of life, rather than its joys and beauties. That they see what they believe and look for is as certainly true as that they believe what they see.

The bad effect of this practice is twofold. It has a tendency to bring about the very thing that is feared, and it likewise robs one of the blessings at hand. Mortal man need not be told that such a course is to be avoided. His own better judgment tells him that he should think and talk about the good things he is permitted to enjoy to-day, and entertain no fears for the future. "Sufficient unto the day is the evil thereof," and he knows that it is folly for him to view with fear and apprehension the evil that may never come upon him. Mortal man knows all this, but how to avoid doing the very thing that increases the discords and disappointments of life, is an unsolved problem. When he is told that he must not fear, it seems almost impossible for him not to do so, for there are so many things which he feels he has good reason to fear. They have harmed him in the past and why should they not harm him in the future? Thus he believes himself unable to look on the bright side of life, even though he greatly desires to do so. When he attempts to rise above the discords and discouragements of mortal existence, he feels his own weakness and the need of something outside himself.

That this need is supplied in Christian Science is a fact which is being demonstrated by thousands and can be demonstrated by any earnest seeker for Truth. The understanding of Christian Science enables one to look on the bright side of things as never before; thus it greatly increases the harmony of the present and takes away the fear of the future. Peace and happiness are divinely

natural, and they flood the human heart, when erroneous belief is destroyed, as naturally as light pours in through the open window.

Because the Science of Christianity turns thought Godward it enables man to look on the bright side of life until it is seen that the bright side alone is real, while the dark side is nothing but an unreal shadow. Here is where Christian Science departs from the generally accepted theories. It declares that discord is an unreal sense, and then demonstrates the truth of the statement by causing the discord to disappear. Mortal man has rendered himself weak by resisting evil as an entity. He has found it difficult to turn from the contemplation of that which he believed to be a stern reality.

Christian Science comes into his life declaring that God, infinite Good, is the only Creator, and that "all things were made by him; and without him was not anything made that was made." He goes to work to demonstrate this great fact, and he is oftentimes surprised at the results accomplished. He does not destroy all evil with one well directed blow, neither does he expect to do so, but of this one thing he is as sure as he is of his own existence, that by planting his feet on this Scriptural declaration and standing firm for the Truth, he has been enabled to master claims of evil that had previously baffled all efforts.

He is learning from experience that it pays to look on the bright side of things. No matter how dark and heavy may hang the clouds, he knows the sun is shining and he will behold it in all its brightness. This thought alone brings light and joy into his life, and he rejoices in the apprehension of the great fact that "the things which are seen are temporal; but the things which are not seen are eternal." By standing firm for Truth, looking on the bright side of life, he hastens the coming of the day of God, the reign of Spirit, when discord and suffering shall be known no more.

Whereas he once found it hard, if not impossible, to refrain from contemplating the discords which beset him, now he finds it easier to turn his gaze in the opposite direction because he has a reason for so doing. The fact that, in reality, God is the only Creator, and that He is the author of good only, gives man a reason for the hope within and he turns naturally to the contemplation of the beautiful, good, and true. It must not be concluded, however, that he simply ignores the claims of evil. While it is true that God and His creation alone is real, yet the Christian Scientist realizes that the claims of evil must be met and mastered. The claims of evil are false and he must *prove* their falsity, for only by so doing can he free himself from them. Thus when occasion requires that he think or speak of evil, he does so understanding that evil is but a false claimant to place and power. The realization of this great truth makes him free. As good becomes more real, evil must of necessity become less and less real until it finally disappears.

As the bad effect of looking on the dark side of things is twofold, so the good effect of looking on the bright side of life is twofold. In the first place, it causes one to appreciate the blessings which are his to enjoy in this present time, and in the second place it takes away the seeming power of evil to rob him of happiness and harmony. Thus it is that man has everything to gain and nothing to lose by looking on the bright side of life.

No one knows better than does the Christian Scientist how the true idea of Christianity, understood and practised, enables one to look beyond the shifting scenes of human experience to the glorious realities of life eternal. The Science of Christianity lets God's will be done on earth as it is in heaven. It declares that Good alone is real and all that is worthy of an abiding place in man's thought. It destroys sin, heals sickness, and demonstrates that the kingdom of heaven is even now to be found in the understanding of God's abiding presence and power.

Board of Lecturers.

WE herewith republish the list of members of the Board of Lectureship as it now exists.

EASTERN SECTION.

The lecturers for the New England States are:—

Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Maritime Provinces, Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

The Province of Quebec, the cities of Ottawa and Kingston, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

MIDDLE SECTION.

For the States of New York, Pennsylvania, New Jersey, and Delaware, and the Province of Ontario:—

Carol Norton, C.S.D., 170 Fifth Avenue, New York.

Rev. Arthur R. Vosburgh, C.S.B., Powers Block, Rochester, N. Y.

SOUTHERN SECTION.

Mrs. Sue Harper Mims, C.S.B., 575 Peachtree Street, Atlanta, Ga.

John Freeman Linscott, C.S.D., 1511 Twentieth Street, N.W., Washington, D.C.

WESTERN SECTION.

For the Western States and all Southern States west of the Mississippi River:—

Edward A. Kimball, C.S.D., 5020 Woodlawn Avenue, Chicago, Ill.

Mrs. Annie M. Knott, C.S.D., Suite 508, Chamber of Commerce Building, Detroit, Mich.

Judge William G. Ewing, C.S., 3743 Ellis Avenue, Chicago, Ill.

Silas J. Sawyer, C.S.D., Room 301, Masonic Building, Milwaukee, Wis.

PACIFIC COAST SECTION.

F. J. Fluno, M.D., C.S.D., 1319 Grove Street, Oakland, Cal.

Abraham A. Sulzer, M.D., C.S.B., 1062 Ninth Street, Riverside, Cal.

GREAT BRITAIN.

William N. Miller, Q.C., C.S.B., 57 Bryanston Street, Marble Arch, W., London, Eng.

A Correction.

In the article in the February *Journal* on "The Withheld Disclosures of Truth" by John B. Willis, the following corrections are made.

Page 672, line 34 substitute *one* for *me*.

Page 675, line 9 substitute *their* for *this*.

Page 678, line 1 substitute *monument* for *movement*.

Among the Churches.

Opening Services at Chattanooga, Tenn.

The opening services of First Church of Christ, Scientist, in their new quarters, the old Second Presbyterian Church, corner of West Eighth and Chestnut Streets, yesterday morning (Sunday, January 6), was a memorable occasion to those present. The church was comfortably filled, quite a large number of strangers being present.

A great transformation has taken place since the Scientists leased it, six weeks ago. New windows have been put in, the church has been painted inside and out, and the inside decorated in tasteful colors, new carpets, pews, etc., and the whole building improved in every respect. The interior color scheme is very quiet and harmonious, being of a terra-cotta and brown. On the alcove in rear

of reading desks is the text from John, "God is Love." On the left hand of the rostrum is the text from Revelation, "Now is come Salvation and Strength, and the Kingdom of our God and the Power of His Christ." On the right hand is a quotation from Mrs. Eddy's book, "Science and Health with Key to the Scriptures:" "Divine Love always has met, and always will meet, every human need."

The reading desks are of antique oak, and the chairs correspond, both being in harmony with the general effect of the church. The reading room connected with the church is in the entrance, tastefully fitted up with pictures, texts, etc., on the walls, and comfortable chairs around the table, on which and in the bookcase is a plentiful supply of Christian Science literature for free distribution. It is open daily, except Sunday, from nine to four, and Scientists are always there to receive visitors.

The outside woodwork is painted a dark green, and the front doors grained in oak. On the pilaster, near the front entrance, is a sign in gold and silver letters on a green background, giving name of church, information as to services, reading room, etc.

The church has a capacity of about four hundred, and the increasing growth of the congregation will soon fill it. They have leased it for five years, and hope by that time to build a large new church, which will be the equal of any in Chattanooga. They have an assured building fund of eleven thousand dollars, which is constantly increasing.

The services were simple and impressive, being the regular sermon with a few minutes' talk by the First Reader, Mr. Edward E. Norwood, which was as follows:—

As I look around this morning and see the faces of quite a number of strangers who have come to be with us on this occasion, as well as those of our own congregation, I am reminded of a verse in the Scriptures, "Many shall come from the east and west, and shall sit down with Abraham, and Isaac, and Jacob, in the kingdom of God."

It is typical of that union of all God's children in one brotherhood of Love, one universal church, whose standard of membership is an understanding and demonstration of a Scientific Christianity and a life of purity and love which alone enables one to make this demonstration.

The nineteenth century just ended, so prolific in inventions, improvements, and discoveries of every kind, has not been amiss in exploring new fields in the spiritual realm. There have been raised up bold thinkers, intrepid investigators, who, tiring of a humanized sense of God, have endeavored to follow the injunction of the prophet of old, acquaint themselves with Him, and be at peace.

To praise God is not enough; to adore Him does not satisfy; but a fervent, unquenchable longing to know and do His will, will so lead us into an understanding of what He is, as to enable us to demonstrate Him as divine Principle, and then, and not till then, are we worshipping the Father in Spirit and Truth.

Christian Scientists believe that in their religious system they have a rational, reasonable explanation of what God and man are—God the Infinite, Supreme, Intelligence, Love, is and has power, and man, the real spiritual man, God's image and likeness, not overcome of evil, but overcoming evil with good. And, above all, while firmly believing, they have in their religion an explanation of the Science of Being, which will eventually lead men into all Truth, they are trying to remember that the best way to enforce any religious tenet is to bring it into vigorous action in their own lives, that they have this Truth "only as they live it," and can never honestly preach higher than they put it into practice.

Chief among these reformers of the past and present century, stands our Leader, Rev. Mary Baker Eddy. Born of Puritan stock, nursed and nurtured in the cradle of piety, growing up to womanhood with an unanswered

"How" and "Why" upon her lips, she calmly set to work to solve the problem of Being. Through tireless toil and patient perseverance, extending through nearly a quarter of a century, she at length discerned the wonderful Truth which our Master taught, and which was so ably expounded by his great follower, Paul. When Mrs. Eddy at last gained the solution of the problem of Life and gave it to the world, how was it received? With honor, with gratitude, and joyful acceptance? No. She soon learned the opposition of mortal mind to the divine impulses, and walking in the midst of a crooked and perverse generation, she found what it was to suffer for doing good. It has ever been so. All through the ages, those brave ones who have had strength and hope and faith enough to lift up their heads, open the door of their thought, and let the King of Glory in, have been maligned and persecuted. It is the penalty error affixes for daring to unseat it. But she went on, and neither flinched nor faltered.

When "Science and Health with Key to the Scriptures" was given to the world, critics said, "To be sure, it is very original, but will never be read." That was in 1875. To-day the 203d edition of one thousand copies each is issued, and it is being published at the rate of about two thousand a month and the sale is constantly increasing.

To-day in the United States, Canada, and Europe, there are over five hundred congregations, all having the same lesson which we have this morning, who have all during the past week been studying these references from the Scriptures and "Science and Health with Key to the Scriptures," and who assemble to-day in their respective churches, just as we do to hear them read. We have in these sermons an original and striking method of presenting the Truth to the world, unmixed with personal opinions, and unlimited by any material theories. The spiritual power of it all is something wonderful. As on the day of Pentecost, we are learning to be all of one Mind, in the same condition of thought.

Our religion is spreading and growing as no religion ever has before, and this, not through any revivals or special efforts at proselyting, for that is never done in Christian Science, but through the individual seeking and finding of those who join.

And so, dear friends, I only add, the Church of Christ, Scientist, stands in the fullest and largest sense for honesty, meekness, purity, and love, for all that constitutes a Christian.

And while we rejoice with unspeakable joy at our success, we would remember that the Christian church has ever been weakest spiritually when strongest materially. We would learn by past history the lesson of true humility, and cling closely to our spiritual birthright, dominion over all pride and glory of the flesh, and abide in the secret place of the most High. Only as we do this can we hope to succeed. Though we build higher than the heavens, and do not build on an absolute spiritual basis, it were worse than useless. But we would remember and profit by the words of what is thought by some to be the leading poem of the century which has just left, and say, in the language of "The Recessional,"

The tumult and the shouting dies,
The captains and the kings depart;
Still stands Thine ancient sacrifice,
An humble and a contrite heart.
Lord God of Hosts, be with us yet,
Lest we forget, lest we forget!

Chattanooga Times.

Christian Science Service at Port Huron, Mich.

The first Christian Science service in Port Huron, Mich., was held Sunday, July 30, 1899, at the home of Mr. George T. Johnstone, the First Reader. The attendance

was small, and often the service was conducted with no one in attendance except the family of the First Reader.

In connection with the healing work, Christian Science literature has been systematically distributed, and in every way possible the work prosecuted with vigor. Little by little the results of consecrated, selfless labor have been made manifest, and the attendance at both the Sunday morning and Wednesday evening services has increased until the procurement of more commodious quarters and effecting a permanent organization are matters which claim early attention.

Last October it was decided to announce Sunday School for the children, and among the few who attend much good work is being done. Sunday, December 23, the congregation were invited to remain to the opening exercises of the Sunday School. After song and prayer, the superintendent read Isaiah, 59:20; Isaiah, 35:5, 6, and St. Luke, 2:1-11. The reading was followed by a brief address in connection with the thought of Christmas, after which commandment cards were presented to the children, these being a gift from the children of the Sunday School of Third Church of Christ, Scientist, Chicago, Ill., accompanied by the following message:—

"Divine Love always has met, and always will meet, every human need."

"We send these love cards to you."

"God's love goes with this gift to you."

Following is the address of the superintendent:—

In your hearing has been read a prophecy of great moment, and the history of its fulfilment. Not only has this event ushered in the joyous Christmastide, when the hearts of old and young are made glad, but to our consciousness through Christian Science, has been revealed the one God and His Christ.

It is well that we should pause for a brief moment and consider what Christmas indicates to us. Christmas is in commemoration of the birth of Jesus the Christ, and our text-book states that "Christ born of the Father illustrated the coincidence, or spiritual agreement, between God and man" (*Science and Health with Key to the Scriptures*, by Mary Baker G. Eddy, p. 228).

As Christian Scientists, therefore, Christmas represents to us the initial point in our lives when, through demonstration of divine Principle, we comprehend the allness of God and the consequent nothingness of matter, and are enabled to claim the true birthright of man. To Christian Scientists Christmas comes not at stated periods, but daily is more of the Christ-Principle made manifest.

We who worship here to-day should be joyous for having come in a degree into that inheritance of divine Love which is "undefiled and that fadeth not away." We should be thankful for the Truth and Love, typical of the Star of Bethlehem, which has guided our steps to where the young child lay. Returning, as did the shepherds of old, with joy to tell others the glad news, let us remember that our highest ambition should be so to humble self that love may be enthroned supreme. It is by this process that the light of love enters and extinguishes the darkness, and we become transparencies for Truth.

We have received that interpretation of the Bible, which, if made practical in our lives, will lead us into all harmony and our hearts will be attuned to the divine. Let us all strive to make ours the true wisdom of Science. If we come into possession of this knowledge then will Christmas be perennial in the heart, and in its sacred temple will Christ be born daily.—A. H. FLANEGAN.

Report of the Work at Scranton, Pa.

An investigator's library was established in Scranton, Pa., October, 1899, beginning with six volumes of "Sci-

ence and Health with Key to the Scriptures" by Mary Baker G. Eddy. This was not sufficient to supply the demand, and it has been added to from time to time till now it consists of nineteen volumes, all of which are in circulation the greater part of the time. During the thirteen months since it started, seventy-five strangers have read *Science and Health* for an average period of five weeks each, resulting in cases of healing and sales of the book.

The church has distributed during the year Christian Science literature by mail and at railroad stations as follows:—

1,556 copies of *Christian Science Sentinel*; 814 Christian Science History; 510 Supplement No. 2; 375 papers of June 3, 1900, with Communion Address, 360 copies of Judge Ewing's lecture; 130 Christian Science Journals.

Five ladies visit the county jail each week distributing literature to all who desire it. During eleven months 81 of the prisoners have read the Bible; 139 *Science and Health*; 4 *Retrospection and Introspection*; 26 *Miscellaneous Writings*; 7 *Christian Science vs. Pantheism*; 12 *Unity of Good*; 11 *No and Yes*.

The above prisoners have also read 604 *Christian Science Sentinels*; 401 *Christian Science Journals*; 32 *Lectures*.

The workers at the jail have been much encouraged by the evident benefit to the prisoners, shown by their healing and conduct after their release, and continued interest in Christian Science.

Letters are frequently received from those who have been sent to the penitentiary. The following is a portion of one recently received: "I deem it a duty to you, to thank you for your kindness to me while here. You cannot fully appreciate how your kindness has affected me. Your kind words and the reading matter you have given me week after week, has made me a better man. It has put new thoughts to work in my mind; things that were pleasant to me then, are now distasteful. The reading of 'Science and Health with Key to the Scriptures' has given me a new life."

We have reason to believe that this literature has been carefully and honestly read by many, and that the good seed has been planted that must sooner or later, spring up and bear fruit, even where the soil seems most unpromising.—E. J. W., Scranton, Pa.

Christian Science at Soldiers' Home.

First Church of Christ, Scientist, Chelsea, Mass., held the first Christian Science service at the Soldiers' Home, Sunday afternoon, January 13, at three o'clock. There were about one hundred and fifty soldiers present. Every seat in their beautiful hall, which seats four hundred, was occupied and several were seated on the platform. There were many present from our city who do not attend the Chelsea church, also several Scientists from Boston, Lynn, Roxbury, and Malden.

Our church received a very cordial invitation from the one who has charge of the religious services at the Home, and we were heartily welcomed by the soldiers, who, without exception, gave their undivided attention to the service, and seemed greatly interested. In fact, they said it was the best religious service they had ever attended at the Home, and urged us to come again at an early date.

About eight years ago, "Science and Health with Key to the Scriptures" was placed in the Home, and since then "Miscellaneous Writings," the *Journal*, and *Sentinel* have also found their way there, and now we are permitted to hold our Christian Science service occasionally, we look for much fruit. "Say not ye, There are yet four months and then cometh harvest. . . . Lift up your eyes and look on the fields; for they are white already to harvest."

E. E. WILLIAMS, Chelsea, Mass.

The Song of the Century.

BY RUTHALIE WINSTON.

LIFT up your hearts, ye sons of men,
And catch a sweet refrain—
The low farewell of a century
Breathing a low sweet lullaby
A surcease from all pain.

Sing, for the days of triumph
Break, and the night is o'er;
To God in the highest glory
Is sung the old, old story,
Heard on the Judæan shore.

The gentle dove of peace has come,
A messenger of love;
Christ is enthroned within our heart,
That Christ whose grace can ne'er depart,
Whose name is endless Love.

Lo, since the star of Bethlehem shone
Where the infant Jesus lay,
There never were years so blest as these,
O'er the earth, o'er all the seas,
The dawn of the perfect day.

Oh Love divine! oh gracious Lord!
The harvest time is here;
The seed is sown, has taken root,
The years that come shall reap the fruit,
And heaven itself appear.

The century old has passed away,
Our birthright back is won,
Love guide us to the perfect day,
Life, Truth, and Right shall lead the way,
Till we hear Thy sweet "Well done."

Rest for the Weary.

BY A. N. T.

Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls.—*Matthew, 11: 28, 29.*

At first glance, Jesus' invitation would not seem to extend to all people; but only to a few unfortunate ones, who, in some unaccountable way, are victims of labor and burden-bearing.

Labor means fatiguing, irksome, servile toil, either mental or physical. To be heavy laden, is to carry a burden which is grievous, wearisome, and oppressive; and when we consider how often we listen to tales of affliction from those all around us, it reveals the fact, that there is not one who would not gladly lay aside heavy burdens, and accept this invitation, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." But does this promise really extend through all time? and as there is no personal Jesus to approach, how can we come?

Do we believe in a God of justice, mercy, and loving-kindness? the same yesterday, to-day, and forever? or can we conceive of a God, capable of relieving or destroying our sins, our sickness, our woes of every description, and yet so lacking in even human affection as to bestow this blessing upon a chosen few to be enjoyed only for a brief period of time? Have we taken the proper steps to prove

that God reveals Himself in the destruction of sin, sickness, and death as He did to Jesus and his disciples?

What has seemed to separate us from the one whom, in the words of the prayer, we are taught to call our Father? Isaiah says, "Behold, the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear: but your iniquities have separated between you and your God, and your sins have hid his face from you, that he will not hear." Can it be that our unrighteousness or want of rectitude has brought all this labor and burden upon us? that the attainment of health, happiness, and harmony depends upon each individual, and may be ours if sought from the proper source and in the right manner? Let us see. "Take my yoke upon you." Yoke means bond of connection,—to be joined or associated. Jesus' unity was with Spirit; as is clearly shown in these words: "I and my Father are one." "As the Father knoweth me, even so know I the Father." In order to accept this promised rest, we find preparations to make; we must be willing to free ourselves from all forms of worldliness; separated from our iniquities we shall then be in communion with God, and if we accept this yoke, we shall grow into spiritual unity one with another, thus obeying these commands: "Let this mind be in you, which was also in Christ Jesus." "Be of the same mind one toward another." "Be kindly affectioned one to another with brotherly love; in honor preferring one another." "Let love be without dissimulation."

"And learn of me." To learn is to receive instruction or gain knowledge; to take pattern. Jesus says, "For I have given you an example, that ye should do as I have done to you." "He that saith he abideth in him ought himself also so to walk, even as he walked."

Although Jesus gained his knowledge from no personal or material standpoint, yet the learned men of his day, and all who heard him, were astonished at his understanding. His wisdom was received through the reflection of the one Mind—all Intelligence—thus proving his unity with Spirit. How can we prove that we too are taught of God—divine Principle? that we are walking even as Jesus walked, in accord with Spirit? Only by following our Master's example through the demonstration of Spirit. Let us, individually and collectively, so reflect Truth and Love that the world may take knowledge of us that we have learned of him.

"For I am meek and lowly in heart." "Meekness is that quality of thought which displays forbearance under injuries; mildness, gentleness." A lowly mind is one free from pride, showing humility; one that glories not in man, but in God.

Oh, that we all may attain these graces of character! Our model recognized no material claims. He never aspired to worldly place or power; he sought not glory or gain; the recognition and approval of this world does not bring rest and peace. May we, through meekness and humility, "Lay aside every weight, and the sin which doth so easily beset us."

"Rest." "Freedom from everything which wearies or disturbs; peace; security; support." "And I will give you rest." When will this sweet promise be fulfilled? When shall we rest in security, undisturbed by the cares and worry of material sense testimony, which is indeed grievous to be borne? Through the understanding and demonstration of the rules given in "Science and Health with Key to the Scriptures," we are enabled to lay aside one by one, our self-imposed burdens, and in the same ratio as we do this, we enter into our God-given heritage of harmony; learning that when thought is governed by the one harmonious Mind, our physical condition will agree therewith.

Let us not delay the acceptance of this standing invitation; and at length, through faithfulness and honest endeavor, be found worthy to enter the consciousness of rest and peace which is here and now.

Our Current Literature.

BY S. B. D.

Too much cannot be said by way of appreciation of our current literature—the *Christian Science Journal* and the *Christian Science Sentinel*. Entering our homes as they do so quietly and unobtrusively, with little effort on our part, except perhaps to renew our annual subscriptions, or pay a few cents for a single copy, these silent messengers of good come laden with blessings.

More and more as it seems are these periodicals becoming avenues through which our Leader speaks to her followers and to the world. Indeed, they are her chosen means; and the import of these messages of Truth and Love cannot be too highly estimated or too carefully weighed.

Then, think of the work and wisdom, incident to the bringing out of these weekly and monthly pages, compiling and arranging the voluntary contributions from all parts of the Field; the broad outlook which discerns the needs of the hour, the dangers which beset our Cause, or threaten to retard the growth of the individual Scientist, thus giving direction to thought along all the lines of practical Christianity. The current events of the day outside the immediate circle of Christian Science thought, are also carefully scanned and summarized for our use. The turnings and overturnings in human affairs are given a place in these columns, all under the one thought, that “the kingdoms of this world” are to “become the kingdom of our Lord and of his Christ.” This is a great work. Jesus once said, “Therefore every scribe which is instructed unto the kingdom of heaven is like . . . an householder, which bringeth forth out of his treasure things new and old.” This seems to be what our editors are doing.

How grateful, too, should we be, for the many helpful words which come to us every week and month from the workers throughout the Field, telling of their struggles and demonstrations, and of the progress of Christian Science, not only in the larger cities, but in the more retired communities in this and foreign lands.

The writer took up a recent number of the *Journal*, after having previously read it through and re-read portions that had been especially helpful, and was surprised to find that between forty and fifty different contributors had thus been ministering to her, either in carefully prepared papers, or “Testimonies from the Field,” from Scotland, Switzerland, Paris, and from not less than twenty states in our own country, beginning with California and ending with Maine.

The Publisher’s Department must not be forgotten, with its corps of helpers and its fund of information so full and clear that with careful reading one is brought into touch even with its business management, in so far as may be necessary for carrying on the work harmoniously in every locality; while its Directory of Christian Scientists, introduces the reader of the *Journal* to thousands of practitioners and teachers, unknown perhaps by face, but well known through their works of healing, churches established, and church edifices erected.

Who can estimate the value of these streams of influence, flowing to The Christian Science Publishing Society, and from it to the world; and what brotherhood and sisterhood is thus established, all working in the One Mind, and to the same end—the uplifting of humanity, through the Truth as revealed in Christian Science.

Nothing is so contagious as example; never was there any considerable good or ill done that does not produce its like. We imitate good actions through emulation, and bad ones through a malignity in our nature, which shame conceals, and example sets at liberty.—ROCHEFOUCAULD.

Testimonies.

How I was Led into Christian Science.

For some two years before I knew anything about Christian Science except hearsay, I fought it bitterly, as it was then making inroads in my family. My wife was studying as much as possible. She had to keep all books and papers hidden, lest I should destroy them, as I did destroy many, hoping thus to exterminate Christian Science from our home at least. Did I? No! “Truth crushed to earth will rise again.” This state of affairs continued until I was called upon to follow all that was mortal of our oldest boy, a bright child of seven years, to the grave. He had been in charge of a Christian Scientist for a few days, not from any willingness of my own but from a forced consent. A relapse occurred during the Scientist’s absence, proving to me, as I then thought, the nothingness of Christian Science. Immediately I called a doctor, under whose care he grew weaker, and two other doctors were called in consultation. At the expiration of a week, the doctors said they could do no more. Then I was more willing to try Christian Science and another Scientist was called. In two days the child passed away without a pain or struggle. In a few days the same trouble was manifest on our next boy of five years. This led me to exclaim, “Anything, oh God! but deliver me from this.” By the urgent request of dear ones I personally called a Scientist. Immediately there was a decided improvement. In less than five days he was out of doors to stay. This led me to the study of the “Blessed Word” and to search for the Truth contained therein. I have been an earnest student of the Bible and “Science and Health with Key to the Scriptures” for nearly three years, during which time we have had many beautiful demonstrations, one of which I will give.

One Saturday evening in August I was tethering my horse near the house, and in her play she jumped and kicked, bringing the rear part of one shoe in contact with the back of my right hand diagonally across the knuckle of the middle finger, cutting it to the bone across the joint for about an inch and a half. Instantly realizing that in Truth there are no accidents, and endeavoring to hold this uppermost in mind, I went on and finished my work. Upon entering the house and washing the hand, although there had not enough blood escaped to reach the end of the finger by holding the hand downward, I bound it in one thickness of thin muslin and went about my business. The wound was entirely healed in about five days with scarcely any stiffness at all, although swollen considerably for a few days.—E. S. WOODHOUSE, Scranton, Pa.

Tobacco and Liquor Habits Destroyed.

I was brought up in the Methodist Church. My religious life, up to about three years ago, was a series of conversions and backslidings. My last backsliding continued for a period of about thirteen years, during which time I had become what might be termed an agnostic.

In 1889, a copy of Science and Health was placed in my hands, which I read much the same as I had been in the habit of reading novels. I laid it aside in disgust, being able to grasp but little of its truth.

Following this, I investigated spiritualism and theosophy, seeking for something, I knew not what, but I found very little satisfaction in either.

In August, 1897, a friend said to me: “Let us begin the study of Christian Science.” I said, “All right,” and I was conscious of a desire to begin the study as soon as possible. This friend knew but little more about Christian Science than I, but we began it together, she gleaning from other sources and bringing to me, for which I shall ever remain very grateful.

I had used tobacco, smoking or chewing and part of the time both, for about thirty-nine years. I had been more or less a user of intoxicating liquors all my life, and in later years often drank to excess. I had been troubled with constipation and hemorrhoids for more than twenty years. A physician informed me that the only cure for the hemorrhoids was a surgeon's knife.

After I began the reading of "Science and Health with Key to the Scriptures," and continued so reading during my spare moments for about three weeks, aided by the treatment and good offices of this dear friend, all the above-named ills disappeared, not a vestige of any of them remains. I have no more desire for liquor or tobacco than if I had never used them.

But vastly more to me than all physical healing has been the spiritual uplifting, the satisfying of that soul-hunger, the knowledge and understanding of the things of God, which I have gained in a small degree. These give unutterable joy and peace.

My heart is filled with gratitude to our Leader, to all the Scientists who have aided me in so many ways, and to the *Journal* and *Sentinel*, the ever-welcome visitors which have been and are continually sources of help in attaining the knowledge of the Christ-Truth.

CHARLES M. JOHNSON, Denver, Col.

A Severe Burn Healed.

Having had a recent manifestation of the power of Mind over matter, I gladly send this experience, that the testimony may be helpful to others, and that I may in a way express my gratitude for the Truth given us in making plain the Holy Scriptures through the text-book, "Science and Health with Key to the Scriptures."

I am an employee in a large glass factory, attending the furnaces and preparing the glass for the melting process. The furnaces are heated and run by gas power. It is always necessary to use the utmost care in keeping the gas in the ovens regulated to produce a certain temperature all the year round. On November 18, I found it necessary to place a new pot in one of the ovens. The gas had been lowered in the arch of the oven to allow placing the pot, and had in some way blown out and the gas was escaping. I turned it off and went for a torch to relight it.

Returning I thought the escaped gas had gone up the chimney, and knowing the pot was in danger if the temperature of the oven cooled too much, I applied the torch and immediately an explosion took place. Seemingly I lost consciousness. As this happened at two o'clock in the morning, there was only one other man on the premises. The man, hearing the noise, hurried to the place where I was and found me lying on a pile of iron bottle molds some fifteen feet from the furnace.

The man called for help by telephone. I was taken to my home and put to bed, and my employer sent for. I regained consciousness by the time my employer arrived, and he and my wife insisted upon sending for a doctor, but I said, no, knowing that Truth would heal me. My employer said, "John, I know you are a Christian Scientist, and I respect your right to your belief, and may I go for Mrs. S.?" I said yes, and he went for her.

My back and spine were badly bruised, and the injury extended internally. When I tried to swallow I felt a severe burning sensation.

The first treatment destroyed the pain and soon all sense of fear was gone, and in less than one hour I called for my clothes and arose and dressed myself and sat in a chair. In five days I returned to my work. I am very thankful for this demonstration of divine Love in Christian Science.

JOHN N. TEGARDEN, Marion, Ind.

Deliverance Came in Due Season.

I was a sufferer of years' standing, not confined to bed but enough out of harmony in many respects to make life not worth the living. Constipation of thirty years' duration and other consequent sufferings that had resisted all medicines and every other attempted cure. Notwithstanding my wretched physical condition, I was a hard worker in the tenement houses among the poor, and upon this occasion I had gone to the Adirondack mountains to spend my few weeks vacation.

I tried conscientiously to realize the Truth taught us in "Science and Health with Key to the Scriptures," so that instead of going into the parlor evenings and entering into the amusements there, I had a certain sense of peace in retiring to my room to think of the perfection and beauty of God's creation. During the day I wandered in the woods with the rest of the company, and saw many things that indicated jealousy, spite, pride, selfishness, and invalidism, but I loved those people none the less, and was happy with them, taking no notice of those traits of character, having simply a steadfast feeling that God was good and all His creation like Him, no matter what might appear. This state of things lasted throughout the six weeks of my sojourn in the mountains, all the time my own sufferings continuing the same; still I never wavered in my thoughts Godward.

The next day after I left the mountains there came to me the most beautiful change physically. All the suffering was gone. From that time the bowels moved with absolute regularity. All parts of my body were so perfect in action that I walked the streets wondering how it was I could have doubted the goodness of God to the extent of ever having been conscious of any kind of inharmony. That *steadfast* realization of the perfect love and beauty of God and His idea overpowered all images of irritation, envy, spite, etc.—until they were blotted out.

ANNA C. THEW, New York, N. Y.

Astigmatism Healed.

The healing of my eyes of astigmatism was the means of interesting our entire family in the blessed Truth which surely makes humanity free. A freedom not only of body, but of soul. A freedom that gives us the spiritual growth, which is all there is to attain. The little understanding I have of Christian Science has removed the bonds of mystery from the Bible, so that now, when I read it I find the comfort I seek.

It has been my custom, whenever I waken during the night, to repeat the twenty-third Psalm until I go to sleep again. During the quiet hours of the night I have made many demonstrations in overcoming fear, hatred, envy, and impatience, simply by repeating that Psalm slowly and thoughtfully. "The Lord is my Shepherd,"—could there be a greater, more loving, more tender, or more watchful Shepherd? It is by using the talents given me that I have learned, and am learning each day more and more of the Truth.—VIRGINIA A. HUBBELL, Chicago, Ill.

Give us, O give us, the man who sings at his work! Be his occupation what it may, he is equal to any of those who follow the same pursuit in silent sullenness. He will do more in the same time—he will do it better—he will persevere longer. One is scarcely sensible to fatigue while he marches to music. The very stars are said to make harmony as they revolve in their spheres. Wondrous is the strength of cheerfulness, altogether past calculation its powers of endurance. Efforts to be permanently useful, must be uniformly joyous—a spirit all sunshine—graceful from very gladness—beautiful because bright.—CARLYLE.

Religious Items.

The editorial columns of a recent number of the (Unitarian) *Christian Register* contained the following: "The tendency to fall in with what is supposed to be the spirit of the age is very marked in many of our religious exchanges. It is believed that the people are tired of religion. Therefore, substitutes for religion are sought for with an eagerness that bodes no good for the next generation. One may find everything now in a religious paper from nove's to war news and political essays. The reaction from the old dogmatic narrowness and stiff doctrinal discussions is natural enough, but there is danger of mistaking the real meaning of the so-called spiritual decline in America. Those who have identified religion and theology, and especially those who have regarded the old theology as sufficient and final, may not understand that the objection of the people is not a revolt from religion, but a revolt from the doctrines and systems which obscure religion. The preachers and the churches who shall be happy enough to preach and teach religion pure and undefiled in a way to feed the mind, the heart, and the conscience of the people, will have no reason to complain, no matter what the statistics may show concerning the decline of the church in America."

The *New Church Life* says: "In a recent address delivered in Philadelphia before a class of young men about to enter into the world of business, ex-President Cleveland bears some remarkable testimony as to the state of the Christian world. In the course of his remarks he says, 'There seems to be an inclination in these days to adopt the version of the Golden Rule proclaimed by the cunning, horse-trading, money-lending character portrayed in a late popular novel: "Do unto the other fellow the way he'd like to do unto you, and do it first."' And Mr. Cleveland shows that, in his opinion, it is not the atheist or the agnostic alone who thinks thus, but the professing Christian, the man who with his mouth applauds the truths of religion. 'This interpretation of the Rule,' he continues, 'if seriously proposed, would arouse loud and extended protest; and yet thousands and thousands of those who would protest the loudest are daily and hourly acting in precise accordance with such an interpretation. If they should candidly and truthfully express their ideas of the Golden Rule, they would say it was well enough for children, but utterly unsuited to the stress of business life.'"

A sermon published in the (Methodist) *Christian Advocate* contains the following:—

"Man ministered to by physical agents climbs up a little way; man ministered to by society climbs up a little higher and overlooks the barbarian; ministered to by culture and heroism, he climbs still higher and overlooks some of his fellows; but ministered to by the Holy Spirit as Teacher, as Healer, and as Sanctifier, man climbs highest of all, for he then knows, as he never knew before, the truth about himself, the truth about God, the truth about righteousness and sin, the truth about death, judgment, and eternity. Furthermore, he is given the power to do the good that he ought to do, and overcome the evil that he ought not to do; he is enabled to grow in the knowledge and love of the Son of God unto a perfect man, unto the measure of the stature of Christ. The Holy Spirit makes practicable for every one a Christ-filled life, and Christ is 'the power and wisdom of God.'"

The editorial section of *Hearst's Chicago American* for January 13, contains a symposium on the subject of "The Coming Union of Science with Religion." The main article is contributed by H. T. W. Dam, A.M., and the subsidiary articles "The Testimony of Religion," and "The Testimony of Science," are respectively by Rev. Minot J. Savage, D.D., and Prof. Nathaniel S. Shaler, of Harvard University.

Among the statements made by Mr. Dam are the following:—

"The United States is on the eve of a great

revival of religion. We have this upon the authority of many eminent divines, whose prophecies to this effect have been widely published. . . . That the public of this country is now in an unusually sensitive and receptive condition is shown by many social signs which have steadily augmented in significance during the past few years."

In an editorial advocating the arrangement of a Scripture reading service for Sunday evening to take the place of "song services," "lectures," or other substitutes for preaching, the (Baptist) *Watchman* says: "A large part of the congregational service devised by Ezra during the religious revival with which his name is connected was devoted to the public reading of the law. The notices that we have of the early meetings of Christians lead us to believe that the reading of the Old Testament and of the apostolic letters occupied a prominent place in the regular exercises. Occasionally a service devoted to the reading of the Scriptures might be exceedingly profitable. The public reading of such a story as that of Saul or Gideon or Joseph, or the books of Amos or Hosea, if condensed within appropriate limits, might be made exceedingly interesting and profitable."

Concerning the agitation for the endowment of city churches, the *Congregationalist* says: "It is not the weak churches alone that are considering this form of guaranteeing their future, but some of our strongest churches, which as yet have no trouble in paying their bills, are wisely agitating the matter in its bearing on their more distant future. . . . The strength of the Episcopalians in New York City has been largely due to the fact that from lower Broadway to the Park, at regular intervals, strong Episcopal churches have been maintained, despite the drift of population northward, and the fact that many churches of other denominations were obliged to yield to this drift and abandon positions where they had rendered great service."

E. A. Russell says in the (Baptist) *Standard*:—

"One of the difficult problems confronting churches of all denominations is to secure good teachers—educated and efficient teachers—for their Sunday Schools. . . . Many will remember when, in large sections of the country, 'paid preachers' and 'paid musicians' were regarded as an indication of heterodoxy. Now few persons object to a salaried minister or to paid musicians. We cannot, always, secure gratuitously what is essential to success. If such results as the cause of Christ demands can be secured in no other way, then let us suitably compensate the best teachers the piety and intelligence of the church can produce."

One of the editors of the *Universalist Leader* says in the young people's department of that paper: "Gossip is never justifiable, and any who are ready to serve it by willing ear or speech may well doubt their claim to the Christian name. Keep your peace if you may not utter good concerning any one against whom speech is rife. Do not walk in the chill twilight of doubt and suspicion. Run from those who would retail to you their unworthy utterances of evil. It is unmanly, it is unwomanly, it is un-Christian, it is weak and cowardly to allow gossip the slightest hold upon one's thought. It is poison to mind and heart, and belittles every one who indulges in it."

By way of introduction to a long article embodying the larger part of an article from the *Christian Science Sentinel*, *The Literary Digest* for January 12, says: "Increased public interest in Christian Science has been stimulated by the recent discussion of this creed in the Protestant Episcopal Church Congress (see *The Literary Digest*, December 1, 1900). In various church assemblies this theme is continually presenting itself as a matter of growing importance to all the churches, and Christian Scientists believe they see a larger measure of comprehension of their tenets."

The (Baptist) *Examiner* says: "There appears to be a peculiar bitterness engendered when the saints, whose law is love, forget their fellowship in Christ, and begin to contend one with another over some matter that ought to be settled in a spirit of mutual forbearance and good-will. . . . We may imagine the evil Adversary standing by with malicious joy, and egging the contestants on till the whole church is at loggerheads, and the community is saying mockingly, 'Behold how these Christians love one another.'"

The (Methodist) *Christian Advocate* says: "It is a vain thing to try to set a good example without a good heart. A life which is merely acted is not genuine, and the counterfeit will soon be detected. Artificial lives are like the artificial flowers which one sees in the market. They are beautiful to the eye, but shed no fragrance on the air. The bees never hover about them. A good life proceeding from a good heart creates a spiritual atmosphere which greatly affects every one who comes within its range."

"Christendom has held from the beginning until this hour that Jesus and his life have a spiritual value in the experience of souls athirst for God that has never been given to any other son of man since the world began," says the (Unitarian) *Christian Register*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston, exchange on Chicago or cities other than Boston or New York will not be accepted.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem, Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

Political and Governmental Notes.

The United States Senate passed the West Point appropriation bill on February 6. The following anti-hazing provision was made a part of the bill: "That the superintendent of the Military Academy shall make such rules, to be approved by the Secretary of War, as will effectually prevent the practice of hazing; and any cadet found guilty of participating in or encouraging or countenancing such practice shall be summarily expelled from the Academy and shall not thereafter be reappointed to the corps of cadets or be eligible for appointment as a commissioned officer in the army or navy."

The President made a number of appointments of army officers last week, of which the following were of most importance: To be lieutenant-general, Major-General Nelson A. Miles. To be major-generals, Brigadier-General Samuel B. M. Young; Colonel A. R. Chaffee (major-general of volunteers). To be brigadier-generals, Captain Leonard Wood (assistant-surgeon, U. S. A.; major-general, U. S. V.; governor-general of Cuba); Brigadier-General Frederick D. Grant.

The President has re-nominated Carroll D. Wright for United States labor commissioner for another term.

Foreign News.

The accession of the daughter of the king of Denmark to the position of queen of England will effect the future Prince Charles of Denmark, who, like his wife, prefers to reside in England. Prince Charles has long desired to enter the British navy. His grandfather, the king of Denmark, has consented, but his father, the crown prince, has objected. It is now understood, however, that the latter has approved this step, and Prince Charles will probably soon be appointed to a position in the English navy.

The London *Daily News* says that Earl Roberts, commander-in-chief of his majesty's forces, does not contemplate the possibility of withdrawing a single soldier from South Africa for the next twelve months, and that the Government recognizes the necessity for asking the House of Commons for three hundred and fifty million dollars during the ensuing fiscal year in addition to what has already been voted for the war.

According to the *Berliner Post* eight new German warships will be completed and placed in commission this year, including the battleship Kaiser Wilhelm der Grosse, with a displacement of 11,152 tons, the twin vessels Kaiser Barbarossa and Kaiser Karl der Grosse, the cruiser Prinz Heinrich, with a displacement of 8,881 tons, and four small cruisers, the Thetis, Ariadne, Medusa, and Amazone, each of 2,660 tons.

The following announcement was issued by the British War Office last week: "In view of the recent Boer activity in various directions, the government has decided, in addition to the large forces recently equipped locally in South Africa, to re-enforce Lord Kitchener by thirty thousand mounted troops beyond those already landed in Cape Colony.

The Boers captured two hundred British and killed or wounded thirty more in an assault on the garrison at Moddersfontein January 30. A force of Boers under command of Blake was reported on February 5, as threatening Lorenzo Marquez and surrounding Portuguese territory, and Portugal had appealed to Britain for assistance.

The first joint conference of the Chinese and foreign peace plenipotentiaries was held in Peking February 5. The Chinese representatives, Prince Ching and Li Hung Chang, seem to be earnestly desirous of fairly meeting the demands of the Powers.

The marriage of Queen Wilhelmina of Holland to Duke Henry of Mecklenburg-Schwerin was celebrated at The Hague February 7. The people of Holland took a loyal and affectionate interest in their young queen's wedding.

According to a report issued by the British War Office, thirty-one officers and eight hundred non-commissioned officers and men were killed in action or died from disease in South Africa during the month of January.

The Rome correspondent of the *Pall Mall Gazette* sends this interesting item: "The Peter's pence of the holy year up to the end of October are estimated at \$3,200,000, and are expected before the close of the year to reach \$4,000,000.

It is reported that Lord Kitchener wishes to send ten thousand Boer prisoners to India. He proposes to locate them in the State of Nilgira, province of Orissa, Bengal.

Emperor William left England on February 5. He was cheered by the London populace with great enthusiasm while en route to the railway station.

Emperor William has conferred upon Lord Roberts the order of the Black Eagle, the highest German decoration.

Industry and Commerce.

The *New York Tribune*, in its issue of February 6, said: "Negotiations for the sale of Andrew Carnegie's controlling interest in the stock of the Carnegie company were brought to a successful conclusion on Monday, J. Pierpont Morgan and his associates being the purchasers. The terms of the transaction cannot at this time be announced, but the transaction is a colossal one, rivalling the recent change of control of the Southern Pacific, when that property passed into the hands of the Union Pacific interests.

Mr. Carnegie held nearly 54 per cent of the \$160,000,000 of the Carnegie Company. Assuming that he has disposed of his holdings at par, he will receive fully \$85,000,000 for his interest, while, at the same time, he will retain his 53 or 54 per cent interest in the \$160,000,000 bond issue of the Carnegie Company.

The British Board of Trade has just issued a report on the trade unions of the United Kingdom, an abstract of which will be of especial interest to similar organizations in the United States. The number of unions for which comparative statistics of membership are given for the period 1892 to 1899 is 1,685. Some of these unions were not in existence during the whole of this period, and the number on the list at the end of 1899 was 1,292, compared with 1,218 at the end of 1892. The membership of all the unions at the end of 1899 was 1,802,518, as compared with 1,503,232 at the end of 1892, an increase of twenty per cent in the eight years.

The Dominion Steamship Company has made arrangements with the Grand Trunk Railway Company for the establishment of a weekly line of steamships from Portland, Me., to Liverpool during the coming season of navigation. Portland will thus be the Grand Trunk port all the year, and the company's western traffic, which has heretofore been shipped from Montreal, will in future be shipped at Portland. This means that the Grand Trunk, with a new elevator and dock at Portland, will challenge New York and Boston as Atlantic ports.

"Natural gas in the United States, according to the last annual report of the United States Geological Survey, has sunk to about one-third, in its fuel value, of what it was a few years ago," says *Cassier's Magazine*. "In 1899 the production of natural gas equaled in consumption the heating capacity of 5,400,000 tons of coal. Ten years ago, when this industry was at its height, the equivalent of the heating output of natural gas was equal to about 15,000,000 tons of coal. But the great gas producing fields are reaching extinction."

Cleveland capitalists have formed a company with a capital stock of three hundred thousand dollars which is to quarry lithograph stone in one of the Southwestern States. The Cleveland people own six hundred acres of land in which there are rich deposits of the stone. The deposit, which is the only one in the United States, is of high grade. Heretofore all lithograph stone used in the world has come from Bavaria.

General News.

The temperance crusade in Kansas, led by Mrs. Carrie Nation, has gained many sympathizers. The press reports of February 7 stated that the crusaders had wrecked fourteen saloons up to that time, destroying fixtures valued at \$11,300 and spilling into the gutters five hundred and fifty gallons of whiskey. There were, at the beginning of the crusade, fifteen hundred saloons in Kansas, all running in open defiance of the state prohibition law. Besides the fourteen that have been wrecked, twenty-six have closed their doors, fearing raids. Temperance people in thirty-four towns have taken action in the courts and the proprietors of nine hundred of the saloons have been warned to close under penalty of being raided. Mrs. Nation's success has attracted many recruits to her banners, and she is now able to wage war in all parts of the state. The liquor men have so feebly resisted the destruction of their shops as to encourage the belief that they have no hope of establishing any claim to the law's protection.

In a letter, dated October 24, 1900, Minister Conger asked Governor Shaw of Iowa to accept on behalf of the State Historical Society, two of the captured Chinese cannon from the top of the city wall which were used to bombard the legations. Governor Shaw at once informed Mr. Conger by letter that the State would accept the cannon and would pay the freight. Mr. Conger's last letter to Governor Shaw under date of November 26, 1900, says of the cannon: "They are undoubtedly the guns which were sending shot and shell into the legation during the siege. I beg you to accept these guns for the State of Iowa as a souvenir of a most disagreeable situation in which some of her citizens were placed, and from which they were providentially rescued."

St. Petersburg press correspondence under date of January 12, says: "Professor W. P. Amalitzki of the Warsaw University lectured to-day to the geological section of the local university on the first skeleton discovered by him in North Russia of an antediluvian race of giants (*Parelosaurus*). This skeleton measured three metres from head to feet, and is perfectly preserved down to the smallest detail."

The estate of the late Philip D. Armour, according to a petition for letters testamentary filed in the Probate Court at Chicago, January 28, is valued at \$15,000,000. Of this \$14,900,000 is realty.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Radiance of the Sun.

The Light from Tesla's New Electric Lamp.

REMARKABLE interest is awakened by Tesla's new light, "artificial sunlight," he calls it, "the result of ten years of thought and experiment." Under a full head of electricity the lamp presents a magic spectacle. Without wick, wire, or carbon filament it floods an apartment with the light of day. It is soothing to the eye and wonderfully diffused—almost shadowless. In its soft radiance one may read and write in any corner of the room as if it were day.

And how is this light produced?

By electrical vibrations of tremendous speed. For years the public has heard of Tesla's oscillator—that wonderful machine roaring out lightning in zigzag, leaping tongues of flame which Tesla claimed was to produce wonders, such as sending currents around the world without wires and burning the nitrogen of the air.

A thousand times it was asked: "Of what practical use is such a machine?"

One of the answers to this question is this daylight illumination.

His oscillator, the inventor says, is the key to solving the most important problems of the age. By its vibrations this new radiance is produced, as from the sun, its pulsations amounting to millions per second.

The electrical vibrations of the oscillator cause the atoms of the gases in Tesla's lamp to become little comets, shooting through the space at enormous speed, leaving trains of light filling the lamp with the brightness of noon.

It is a miracle, seemingly. The sudden starting and stopping of the electrical current at inconceivable velocity produce a continuous glow, neither of the incandescent nor arc light character, but pure solar light, the light of day.

How does the oscillator accomplish this wonder? Simply by storing and discharging alternately, electricity. An instrument called a "condenser" is used for this purpose. According to Tesla, it is the most marvelous appliance ever invented.

"It can discharge," he says, "or explode its stored energy in an inconceivably short time. Owing to this it is unequaled in explosive violence. The explosion of dynamite is only the breath of a consumptive compared with its discharge. It is the means of producing the strongest current, the highest electrical pressure, the greatest commotion in the medium. Another of its properties equally valuable is that its discharge may vibrate at any rate desired up to many millions per second.

"I arranged such an instrument so as to be charged and discharged alternately in rapid succession through a coil with a few turns of stout wire, forming the primary of a transformer or induction coil. Each time the condenser was discharged the current would quiver in the primary wire and induce corresponding oscillations in the secondary. Thus a transformer or induction coil on new principles was

evolved, which I have called the electrical oscillator, partaking of those unique qualities which characterize the condenser and enabling results to be attained impossible by other means."

Such is the much discussed machine of Tesla's, which, he claims, will accomplish many more wonders in light, telegraphy, telephony, and the transmission of power, and set up vibrations and electric wave currents pervading the universe of matter, and perhaps entering a new world hitherto penetrated only by the imagination.

Regarding his new system of illumination, Tesla says:—

"The light is the result of continuous efforts since my early experimental demonstration before scientific societies here and abroad. In order to make it suitable for commercial use, I had to overcome great difficulties. One of these was to produce from ordinary currents of supply electrical oscillations of enormous rapidity in a simple and economical manner. This, I am glad to say, I have now accomplished, and the results show that with this new form of light a higher economy is practicable than with the present illuminants. The light offers, besides, many specific advantages, not the least of which is found in its hygienic properties. It is, I believe, the closest approach to daylight which has yet been reached from any artificial source."

Tesla's lamps are tubes of glass of the size of one's fingers. They may be bent in any ornamental fashion—in spirals, expanding circles, rectangular clusters, and the like. He says:—

"I generally use a rectangular spiral, containing about twenty to twenty-five feet of tubing, making some twelve to fourteen convolutions. The total illuminating surface of a lamp is from three hundred to four hundred square inches. The ends of the spiral tubes are covered with metallic coating and provided with hooks for hanging the lamp on the terminals of the source of oscillations. The tube contains gases rarefied to a certain degree determined in the course of long experimentation as being conducive to the best results."

Here is a technical but plain description in Tesla's own words of how the light is produced:—

"The street current is passed through a machine which is an electrical oscillator of peculiar construction, and transforms the supply current, be it direct or alternating, into electrical oscillations of a very high frequency.

"These oscillations, coming to the metallic coated ends of the glass tube, produce in the interior corresponding electrical oscillations, which set the molecules and atoms of the enclosed aerified gases into violent commotion, causing them to vibrate at enormous rates and emit those radiations which we know as light.

"The gases are not rendered incandescent in the ordinary sense, for were it so, they would be hot, like an incandescent filament. As a matter of fact, there is very little heat noticeable, which speaks well for the economy of the light, since all heat would be loss.

"This high economy results chiefly from three causes: First, from the high rate of the electrical oscillators; second, from the fact that the entire light-giving body, being a highly attenuated gas, is exposed and can throw out its radiations unimpeded, and, third, because of the smallness of the particles composing the light-giving body, in consequence of which they can be quickly thrown into a high rate of vibration, so that comparatively little energy is lost in the lower or heat vibrations."

One great disadvantage in using electrical lamps has been breakage. The carbon filaments are sometimes defective, often short-lived, and more or less of a nuisance. Tesla has no filaments to become incandescent, neither carbons nor wires. Thus an important point is gained. He says:—

"The lamps need not be renewed like the ordinary ones, as there is nothing in them to consume. Some of these lamps I have had for years, and they are now in just as good a condition as they ever were.

"The illuminating power of each of these lamps is, measured by the photometric method, about fifty-candle power, but I can make them of any power desired up to that of several arc lights. It is a remarkable feature of the light that during the day it can scarcely be seen, whereas at night the whole room is brilliantly illuminated.

"The lamps are very cheap to manufacture, and by the fact that they need not be exchanged like ordinary lamps or burners, they are rendered still less expensive. The chief consideration is, of course, in commercial introduction, the energy consumption. While I am not yet prepared to give exact figures, I can say that, given a certain quantity of electrical energy from the mains, I can produce more light than can be produced by the ordinary methods.

"The transformer, or oscillator, will usually be located at some convenient place in the basement, and from there the transformed currents will be led as usual through the building.

"The lamps can be run with one wire alone, as I have shown in my early demonstrations, and in some cases I can dispense entirely with the wires.

"I hope that ultimately we shall get to this ideal form of illumination, and that we shall have in our rooms lamps which will be set aglow, no matter where they are placed, just as an object is heated by heat rays emanating from a stove. The lamps will then be handled like kerosene lamps, with this difference, however, that the energy will be conveyed through space.

"The ultimate perfection of apparatus for the production of electrical oscillations will probably bring us to this great realization, and then we shall finally have the light without heat, or 'cold' light. I have no difficulty now in illuminating the room with such wireless lamps, but a number of improvements must be made yet before it can be generally introduced."

In conclusion, one may say of this strange, all-pervading crystal radiance of Tesla's that each lamp is a little baby sun filling the room with the flaming magic of life and health, the same that floods the solar system, making animal and vegetable existence possible on our earth.

As the lamps are lighted at evening you see dawn stealing over the room. It is like early morning. So perfect is the illusion that the change does not come instantly, but gradually, every corner growing brighter. Dark nooks fade out. Books, pictures, and figures on walls and carpets appear—their colors in natural shades, as at noonday.

Because of this wonderful artificial sunlight you now think the lamps may be extinguished. Day has indeed come—each moment it grows lighter. So out go the lamps.

Alas! your room is in darkness, and you see the streets dusky in the yellow glare of the city's night. But if you light the lamps again the dawn re-appears, and again morning has come.—*Boston Herald.*

The Lectures.

At Utica, N. Y.

Yesterday afternoon (Sunday, January 27) the Majestic Theatre, which seats nearly two thousand persons, was filled with people who had come to listen to a lecture by Carol Norton of New York, given under the auspices of First Church of Christ, Scientist, of this city. The audience was not only large, but very attentive, and listened closely to all that was said. Before and after the lecture there was appropriate music by an orchestra made up partly of members of the church.

Mr. Norton was introduced by Hon. Alfred C. Coxe of Utica, United States District Judge, who said:—

It is possible that some of you may wonder why I am here. I wish to say at the outset, for the benefit of those who are not acquainted with me, that I am not a Christian Scientist. My presence can be accounted for in two ways: First, a wish to please the valued friends who requested me to introduce the lecturer, and, second, a desire to re-affirm and re-assert my unfaltering faith in the God-given right of freedom of speech. You remember that when the religion which, in one form or another, is now accepted by every civilized nation, was first promulgated at Ephesus, at Antioch, and at Rome, the men who taught the new creed of love and pity and self-denial were thrown to the lions in the amphitheatres and were used as torches to light the orgies of pagan emperors. Centuries rolled away, a religion other than that of the meek and lowly Galilean became the religion of the powerful, and obedience to its precepts, as they were interpreted by authority, was enforced by fire and sword. At last the great truth was evolved from fifteen centuries of bloodshed that man is endowed with the inalienable right to worship his Maker according to the dictates of his own conscience. Free thought and free speech are the foundation stones on which this republic rests, and yet I sometimes think that we have forgotten the fearful struggles for religious liberty which sent our forefathers across the sea. True, there is no longer resort to the fagot and the rack, but the old intolerance, the old bigotry, the old brutality are constantly manifesting themselves. Within the recollection of men still living, speakers have been mobbed in this city for denouncing the crime of slavery, and within a few months in a neighboring state disciples of an apparently harmless creed were driven from the city and threatened with death should they return. As an American citizen I protest now and always against the least interference with the right of free discussion. He who proposes to change the existing order of things has at best a thorny path to tread, and the least we can do is to give him an attentive and respectful hearing. Every age on him who strays from its broad and beaten ways pours its sevenfold trial.

I know nothing of the doctrine of Christian Scientists, but I expect to know much more before the sun sets. I do know, however, that "If this counsel or this work be of men, it will come to nought; but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

The lecturer who is to address you has devoted the best years of his life to the study of his subject, and he is a member of the Board of Lectureship of the Mother Church in Boston. Let us at the outset disabuse our minds of all prejudice and listen with tolerance and good-will, determined to know the truth, for the truth will make us free. The subject of the lecture is, "A Third of a Century of Christian Science." I take great pleasure in presenting to you Mr. Carol Norton of New York.

Utica Daily Press.

At Sheldon, Ia.

Thursday evening (January 10) the Opera House was well filled with our citizens to hear the address of Edward A. Kimball, C.S.D., of Chicago, on Christian Science. Mr. Kimball is a member of the Christian Science Board of Lectureship. He is a man of pleasing address and a splendid speaker. His lecture was received with marked attention. It was interesting, instructive, and to the point.

E. B. Starrett introduced the speaker of the evening as follows:—

The Bible says, "Prove all things; hold fast that which is good." This is not the attitude of standing still or of self-satisfaction, but a reaching out for the best things obtainable. We want the best in our business life; we want the best in our social life; we want the best in our religious life. Building upon the best within our reach brings still better conditions of thought and life. Christian Science has come to the world at this age, and offers much that we all agree is desirable if it can be proven true and practicable. In order that a clear understanding may be had of just what Christian Science is and does, a Board of Lectureship has been established. We have with us tonight a member of that Board in the person of Edward A. Kimball of Chicago, who will now address you.

The *Sheldon Daily Sun*, in commenting on the lecture said:—

We do not know whether Christian Science is all a delusion or not, nor do you. Neither are we prepared to say it is all its adherents claim for it. Judging from its fruits, we cannot condemn it, nor can you. Perhaps there never was a doctrine so much misunderstood and misrepresented as Christian Science. Upon the theory, that what is good will triumph in spite of opposition, we must concede that Christian Science is good, for it is gaining ground with amazing rapidity.—*Correspondence.*

At New Bedford, Mass.

Judge William G. Ewing of Chicago addressed an audience of about seven hundred at Odd Fellows Hall Monday night, January 28, on the subject of Christian Science. The seats in the gallery were full and several standing, and only a very few seats were vacant on the floor. The lecture was under the auspices of First Church of Christ, Scientist, of New Bedford.

Judge Ewing was introduced by Richard H. Booth, a Christian Scientist.

The audience was a representative one, which listened attentively for an hour and a half, and we have heard nothing but praise of the lecture from Christian Scientists and others. The harmony that prevailed throughout the whole lecture was beautiful. One person who had heard the lecture twice before said this was the most beautiful of all.

People came from neighboring towns and from Woods Hole, West Falmouth, Cotuit, Medford, Fall River, and from Barrington and Providence, R. I.

The two papers here, *The Morning Mercury* and *The Evening Standard*, spoke of the large audience and published about two columns of the lecture.—*Correspondence.*

The lack of service is the ruin of humanity. There is no dignity but of service.

No man could rise to the honor of knighthood without service.

Wherein did this knighthood consist? The very word means simply service.—MACDONALD.

I hope I shall always possess firmness and virtue enough to maintain what I consider the most enviable of all titles, that of an "Honest Man." GEORGE WASHINGTON.

Selected Articles.**Scientific Christianity.**

"AND God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth."

"Thou madest him to have dominion over the works of thy hands; thou hast put all things under his feet."

"Man, as the image of his Maker, reflects the divine might. He is the master of earth, not made to till the soil. His birthright is dominion, not subjection. He is lord of beast, fowl, reptile, and fish,—himself subordinate alone to his Maker. This is the Science of Being" (*Science and Health with Key to the Scriptures*, by Mary Baker G. Eddy, p. 511).

"The law of the Spirit of life in Christ Jesus hath made me free from the law of sin, and death."

"Think less of the enactments of mortal mind, and you will sooner grasp man's God-given dominion. . . . Let us banish sickness as an outlaw, and abide by the rule of perpetual harmony,—God's law. Man's moral right is to annul an unjust sentence, a sentence never inflicted by divine authority" (*Science and Health*, p. 380).

This declaration that man is the reflection of God's omnipotence is the keynote of the Christianity of this new century. Jesus illustrated it to its fullest extent in his life and works, as our Way-shower and demonstrator of this spiritual law of Life. This law and proof of spiritual ascendancy runs like a fine golden chain throughout the entire Scriptures, linking all its eras of development in one perfect design culminating in Christ Jesus.

Abraham was the friend of God. Jacob, who wrestled with material evidence, and overcoming, became the founder of the Israelitish nation, receiving the new name of Israel, Prince of God. Moses demonstrated in many wonderful ways this spiritual dominion. It is this demonstration that makes the true Israelite and the true Christian. Paul said, "And my speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power." "Now we have received, not the spirit of the world, but the spirit which is of God; that we might know the things that are freely given to us of God." Elijah, who raised the dead, multiplied the oil and meal, and controlled the elements, and Elisha also, proved this divine birthright of man to be his spiritual dominion as the divine image or reflection. The Scriptures teem with accounts of the blessings resultant from this recognition of divine power and presence, and of the sorrows and afflictions—in the forms of disease, poverty, defeat, and discords—resulting from failure to recognize this divine presence and power.

In the material world the watchword of to-day is science—humanity is looking to science as the emancipator of the race. In the realm of the material there are many so-called sciences, dealing with material laws and theories, changing and fleeting as the phantasmagoria of a dream, each generation contradicting its predecessor.

There is a so-called science of history, of medicine, of electricity, of chemistry; and through these, human thought is rising out of its limitations. The Christ-Idea, in consciousness, is the eternal cause back of all, "turning and overturning," until He whose right it is to reign shall reign. In this great stir of human energy God gives to us as the one Science, which includes all,—the omni-Science—the Science of the all-knowing, the all-loving, the all-inclusive Mind,—that is God,—the Science of God and man in their eternal, indissoluble at-one-ment, or oneness, the oneness

for which Jesus so devotedly prayed that we might reach in realization: "That they may be one, even as we are one: I in them, and thou in me, that they may be made perfect in one." This Divine Science is God's great gift to this century, and is embodied in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. It teaches the scientific demonstration, the *modus operandi*, of Jesus' spiritual ascendancy and control over matter. It illumines the entire Scriptures and reveals this Science as having been from the beginning the Word of God, ever operative, now, then, and forever,—a law of righteousness, harmony, and love. It is the Comforter, testifying of Jesus' life and works. It is here as Christian Science, reconciling man to spiritual law, annulling the material law of sin and death. It weds Science and Christianity, and is the true emancipator of man, bringing the freedom of the sons of God.

In the beginning of this century we still see, in the words of Paul, "that the whole creation groaneth and travaileth in pain together until now. And not only they, but ourselves also, which have the firstfruits of the Spirit, even we ourselves groan within ourselves, waiting for the adoption, to wit, the redemption of our body."

Have the doctrines of men hidden from our view the sublime practicability of Christianity? Jesus illustrated constantly the power of Spirit to destroy disease and death, and to make a harmonious body.

Paul, who had a clear spiritual sense of Jesus' work, constantly strove for this mastery of matter. He fully understood that this mastery was the practical Christianity that Jesus brought to humanity. He taught that our reasonable service is to bring the body into subjection to Spirit; not to drugs, or electricity, or hypnotism, but to Spirit. To reach this mastery he enjoined temperance in all things, the conquest of sin, of fleshly desires. He showed a lofty scorn of the flesh, and its filthiness, and strove to be absent from the body, and present with Spirit,—out of the belief of material sensation, into the spiritual consciousness of Truth, Life, and Love. In his own glowing words, he expresses that Christ Jesus, the Christ Idea, abiding in our consciousness, is able to "change our vile body, that it may be fashioned like unto his glorious body, according to the working whereby he is able even to subdue all things unto himself."

By the contemplation of this divine idea, Paul clearly saw its transfiguring power. "But we all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord." Paul further said: "I keep under my body, and bring it into subjection; lest that by any means, when I have preached to others, I myself should be a castaway."

A noted English evangelist has said: "The hour has come for Christians to think of transfiguration instead of death," and it is certainly a much more glorious anticipation. "Be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

We see that this is a divine mental or metaphysical process. In this century the church militant and expectant will become the church triumphant; it will unite all Christianity in a demonstrable, practical religion. The Christ-idea will rule the whole world with the unswerving rod of divine immutable Science, and "every knee shall bow."

We are looking "for new heavens and a new earth, wherein dwelleth righteousness. Wherefore, beloved, seeing ye look for such things, be diligent, that ye may be found of him in peace, without spot, and blameless." We can only attain this new heaven and new earth as we change our present concept of man, as we put off the old man, or

old Adam theory, in which all die, and "put on the new man, which after God is created in righteousness and true holiness." The new man belongs to the new century. This new man is manifested as the spiritual understanding of the divine sonship and heirship of immortality, dominion, and power, and annuls the false sense of man as material in origin, as heir to disease and death, and subject to material law.

This is what Jesus did, and his words and works were so revolutionary that the material world, even while he was healing the sick, raising the dead, and feeding the multitude, stoned him, spat upon him, laughed him to scorn, and crucified him, but in so doing they drove him to constantly sublimer demonstrations. His words and works remain the divine facts of human history, the pivot on which all true progress and development turns and from which all true knowledge radiates. Christian Science and its inspired interpretations of those words and works, brings them out in a new and glorified meaning, and is flooding consciousness with intensified love, reverence, and thanksgiving.

This century needs to study not only the words but the works of Jesus; they are one, and explain each other. It will be seen that everything that the most advanced physicist of to-day is striving for was really demonstrated by Christ Jesus nearly two thousand years ago.

This is the glorious outlook for the century, this freedom of the children of God,—

The freer step, the fuller breath,
The wide horizon's grander view:
The sense of life that knows no death—
The life that maketh all things new.

While contemplating this great vision of the century, and recognizing its sublime possibilities, we, while rejoicing in some progress, must needs be very modest, for our attainment seems very small in contemplation of the vastness of Science, and its demands. Thousands of us have proved our spiritual dominion, meeting untoward conditions by applying our God-Principle in Christian Science. While not yet risen above many seeming obstacles, we are brave to go forward, knowing of what stupendous import is our fidelity.

Christian Science is not in any way allied to, nor has it anything in common with theosophy, spiritualism, hypnotism, or human psychology; it is the pure and simple Science of Christ made appreciable and demonstrable by Mrs. Eddy's book, "Science and Health with Key to the Scriptures."

How vast is our debt to this beloved and holy woman, we cannot yet fully understand. We can only deeply reverence and value the purity and selflessness that made it possible for her to receive such a revelation.

As Christian Science is more loved, appreciated, and practised we shall see its visible manifestation in increased health and harmony in every direction; there will be less sin, disease, sorrow, avarice, and greed; higher ideals in municipal government, purer aspirations in civic ambition, more brotherly love, fairer skies, and gradually increasing beauty and perfection will characterize the visible phenomena of our changed thought. Self-love, selfishness, impurity will be lost in universal Love. Purity shall be found to be the corner-stone of spiritual power—then mortality will yield to immortal harmony, the veil will be lifted, and glorified man and universe will be revealed.

Then shall the reign of Mind commence on earth,
And starting fresh as from a second birth,
Man in the sunshine of the world's new Spring
Shall walk transparent like some holy thing.

The Religious Side of Queen Victoria.

AN account of the religious side of Queen Victoria's character has just been written by the Rev. Dr. Alexander MacKenna, a distinguished Congregational minister of Bowden, England, and president of the National Council of the Evangelical Free Churches of Great Britain. Dr. MacKenna's account appeared in *The Congregationalist*, January 26, and was as follows:—

"A prosperous reign is a sore trial to the integrity of a people; we have not come out of it unscathed. We might have been destroyed by it, but we have had a monarch whose personal character has been a standing witness for virtue and godliness, and whose influence has always been exerted in favor of whatsoever things are true and honorable and pure and holy and of good report.

"The Queen had to choose her husband, and the soundness of her heart and judgment is seen in her choice of Prince Albert. He brought the simplicity of Lutheran piety and the largeness of German culture to refine the hard English habit and set its judgment free. To him we owe the inscription on the Royal Exchange in London, 'The earth is the Lord's and the fulness thereof,' and the prominence of a like inscription in the Exhibition of 1851. He loved to have about him men with whom he could talk of religion, the Bible, Christian life and doctrine. A certain intellectual freedom, robustness of faith, and largeness of fellowship mark the piety of the royal household. Dean Stanley and Dr. Caird, Baron Bunsen and Archbishop Tait and the less known Benjamin Woodward represent different churches and various religious habits, and all spoke freely with the Queen and the Prince Consort. These were, however, cultivated men; one might value their friendship for other reasons than their piety. The Queen was interested in the religion of all with whom she had to do and showed concern for humble as well as for scholarly godliness. When one of her servants died at Windsor, she sent for the minister of the Congregational Church, of which the woman had been a member, and asked him to conduct a funeral service in the porch before the body was sent away for burial, and she herself was present. Her religious tastes have also been simple. She has herself told us how her heart rose into her throat when Norman McLeod prayed without a book for her and her children.

"The simplicity and directness of her religious life are the more noticeable because she has been a strict observer of court etiquette. She has regarded the restrictions of her position, and has not attended dissenting places of worship, as have some of her family, both before and after her. Nonconformists have no good ground for resentment of this. They have seen in the personal respect she has paid to Nonconformists, and in her insistence that they should be recognized on public occasions, both what was her own feeling and what her policy in regard to them. One of those on the steps of St. Paul's in 1897 remembered an incident which had happened at Windsor ten years before. 'The three denominations,' as they are called—Baptist, Congregationalist, Presbyterian—have the right of access to the throne in recognition of their services in establishing the present dynasty. They wished to offer addresses to her Majesty on her first jubilee, and were invited to go up, in company with several other deputations. It was a various gathering which went to court that day. There were lords-lieutenants of counties and mayors of boroughs, heads of learned societies, the Scottish and Irish Universities, the Royal College of Physicians and the Royal College of Surgeons, the Royal Society, and many others; last of all came five fishermen from Grimsby, in blue jerseys, who were there to represent the North Sea industries. The first to be presented were the lords-lieutenants and the mayors. The Queen received them seated. But

when the 'representatives of religious bodies' were announced she rose and received them and their addresses standing. The act was intended to be significant. Perhaps not one of these men was known to her even by name; they had come from the dissenting churches and the undenominational societies. They were representatives of religion, and that was enough."

A Thought for the New Year.

It is a favorite maxim at this season that all things are passing away. And so they are. But the maxim I would adopt is one equally true, and one far less considered; it is that all things are coming back. Personally, I have been more impressed with the return than with the fleetingness of the years. The poet says,—

I never loved a tree or flower,
But 'twas the first to fade away.

I would say, "Every faded tree and flower has in some form come back to me." You and I are constantly made to feel the smallness of this world. We are meeting every day with some link of our school life, some revival of yesterday. It would almost seem as if a voice were saying, "Gather the fragments that remain, that nothing be lost." But if the two maxims be equally true, they are not equally solemn. I see no solemnity in being told that things pass away. Rather the reverse; the sense of duty grows light when things lose their value. But if I am told these things are of permanent value, if I am made to feel that sometime, somehow, somewhere, I shall meet them again, I am made very solemn in their presence now.

Let us, in this first year of a new century, uncover our heads to the permanence of things! Let us bow before their immortality! Let us realize that we are dealing with influences absolutely deathless, imperishable! Let us awaken to the fact that it will not be all the same a hundred years hence, that to-day will meet us folded on the breast of to-morrow! Then I know we shall be kind, tender, true. We shall fear to mar the masterpiece. We shall tremble to put a stain upon a picture destined for immortality. We shall touch softly the broken reed; we shall lift gently the shattered alabaster. We shall remember, not the nothingness, but the nobleness, of life, not the fleetingness, but the fadelessness, of time. Our pity shall be born, not from our contempt of existence, but from our sight of its awfulness. This New Year ship we will freight with gold, and send forth into the great sea; but we shall do so in the perfect confidence that we shall find it again upon the waters. Let us strive to make it a good New Year!

GEORGE MATHESON, D.D.

Journals at Reduced Rates.

UNTIL April 1, the beginning of the *Journal* volume, we will sell back numbers of the *Journal* at five cents a copy when ordered in lots of ten or more. No special numbers can be ordered at this price.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Mch. 01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for April, May, and June.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The New Century.

BY MARY BAKER G. EDDY.

THOU God-crowned, patient Century!
Thine hour hath come. Eternity
Draws nigh—and bec'ning from above,
One hundred years, aflame with Love,

Again shall bid old earth good-bye—
And lo, the light! far Heaven is nigh!—
New themes seraphic, Life divine,
And bliss that wipes the tears of time

Away, will enter, when they may—
And bask in one eternal day:
'Tis writ on earth, on leaf and flower—
Love hath one race, one realm, one power.

Dear God! how great, how good Thou art
To heal humanity's sore heart;
To probe the wound, then pour the balm—
A life perfected, strong and calm.

The dark domain of pain and sin
Surrenders—Love doth enter in,
And peace is won, and lost is vice:
Right reigns, and blood was not its price.

January, 1901.

A Legal Opinion.

EX-JUDGE CHARLES Z. LINCOLN of Albany, N. Y., one of the leading attorneys of the State of New York, who represents the Christian Scientists of the state before the legislative committee in opposition to a bill proposed by certain medical societies and others against Christian Scientists and their practice, has given the following able opinion as to the constitutionality of the proposed legislation, which we take great pleasure in publishing:—

The present law of New York State provides for a license and registry of physicians and prohibits any one from practising medicine who is not authorized as provided by the statute, and it makes the unauthorized practice of medicine a crime. The evident purpose of this bill is to define the practice of medicine and exclude from such practice all persons who are not regularly authorized. The bill says that "any person shall be regarded as practising medicine who shall give treatment to any other person by the use of any remedy, agent, or method whatsoever, whether with or without the use of any medicine or instruments or other appliances for the relief or cure of any wound or fracture, bodily injury or infirmity, physical or mental disease." This proposed amendment is probably as broad as language can well make it and absolutely prohibits any person not duly authorized under the statute to practise medicine, from using any remedy or agent or method whatsoever for the cure of any disease.

The effect of the bill is then to limit the right to practise the healing art to persons who are members of the allopathic, eclectic, or homœopathic schools of medicine, and in effect declares that there shall be no remedy or agent for the cure of disease used unless through one of these mediums.

This imposes a limitation beyond the power of the legislature. The present law I think goes as far as the legislature has power to go in the direction of restriction. In view of several judicial decisions it will be conceded that the legislature has a right to prescribe the qualifications of those who are to deal in and prescribe medicines for the cure of disease, but the legislature has no right to impose a limitation on the freedom of investigation and application of remedies outside of and beyond those in common use by one of the schools of medicine above mentioned. If the remedies suggested by these schools of medicine are inadequate in a given case the patient clearly has a right to resort to other remedies and to other means of restoring his health, and if a person not licensed has discovered and is able to suggest another remedy he has a clear right to make the suggestion and to recommend its use for what it may be worth, and any citizen may, in the exercise of proper judgment, apply this remedy for his own relief. The law therefore cannot constitutionally proscribe other remedies. It is quite possible that a person not licensed as a physician may discover a remedy for a given disease which will prove efficacious, and it is beyond the power of the legislature to prohibit the investigation and discovery of this remedy and its proper use.

But I understand that Christian Science is essentially the application of a religious belief or Principle, and that the Christian Scientists are organized into churches, holding religious services and worship, and that the cure of disease is a part, and essentially a part, of their religious belief. The Constitution of the State (Article I, Section 3) guarantees the free exercise and enjoyment of religious profession and worship, and this right can be restrained only where it appears that such profession and worship constitute an act of licentiousness, or involve practices inconsistent with the peace or safety of this state. It will scarcely be claimed by any one that the religious profession and worship of Christian Scientists or their practices endanger the peace and good order of the state. They claim that the religious aspect of Christian Science is a revival of Christianity in its original and primitive form, and that Christian Science is attempting to apply in modern life and in modern experience the principles familiar to every student of the Bible. The Bible is a free book. Every citizen has a right to study it and to teach its doctrines as he understands it within the limitations already suggested contained in the Constitution, and the state has no power to impose on the citizen in this respect any special qualification. It cannot require any man to receive a license in order to preach the Gospel nor to expound religious Truth as he understands it. This is one exception, and possibly the only exception, to the general power of the state in its exercise of what is known as the police power to prescribe special qualifications before engaging in a given vocation, but the separation of Church and State and the absolute freedom of conscience regarding religious matters make it impossible that the state can impose a special and peculiar qualification fixed by itself or by its officers before a person can engage in the study of the Bible and the demonstration of the truths to be derived from such study. Christian Scientists do not practise medicine in the ordinary sense. They do not give medicine, but they undertake to produce the relief and the cure of disease by bringing the patient into right relations with divine Power, and it is this power which heals, and not the power or influence of the individual. If this is so, Christian Science is clearly the exercise of a religious profession and worship within the

meaning of the Constitution, and it cannot be interfered with nor restricted by the state. The citizens who profess the belief of Christian Science have an absolute and untrammelled right to the exercise of that belief, and they have a right to suggest as remedies for disease, prayer, submission to the divine will, purity of life, and as a corollary the abandonment of any habits or curses of life which have tended in any way to produce the disease. It seems to me very clear that under our Constitution such teaching cannot be prohibited by a statute, nor can persons who wish to engage in this teaching be required to pass any examination proscribed under the authority of the state. To impose any conditions other than those suggested in the Constitution itself would be to impose limitations on the free exercise of the right of conscience.

But there is another side to this bill which affects the citizens and does not apply specially to the Christian Scientists, but affects all citizens alike, and that is that the bill in effect imposes a restriction on the citizen himself in his attempt to gain relief and procure the restoration of his health. Self-preservation is the first law of nature, and the effect of this bill in its present form is that the citizen who thinks he needs relief in cases of sickness is limited to one of three schools of medicine, and if he fails of relief there, he can make no application elsewhere without possibly subjecting the person to whom he applies to the penalties of the statute if such person should be able and willing to recommend or advise another remedy or agent. The patient who has found the remedies suggested by the physician inadequate, has a clear right to seek and use any other available remedies, but this bill in effect says that he may not ask relief or a suggestion, or recommendation of a person who has not been licensed under the law. This is an unwarrantable limitation of the rights of the citizen. True, under the bill he may seek relief if he can find it without compelling some one else to commit a crime, but the law should not be so absurd as to put any citizen in that position.

Voice of the Press.

THE following concerning the bill above referred to appeared in the editorial columns of the *Press-Knickerbocker-Express* of Albany, N. Y., on the 8th inst.

When the Bell measure, which proposes that persons not duly qualified as physicians shall be prohibited from prescribing remedies to sick persons, was first introduced in the legislature, the *Press-Knickerbocker-Express* denounced the bill as a drive at Christian Scientists. Subsequent developments have borne out our assertion. The *Troy Press* apparently believes that the Bell bill is decidedly faulty. Without taking a decided stand in favor of either side the *Press* says:—

"The drug associations and patent medicine proprietors asked to have the bill amended so as not to affect their interests, and the readiness with which their requests were complied with gives color to the charge that the bill is simply a drive at the Christian Scientists, and the other features were added to disguise its true intent. Undoubtedly Christian Science is more damaging to the income of the regular medical profession than any other competition with which it has to contend, and the physicians are naturally anxious to suppress it. Having given years to the study of diseases, they feel that they are entitled to a monopoly of practice. Otherwise, courses in medical schools are deprived of much of their commercial value. The Scientists, on the other hand, admit that they know nothing of disease, as they confine their studies to good health, and are wonderfully successful in dispensing it to long-suffering seekers of this boon. Between these rival claims, our readers may judge for themselves."

The Bell measure proposes to interfere with the belief of reputable people who have found comfort as well as

health in the new cult. Whoever attempts to prescribe laws for man's personal conviction treads on dangerous ground. There is very little probability of the bill passing. It is too suggestive of tyranny and, if it meets the fate it deserves, will die in committee.

Liberty in Healing.

WE clip the following editorial, under the above heading, from the *Boston Herald*, of February 12, 1901. The editorial comment in connection with the pithy remarks of the great humorist contain volumes of substantial truth in small space:—

Mark Twain is coming into prominence as more than a humorist or a litterateur in other directions. He appears to be in demand as an authority in public affairs. A bill relating to the practice of the healing art and restricting its exercise in certain directions being proposed in the New York Legislature, Mr. Clemens was asked to go before the committee having it in charge and speak on the subject. He modestly declined to do so, on the ground that he would have no influence there, but he gives his views sensibly on the general principles relating to the subject. Here are some of them:—

"How is it," inquired Mr. Clemens, "that there are a thousand ways—constitution, laws, and everything permitting—in which I may damn my soul; but when it comes to a trivial little matter like temporary ill health, the legislature must prescribe how I shall do it?"

"One of these bills prescribes that if your mother falls in a faint you may not help her. Certain physicians are set aside who may give you permission to help her; but you may not do anything without their prescription. You may smoke, if you choose, but the number of cigars must be determined by a physician—you may not say how many yourself. This bill is so absurd and ridiculous that I wish somebody might appear in Albany just to make fun of it."

But who could have done this so well as Mr. Clemens? We think he should have gone, on the ground, as he says himself, that his interest centres itself upon a broader ground than any that is likely to come up in the committee—the ground that every time a statute encroaches upon the liberty of a citizen it is an entering wedge for further encroachments and is a danger; and that one cannot give his bodily health into the hands of any monopoly without running the risk of presently having his liberties curtailed in other directions.

Change of Address.

The address of Mr. Carol Norton, C.S.D., member of the Christian Science Board of Lectureship, has been changed to 1123 Broadway, New York, N. Y.

Just a Kind Word.

BY RICHARD J. HICKS.

ONLY a pleasant word a stranger spoke to me,
Just one kind word along the path of life,
So brightened up the day that I forgot the night;
A ray of hope appeared 'mid toil and strife.

One word, a lifting word, had reached me where I fell,
O'erburdened with life's struggles, cares, and woe;
It spake,—the vital spark that dormant lay within;
I then took up the task, true Life to know.

Pausing oft and musing, I see the years gone by,—
The dark days, the gloomy hours, are all forgot;
A momentary glance reveals much thanks in me,
I feel. "God bless the giver of that thought."

Among the Churches.

New Quarters at Lima, O.

The members of First Church of Christ, Scientist, of this city were very happy yesterday (Sunday, January 13). The occasion was the opening of their new hall and reading room in the Masonic Temple. The hall is a very handsome room, seated with the latest design of opera chairs, walls tinted in a rich glowing shade of buff, and aisles and platform carpeted with a soft, dark green and black Wilton velvet. The Readers' desk is a very fine piece of work done in oak, Corinthian style. Two mottoes are emblazoned upon the walls, one from the Bible, immediately over the Readers' desk, and one on the south wall from the Christian Science text-book. Palms were used very effectively around the platform, roses and pinks in handsome jars adding their beauty and fragrance to the already pleasing effect.

The service was that usually followed in Christian Science churches, varied only by the reading of an address by the First Reader, Mrs. Florence F. Fullerton. The address was a greeting and also explanatory of the object of this old-new religious thought, giving Scriptural references and authority for the re-appearing of Truth until all shall know and love their neighbor as themselves; then in grateful phrase consecrating the new hall to the cause of Christian Science, the promulgation of Truth as taught thereby. The address closed with congratulations and words of commendation to the members of the church and those interested with them, upon their growth individually, their progress and self-sacrificing devotion to God and their fellow-men.

Miss Florence Campbell sang the one hundredth Psalm, arranged by Jadassohn, her rich melodious voice making the selection a fitting close to a very impressive service.

This church organization is certainly to be congratulated upon its growth and success, and also upon its very pleasant surroundings in its new location.

The Times Democrat.

Mrs. Fullerton's address was in part as follows:—

Dear Friends and Brethren:—We are filled with gratitude to "Our Father which art in heaven," as we assemble this day to join in the service followed by every Church of Christ, Scientist, throughout the entire world. This is an especially happy occasion, in that we to-day consecrate this new hall to the service of God, the promulgation of Truth as taught and demonstrated by Christ Jesus, whose life and example are illuminated and made practical to this present age through the teachings of Christian Science.

To the friends who have met with us for this occasion, we extend a hearty welcome, confident that some bright thought of Life and Love will linger in your memory, a seed of Truth, to grow and ripen into immortal fruitage. The sympathy of friend with friend is sweet, typical of Heaven's joy and harmony. To develop a common desire for the real and permanent happiness is the underlying purpose of Christianity; yea, of all religions.

The Prophet Haggai says, "Yet once, it is a little while, and I will shake the heavens and the earth, and the sea, and the dry land; and I will shake all nations, and the desire of all nations shall come: and I will fill this house with glory, saith the Lord of Hosts."

We know this was the purpose of Jesus' entire ministry: to meet the demand; to fulfil the desire. He said of himself, "I came not to destroy, but to fulfil;" he came not to take from the good of the world, but to fulfil the ever longing of the human mind for better things. While he lived his daily life with men, his inspiration was the understanding that Spirit is the Father, the Creator of all

being,—that man is the emanation of the Principle that governs the universe. By constantly reverting to this Principle as the primal cause, Jesus brought into his own life, and to the lives of those who sought him, the harmony and peace that is exemplified in the equipoise of creation. This is government by Principle, a scientific, unchangeable process of the Law of God,—divine Love.

Taking Jesus as the Way-shower, our guide and elder brother, we are to have that same Mind that was in him, acknowledging no law but Love; no cause but God, the eternal Good; no intelligence but the Divine that speaks peace and power, wisdom and health. All Christendom joins to-day in this desire, and those who follow closely in the way made plain by the Master, may do the works which he did. He blessed all,—even those who believed him not. He healed the sick, raised the dead, cleansed the leper, and taught the "good spell" to the poor—the meek in heart.

The magic of his life and example was the divinity of character expressed in the humanity of the man. So shall it ever be. No change is there in God's immutable wisdom and its unfolding; it is a scientific demonstration, a fulfilling of all aspirations, a constant conscious capacity to meet all demands with unfailing supply. This is the application of the Science of Christ, and it is again doing the works of the Messiah. Not a new religion, but an illumination of the forever love of God to man.

It appeared to the prophets of old and they told the people of its glory and its ultimate intent, warning them to be ready and to watch for the coming. The Psalmist sang of its beauty, claiming its power to be ever-present. Isaiah gives in pathetic phrase, the story of its appearing, and calls the wandering people to share with him the peace it brings. Mary heard the promise as from the angel of God, and to her it became a living reality, "and she called his name Jesus," for he was to be the Saviour of his people. To-day, it is the spirit of Truth promised to those who are watching and waiting for its re-appearance.

Listen to these promises: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father. And whatsoever ye shall ask in my name, that will I do, that the Father may be glorified in the Son. If ye ask anything in my name, I will do it. If ye love me, keep my commandments. And I will pray the Father, and He shall give you another Comforter, that He may abide with you forever; even the Spirit of Truth; whom the world cannot receive, because it seeth him not, neither knoweth him: but ye know him; for he dwelleth with you, and shall be in you. . . . But the Comforter, which is the Holy Ghost, whom the Father will send in my name, he shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you."

I cannot close without a word of love and joyful commendation to the members of this organization, First Church of Christ, Scientist, and those who are interested and have joined with us in this effort for the advancement of the cause of Christian Science in our city. Work well done is assured of its purpose; it shall accomplish that for which it was intended. Love is ever reflected and harmony means heaven, even here and now. Let us watch that we be not lulled to sleep; but may the sweet influence of peace inspire us to more concerted action, to greater undertakings and more consecrated purposes. "Ye shall reap, if ye faint not."

Lifting our hearts in devotion to God, we forget not those to whom we owe a deep gratitude. As students of the text-book of Christian Science, "Science and Health with Key to the Scriptures," we consecrate this hall and reading room to the Cause, expressing thereby our love and loyalty, hoping to spread abroad the gospel of health and wholeness, awakening man to his God-given dominion over all the earth.

From Fort Worth, Tex.

The inspiring number of the *Christian Science Sentinel* (December 27) just read. I cannot refrain from expressing my heartfelt gratitude for these periodicals,—the *Sentinel* and *Journal*,—which come into our homes fraught with blessings for us all. Thinking the Field may be interested in our Sunday School I am going to write a few lines telling you of our work.

Our Sunday School was re-organized December 16, 1899, with ten or twelve children. December 16, 1900, we find enrolled during the year eighty children,—a few of these have left us now for new homes. Our actual roll is to-day sixty. The contributions for the year amounted to \$114.50. Some of the children who started a year ago have never been absent. We are studying Science and Health and the Bible. The smallest children, two and a half years old, know the commandments and Scientific Statement of Being. The Thursday after Christmas the children invited all their friends to a Christmas-tree. The Christmas-tree, unlike the usual tree as to trimmings, was trimmed with flags. The trunk being the United States flag represented the place where Christian Science was founded by Mary Baker Eddy. The branches were the flags of other nations, showing where this Truth had gone. The church was also decorated with the flags of other nations; appropriate chapters from the Bible were read, and from "Miscellaneous Writings," p. 320, "Christmas." The children recited in unison the Scientific Statement of Being, the first three commandments, and sang appropriate hymns. Altogether it was a most interesting and unique service. The church was full and all were much impressed with the Christian Scientist's idea of a Sunday School Christmas-tree.—J. R., Fort Worth, Tex.

Second Church at Binghamton, N. Y.

The Second Church of Christ, Scientist, Binghamton, N. Y., have secured the room where they hold their Sunday service, for a reading room to be open to the public Monday, Wednesday, and Friday from 2 to 4 P.M. There will be some one in attendance to receive visitors. Our room will be supplied with the works of our Leader, Mary Baker Eddy, also the publications issued by The Christian Science Publishing Society.

Since this church was organized we have placed Science and Health in the Railroad Y. M. C. A. rooms, and the city library. The children of the Sunday School have given a year's subscription to the *Sentinel* to the Railroad Y. M. C. A., to the city library, and to the reading room of this church. Christian Science Histories, Lectures, and tracts, have also been distributed.

JESSIE M. SMITH, *Clerk*.

The Work at Victor, Col.

On the 23d of May, 1897, two earnest seekers for Truth met in a parlor to read the Christian Science Lesson-Sermon. Three friends joined them, making a little circle of five. A Sunday School was started the same day, with ten children in attendance.

In January, 1898, a society was formed with thirteen members. Larger quarters were required in March, 1898, also the following December, and again in March, 1899. June, 1900, the present handsomely furnished reading room was occupied, where there is accommodation for more than eighty.

More than three dozen copies of Science and Health have been sold. An organ was purchased in November, 1897. Steps have been taken to obtain a charter for the purpose of organizing as First Church of Christ, Scientist, of Victor, Col.—L. L. T.,

From our Contributors.**The Course of the Day.**

BY L. D. AND M. B. MARRIOTT.

I. MORNING.

ABOVE the earth hangs heavily night's mist,
Yet as in hope I watch the eastern sky,
Faintly the light gleams through the lessening gloom,
Telling the waiting world that day is nigh.
O Life unchanging, though grim error seems
O'er consciousness to spread its sombre pall,
Help me to know and understand Thou art,
Hast been, and ever wilt be All-in-all!

II. MID-DAY.

And the tumult of the world's unrest,
Where sin, disease, and death their places claim,
In questioning and doubt, oft in dismay,
I seem to stand,—yet always this my aim:
To see the Christ; to turn from things of sense,
Knowing that Truth alone is real; to find
On those unclouded heights where Spirit reigns,
The harmony of all-controlling Mind.

III. EVENING.

A silence calm and sweet broods over all,
Stillling the strife and clamor of the day.
The twilight deepens; with the fading light
Come thoughts of peace. I lift my heart and pray.
O Love divine, the All, the Infinite!
O Mother God, upon thy tender breast
I lose all discord, for in Thee alone
I seek, I find, perfect, eternal rest!

Discouragement.

BY HENRY C. LAWRENCE.

IN traveling the pathway which Christian Science points out to us as the one road to heaven or harmony, we seem to be persistently beset by a claim or condition which says we are not advancing, are not doing our work, are not living as we should and cannot, therefore we may as well stop trying, go back to the old way of living according to the dictates of human sense and self-will, where we are free to carry out the suggestions of selfishness.

This condition presents itself to be overcome in our physical, moral, and spiritual growth. One under treatment is perhaps discouraged because he is not at once freed from his physical bondage. One may be disappointed because he does not bring Truth into his business or daily work as he had hoped. We are impatient because we do not bring it more into our lives and live up to our highest apprehension of it. We fail to express what we already comprehend, and then are tempted to give up because we do not gain a clearer understanding. Should the one in physical bondage for years, who has perhaps tried all other healing methods only to receive the verdict "incurable," be discouraged because under Christian Science treatment he is not healed in a few weeks or months, or even a year? Should he who for ten, twenty, thirty years has conducted his business along generally accepted lines be disappointed because he cannot at once place it on the basis of Science, and conduct all matters according to its Principle? Should we who all our lifetime have been slaves of the material senses, serving them, and believing them to be our masters and our all, despair because we cannot in a moment reach that spiritual understanding and manhood which knows only strength, peace, and harmony? Should we not rather rejoice that in the Stygian darkness in which we have been

left Christian Science comes offering one gleam of hope, one ray of light, which, if followed, leads unto "the perfect day"?

Discouragement would have us believe we do not reflect the one Intelligence, that we are too dull to comprehend simple Truth, thus tempting us to give up the talent we have to an unreal master, forgetting that by putting this little understanding into practice we must surely gain more. Discouragement is impatience, haste to tread where we have not conquered, to occupy a place we have not proven our fitness to fill. A writer has aptly said, "Impatience is doubt,"—doubt of God's willingness to help us, doubt of His presence and power, doubt of His love, when we are told "God is Love." Did the Master ever doubt, think you? Was he discouraged because his disciples were apparently baffled by the demon of insanity? True he said, "O ye of little faith," but did this imply a faltering of his own faith? No; he never faltered, never failed, and where others doubted, tenderly brought them back to a steadfast trust in a loving Father, constantly our strength and help.

We read in Isaiah, "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." Does not this peace and steadfastness belong to each one of us? Trusting Him, how can we doubt? Conscious only of Good, the sick man learns that Good is supreme and brings health, the sinner knows he can overcome false pleasures and find the joy of holiness. We know that whatever discouraging thoughts may be presented to us, that, using the one talent, doing our best to live the Truth, we are advancing in the understanding of Life and true harmony, "and all the wicked endeavors of suppositional demons can never change the current of that life from steadfastly flowing on to God, its divine Source" (Miscellaneous Writings by Mary Baker G. Eddy, p. 19).

"Bricks that go Underground."

BY G. S. H.

PASSING a new public building lately, admiring the beauty and grandeur of its outline, noting its massiveness and strength rising so grandly above the surroundings, I could not help going back in thought to the time the same vast piece of masonry was begun, remembering how long it was before any evidence of a building appeared to the onlooker. Day after day, months it seemed, the same picture met the eye, evidence perhaps of something going on behind the surrounding fence but no structure looming before the expectant gaze, one would almost think at times the project had been given up. In reality far from this. As the foreman was overheard to say, which explains the seeming slowness, "We are putting an immense number of brick underground on this job." The builders knew if the foundation were safely laid, if good, careful, conscientious work were put in there, in due time the great derricks could swing the huge stone, the iron girders, the steel beams into place as quickly and skilfully as a child picks up its blocks of wood. All would be able to see the growth then, but how necessary to this growth was the unseen, quiet work beneath the surface.

Is it not so with our greatest demonstrations in Christian Science? How necessary, after clearing away the ground, as the builder clearing away the obstructions of self-love, self-will, self-pity, the stumbling-stones of pride and self-righteousness, to put plenty of "bricks underground," in the foundation, bricks of love, of self-denial, of meekness, of humility, of kindness, of watchfulness, of obedience, "for other foundation can no man lay;" and then we can be sure the work will be done, the demonstration will be made, the building will appear, the clear, beautiful reflection of the "building of God" that always has been "eternal in the heavens."

How necessary, too, to overcome a sense of impatience and discouragement in our work,—impatience to get the roof on before the foundation is laid, discouraged because our senses do not tell us more, forgetting it is the things unseen that are eternal. The careful builder knows it would not do to swing great stones into place before all was ready below the ground, he knows, too, everything there has its part to play, all must be true and level. If there are any weak places the work must be gone over, if any part out of plumb it must be straightened before the work can go on successfully. Is it not so with us? Are we impatient because harmony is not brought about more quickly in our home or in our business? Are we discouraged because some disease is not overcome immediately, disheartened because we are not all brought into harmony, health, and prosperity in a moment?

Let us ask ourselves about the foundation of our building. Are the weak places all strengthened? Are we earnestly striving at all times and under all conditions to be governed by Principle? Are we gaining the discipline of little overcomings in our daily life? Are we praying constantly for that Mind to be in us that was also in Christ Jesus? Are we putting the right bricks and plenty of them under ground? If so, then we may be sure the foundation and the whole building will be firm and strong, "Jesus Christ himself being the chief corner-stone; in whom all the building fitly framed together groweth unto an holy temple in the Lord."

The Necessity of Work.

BY FRANCES GIBSON.

I THINK one of the questions most frequently asked in Christian Science is: "If man is perfect why do we have to work?"

It always seems to me to be like a proposition in Euclid. We begin with the "Enunciation:" "Man was made in the image and likeness of God, and is therefore perfect and spiritual."

Hypothesis. It is required to prove that man was made in the image and likeness of God and is therefore perfect and spiritual.

Now we have to construct our figure so as to be able to prove the "theorem." The worker must be careful to work along the right lines—every wrong idea about the prop. will be manifest in his work—his first duty then is to destroy all his wrong thoughts, for if the figure were constructed on a wrong principle the proof would be impossible—every line in the figure must be absolutely perfect—and if a wrong line is put in it must be effaced and the right one put in its place, and as Euclid will not allow rulers, etc., to help in the construction, so in our life theorem, all material means are prohibited as hindering the perfect work. All this requires patient, persistent work, till at last, having destroyed all our wrong ideas and faithfully put the right lines in the place of the wrong ones, we have the perfect figure—then the glorious proof is seen that man is the image and likeness of God perfect and spiritual, and with a shout of joy we say, *Quod erat demonstrandum.*

Obedience.

BY LETITIA VERTREES PULLMAN.

OBEY! Obedience is the law
Of Life eternal,
For only thus is opened up
The way supernal;
In Life is harmony and health,
And God's perfection
Must by His law be ever found
In His reflection.

Testimonies.

A Proof of God's Power to Heal.

I feel that I can truly say with the Psalmist, "Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me."

In October, 1896, while living at Kelly, Kan., our little daughter, then only three years old, was very low with membranous croup. After several days of constant care and worry, and as many sleepless nights, our physician came, bringing with him another physician. After consultation, they said that she would pass away before morning. They said, however, that there was one more remedy that might possibly save her. That was, to heat irons and put into a tub of lime water beside her bed; also, to spray her throat with some of the lime water every twenty minutes and no time was lost in following the directions. By midnight it was evident that the remedy was not helping her, for she constantly grew weaker, and when taken up for those treatments, she would look up with such a pitiful look, it seemed almost more than I could bear. I prayed to God, almost constantly, to spare us our child, but still continued to follow the directions. Morning came, she was still alive. The doctor said she would soon pass away.

My mother, a resident of Baileyville, Kan., who had been greatly benefited by Christian Science, did not know how dangerously ill her little granddaughter was until all material remedies had failed. However, we sent word, and in a few hours my sister arrived. She said, "I know that Christian Science will heal her, and mother says you must try it." To us it seemed a thing incredible; but mother's words, "you must," seemed so strong that we felt we must obey, and, having done all we could in our way, we consented to try it.

We then telegraphed to Seneca, a distance of ten miles, to Mr. S., asking him to come at once. He answered that he would. Sister then said that we must lay aside all material remedies, and trust all to Christian Science. We could not consent to that at first, for we felt she might die before the healer could possibly arrive. She then tried to tell us that they gave absent treatment, but we could not understand. The doctor by this time had become very impatient, waiting for us to heat poultices and help him to spray her throat again.

Sister then told him that we were going to try Christian Science, but he became angry at once, and said that I had lost my reason, and that he must pay no attention to me, but do all that he could for the child while she lived. Then my husband tried to talk to him, but he would not listen, and left the house. By this time our little child was asleep. Then our fear was aroused again, for the doctor had said not to allow her to sleep; but sister would not allow her to be awakened, and took off the poultices.

Minutes seemed hours waiting for Mr. S. to arrive, but when he came he seemed so very calm, that our fear seemed to leave us. Notwithstanding what had already been said, the doctors were not willing to give the case over to Christian Science, for they returned—three of them—after the healer had arrived; but did not move us, for we had already tasted Truth,—we could no longer doubt, for there was already a change for the better.

Mr. S. staved all night with us and asked my husband and me to retire, which we did not fear to do. Morning came, and we found a wonderful change. Before noon the child sat up and asked for her playthings; the next day she sat up most of the day; and the third day was dressed and went where she pleased.

The doctors had told us that even if she did recover this time, she would never be a healthy child, for the

slightest cold would bring croup again. She is now seven years old and is as strong and healthy as any child. I am truly thankful for the little understanding I have of Christian Science, and for the many blessings it brings to our home.—MRS. LIZZIE GEHMAN, Helena, Mont.

Christian Science Revealed a New World.

Christian Science came to me in a very dark hour, at a time when life should have been full of hope, courage, and youthful, healthful work. Up to this time my longings, aspirations and efforts to overcome evil with good seemed to meet with successive failures, until I felt that I had tried all and proved life an inconsistent phantasm.

Sincerely longing for some way out of the labyrinth of human woes, although for a year I continued to refuse the help of what I thought was Christian Science, divine Love was leading me toward the light that must some time illumine the darkness for every mortal.

With its coming a new world of possibilities was revealed that seemed too good to be true, bringing deliverance from sin and suffering. I saw that the standpoint of reasoning, action, and living must be entirely changed, and there began my work. For I was weary of the old way and ready to begin to turn my footsteps into a new path, however rugged, if it but promised deliverance from sin.

As with many beginners, I have tried to hold myself to heights that had not been attained through demonstration. There has been the old story of straining out gnats and swallowing camels, of holding to the letter without the spirit. But as error can only, and inevitably must, destroy itself after each downfall, thought has risen clearer and stronger to behold the one thing needful and to divide between the chaff and the wheat. A lesson that has been brought home to me many times is that it is not enough to deny material conditions. If we stop there we have perhaps swept the house, but have also left it barren. We must see that having denied and dethroned the tempter we close the door on him, and fill all the space with the consciousness of divine Love's all-presence and power. If we have not love, it profiteth us nothing. In this realization we are indeed safe within a stronghold. Then we begin to know in whom we have believed.

Christian Science has lifted me out of chronic depression, has healed me of suffering that *materia medica* declared I would have to endure until I should be taken out of the way.

But immeasurably above the physical benefit is the spiritual uplifting it has brought, the ideals to be attained that I never dreamed of, and the certain knowledge that life is in God, Good, Spirit, entirely apart from all material conditions. Seeing this I am beginning to love all as children of one Parent, and am overcoming jealousy, envy, and malice by the sure knowledge that God's children can only enrich and bless one another.

While just beginning to walk a long road to a promised land, I have thus far found so many treasures in the way, and such sure weapons to meet the daily conditions of mortal thought that present themselves, that I am beginning to know that my Redeemer liveth, and to see more and more that I have no-thing to lose but all to gain in giving up matter for Spirit.—C. L. M., Chicago, Ill.

Thankful for Our Publications.

Christian Scientists in a foreign country have peculiar reason to thank God for their church publications. We always look forward expectantly for the arrival of the *Journal* and *Sentinel*. Our publications seem to grow better; but on the other hand probably we value them more as we understand them better, always finding therein something to steady our thought.

The editorial in the Thanksgiving Day number of the

Sentinel touched a responsive chord. Talking over the history of Christian Science in Mexico since the first little service during Christmas week of 1898, we realized our cause for Thanksgiving. Then we read the Proclamation of President McKinley and the Thanksgiving Proclamation of King David, the 136th Psalm, the Responsive Reading of our Lesson Sermon: "God the only Cause and Creator." We read from "Miscellaneous Writings" by Mary Baker G. Eddy, pages 230 and 391, also appropriate paragraphs from our text-book, "Science and Health with Key to the Scriptures." One of the Mother's hymns rounded out our little service, held, not at our hall but in our home.

The reading of the first testimonial in the *Sentinel* of November 29, was very helpful. It was a clear, direct, and honest admission of the operations of Christian Science; accepting the revelator of Christian Science together with the revelation she made possible, subscribing for the legitimate literature of the cause, and attending the regular services. If we follow the means appointed in Christian Science for our betterment, and are ever loyal to its teachings, we shall assuredly reap the results appointed.

Men and women will cross the ocean and spend time and money in far-off foreign lands, in the search for health. At home and abroad they will follow faithfully the most stringent directions of their physicians, take their medicines, and pay their bills. No less faithful adherence should be given to the rules and directions of Christian Science, especially because, beyond the highest possibilities of *materia medica*, is the power of Christian Science treatment in the spiritual uplift to humanity; the attainment of that Mind which was also in Christ Jesus. Men and women so succored and saved, can, and do realize the force of the prophecy in Malachi, third chapter, tenth verse; for God does pour upon them, from the opened windows of heaven, a blessing there is not room enough to receive.

EDWARD C. BUTLER, City of Mexico.

My Experience in Dentistry.

During five years of faithful, persistent effort, midst multiplied defeat and triumph, Truth has, so unconsciously on my part, transformed my nature from that of extreme sensitiveness and dependence to one of such marked self-possession and independence (loss of fear) that her fortifications in my heart utterly surpass anything I had expected.

I have recently spent no small part of two weeks in the dentist's chair; eight cavities were filled, three teeth capped, two teeth extracted, and a live nerve removed. One cavity the dentist declared to be of the severest nature, it being located in next the cheek at the back part of a wisdom-tooth and extending into the root, thus rendering it extremely difficult of access.

The teeth that were pulled had to be removed from the root, the top being wholly gone from the one and so near from the other that it crushed beneath the forceps.

When time came for destroying the nerve in a tooth to be capped, the dentist's way was to take a week for treatment, but for some reason, and so unlike me, I possessed a great desire to have the nerve removed that afternoon. My dentist reluctantly consented to what he termed "a supreme test"—the removing of a live nerve without the use of anæsthetics.

Despite expressions of fears, and cautions gravely but kindly given, I sat firmly and was ready for what was before me and could not be shaken. Work proceeded and interest intensified. Three young ladies gathered around me closely watching the expression of the face. I never winced, there being no occasion, the nerve came out bleeding and in picces. I felt it, 'tis true, but the sensation was no more severe than the gentle touch of a pin-point. Not much was said,—indeed, what is there to say in the face of proof? "By their fruits, ye shall know them."

I had no thought of dictating to the dentist whether he should or should not use his medicines, thus leaving his thought free and mine at peace; neither was I conscious of demonstrating while in the chair, *this* work has been done in the five years that were past.

Will the dear *Sentinel* and *Journal* please accept our grateful thanks for the light and love borne on their wings at each successive appearing, thus brightening and cheering the glorious pathway.—LENORA S. BURT, Des Moines, Ia.

Curvature of the Spine Healed.

From babyhood I was reared in the thought that I was the victim of hereditary consumption, my mother having died of this disease when I was but a week old. My spine also became affected, and the physicians to whom I went for help told me that in a short time I would be bent double. In one year from the time my spine became affected I was treated by five different doctors, but they were all unable to give me any permanent relief. We finally lost all hope of finding anything that would benefit me, and I felt so weak and helpless, suffering almost constantly, I prayed that I might die, as I believed that only in death, should I find relief from my suffering.

At this time Christian Science was brought to our notice through the healing of a friend. Although knowing nothing about it, I became very much prejudiced, and refused to have anything to do with it. My aunt, by whom I had been raised, being very anxious for me to try Christian Science, secured the address of a healer and wished me to begin treatment at once. I was at this time so very much opposed that I would not listen to her, but a few months later she made arrangements for me to go to Chicago, and while there take Christian Science treatment. I was still very reluctant and became excited and nervous about it. I told the Scientist how much I was opposed to Christian Science, and the only reason I had consented to take treatment was to please my aunt. The Scientist was very patient with me and was sure I would feel quite differently in a short time. She was right, for after the third treatment I felt like a different girl. I gained strength rapidly. The curvature entirely disappeared and I became perfectly straight and strong, soon able to ride a bicycle or do any kind of work which I had never been able to do in all my life before. I am very grateful for all Christian Science has done and is doing for me. I give this testimonial hoping that it may help some other weary and heavy laden mortal to find rest and peace.

C. B. W., Elkhorn, Wis.

Helped in Many Ways.

For about twenty years I was annoyed by an enlargement on my right hand. It seemed that I could do no kind of work without bruising it.

I had been successfully treated in Christian Science for the tobacco habit in its worst form, and had witnessed numbers of cases of healing. I realized, too, that I had never succeeded in business until I studied and in a measure practised Christian Science.

I had not thought it necessary to have treatment for my hand until the lump grew to the size of a hen's egg, still not sore in the least, but greatly in the way. At that time, which was about the last of July, there was a lady Scientist stopping at my home who told me that Christian Science would remove the lump, a fact that I believed, but had not thought of the trouble as being a serious matter; but as it was getting larger very fast, and in my way, I told her to treat me. As a result of the treatment the lump has entirely disappeared.

J. M. ADAMS, Halsey, Neb.

Religious Items.

The "London Letter" in the (Episcopalian) *Church Standard* contains the following: "The Dean of Canterbury, says a reporter, is more and more assuming the role of Jeremiah. Speaking last week on 'Twixt Two Centuries,' he asked: 'What do we hear of most in any paper about the Church of England? Is it about spiritual passion and moral nobleness, or is it about the trivialities of infinitesimal importance? The emptiness of multitudes of our churches certifies to the need of changes in our services. We, almost alone of all the Churches of Christendom, go on reciting constantly the Athanasian Creed, most unsuitable for public recitation, in its literal sense most uncharitable, and deeply repulsive to thousands of those who hear it. Our liturgy is, as many of our clergy testify, what the people do not want and cannot understand. It is too iterative, too long, too mechanical, too formal. And yet, although as long as fifty years ago the Upper House of Convocation agreed that some modification of the Church's rules is needful to minister to the spiritual necessities of the people, we go on as if smitten with apoplexy, and nothing is done.' Canon Henson, preaching his first sermon as Canon of Westminster, in the Abbey, remarked on the pessimistic utterances of the last few days by preachers in that very pulpit, and said that he not only indorsed them, but regarded the outlook with even more anxiety."

Robert Louis Stevenson says: "It is probable that nearly all who think of conduct at all think of it too much. It is certain that we all think too much of sin. A man may have a flaw, a weakness, that unfits him for the duties of life, that spoils his temper, that threatens his integrity, or that betrays him into cruelty. It has to be conquered; but it must never be suffered to engross his thoughts. The true duties all lie upon the farther side, and must be attended to with a whole mind so soon as this preliminary clearing of the decks has been effected. In order that he may be kind and honest, it may be needful that he should become a total abstainer. Let him become so, then, and the next day let him forget the circumstance. Trying to be kind and honest will require all his thoughts. A mortified appetite is never a wise companion. In so far as he has had to mortify an appetite, he will still be the worse man; and of such a one a great deal of cheerfulness will be required in judging life, and a great deal of humility in judging others."

The *Cleveland Leader* says: "That able and justly popular Chinese statesman, Wu Ting-Fang, says that the Christian religion is too high and noble for frail humanity to live up to. The fact is not to be disputed that the gulf between the doctrines of the Bible and the fundamental laws and systems of government which lie at the bottom of the structure of civilization in so-called Christian countries is wider and deeper than that which separates the laws from the religion of Oriental lands. No Christian Power of high rank or international importance has made any attempt to found its government or frame its laws on the basis of the Sermon on the Mount. There is no likelihood that any such effort will be made for ages to come. The foundation of the legal structures reared with infinite pains in Christian countries is not the Bible, but the laws of pagan Rome."

In its editorial columns the (Unitarian) *Christian Register* says: "Senator Lodge has certainly expressed the opinion of the better half of the American public when he says that the saloon in the Philippine Islands is a demoralizing institution, that it can be suppressed, and that it ought to be suppressed. Where martial law prevails the commanding general has the power to put down or to drive out everything which is detrimental to the morals of the army and the preservation of public order. The health, the happiness, and the efficiency of our soldiers in no way depend upon the maintenance of the saloon."

A writer in the (Baptist) *Examiner* says: "The mutual approach of the various sects in the matter of doctrine consists partly in a clear change of position on the old questions, and partly, and perhaps chiefly, in the fact that the old questions, on which the sects originally divided, have ceased to be discussed, being superseded by other questions. Who is debating nowadays those questions between old school and new school on which, sixty years ago, men used to wrangle on the street corners and on the barrel-heads of country groceries?"

The (Methodist) *Christian Advocate* quotes the following words of an English preacher: Grace having got into the heart makes itself manifest in the life. Given a new man, you get a new home. Given a new heart and you soon get new habits. Given a new community, and you will soon get new social conditions. The way God is going to save the world, and make it like heaven, is by making men and women like Himself."

The *Congregationalist* says: "Most men have gained their ideas of God largely from tradition, and tradition is based upon what some former man has thought and taught. We have drawn our conceptions of the Almighty too much from human sources, forgetting that, however wise and instructive Augustine and Calvin may have been, they were not inspired, and their declarations have no such authority as has been claimed for them."

The (Baptist) *Watchman* says: "Henry Ward Beecher once said that you need not break the glasses of a telescope or coat them over with paint, in order to prevent you from seeing through them. Just breathe upon them and the dew of your breath will shut out all the stars. So it does not require great crimes to hide the light of God's countenance. Little faults can do it just as well."

The Rev. Mary C. Billings, in a sermon published in the *Universalist Herald*, says: "How much better off is humanity for man-made creeds and formulas? nay rather, have they not been a detriment to the inception of the pure and sweet gospel of the Master, whose life and teaching embodied reverence and love for our Heavenly Father, and practical exemplification of the one grandly simple Golden Rule?"

In a sermon in the *Universalist Leader*, the Rev. L. M. Powers says: "We need to enlarge our thought of prayer. Every word of thankfulness and song is a prayer. Our silent, trustful waitings are prayers. All brave and heroic deeds are heard in heaven. As we grow more spiritual the less likely, it seems, we shall assail heaven's gates with words. The wiser we become the more we shall see the divinity we have sought we have already found."

The (Baptist) *Watchman* says: "Too many people have no way of dealing with their fellow-men except as an unskilful driver deals with a horse. They have no resource but will, muscle, and brute strength. They lay down the law and that is the end of it. People have to do as they say. If one were required to specify the main cause of domestic unhappiness, he would probably mention driving with a heavy hand."

The *New Church Independent* says: "It is the spirit of childhood that we want, and not the precise actions—the former in a grown person we call *child-like*, and love—the latter we call *childish* and do not love. Could we but carry the subtle charm of the child-like spirit to meet the new duties of maturer years, they would be as attractive in their performance."

The western edition of the *Universalist Leader* says: "We are in the world for educational and not probationary purposes. No soul would willingly accept life as a gift with the tremendous responsibilities of a probationary state in which everlasting blessed-

ness is to be earned, and the possibility of endless suffering also involved."

"Half the writing, preaching, teaching, and reform work of the world that fails, fails just because the thinker and worker is getting something off his mind, relieving his own conscience, reducing his own unrest, or doing something for himself, when he thinks he is doing something for the rest of the world," says the *Christian Register*.

Helen Gould has given four hundred thousand dollars for the land, the building, and complete endowment of a Young Men's Christian Association Hall to be built and conducted under the direction of the officers of the Brooklyn Navy Yard for the benefit of the sailors and marines.

The *Christian Register* says: "Whenever one has a grievance, in nine cases out of ten it will disappear if he states it to the person offending. Commonly there is a misunderstanding which a slight explanation will remove."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00

RETROSPECTION AND INTROSPECTION.

A biographical
sketch of the author. The way she was led to the discovery of
Christian Science; its growth and fundamental idea; 120 pages,
cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half
dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the
history and to the readers of Christian Science; containing
Dedicatory Sermon delivered at the Mother Church, and scin-
tillations from the press on that occasion; 132 pages. Price
by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating
and enforcing practical Christian Science, thus affording inval-
uable directions for all true Scientists. The following are
some of the topics treated: SEED-TIME AND HARVEST, DEEP
THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFF-
ERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80
pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50
half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00
each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable
book, containing a brief and concise statement of Divine Science,
alias Christian Science, in the form of questions and answers.
It is a very succinct statement of Christian Science; 35 pages.
Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00
per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM.

The Pastor Emeri-
tus' Message delivered at the Communion Season in the
Mother Church in Boston, June, 1898. A clear and strong
refutation of the charge that Christian Scientists are Pantheists.
Leatherette covers; 21 pages. Price by mail, 26 cents; per
dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message
of the Rev. Mary Baker G. Eddy to the Mother Church on
Communion Sunday, June, 1900. Leatherette covers, deckle-
edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in
Christian Science; 56 pages. Pebbled cloth covers. Price by
mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music
by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per
dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIP-
TURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder
of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in
Boston, Mass.

The Journal is published on the first of each month, and con-
tains interesting reports of cases of Spiritual and Physical healing
as well as instructive discussions of the Principle and the Practice
of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United
States, Canada, or Mexico. Two Dollars per annum; One Dollar
for six months; Single Copies, Twenty Cents; Foreign Subscrip-
tions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday
Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one
address, one year, each, 50 cents. Foreign Subscriptions, one copy,
one year, 60 cents. Postage prepaid to any part of the United
States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies
or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by
REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHN-
SON. Price, 50 cents per copy; \$5.00 per dozen. Words used
by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY
BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For
soprano or tenor, C sharp to A; for lower voices, B flat to F.
Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother
Church, also list of members. Price, one copy, \$1; six copies
to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, pre-
paid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half
Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half
dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History
of the Building of the Mother Church, The First Church of
Christ, Scientist, in Boston, Mass. 103 pages. Illustrated.
One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL
NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of
the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

five copies to one address \$1.15; 50 copies to one address, \$2.25.

SUPPLEMENT

To the CHRISTIAN SCIENCE SENTINEL

CHRISTIAN SCIENCE: ITS WORK AND SCOPE.

Practical Application of the Science.

A Lecture by Mr. Carol Norton of New York City, delivered at Theatre Saratoga, Saratoga, N. Y.

In presenting to your thoughtful consideration the subject of Christian Science as an applied Science, I shall endeavor to review its practical excellence and vital work, as I have observed the operation of the system during a period of ten years in its ministry and among its people. Our time will not allow a full or detailed investigation of its religious and scientific tenets. This can be accomplished in the quiet of the home, through the thoughtful perusal of the written works of Mary Baker G. Eddy, the Discoverer and Founder of the system. I will, therefore, endeavor briefly to review the practical operation of Christian Science in the varied departments of life, and strive to show that it amply proves its right to be called an applied Science, applicable to all the affairs of human existence.

RELIGION.

Christian Science, as its name indicates, is a religion. Christian Scientists consider it the Science of Christianity. It recognizes the impersonality of the teachings of Jesus, and emphasizes the fact that all the works of the Founder of the Christian Religion were wrought in accordance with an eternal law of Divine Mind. Hence, it elevates the idea of divine naturalness in the so-called miracles of Christ, and rejects the popular idea of the miraculous or supernatural element. Christian Science recognizes all that is true and good in the religions of the world; but, as its name indicates, it claims to be the scientific or demonstrable presentation of the teachings of the Nazarene, whose ethical ideas and religious tenets are rapidly becoming universal. Religion, to the Christian Scientist, means works, enlightened faith, spiritual understanding, physical and spiritual healing, the application of the laws of spiritual evolution and progress to all the affairs of life, the gradual regeneration of mankind, and the ultimate establishment of the brotherhood of man under the law of Love, through the Gospel of peace. Christian Science disbelieves in religions as it disbelieves in gods. It accepts one religion, one God or Mind, and one family on earth and in heaven. It presents the idea of the Great Knowable, *alias* divine Mind, in the place of the ancient and anthropomorphic idea of God, which partook so largely of the nature of imperfect humanity. Creeds, doctrines, mysticism, ceremonial, scholastic intellectuality, and fear, it considers as no part of Christianity. Christian Science teaches the existence of one Father or divine Principle; one Way-shower, the man Christ Jesus, whose teachings are now spiritually interpreted by the writings of the Founder of Christian Science, and demonstrated as practical with signs following. The religion of Christian Science is impersonal, liberal, scientific, impartial, and of universal adaptation. Its idealism includes its rationalism, and its liberalism is the soul and centre of its evangelical nature. Trinitarian and Unitarian, Jew and Gentile, religionist and scientist, materialist and Truth-seeker, agnostic and infidel,

all find within its teachings that which satisfies. It shows that the Mind which is God abides in the holy temple of the purified thought and chastened heart of every regenerated man and woman. It is a religion of love, tolerant, progressive, comforting, renewing. Love, pure and undefiled is the genius of Christian Science. This Love makes of one family all the children of men. It removes the possibility of human and personal contention, binds up the broken-hearted, heals the sick, converts the unbeliever, spiritualizes the mind and affections, renews the hopes, paints the gray clouds of life with a golden border, and reveals the eternal plan of God; namely, that Love, infinitely tender and infinitely pure, constitutes the abiding atmosphere of Heaven and pervades the Holy of Holies which exists in every true heart that has been purged of worldliness and human depravity. In a sweet and satisfying way it reveals the great truth, that,

Love is no joy that dies apace
With the delight of dear embrace;
Love is no feast of wine and bread,
Red vintaged and gold harvested;
Love is the God whose touch divine,
On hands that clung and lips that kissed,
Has turned life's common bread and wine
Into the Holy Eucharist.

Perhaps the least comprehended truth of the religion of Christian Science is that of the reality of Good and the unreality of evil. Upon this pivot moves the entire structural life of its theology and religion. To the Christian Scientist this idea transcends in glory and practicability all lesser ideas. By this almost revolutionary statement Christian Science elevates a profound yet simple truth; namely, that because Good is the nature of the eternal God it necessarily becomes the positive of life. Therefore, the scientific deduction made by Christian Science is that the reality or positive actuality of Good, as Deity involves the doctrine of the unreality of that element which opposes the eternal nature of Divinity. The scientific conclusion of the whole system, therefore, is: If Good is real, actual, positive, immortal, perfect, infinite, that which contradicts the eternal nature of the positive Principle of life, *alias* God, must be temporal, unreal, and without Principle or actual existence, real to material sense, but unreal to spiritual sense. The practical application of this doctrine is seen in the purification of the human mind, through the accession of the primary elements of the divine Mind. Christian Science makes the idea of God scientific and demonstrable, elevates the conception of the Supreme Being as divine Principle, and enables man, through spiritual enlightenment, to awaken by degrees in the image and likeness of God, and possess the mind which was in Christ Jesus. Paul showed clearly that the yielding of thought to evil, as obedient servants of error brought men into bondage to evil, and that the way out of this servitude was solely through the scientific demonstration of divine Mind over all error of thought. Nothing that can be said of evil is true, except that, driven to its final limits, it destroys itself. Therefore the practical outcome of this doctrine in Christian Science is the final salvation of every individual here or hereafter from all that wars against the divine nature of God.

SCRIPTURAL BASIS.

Christian Science is founded on the Scriptures. It throws the light of spiritual in-

terpretation upon the Bible from Genesis to Revelation. It reveals clearly in the divine plan of atonement, the advancing Messiah as the Impersonal Christ marching majestically down the centuries as the Prince of Peace, the divine Purifier and Healer of mankind. Because of its close adherence to this ideal many Hebrew religionists of this hour are accepting Christian Science in its Religion as well as its healing. The deductions of modern scholarship relating to the inspiration and authorship of the books of the Bible in no way affect the Christian Science interpretation of Scripture. While these deductions are forcing revolutionary changes in the doctrinal standards of Christendom, Christian Science, as stated in its text-book, remains untouched, a revealed and demonstrable Science. The reason for this is most simple. It is because Christian Science affirms that the Bible teaches on an ascending scale, through parable, argument, logic, and revelation, a simple, but profound lesson. The nature of this lesson is fourfold, its scope universal, and its character divine. First: The eternal reality of Good as God and the unreality of evil. Second: The reality of Mind or Spirit as Supreme Sole Cause and the unreality of matter or flesh, *i.e.*, materialism. Third: The inspiring fact that sin, sickness, and death are no part of the divine plan, but errors of human belief and material existence. Fourth: The final conquest of all that wars against harmony and individual perfection, through the actualities of Divine Science, which is divinely natural, but not miraculous or supernatural.

Prayer without ceasing, silent, aspiring, deep-hearted, is especially the custom of Christian Scientists. Such prayer removes mountains, heals disease, binds up the broken torn hearts of earth, and widens the mind's horizon. Prayer of this sort brings the thoughts of man into oneness with the divine Mind, and the worship of God becomes the daily reflection of the Mind which moves only in Love's grooves, and thus governs all in harmony.

SCIENCE.

Christian Science claims for its basis and operation, exactness and practicability. As a Science it is logical and in its varied applications demonstrable. This latter fact removes the system from the realm of the so-called inexact sciences, and places it virtually at the head of all religious, therapeutic, and social sciences. The Science or exact knowledge of God as divine Mind must be the demonstrable understanding of Omniscience. The practical application of such a Science must cover the whole area of life and perfectly govern each part, as in its fulness it rules the whole. Deity or God being Mind or Intelligence, the only Science that can reveal the nature and laws of God must be a mental Science, or that Science which relates wholly to mental laws of cause and effect. Such a system is Christian Science. It goes to the logical ultimate of metaphysical and psychological reasoning and affirms that pure Monism alone is natural and real. It denies the dualistic or dualistic theory of two opposing primary elements, mind and matter. And in this denial we are brought face to face with the great basic truth of Christian Science, namely, its statement, "All is infinite Mind and its infinite manifestation, for God is All in all" (Science and Health, p. 464). By teaching the omnipotence of God as Mind and proclaiming that the changing and decaying forms of

matter are but the phenomena of the human mind, it avoids the shoals of pantheism. It thus reveals the fact that the belief in the reality or divinity of matter as well as Mind constitutes genuine pantheism—the theory that God is not only all, but that all materiality that exists is God and His creation.

For many years after the founding of Christian Science, religious and scientific critics persistently opposed its scientific and philosophical basis, viz., its teaching that "All is Mind, there is no matter." The dual theory of two elementary forces, mind and matter, in life or nature, had been so long believed that a system that absolutely denied what to the general mind was an axiomatic truth was at once stamped as unscientific, absurd, and undemonstrable. Again, the rapid development and elaboration of the theory of evolution and its almost world-wide acceptance, seemed to many to be a positive confirmation of the theory of dualism in nature; hence organic evolution has been accepted by a large part of the scientific world as the true theory of the creation of the universe and man. But as progress is the law of life, and as there are no permanent stopping places along the highway of Truth's eternal unfolding, it is but natural that the ultimate statement of true, spiritual, and natural evolution should be announced almost simultaneously with the first public deductions of the world's greatest evolutionists. In 1866 Mrs. Eddy first gave to the world the keynote of the philosophy of Christian Science in the statement: "All Causation is Mind and every effect is a mental phenomenon." Causation in matter or material atoms, mind emanating from organism, and spirituality from materiality Christian Science deems an impossibility. Its teachings affirm that "all atomic action is Mind." Universal Mind manifests itself in infinite form, color, symmetry, order, individuality, and glory. Evolution has classified, and with scientific accuracy traced, the gradations of life in form and identity, from very low types up to very high ones. Christian Science admits that the infinite Mind manifests itself throughout time and eternity in an infinite creation, and that ideas as things are ever revealed in an ascending order, but it never departs from its scientific platform, which states that life ever evolves life, and affirms that decaying forms, sin, sickness, and death are not the manifestations of the One Good, the Perfect First Cause, which we call God. The growth of the Christian Science idea of matter's unreal nature, or its mental character, and the idea of Mind as the only actuality is shown by the conclusions of many of the leading natural scientists of this country and Europe.

Professor Huxley says: "After all, what do we know of this terrible 'matter' except as the name for the unknown, hypothetical cause of states of our own consciousness."

Dr. Moncure D. Conway of London, England, writes in a recently published article: "A new religious statement has become necessary to adjust evolution to the spiritual consciousness, and that statement will also have to be evolved."

Christian Scientists, among them thousands of men and women of profound thought and deep intelligence, believe that the new religious statement needed to adjust the idea of evolution or spiritual progression to the spiritual consciousness of man, was formulated and scientifically enunciated by Mrs. Eddy in "Science and Health, with Key to the Scriptures," in 1875, and as therein stated, is being daily demonstrated as both Christian and scientific. This idea that matter is a thing of thought, an externalization of the human mind, and not an entity or element having independent life apart from thought or mentality, is gaining ground very rapidly in the world of thinkers.

MENTAL THERAPEUTICS.

In his work, "Literature and Dogma," Matthew Arnold writes: "Medical Science has never gauged,—never, perhaps, enough set itself to gauge,—the intimate connection between moral fault and disease. To what extent, or in how many cases what is called illness is due to moral springs having been used amiss, whether by being over-used, or by not being used sufficiently, we hardly at all know, and we too little inquire. Certainly it is due to this, very much more than we commonly think, and the more it is due to this, the more do moral therapeutics rise in possibility and importance." These pertinent words of England's eminent critic and religionist bring us face to face with the physical healing of Christian Science, which should be reviewed from a two-fold standpoint. First, as a vital part of the Christian religion. Second, as a system of mental therapeutics, representing the third and final step in the evolution of medical practice. Healing the sick through spiritual law without drugs or material means frequently appears in the Old Testament. The pages of the New Testament record it as the handmaid of all moral and spiritual reform. It formed a conspicuous part of the work of Jesus, it was the sign that followed the footsteps of his disciples and followers, and it was the divine seal of spiritual power that blessed and advanced the early Christian Church. For fifteen centuries it has been a lost element of the Christian religion. In 1866 it was re-discovered, and in "Science and Health with Key to the Scriptures" it is stated in its scientific as well as its spiritual significance by Mary Baker G. Eddy.

The present age is peculiarly in need of Christian healing and conspicuously in want of an exact system of mental therapeutics. The practical results of Christian Science prove that this need has been met. A careful study of Christianity as its Founder lived and taught it, reveals that healing was to thousands perhaps the greatest proof of the divine nature of the religion of Jesus. Release from bodily woe and suffering prepared many hearts in that hour for the acceptance of the truth that Jesus taught. Freedom from all types of organic and functional disease has prepared thousands for the Gospel of health and practical Christianity that Christian Science proclaims. Healing and moral-spiritual reformation proved the divinity and genuineness of Jesus' teaching. In this age the same evidences confirm the claims of Christian Science, and establish it as an agent of reform and as the restoration of primitive Christian healing. Christian Science declares that all the commands of Jesus to his followers should be obeyed. Chief among these is to be found the command to heal the sick. Jesus established the precedent for all healing, namely, divine or mental healing, without drugs. This healing was called by the people of that age the healing of the sect of the Nazarenes and of its great teacher, the man from Galilee, Jesus of Nazareth. Jesus and his followers were Christian metaphysicians to whom the healing of bodily disease was as natural as the healing of sin. The union of spiritual and physical healing has been re-established in Christian Science and in this age is known as Christian Science Mind-healing. In that age its nature and spiritual character, but not its science, were taught by Jesus and his Apostles. To-day, with the exactness of a demonstrable and applied science, the mental therapeutics of Christian healing are taught and scientifically demonstrated. Therefore, this healing is Scriptural and a necessary accompaniment of evangelical as well as liberal Christianity.

Discerning the need of the seamless robe of Christianity according to its Founder's words and example, Rev. Dr. A. J. Gordon,

one of the leading writers and preachers of the evangelical Christian Church, thus speaks to the Church of to-day: "Oh, Church of the ascended Christ, carrying still in thy hand thy Master's commission, with no clause annulled and no vestige of authority revoked, what has happened to thee that the lame must lie at thy doors, and none can take him by the hand and lift him up, that the sick must pine on his couch, and never a cure must be expected through the prayer of Faith? Hast thou ceased to walk in the light of the Sun of righteousness that thou hast no longer any healing shadow to throw upon the sick and dying? And how is it that, instead of mourning and being humbled at the loss of these apostolic gifts, thou art lifted up with self-complacency, speaking reproachfully of such as seek for their revival, and visiting them with cold rebuke? Is it an occasion for pride that 'thou hast no healing medicines for the sick,' and that thou must say to the lame and leprous, 'Thy bruise is incurable, and thy wounds are grievous. There is none to plead thy cause that thou mayest be bound up'? My brethren, we cannot ask these questions too earnestly or repeatedly. I am weary, for one, of the excuses which Christians have framed for their impotence: telling the world that the age of miracles has passed, and that the gifts of healing have been withdrawn. The age of miracles has passed indeed, and perhaps the only reason is that the age of faith has passed. . . . I feel as sure as I am of anything, that the loss of a healing ministry is due to a change in the church and not to a change in Christ."

There have been many prophets of the good new days in which we live. Emerson with lofty optimism wrote: "I believe that the laws of Nature, which are the angels of the Most High, are rolling on to the time when the child shall die a hundred years old; when sickness shall fade from the world, and with it the sins of the soul. A glory is coming to man such as the most inspired tongues of prophets and of poets have never been able to describe." Mental Therapeutics as an exact preventive and curative system is a well established Science. Mental causation is a final cause, and by addressing the mind of a patient the Christian Scientist deals with the germinating ground of all organic and functional disease. Moods, fears, sinful and sensual thoughts, inherited beliefs, the illusion that matter has life in itself, all originate and perpetuate sickness and suffering. Cancer, consumption, blindness, deafness, skin and bone diseases, gout and deposits, drug and liquor habit are being healed constantly by Christian Scientists. Facts are stubborn things, and the simple facts of the work of operative Christian Science make its claims genuine. While the percentage of cures is large, about seventy-five per cent, the Science is really in the infancy of its demonstration. As spirituality increases in the lives of its operators, vastly greater results will be obtained. Christian Science Mind-healing differs from systems of mental healing that the public mind often confounds with it.

Faith Cure attempts to heal sickness through faith in a personal God, who is believed to reward sufficiently strong faith or petitionary prayer with occasional cures. The premise, operation, and outcome of Faith Cure thus wholly differ from the exact scientific system of mental therapeutics known as Christian Science, wherein God is the divine Principle of cure as Harmony is the Principle of music. Mind cure, suggestion, and hypnotism are based and operated upon the influence of one human mind over another. Will power is a vital element in the work of these systems, and each starts with the assumption that the human mind possesses within itself curative elements, that operate through psychical law, magnetism and thought transference,

Christian Science departs at the outset from the primary claims of these systems and denies that the human mind possesses healing power that can destroy either evil habits or sickness. It considers the healer at all times an agent only, and the Deific Principle, *alias* God, the sole curative power "who forgiveth all thine iniquities; who healeth all thy diseases."

LITERATURE.

The ideals of Christian Science are making permanent impression upon the literature of the hour. As in the drama realism is found to be true naturalness, and art to be the truthful delineation of possible, not impossible, character, Christian Science trains the mind in concise thinking and removes cumbersome methods of thought and expression. It shows that to the extent the author and writer incorporates in his work Soul-life, he reaches the heart of literary merit and ministers to the genuine wants of his readers. Books, like friends, must be truthful to wear well, pure to outlast the discords of life, and elevating to overcome the temporary mesmerism of low sensationalism. The marked rise in the tone of our current literature is traceable to the widespread demand for purity, truthfulness, and character in all the departments of life. The popular books of the period are those which present in vivid realistic ways some great question of morals, ethics, or sociology. Christian Science encourages in literature all that elevates the mind. It shows the great danger to morals and health of books and newspapers that present vivid word-pictures of vice and sensationalism. In the interest of health, good morals, and social purity, Christian Science utters a solemn protest against the widespread publishing of descriptions and pictures of disease, crime, and patent medicines, accompanied with detailed accounts and illustrations of so-called incurable diseases. It is proverbial that the reading of vivid descriptions of disease tends to the development of like symptoms in the reader's mind or body. In Germany the press is no longer allowed to print accounts of suicide because these accounts help to make this error epidemic. Our consecrated social reformers should learn a lesson from Christian Science and recognize that the constant publication of criminal action, murders, and suicides keeps a series of thought-waves in motion that sway all minds that are open to erring or criminal suggestions. These waves of mental suggestion set in motion by sensational books and papers, and strengthened by the minds of millions of readers, who transfer by thought and speech the germs of crime and disease are the chief dangers that confront our modern civilization. "We are as liable to be corrupted by books as by companions," writes Fiddling. Christian Science separates the chaff from the wheat in literature, and prepares the mind to appreciate true literary merit, making purity the corner-stone of all genuine book-making. The modern press is a marvel, and in most instances the friend of progress, freedom, and Truth. But, as with all human institutions, error tries to retard its upward steps and worthy motives and to array evil's demoralizing sensationalism and depravity, with the garments of decency and Truth. Such journalism is not only an enemy to health and morals, but to civilization, to the entire race, and to the century in which we live. Public opinion will soon demand the reformation of this abnormal type of journalism, and impersonal righteousness will cleanse the atmosphere of its foul impurities.

SOCIOLOGY.

Sociology, or the science of society and human association, can be called the highway to the realm of brotherhood. In a practical way Christian Science can be termed Christian Socialism, for that Magna Charta of divine democracy, the Sermon on the Mount, is the foundation of this Science, and the Lord's Prayer, which petitions that God's kingdom or rule shall come on earth

as in heaven is its one great Article of Faith. The questions of capital and labor, government, business, education, practical philanthropy, all confront Christian Scientists as they do every social and religious reformer. It should be remembered that the very transcendentalism of the philosophy of Christian Science makes it of practical value to all aspects of human affairs. Because the system deals wholly and directly with mind and mental forces, and because it aims at the purification and spiritualization of thought, it at once enters the realm of mental causation, and there purifies, elevates, and corrects. This system aims at the establishment of the Brotherhood of Man, with one governing Mind, on the basis of divine Love. It shows that erring thoughts, false motives and standards, selfishness, and human fear evolve and create the perplexities that surround the questions of class strife, and the inequalities of life so prominent in the varied aspects of the great problem of capital and labor. Christian Science lays the axe at the root of the tree of human error. It demands that love shall take the place of fear, trust and confidence the place of suspicion, and the consciousness of Christian democracy and equality in individuality (for individuality can never be lost) shall overthrow the power of human greed and jealousy. Genuine reform will be a vain dream, and brotherhood a phantom, until the elements of human nature are changed by the acquisition of the Mind of the Master. Individual reform must and will end in the general reformation of the race.

GOVERNMENT AND BUSINESS.

Christian Science, by bringing the mind into harmony with divine Mind through a gradual process of mental elimination, makes the individual a law unto himself. Man thus brought under the impersonal rule of Right, Justice, and Mercy involuntarily becomes obedient to the law. He is then by natural and true instinct a supporter of all moral and righteous government. Class legislation is fundamentally wrong. Popular government, true Republicanism, and Christian democracy, in the larger significance of these terms, will be sustained and enlarged only as the divine rights of the individual are recognized and sacredly guarded. Popular government need not be paternal in order to protect its supporters. Neither is it necessary for the individual to carry the idea of liberty so far that it amounts to lawlessness. "Unity in individuality" should be the motto of our commonwealth and the basis of government in all lands, and among all nations.

Christian Science is of vital importance and value to the business man. It intensifies the normal mental power of concentration, application, foresight, and wise conservatism. It engenders that optimism which enables the well poised and experienced business man to wait, and in cautious movement attain a legitimate and desired end. It enables the business man to read human nature more keenly, hence more accurately. Thus he is better fitted to protect himself against human subtlety and craftiness so common among those mortals who attach no value to integrity, recognize no obligations in friendship, and see no grandeur in being honest, with word and bond as one. It helps him in times of panic and in hours of fear, because it reveals the fact that the Principle of honesty, like that of spiritual perception, is God. Christian Science, through its processes of mental training, lifts business men above the petty annoyances of daily life and renders sure rewards, under the natural laws of cause and effect, to all effort and action that tend to uphold integrity, honesty, and right motive. Financial panics, so-called "hard times," and business depression, come in most cases from mental and abnormal reasons. It is but infrequently that actual and reasonable causes exist for these distressing disturbances.

Merciless waves of concrete or defined fear aggravated and increased by suggestion, press, and telegraph, sweep over the minds which constitute what is known as the business world, and manipulate conditions and values as a tornado sweeps over a forest. Constant talk about one's bodily ailments or mental woes always perpetuates and increases these troubles. The rehearsal of crime and vice tends to evolve like conditions in the life or environment of the person who dwells on such error. Business men unwittingly talk poverty, limitation, and "hard times," brood over the detailed symptoms of a diseased or sick business, and so work against their own interests and evolve either distress or actual failure. The Christian Science business man is wiser than the generation about him. He applies rational mental methods to all conditions that confront him, and by so doing avoids the torment of continued worry, fear, and perchance catastrophe. In a public speech delivered in one of the great business centres of this country, in the midst of the last financial panic, the present Secretary of the National Treasury stated that it was his firm conviction that the business and financial world were to be likened to the human body. This body and its functions, he stated, were directly governed by the human mind and subject to its power; and that fear-waves were the most direct and potent causes of financial disturbance. Christian Science teaches that divine Love casts out fear in its multitudinous forms. The varied manifestations of fear darken the mind, perpetuate timidity, and hinder individual advancement. Therefore, the practical application of the rules of Christian Science ends in the gradual destruction of this element in the human mind.

PHILANTHROPY, EDUCATION, ART.

In all that relates to educational questions Christian Science exalts the idea that true education consists of training thought in channels of right knowledge such as will help the human mind to outgrow its ignorances and wrong tendencies. All that encourages keen insight, correct reasoning, scientific and exact mental methods, is of value. To the Christian Scientist the higher education is wholly ideal and spiritual, but eminently practical, though in advance of general educational theories. It proclaims the spiritualization of secular thought in contradistinction to the secularizing of spiritual thought and rational idealism. The philanthropy of Christian Science consists of healing the sick, reforming the depraved, teaching mankind the Science of Being, comforting the sorrowing, and showing all men how to rise from the valleys of poverty and misery into the light of true living. To lawyers this Science becomes invaluable inasmuch as it is the great interpreter of the Moral Code, and through its enlargement of the faculties of the mind it naturally increases the intuitive sense of moral right, so necessary to this profession. It also gives thought an enlarged grasp of the scope and application of the law as a whole. Art, Architecture, and Music all have their place in Christian Science. "The true work of art," wrote Michael Angelo, "is but a shadow of the divine perfection;" and Blake writes that "the highest art is always the most religious, and the greatest artist is always a devout man. A scoffing Raphael or an irreverent Michael Angelo is not conceivable." Yet the highest manifestation of the beauty of things about us is but type and shadow of the grandeur that awaits the spiritualized mind. In the divine Mind exists all beauty, and as thoughts are attuned to the eternal and Infinite Beauty, all the glories of earth and heaven unfold the petals of the new born and ascending consciousness. In all parts of God's universe are evidences of His art. Nature's blending colors, shades, and order are satisfying evidences of the immortality and divinity of beauty and art. The everlasting hills towering toward the blue dome

above them speak to us in silent eloquence of the eternal love and protection of the Infinite Father. The placid lake, the winding river, and babbling brook tell of the eternal calm of Spirit and of the peace of harmonious action for perpetual motion or progress is God's plan and man in His image forever advances in the unfolding of the Infinite Ideal. Truly it is written that

Rest is not quitting the busy career
Rest is the fitting of self to one's sphere.
'Tis the brook's motion—clear without
 strife,
Fleeting to ocean after its life.
'Tis living and serving the highest and
 best,
'Tis onward, unswerving—and this is true
 rest.

Christian Science is of practical value to the artist, inasmuch as it brings the sentiments, instincts, tastes, and thoughts into harmony with the creative Mind, the Author of all art. It refines and purifies his conceptions and abilities in all ways. Art thus becomes religious and idealistic, and serves as a stepping-stone to the art of Soul and spiritual perfection. The musician gleams from the truths Christian Science metaphysically practical assistance. It has been said that "where painting is weakest, namely, in the expression of the highest moral and spiritual ideas, there music is sublimely strong." Thousands of musicians are Christian Scientists, and their testimony giving the result of applying its ideals to their profession is most interesting.

THE FOUNDER, MARY BAKER EDDY.

The Founder of Christian Science recently stated in a published interview that its adherents number over six hundred thousand believers. The magnitude of the work of the system, its healing, reformatory, and widespread influence upon the thought of the present era, demand that its tenets be soberly investigated. To its Discoverer and Founder the race owes everlasting gratitude. Hundreds of thousands, long bound by chains of suffering and error, now call her career blessed and her mission to humanity divinely ordered. She discourages personal homage. Her strongest characteristic is lofty scorn for mere personal regard or any approach toward hero-worship. She is liberal, consistent, unselfish. As a friend she is constant; as a religious teacher faithful and untiring; as a philanthropist liberal and wise, giving to private and public charities large in-

stalments of her time and money; as a reformer courageous, with prophetic vision of a rare order; as a "Mother in Israel," tender, compassionate, forgiving; as an American woman, patriotic and democratic, yet it can be said of her that "the world is her country—to do good her religion." She stands, as she always has done, the friend of the oppressed and down-trodden. Works, not professions, crown her years of toil, and willing thousands, with dignified gratitude, love to call her by the endearing term of Mother, for she has interpreted to a needy world the nature of the Divine Maternity, yea, the Father and Mother God. The restored Church of Christ on earth will be renewed, and Israel of the Spirit will enter the promised land of spiritual freedom and salvation. Whittier, the sweet singer of the Friends, tells us of this Church:—

O heart of mine keep patience! Looking forth,

As from the Mount of Vision, I behold,
Pure, just, and free, the Church of Christ
 on earth,—

The martyr's dream, the golden age fore-
 told

And found at last, the mystic Grail I see,
Brimmed with His blessing, pass from
 lip to lip

In sacred pledge of human fellowship;
And over all the songs of angels hear,—
Songs of the love that casteth out all
 fear,—

Songs of the Gospel of Humanity!

CONCLUSION.

In closing, let it be stated that Christian Science stands for the Religion of Jesus, for the equality of the sexes, and for the establishment and maintenance of universal peace among the nations of the earth. It exalts the practical ideals of freedom, personal purity, sound morality, and Christian democracy. It proclaims the Gospel of good thinking, true living, and the contagion of health and happiness. It elevates the ideas of honesty, individual self-government, and liberalism, placing Principle above party in the political world, and Truth above authority in the religious. It condemns the use of fear as a means to the evolution of either right living or moral obedience, hence lays all stress on the abiding power of Love and righteousness. It teaches a Gospel of Life as opposed to death, of victorious Good in contradistinction to the outgrown and dismal theory of evil's awful power over mankind. The

work of healing and regeneration goes on, the Cause of Christian Science is now fully established, and upwards of a million believers have left the beaten path of old-time theories to follow to the full noon time of health and spiritual salvation, this Day-spring from on high, this Liberator, Healer, and Good-spell.

PERIODICALS

PUBLISHED BY
THE CHRISTIAN SCIENCE PUBLISHING SOCIETY,
95 Falmouth Street, Boston, Mass., U. S. A.

A WEEKLY NEWSPAPER

Christian Science Sentinel

PUBLISHED EVERY THURSDAY

Contains brief summary of the most important news; articles selected from various sources, gives the Voice of the Press and timely editorials in connection with the movement; and presents interesting contributed articles and testimonies.

Subscription Price: One Dollar a Year. Foreign subscriptions, \$1.50. On sale at three cents a copy, postpaid.

A MONTHLY MAGAZINE

The Christian Science Journal

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE, Is the Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

It contains interesting reports of cases of Spiritual and Physical Healing, as well as instructive discussions of the Principle and the Practice of Christian Science, dissertations and lectures.

Subscription Price: Two Dollars per annum; One Dollar for six months; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months; Single Copies, Twenty Cents, postpaid.

BIBLE LESSONS

The Christian Science Quarterly

PUBLISHED JANUARY, APRIL, JULY, AND OCTOBER.

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year, in all the Christian Science Churches.

Subscription Price: One copy one year, postpaid, fifty cents.

Foreign subscriptions, one copy, one year, 60 cents On Sale at 15 cents a copy.

Catalogue of prices for Oxford Bibles, Hymnals, Books, Pamphlets, etc., sent on application.

Works on Christian Science, By Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 665 pp. Revised and Enlarged 1894. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Price (cloth) each \$3.18

Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid . . . 4.00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each prepaid 5.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid \$2.25

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4.00

Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book containing brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid, \$3.00; \$30.00 per dozen.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE ECO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, prepaid.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; \$2.50 per dozen, prepaid.

Direct all orders for above works, and make remittances payable, to

Political and Governmental Notes.

The appropriation bills that have passed Congress and those that are still pending call for unprecedented sums of money, and it seemed likely that the present Congress would make a record for extravagance before its adjournment on March 4, that would astonish the world. Now leading Republican Senators are beginning to revolt. Senator Hale of Maine entered a protest last week, and it was ignored. Then Senator Lodge of Massachusetts came to Senator Hale's support and raised his voice for economy. The effect will probably be to check the lavish expenditures to some extent.

The ceremony of counting the electoral votes for President and Vice President took place in the Hall of the House of Representatives at one o'clock, February 13, at a joint session of the Senate and House. The method of counting the vote is prescribed with great detail by the statute, and was followed literally. Great crowds thronged the galleries to witness the interesting spectacle.

The most radical anti-cigarette measure yet proposed is now under consideration in the Minnesota Legislature. This bill makes it a misdemeanor to use tobacco in this form, bars merchants from bringing cigarettes into the State, makes giving away cigarettes an equally grave offence, and even prohibits the sale of the papers used in rolling cigarettes.

According to the War Department's plans, the army is to be recruited to its full authorized strength of one hundred thousand men. The regular army now consists of about sixty-seven thousand men, including the troops in the Philippines, so that the new enlistments are limited to about thirty-three thousand men.

The largest number of candidates ever designated for admission to West Point Military Academy have been ordered to appear at the various examinations, to be held March 1, when upward of 220 principals and alternates are to meet the board.

Foreign News.

The Princess of the Asturias, sister of the King of Spain, was married on February 14, to Prince Charles of Bourbon, son of the Count of Caserta, the former Carlist leader, who is bitterly hated by a large portion of the Spanish people, probably a considerable majority. For several days before the wedding there were public demonstrations against the Jesuits and of disapproval of the royal marriage; and on the wedding day riots broke out in different parts of Spain. The situation became so serious that soon after the ceremony was performed martial law was proclaimed throughout Spain, and

Captain-General Weyler was put in absolute command of the province of Madrid. United States Minister Story notified the government in Washington that a complete change of ministry was imminent, and press dispatches declare that the kingdom is on the brink of a revolution.

Sir Edward Clarke, the former solicitor-general of Great Britain, in a recent letter calls attention to what he considers was a grave mistake made by Lord Roberts, when in June, 1900, in answer to the question of Christian Betha as to what terms of peace would be offered the Boers, he said: "Unconditional surrender, and no promises to commanders or any who had taken an active part in bringing on the war." "This," says Sir Edward Clarke, "put an end to all negotiations. So the war has gone on. The losses since have been 124 officers and 1,454 men killed in action and died of wounds; 63 officers and 3,820 men died of disease, and 909 officers and 22,637 men invalided home. We have spent from \$90,000,000 to \$170,000,000 devastating a country over which we desire to rule. We do not seem a day nearer unconditional surrender than seven months ago."

The first Parliament of the reign of King Edward VII. was opened by the king in person on February 14. The king and queen rode to the House of Lords in the golden carriage of state, and the streets along which they passed, and all the side streets, were thronged with people. All London pressed to get within sight of the royal coach. The last state ceremony of the kind occurred in 1801, when Queen Victoria opened Parliament and was accompanied by the prince consort.

Berlin has refused a legacy of \$120,000, left by Professor Baron for the establishment of an orphan asylum, with the condition that the orphans should be brought up on a purely vegetarian diet. Breslau is ready to accept the gift, but the Prussian Government withholds its consent and it is likely that the money will revert to the State.

The South African war continues to be waged with great vigor, but the Boers have successfully evaded a decisive battle, preferring to get in among their kinsmen in Cape Colony, and induce them to rise in rebellion, thus keeping the British uneasy.

"With only one dissenting voice," says the Copenhagen correspondent of the London *Daily Mail*, under date of February 13, "the financial committee of the Landsting has approved the sale of the Danish West Indies to the United States."

Industry and Commerce.

"Plans are under way for the construction of a canal between the Don and Volga Rivers in Russia," says the *Great Round World*. "At one place the two great streams are only sixty miles apart, and it is there that the canal will be dug. The cost will be between \$25,000,000 and \$40,000,000—at least, so say the estimates. Belgian capitalists are behind the project, which, if carried through, will give the Volga—the greatest river of Europe—an outlet to the Black Sea, and will connect the Caspian and Black Seas."

A man in Chattanooga, Tenn., has secured a patent on an invention for staining lumber in the log. The staining materials are forced through logs by hydraulic pressure, and the result is that the log comes out of the process evenly stained all the way through. In one case, with two hundred pounds of pressure, the inventor completely stained a ten-foot log, forcing the staining material into the grains of the wood from which the sap had been forced by the same hydraulic pressure.

An event of importance to the scientific world was a successful test made recently at Omaha, Neb., of a printing telegraph. The apparatus consists of a sender and a receiver, operated by electricity. The key-

board resembles that of a typewriter, and the message is transmitted over a wire any desired distance, and is automatically printed on a roll of paper by the receiver. Any one who can operate a typewriter is capable of sending a message.

The Southern Pacific Railway system, 9,644 miles long has been bought by the Union Pacific, which controls 5,566 miles directly, and 15,062 miles more, under the corporate names of Atchafson, Topeka & Santa Fe, the Missouri Pacific, the Missouri, Kansas & Texas, and the Texas and Pacific Companies. The resulting consolidation anticipated aggregates 30,192 miles of track.

The use of aluminum is growing and its price is decreasing. With the exception of iron, zinc, and lead, it is now said to be the cheapest metal on the market. Twenty years ago the world's output was about five tons, and its price about \$90,000 a ton. Now the price is less than \$700 per ton, and the output is reckoned at five thousand tons.

General News.

The powers of recuperation shown by the city of Galveston since the great storm of last September are marvelous. The story of the city's rapid recovery at once reminds one of the phoenix-like second birth of Chicago after the great fire of 1871. In spite of the hurricane, the exports from the port during October, November, and December were greater in value than during the corresponding months of 1900. The property loss caused by the storm was \$17,068,275. The number of houses entirely destroyed was 4,131. In money and supplies the city received relief to the amount of \$1,704,000. Since the storm \$2,258,000 had been spent on building up to January 1. In the districts where the greatest damage was wrought more than one thousand houses have been built.

Lincoln's birthday is a legal holiday in Connecticut, New York, New Jersey, Pennsylvania, Illinois, Minnesota, North Dakota, and in the State of Washington, and the day is reverently observed in nearly all the States. The celebrations this year on February 12, showed that the great emancipator's popularity with the people is increasing. Where formerly the veteran army organizations and the great Republican clubs were principally the ones to observe Lincoln's birthday, now Democratic clubs are vying with Republican clubs in doing honor to his life and character; and the schoolchildren and people in general publicly express their reverence for this greatest man of the common people.

The drought in the western districts of New South Wales is terrible. Over thirty million sheep have perished. The area of drought-afflicted country is vast enough to find room for two or three kingdoms, and it is as monotonous as vast. Hills are unknown. The rivers are mere ditches. At the whisper of rain these sealike plains blossom into unparalleled verdure, but under the rainless, crystalline skies these shadeless pastures shrivel into one vast level floor of sand.

A consignment of seventy-five cages of wild animals for the Cincinnati Zoological Gardens arrived in New York by the Hamburg-American liner Pennsylvania on February 6. There were four lions, three tigers, six camels, six mountain goats, a baby elephant, four Siberian white bears, and many monkeys and rare birds. The Polar bears made the entire voyage in open cages on deck, exposed to the weather, which just suited them.

The authorities of the University of Chicago desire to adorn the campus of that institution with fifty big elm trees similar to the one presented to the university by the class of 1900, and Secretary Goodspeed has announced that the trustees are willing to pay \$5,000 for the lot—\$100 for each. The trees are to be placed in symmetrical arrangement inside the quadrangle.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Selected Articles.

Reply to Dr. Whitaker.

Boston, Mass., November 1, 1900.

Editor of *Pioneer*.

Dear Sir:—In your issue of March 24 you published a criticism on Christian Science by Dr. Whitaker.

It is stated that "Many Christians, after becoming acquainted with the theology taught by Mrs. Eddy, have lost all religious faith, and that they publicly antagonize the faith of other professed Christians."

We would ask, what religious faith is lost by the study of Mrs. Eddy's theology? No class of Christians love the word of God nor the good more than Christian Scientists; none have more faith in God nor strive more earnestly for the regeneration of the world. The life of the true Scientist is full of good works. He strives earnestly to be pure in thought, word, and deed. No one can deny the good morals and good deeds of Christian Scientists; no one can deny that thousands of men have left off their bad habits and are daily growing in goodness through Christian Science, and yet our friend declares it is fatal to spiritual life. What does he mean by spiritual life? "Every tree is known by his own fruit." The Christian Science method of healing is known by its fruit. It was claimed that Jesus was a pestilent fellow, and his doctrine was more than some people could bear, and he asked, "For which of those works do ye stone me?"

How can it be said that "Christian Science is fatal to spiritual life," since it is an indisputable fact that hundreds of thousands have been healed of sickness and sin through its influence? Thousands of homes have been turned from sorrow to joy, family feuds have been broken up, drunkards have been reformed, scoffers and sceptics have been made to love the Bible, and atheists have been converted to a knowledge of the true God, through the clear, scientific definition of God and evil as found in this Science. Have we reached an age when traditional beliefs rather than a pure and holy life fraught with good works are to be counted spirituality? John said, "Let us not love in word, neither in tongue; but in deed and in truth."

The Christian Scientist who gains the true sense of his mission is extremely careful not to antagonize any religious faith, nor any institutions of the world, which tend to make mankind better. The Christian Science Board of Lecturers are an able body of sincere Christians whose purpose is so to state the theory and practice of Christian Science that it may be understood even by those who have never heard of it before, and it is the sincere belief of hundreds of thousands of people that such a result is being accomplished. But if it be true that the learned men sent out by this denomination, after many years of faithful study and practice of Christian Science, are not able to give "a kind, fair, and thorough expose" of it, how can Mr. Whitaker hope to do this, since he evidently does not even perceive correctly the theory of Christian Science, and has

not proved his understanding by long experience in healing disease and sin through its methods? What qualification over and above the average Christian Science lecturer does he claim?

This Science is new and in many instances not understood, and for this reason may seem objectionable to some. The Christian Scientist detects the lack of true comprehension in those who discourse upon his religion as readily as an accomplished musician discerns the lack of musical understanding in those novices who attempt to criticise it.

To write intelligently on the subject of Christian Science one should first be able to prove his understanding of it by healing the sick. We readily concede that one might write an adverse criticism on a good thing with better grace and a clearer conscience in his ignorance than he could when rightly informed, and in such a case, "ignorance is bliss." What would our readers think of a man who should attempt a criticism on mathematics, based upon a mere perusal of the rules, who has never been able to solve a single problem in evidence that he really comprehends it? In like manner we would ask, what shall we think of a man who attempts to tell about Christian Science before he has healed a patient to prove even to himself that he understands it? How much can be learned from such a teacher? In such a case all that can be gleaned is a useful lesson in respect to the folly of carping at a thing concerning which one is ignorant.

Christian Science elucidated and explained by a skilled student is a delight to the listener; whereas when distorted and misrepresented it can be made to appear ridiculous. So can any other religion or science.

To cull abstract portions of Mrs. Eddy's text-book, severed from their context, and attach thereto foreign interpretations, is not "a kind, fair, and thorough expose" of Christian Science, but the opposite. Why not advise the people to study the book as a whole? Did Mr. Whitaker hope to make the thought of Science and Health look ridiculous by selecting such quotations as are difficult of comprehension when severed from their context? Did he purpose to present it in its best light, or did he hope to make it appear what it is not?

Christian Science is not "pantheism;" does not teach that the universe is God, but teaches that the creation is His manifestation and is inseparable from Him. Jesus Christ taught that he was one with the Father and prayed thus for his disciples: "That they may be one, even as we are one." He surely did not mean that he was identical with the Father, and that he desired his disciples to become absorbed into this great Spirit, thus losing their individuality. Evidently Jesus desired them to be lifted up to a realization of their inseparable relation with God, their at-one-ment with the Father.

I like the Christian Science explanation of the Father, Son, and Holy Ghost.

The Bible states that there are three which bear record

in heaven: the Father, the Word, and the Holy Ghost. Nothing could be more satisfying nor demonstrable than this statement. First is the Father, the Spirit, Mind, Creator; second the Son, Word, expression or creation of the Father, Mind; third is Divine Science, the understanding of the Father and His creation and the relationship between them. God is God and man is His expression or likeness; but this fact must be understood and lived to bring about the establishment of the Kingdom of Heaven upon earth. Thus the Father, Word, and Holy Ghost are one and inseparable, and absolutely essential to the harmony of being.

Christian Science may offer an interpretation of the Bible, atonement, Holy Ghost, resurrection,—yea, of all things differing from that of some other denominations; but Christian Scientists accept the Bible, believe it, love it, and no power on earth can separate them from it, or justly dispute their right to their understanding thereof.

That "Christian Science inculcates a want of sympathy for the sick and sorrowing" is refuted by the mere fact that no class of people have a deeper or truer sympathy for the suffering. To tenderly bind up the broken hearted is the mission of Christian Science.

ALFRED FARLOW.
In the *Chelsea* (Mass.) *Pioneer*.

The Coming Revival.

THERE is much discussion now among the pastors and in the religious press about the great revival needed, prayed for, and expected. We have read with interest all we could find on the subject. We are surprised, however, to see how few seem to apprehend the real difficulties and the forces already at work that are, as we see it, to hasten and help it.

Of course every man seems queer to every other man, and every one thinks his opinions right. We may therefore be pardoned for thinking it strange that among so many writers of distinction, so few have seemed to take in the situation. A few months ago, we wrote three articles on "A Crisis in Methodism" that provoked considerable comment. In those articles we gave as three reasons for our decline that "we are growing too conservative," that "we are drifting away from the poor," that "this is an age of intellectual disturbances which have caused doubt, while no settled or well defined system has yet been produced that takes the place of the old in mind and conscience." We still hold these views; but we might have said more and now affirm that our present industrial system is un-Christian in the true sense, and that the masses feel that it is impossible to continue in business under sharp competition and live up to the Christian standard of religion.

Business men who are not church members, generally brand their competitors who are church members as hypocrites; and business men who are church members are not as a rule spiritually-minded and neither attend prayer nor class meetings. It is rare indeed to find a business man who either professes or strives to attain to any high degree of grace. Why? Because the system by which he transacts business is heart-hardening and contrary to the Golden Rule.

The great coming revival will be ushered in with the adoption of a system that cultivates a love and sympathy that will unite men in a feeling of brotherhood; that practically abolishes class distinctions and breaks down the bitter feeling that now exists between the rich and poor. This is the problem of "How to reach the masses."

We cannot hold the masses now, because capital mainly controls the churches and there is an industrial war most bitter being waged between labor and capital. The system

that makes one class of Christians multi-millionaires, and another class of Christians paupers, is not Christ-like and can never convert the world to Christ. Love can only become general under a system that cultivates it. Competition does not cultivate, but destroys it. Some have charged our decline to the theories of evolution and the higher criticism. But to our minds these are mighty forces to aid us in the discovery of truth and to hasten the coming of a better day.

Dr. Thwing of the Western Reserve University touches the keynote when he says: "The church of the future is to adjust itself to the special conditions of the future. We are living, and we are to live, in a time when the foundations of society are to be tested. Socially, is the family to remain the social unit? Industrially, are capital and labor to remain armed neutrals? Economically, is competition to remain the method of trade?"

While the doctor puts these thoughts in the interrogatory form, we can see that he grasps the situation. Of course we believe that the extraordinary efforts of the church will bring results in a measure. But they will be local. Here and there a local church will have a revival that will stir the town or community in which it is held, and the results of next year's work will doubtless increase the membership of the church. But the business men working under a system that is out of harmony with the law of love, the working men who are becoming more and more embittered because they believe they are fast being exploited by capitalists (many of them professed Christians), the millionaires themselves, and a large number of others who feel that the highest success in life is financial success, will not be brought into the revival in any considerable degree. But we are soon to have a revival, the greatest in Christian history in its extent, and marking an epoch as distinct as that of the Protestant Reformation. It will be a revival that will so change industrial conditions as to make universal love possible in the heart and practical in the life. It will make it possible for a man to enjoy the blessings of "perfect love," as taught by Wesley, and remain in business. It will abolish poverty and class distinctions and enthrone Christ in the human heart. It will be a practical recognition of "the Universal Fatherhood of God, and the universal brotherhood of man." It will destroy the competitive system of business and institute the co-operative. It will be the dawning of the millennium. It is already in its beginning and in four years more will make rapid gains. It will abolish war, saloons, houses of prostitution, poverty, and most of the crimes. It will enthrone righteousness and love as taught by Christ. "It is near, even at the doors."

Editorial in *The Southwestern Advocate*.

The Christian Science Journal.

The Christian Science Journal is in the middle of its eighteenth year, which is evidence that it is a periodical which has a field, fills it, and has come to stay. It is a monthly full of interest to those who would like to acquaint themselves with Christian Science and the results of a knowledge of the truth and an abiding faith. Among the papers in the January number are "The Richness of Grace," "Individual and Church Growth," "Man's Existence Here and His Life-Work," "Christian Science and the Episcopal Congress."

The "Testimonies from the Field" are something surprising to one unfamiliar with the work. The directory of places where meetings are held covers nineteen solid pages, and the healers in the field cover forty-six pages.

Norwich (Conn.) Bulletin.

The greatest of faults, I should say, is to be conscious of none.—THOMAS CARLYLE.

The Lectures.

At Kingston, Ont.

The lecture on Christian Science which Judge William G. Ewing delivered here Monday evening, February 4, attracted an audience that packed City Hall to the doors. It was such a noteworthy gathering of the intellectual and religious people of the city, that one of the daily papers printed the following statement:—

"In reference to the audience the speaker stated afterwards to a *Whig* reporter: 'You can say for me that, though I have been in almost every city in the United States, from the Atlantic to the Pacific and from your Dominions to the Mexican border, yet have I never addressed a more thoughtful or more appreciative audience.'"

John McIntyre, K.C., introduced Judge Ewing in the following words:—

The Christian Scientists of Kingston have been fortunate enough to secure the presence to-night of the Hon. Mr. Ewing of Chicago to lecture on Christian Science. The honorable lecturer is a gentleman eminently qualified to expound and illustrate the principles of Christian Science. In this University City, I am very sure he will receive a most patient hearing. We are all invested with mental, moral, and spiritual powers, and therefore are ever seeking after truth. Truth is not ashamed of the open, is not afraid of the sneer, does not fear persecution or calumny, but rather flourishes by reason of taunts and opposition. We are all desirous of finding out the Truth, and we bend our energies to its most careful investigation. The stern old Roman governor Pilate enquired of the gentle victim before him, "What is truth?" and though the inflexible upholder of Roman despotism did not personally profit by the reply, but crucified his prisoner, yet for two thousand years, the truth has lived and expanded and flourished. A howling mob in Jerusalem assaulted the great Apostle of the Gentiles, St. Paul, and cried, "Away with such a fellow from the earth: for it is not fit that he should live," but though he afterward fell under the sword of the Imperial executioner, yet the truth he expounded lived and flourished. With most marked penitence, did St. Paul himself bear testimony to the signal wrong which he had committed, when, a few years before that, he fanatically joined another howling mob, which with oaths and violence stoned the first martyr to death, and actually held the garments of those who dealt the murderous blows. "Truth crushed to earth shall rise again." We are here to-night to listen to an exposition of the principles of Christian Science. We desire to get at the truth. I have great pleasure in introducing the Hon. William G. Ewing, who belongs to the same profession to which I have the honor to belong, and who will speak to us on this important and interesting subject.

In addition to giving the usual synopsis of the lecture, the *Daily British Whig* published the following:—

In his peroration Judge Ewing paid a noble and eloquent tribute to our departed queen. He spoke of the most profound sorrow in the United States. "I am sure," he declared, "the tears of myself and my people fall as lovingly as yours. She was a womanly queen, and what is better and greater still—a queenly woman."

In tendering the vote of thanks to Judge Ewing, after the lecture, Mr. McIntyre, spoke as follows:—

"Judge Ewing, on behalf of this most interested audience, I thank you for the impressive and masterly address to which we have just listened. You have given us something to think of, to meditate upon, and I am sure that much advantage will be derived by every one of us from what we have heard. The subject is new to many of us, and your

expert handling of it will lead to thoughtful and patient investigation.

"As one of her late Britannic Majesty's subjects, and a subject of his present Majesty, King Edward VII., and on behalf of this audience of British citizens, I thank you cordially for the most kind and sympathetic expressions which fell from your lips with regard to our late beloved Queen. We loved our Queen; we honored her in life; we honor her in death. We honor her memory, and we honor any one who speaks with regard to her in the feeling and eloquent manner in which you have done. It was a proud satisfaction to us to learn that through the wide expanse of the United States of America, a profound sympathy with us in our great bereavement prevailed, and I thank you specially for the marked eulogy you paid to her memory in referring to her as a most womanly Queen and a most Queenly woman.

"Again I thank you for your kind and sympathetic expressions which have touched our hearts."

In replying Judge Ewing said: "If I were as worthy to speak well of her as she was worthy to be spoken well of I would be happy. I loved your Queen; I love her memory." His sympathetic references to the dead sovereign we adored called forth loud applause.

The lecture made a very favorable impression upon the people of Kingston.—*Correspondence.*

At Philadelphia, Pa.

Carol Norton, C.S.D., of New York, member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, gave the semi-annual free lecture of First Church of Christ, Scientist, of Philadelphia, Chestnut Street, above Eighteenth, yesterday afternoon (Thursday, February 7). His subject was "A Third of a Century of Christian Science."—*Philadelphia Inquirer.*

The lecturer was introduced by Prof. Theodore F. Seward of New York, as follows:—

The present is joined to the past by a thousand subtle and invisible but very vital links. The infant Philadelphia of two centuries ago prepared the way for this meeting in the Philadelphia of to-day by its acceptance of the Quaker principles of George Fox and William Penn. Quakerism was a forerunner of Christian Science. Listen to these words from its founder and truly inspired apostle, George Fox. "*The Lord's everlasting Truth is breaking forth again in His eternal power in this our day in England.*" Substitute America for England in this sentence, and it may stand as the trumpet-call of Christian Science to the present day and generation.

Quakers were first called "Children of Light," because they believed in the inner spiritual kingdom and in a divine light therein. Their motto was "Preach the spirit. Practise goodness;" which is the essence of Christian Science.

Although history repeats itself, the repetition is never on the same level. Humanity is progressing. It not only moves forward, but upward. Its motion is spiral. Quakerism did a noble work, but it lacked objectivity. It was too largely introspective. The aggressive evangelism of the Methodists was needed to supplement and apply its message. Christian Science, on the contrary, includes both principles—the subjective and the objective. It is not only many-sided, but all-sided. It not only presents a theory of life, but supplies rules and principles for the complete application of the theory. To speak specifically, we may say that Christian Science is three things. It is religion, it is Science, it is a system of healing. As religion, it ministers to man's spiritual life, establishing churches as a necessary means to this end at the present stage of development. As Science, it teaches the law of dominion over the material. Physical science has always sought to

gain this mastery, but Christian or Spiritual Science really accomplishes it. As a system of healing, Christian Science overcomes the diseases of the body, whether hereditary, chronic, or acute.

The system or method of church government in Christian Science is purely congregational and democratic, and not hierarchical or sacerdotal. The church is an expression of the spiritual life of its members. Christian Science is a message of peace to restless and unsatisfied human hearts in and out of the churches. When I gained the idea of divine immanence I found a new comfort and strength. I was even able to help others by the books I wrote on the subject in which I emphasized the infinitude and perfection of the divine Love by which our lives are guided. I was sometimes called the "don't worry man" by reason of the book I published with that title. In fact, I gave a lecture on the subject three years ago in Horticultural Hall in this city. But, like many other preachers, I failed to make a complete application of my own principles. My philosophy enabled me to overcome anxiety and fear to some extent, yet it must be confessed that I did worry more or less. The standard of the Master is: "Let not your heart be troubled," or even "rippled," as is the meaning of the original word. The image is that of a glassy lake whose surface is so smooth that it perfectly reflects the sun and sky and all beautiful objects above it.

Having formerly been associated somewhat with Mental Scientists in this city and elsewhere, I think it is but just to them to explain why I now take a strong stand for Christian Science, and for Mrs. Eddy as its interpreter. It is because, after long and painful experience, and after as profound study of the subject as I am capable of making, I became convinced that there is no resting place, either in thought or experience, this side of absolute idealism as proclaimed and expounded in the book entitled, "Science and Health with Key to the Scriptures," written by Mary Baker G. Eddy. I became satisfied that while belief in the predominance of mind over matter is a great step in advance of materialism and scholastic theology, yet it is not the final goal. It does not lead to the rest and peace which the Saviour of the world promised to his followers. We may preach "don't worry," but as long as we concede reality to matter, and potentiality to evil, it is impossible to eliminate anxiety entirely from the mind.

But I must not give this audience any occasion for worrying by occupying time that belongs to the lecture, and I therefore take great pleasure in introducing my friend Carol Norton of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston.

At New Rochelle, N. Y.

An audience of about two hundred and fifty intelligent listeners heard the lecture by Carol Norton, C.S.D., of New York, on the subject, "A Third of a Century of Christian Science: Its Past, Present, and Future," at Metropolitan Hall on Tuesday evening (January 29). The lecture was given under the auspices of the Christian Science Society of this city.

Mr. Norton was introduced by Mr. Stanley Burger of New York.—*New Rochelle Pioneer*.

Mr. Burger spoke in part as follows:—

The Bible records that, at the last appearance and talk of Jesus to his disciples, just prior to his ascension, he gave this command: "Go ye into all the world, and preach the gospel to every creature." As is well known, it is because of the desire to obey this command, as well as because of man's love for man, that the motive for the establishment and spread of the Christian religion, is found. That this same motive actuates Christian Scientists in their efforts to make their doctrines known to all man, cannot be doubted

by any one. And an additional motive for their desire that the teachings of Christian Science become universally known and practised, is because of the fact that this will fulfil the completed command of Jesus, "Heal the sick, cleanse the lepers, raise the dead, cast out devils:" and it is because Christian Science has so much to offer to mankind that its adherents are so earnest in its behalf. It is for the lecturer to tell you what Christian Science is, what its promises are, what it has done and can do. I will simply say that you have not been invited here to learn of anything "new," for as Solomon says, "The thing that hath been, it is that which shall be; and that which is done is that which shall be done: and there is no new thing under the sun." We know this to be true, for no matter what apparently new invention or idea is brought forward, it is but the manifestation of an unseen and heretofore unknown principle that has always existed. And so Christian Scientists simply ask your sober consideration of new light upon old truths; your careful investigation of its teachings which are founded on the Scriptures; and your remembrance of the fact that a vast concourse of devout, intelligent men and women have found through its teachings, that God is defined to them as never before, and hence have come to know their own true individuality and the reason of their existence and their life mission. Many of them have been restored to health and family and friends when all hope had fled and death or invalidism seemed inevitable, by the understanding of God as revealed through Christian Science.

I know you will consider it a privilege to listen to the speaker of the evening, with that tolerance and desire to know the truth about all things that is so characteristic of the American people. I take great pleasure in introducing to you as the evening's lecturer, a Christian Scientist who has followed its teachings for more than ten years, and who is eminently qualified by reason of practical experience and knowledge of its healing and reformatory work, as well as its religious teachings, to speak upon the subject. Allow me to present to you Carol Norton, C.S.D., of New York.—*Correspondence*.

At Woburn, Mass.

An audience of about six hundred ladies and gentlemen, a considerable portion of whom were from out of town, gathered in the Auditorium Tuesday evening (January 29, 1901), to listen to an address upon Christian Science, under the auspices of First Church of Christ, Scientist, by Hon. William G. Ewing of Chicago, a man who has held high judicial positions in his state, and whose fame as a ready and eloquent speaker is national.

Promptly at 7.45 P.M., the speaker of the evening stepped upon the platform, accompanied by Mayor Davis. His Honor in pertinent phrase introduced the speaker, very happily referring to the fact that in the history of this ancient municipality it was first the church and then the town, and that for years the history of the church was the history of the municipality.

Judge Ewing is a quiet platform speaker, earnest in manner, devoid of extravagant gesture, seeking by logical methods to win and hold attention.—*Woburn News*.

Hon. William F. Davis, Mayor of Woburn, spoke as follows:—

The corner-stone of this old municipality is the church placed in position by the fathers nearly two hundred and sixty years ago, who, as the representatives of the mother church in Charlestown, pushed out into the wilderness and established a branch of their church here. For many years the church was largely identified with the municipality, the history of one being the history of the other. Much progress has been made in religious thought since the early days.

yet those people lived according to the light that was given them.

Being desirous of welcoming everything good into our community, I accepted the invitation of the committee to introduce the distinguished speaker of the evening. Although, perhaps, I may not endorse all the doctrines that may be presented to you, I feel that if they cause any of our people to lead better and consequently happier lives, they deserve official welcome and encouragement. So it is with a great deal of pleasure that I welcome to our city the distinguished gentleman who is to address you on the subject of Christian Science. While we may not agree with all his conclusions, I bespeak for him a respectful and attentive hearing. We have reason to be thankful to the people who have invited him for the opportunity of learning the truths of this Science from the lips of so distinguished an advocate.

I have the pleasure of presenting to you, Judge William G. Ewing of Chicago.

The Woburn press published a generous abstract of Judge Ewing's lecture. Two criticisms on the lecture made by persons present are eminently satisfactory: first, that they had heard all these things from Sunday to Sunday (showing that Christian Science teaches no strange doctrine); secondly, that they did not hear as much about Christian Science as they would have liked.

The demonstration we have wrought in presenting Christian Science publicly to the thoughtful people of Woburn gives us great comfort.—*Correspondence.*

At Cambridge, Mass.

On Friday evening, February 1, Brattle Hall was crowded in advance of the time for the lecture with an audience that filled the seating capacity of the stage and auditorium, and soon required the aisles for standing room. A hundred or more of those arriving late were unable to find entrance. The floral decoration of the stage was tasteful, carrying out the illusion of a woodland scene. At eight o'clock, Mr. H. N. Wheeler, vice-president of the Social Union, introduced the lecturer, Rev. William P. McKenzie, C.S.B., a member of the Board of Lecturers appointed by The First Church of Christ, Scientist, in Boston, Mass. The subject of the lecture was "Christian Science the Panacea for the World's Unrest."—*Cambridge Tribune.*

At Meadville, Pa.

The lecture at Meadville, Pa., an account of which appeared in the *Sentinel* for January 31, was given under the auspices of First Church of Christ, Scientist. The lecturer was introduced by Rev. Irving Beman.

The Postage Stamp Mill.

MILLIONS upon millions of new crisp currency bills are being turned out by the bureau of engraving and printing to replace the defaced and worn-out greenbacks which are constantly coming back into the treasury, to be eventually ground and smashed up into pulp, says the *Washington Times*. Huge printing presses are constantly at work in the steel protected rooms of the treasury department. It is, in fact, safely estimated that by the close of the present year these presses will have turned out enough greenbacks to furnish each of the seventy-six million inhabitants of this land with about ten dollars each. This means that 107,500,000 crisp new bills of various denominations will be used.

In the matter of postage stamps, the figures are even more enormous. It is estimated that on an average every man, woman, and child in the United States will use fifty-

three postage stamps during the year 1901, forty of them being of the popular two-cent denomination. The total number consumed will be over 4,000,000,000, and nearly 1,000,000,000 of these will be of the one-cent variety. One person out of every ten will send a special delivery letter in the course of the present year.

Cuba, in 1901, will require about sixteen million ordinary stamps, with one hundred thousand "special deliveries," all of which will be turned out at Uncle Sam's money mill in Washington. The Philippines will use up five million stamps. Porto Rico 1,600,000, and Guam 150,000. Of course, Guam, Porto Rico, and the Philippines have no stamps of their own, properly speaking, but are supplied with the ordinary United States postage stamps, altered simply by the addition of a word printed across the face of each one in unornamented black letters. Thus all Guam stamps have the word "Guam" marked on them, as if it were for cancellation, and the word "Philippines" makes our common stamps serviceable for carrying mail matter in Uncle Sam's new oriental archipelago.

Our Blessings.

Our blessings should be *sought*, not *claimed*,—

Cherished, not watched with jealous eye;

Love is too precious to be named,

Save with a reverence deep and high

In all that lives, exists the power

To avenge the invasion of its right;

We cannot bruise and break our flower,

And have our flower alive and bright.

Let us think less of what appears,—

More of what *is*; for this, hold I,

It is the sentence no man hears

That makes us live, or makes us die.

Trust hearsay less; seek more to prove

And know if things be what they seem;

Not sink supinely in some groove,

And hope and hope, and dream and dream.

Some days must needs be full of gloom,

Yet must we use them as we may;

Talk less about the years to come,—

Live, love, and labor more, to-day.

What our hand findeth, do with might;

Ask less for help, but stand or fall,

Each one of us, in life's great fight,

As if himself and God were all.

ALICE CARY.

A Correction.

IN the *Sentinel* of February 7, 1901, referring to Mr. Ormond Higman in connection with the placing of the American and British flags at half mast at the residence of Rev. Mary Baker Eddy, Pleasant View, Concord, N. H., we prefixed the title "Hon." to his name. This it seems was a mistake. Mr. Higman does not bear this title, although, until he informed us to the contrary, we were of the impression that he did.

How often do we look upon God as our last and feeblest resource! We go to Him because we have nowhere else to go. And then we learn that the storms of life have driven us, not upon the rocks, but into the desired haven; that we have been compelled, as to the last remaining, so to the best, the only, the central help, the causing cause of all the helps to which we had turned aside as nearer and better.—MACDONALD.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Obey the Law.

THE following from the pen of Rev. Mary Baker G. Eddy appeared in *The Boston Herald* on the 17th inst.

To the Editor of *The Herald*.

On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law abiding; and, actuated by this conviction, I authorized the following statement, which appeared in *The Boston Herald* about one year ago:—

"Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights and governmental usages."

This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: "Render unto Cæsar the things that are Cæsar's," even while you "render unto God the things that are God's."

MARY BAKER G. EDDY.

Concord, N. H., February 17, 1901.

The Massachusetts Metaphysical College.

THE annual term of the Massachusetts Metaphysical College will open, with the Board of Education, on the first Monday of June, 1901, at 10 o'clock A.M. Unless otherwise arranged, the sessions will be held in the Mother Church edifice, and will continue not less than two weeks.

Applications should be on file not later than May 1, 1901.

CHRISTIAN SCIENCE BOARD OF EDUCATION.

The Golden Rule.

IN the course of an able address delivered before the Massachusetts Legislature Tuesday, February 12, 1901, on the occasion of its first celebration of Abraham Lincoln's birthday, Senator Hoar referred to the Golden Rule as the solution of some of the serious problems which are now confronting our nation. He said:—

I believe the solution of this difficulty is to be found in the Golden Rule and in the great declaration, which is but the application of the Golden Rule to the conduct of states.

If the white man will take these for his guides when he deals with the negro and the Indian, if America will take these for her rule of action in dealing with weak foreign nations, the difficulties that beset us will disappear. If we do not, as sure as God liveth, however the weaker races may suffer, the penalty will fall upon us. I have an abiding confidence that these clouds which hover over us will disappear. I am no prophet, nor son of a prophet, except as all our fathers were prophets. But I think I know the temper of the American people, and I know that I know

the temper of the people of Massachusetts. I have an abiding and absolute conviction that, with knowledge of the truth and the letting in the light, persistence in a wrong to any people or race is wholly impossible to our just and generous countrymen. I look upon the future of Massachusetts and of the country without fear. The new days and the new century are to be better than the old. This headland that our ship of state is passing on its stormy voyage, freighted with the hope of liberty and humanity, is a Cape of Good Hope. Our fathers did not penetrate a position their sons cannot hold. The people that gained the great heights of the Declaration will not abandon them. Humanity that has risen from out the beast shall not.

Go back into the beast again.

These eloquent words are but a Twentieth Century reiteration of the utterance of the Nazarene in the First Century,—that utterance which gave birth to the formulary called the Golden Rule. Never will the nations be truly Christian nations until this utterance, in the full import of its spirit, shall become their inflexible rule of action. Never will governments be truly blessed, truly great, truly just, or truly Christian until the Christ standard shall be raised and held aloft as their only ensign. Lincoln bore this standard aloft as no other chief magistrate of our nation has done, and cannot all our people afford to follow in his great footsteps?

His birthday were unfitly celebrated if our present-day statesmen fear to tread where he trod, or follow where he lead.

An Eloquent Tribute to Lincoln.

AT the celebration of the ninety-second birthday of Abraham Lincoln by the Middlesex Club at the Hotel Brunswick in Boston, Tuesday, February 12, 1901, Senator Joseph V. Quarles of Wisconsin delivered an unusually eloquent address. He paid the great President a fine tribute. In a bit of word painting so picturesque and vivid that the production may justly take its place among the masterpieces of oratorical art, he likened him to a great mountain.

Here is the picture:—

A mountain is a mystery; such was Abraham Lincoln. It is tall, rugged, isolated; so was he. It has seams and crevices that would disfigure the beauty of a hill, but constitute no blemish on such massive sublimity. Among its rugged crags are sheltered spots of rare beauty, where the sunshine loves to linger, where flowers bloom and cooling streams sparkle, where the rich coloring of nature delights the eye. But there are great patches of denuded rock which tell of the harsh attrition of the early glacier. The clouds that veil its summit lend it an air of mystery and melancholy. Great storms beat up against it with tremendous fury. The lightning with its vivid glow and the quick responses of the deep-toned thunder tell of the awful struggles that are waged about its lofty peak. Yet through storm and tempest it remains unmoved. Its cold, gray surface condenses the moisture in the threatening clouds and sends it down in raindrops to refresh and fructify the earth below. Its grand mission remains the same through all its varying moods.

The same God that made the mountain made the man. His mysteries defy all human analysis.

Mr. Quarles thus further eulogized Abraham Lincoln:—

If obstacles surmounted furnish the true test of greatness, then Abraham Lincoln was by all means the greatest man of his age. Recall the dangers and difficulties that beset him at the time of his inauguration. Personally he suffered great disparagement. No other man in modern times was ever so cordially hated. He was an obscure man.

comparatively unknown, content to remain in seclusion until the time was ripe for action.

What a theme had he and what inspiration filled his soul! He spoke as never man spoke before. I doubt if in all political history a discourse ever produced an effect so profound and so magical. His address was in every sense a masterpiece. Its argument was strong and comprehensive. Its logic was unanswerable. It unmasked the fallacy of secession in vigorous terms. At the same time its temper was so kindly, even affectionate, that it seemed more like a winsome plea. The delicate skill displayed in its adaptation to the several sections he sought to reach was masterly. It roused the patriotism of the North without alienating the loyalty of the border states. In according to slavery everything that slavery had a right to demand under the constitution it was as generous as it was just. It brought the fire-eaters face to face with the proposition that the Union cause was unassailable except by open and deliberate rebellion.

At one bound this country lawyer, without education or special training, stood forth the best equipped man of his generation to assume a burden which can only be likened to the task that mythology assigned to Atlas. With his face toward the approaching storm he stood undaunted, self-poised, like a divinely appointed leader. To employ his own language, "Without a name, without a reason why I should have a name, there has fallen upon me a task such as did not rest even upon the Father of his Country."

He was at once master of the situation. He was startled, at first blush, to realize that he was superior in leadership to the able men who surrounded him, some of whom he had been taught to regard as demi-gods.

Power never excited in his mind a flush of exultation, but rather deepened the shadow on his melancholy face.

He had one element of strength which contributed largely to his success and which was so rare as almost to differentiate him from other men. Many men, perhaps a majority, are honest, yet how few are exactly fair! Personal tastes, interests, and temperament almost necessarily warp the judgment. Abraham Lincoln could be absolutely fair, because when he approached a public question his own personality seemed to sink out of sight, as though he had said with divine sanction, "Get thee behind me, self!" Neither pride of opinion nor personal prejudice seemed to invade the calm serenity of his official judgment. There no storm ever raged, no mist ever gathered.

Constitutionality of Christian Science Healing.

WE republish the following from the *Troy* (N. Y.) *Record*, of February 12, 1901:—

The following argument on the constitutionality of Christian Science Healing was presented Wednesday, February 6, before the New York Assembly Committee on Public Health by Judge Charles Z. Lincoln, formerly member of the Statutory Revision Commission and legal adviser to Governors Morton, Black, and Roosevelt:—

Mr. Chairman, Gentlemen of the Committee:—

I have been asked to make some observations on this bill to amend the public health law by a new definition of what constitutes the practice of medicine, especially relating to some constitutional objections that may be raised to the bill. Perhaps it may be well first to suggest that this committee has before it in this bill a question of tremendous importance; one which I think is fundamental in its character, and a bill which affects the rights and privileges of every citizen of the state, and I think it is of the utmost importance that this subject should be disposed of carefully and in the right way. It illustrates the development that is going on in the practice of medicine in this state. My reading shows me that from 1797 until

the year 1844, a period of forty-seven years, the allopathic school of medicine was the only one that was recognized under the laws of this state. In the year 1844 the legislature swept away all restrictions on the practice of medicine, and anybody was at liberty to practise, subject, however, to actions for malpractice and to be punished for committing a misdemeanor, if it could be proven that he was guilty of gross ignorance, and was incompetent to practise his profession. That condition in this state lasted for thirty years. From 1844 to 1874 there was substantially no restriction on the practice of medicine. In 1874 there began a series of laws which have led up to the present public health law, developing into the medical code of 1887.

PROGRESS AND LAW.

Now, during that period of thirty years, while there was no restriction on the practice of medicine, a case arose that went to the Court of Appeals, which established the standing of homœopathy, which had developed largely during that period. A physician belonging to the old school said in a public place that a physician belonging to the homœopathic school was a quack. The question went to the Court of Appeals, and the Court of Appeals said in that case (in 1870) the court would take judicial notice of the fact that homœopathy had become well developed; that it had schools and practitioners, although not mentioned in any statute law, and that a homœopathic physician could maintain an action for slander for calling him a quack.

Three classes or schools of medicine are recognized in our statutes, and as I understand the law to-day, there are three boards of medical examiners; one representing the allopathic, one representing the eclectic, and one representing the homœopathic school. Examinations go to the regents, and the regents issue licenses, which authorize the successful candidates to practise. These three schools are in the statute. The legislature cannot discriminate as between schools, and it cannot determine that one school only shall be recognized by law, and other schools be excluded. The law now is that these three schools have equal standing in this state.

UNWARRANTABLE RESTRICTION.

Now comes this bill, which attempts to determine what constitutes the practice of medicine. The law already makes the practice of medicine, if unauthorized, a crime; it fixes the course of study to be pursued if one wishes to become a licensed practitioner. The object of this bill, as I understand it, is to develop some method by which one may be determined to be practising medicine or not practising medicine, as the case may be. So this bill reads, that one shall be regarded as practising medicine who professes to heal, or shall give treatment to any person by any method, whether with or without giving drugs or medicine. Now that, it seems to me, involves the consideration of two important propositions. First, I think it an unwarrantable restriction and limitation of the rights of the citizen. If I have a bodily infirmity and I resort to these three schools of medicine, or the practitioners in these three schools, and they all three are unable to give me relief, do you think the legislature of the state of New York has a right to say I shall not be permitted to go to any one else? Self-preservation is the first law of nature. I have a right to go where my conscience dictates, whether the man is licensed or not, for he may not be practising medicine within the law; but if he has discovered a remedy which he is willing to give to me, or even possibly in some cases to sell to me, I have a right to apply to him, and you cannot say by your statute that I shall limit my application for relief to three classes of practitioners and no more. Everybody knows that men who are not physicians often discover remedies for disease. They study the human system, they study the relations of medicine to the system

itself, the influence of the mind on the body, and they are sometimes able to suggest a remedy, even if they have not been licensed; and it is not within the power of the legislature to limit me in my opportunity to be restored to health. Under my right to life, liberty, and the pursuit of happiness I may preserve my health, not only by the application to these three schools of medicine, but by application to any one else who has an available remedy. The attempt to limit me in this right is a fundamental objection to this bill. You may say that the citizen himself is not mentioned in the bill. He is not. There is nothing in the bill which directly limits the right of the citizen, but there is that in the bill which makes it unlawful for a person to whom he applies to give him relief unless that person is licensed by one of the three schools of medicine. The person to whom I may apply may say: "I have a remedy, but the legislature of the state of New York says that I would be a criminal if I give it to you, because I have not been licensed by one of these schools." The legislature of the State of New York has no right to pass such a law.

RELIGIOUS LIBERTY.

The other objection has already been referred to this afternoon, and it is of great significance, and that is, that this bill, as it relates to Christian Scientists, is an infringement on the right of religious liberty. Section 8 of article 1 of the constitution of this state provides, among other things: "The free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever be allowed in this state to all mankind," and it cannot be infringed upon by the legislature. Now is Christian Science a religious belief? As I understand it from statements made this afternoon, and from what examination I have been able to give the subject, it is purely and essentially a religious belief, and the operation of that belief upon the patient who comes to the Christian Scientist for relief is the operation of the divine Mind, and the law by which you think of prohibiting the Christian Scientist from offering the relief or remedy which he may have to offer to those who are afflicted, is a violation of his religious liberty and privilege. The main object of the Christian Scientists is to bring the individual into right relations with his Maker, and to bring him into conditions of right character with reference to the divine Mind and divine power. As I understand it, the Christian Scientists teach that one of the most important effects to be produced on the human system is produced by prayer, by purity of life, by the abandonment of vicious habits, and by leading the kind of a life that will produce these results in the individual. That is the religious teaching they are setting forth, and as I understand it, they undertake to teach a doctrine which constitutes the revival of primitive Christianity. They give no medicine.

RIGHT TO LIVE.

I read one case where a Christian Scientist was on trial. It appeared from the evidence that he did not examine the pulse of the patient, did not take the temperature, did not go into physical detail concerning the disease, but did that which he thought was capable of producing the best results, and that was the application of the principles of Christian Science. Now Christian Science is a religious belief, and any religious belief or practice cannot be interfered with by the legislature. It seems to be fundamental that the one seeking help has a right under the constitution to go to persons that may be teaching religious faith of some sort. It seems to me very clear, gentlemen, that these two objections ought to be sufficient to prevent the enactment of this bill into a law, unless you provide some remedy or some amendment by which Christian Scientists may be protected in their practice. There are thousands of Christian Scientists, hundreds of churches

that have been established, and hundreds of people who are doing this work. This question is not like the question brought up by those who preceded me, the question of osteopathy. This is another thing, but I understand that some good results may be accomplished by osteopaths. They illustrate here a new school coming into existence, and what its developments may be we do not know. It is not for the legislature to put up barriers against these developments, whether they be of this school which these doctors have represented this afternoon, or of Christian Science, or of any other science of healing. One of the doctors spoke of the miracles performed by our Saviour, and I was quite surprised to hear him put the construction he did upon them. Now the Christian Scientists believe in the power of prayer, and the great Christian church believes in the power of prayer. We find this doctrine set forth in the Bible. I recall a quotation from the general epistle of St. James: "Is any sick among you? Let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins they shall be forgiven him." Shall the statute of the state stand in the way of the application of these words? If the Christian churches wish to pray for their people, if they wish to recommend prayer as a means of relief, can they not do it?

PROPER RESTRICTIONS AND PUBLIC SAFETY.

Have we not all been in church services where prayers were suggested and prayers were offered for the sick of the congregation, and yet in a sense that would be a violation of the proposed law? This liberty of conscience, this great right of exercising religious belief must be preserved in this state. I admit that the practice of medicine ought to be regulated by statute. That is proper. We also license engineers, license lawyers, license accountants; but you cannot pass a law in this state which would require a man to take out a license under the authority of the state before he could preach the gospel. Neither can you require a license of a man before he shall teach any religious truth that he thinks proper, unless such teaching leads to "practices inconsistent with the peace and safety of this state." The belief of the Christian Scientist is a religious belief, and he is engaged in religious teaching, and the legislature of this state cannot interfere. I think the suggestions that I have made show that the state cannot limit the right of the citizen himself to secure proper relief. I think he has a right to obtain outside the three schools of medicine any remedy available. Neither can the law interfere with any man's religious liberty. Unless this bill can be made to conform to these principles, it ought not to be put on the statute book.

Christian Science and the Public Health.

[We herewith publish a synopsis of a paper written by Carol Norton, C.S.D., upon the above subject.]

I HAVE been asked to give a brief review of the Christian Scientist's position in relation to the public health, the practice of medicine, and the legal aspects of Christian Science practice. I will endeavor to give in the brief form of questions and answers the pertinent points on the Christian Scientist's side of this vital question.

Q. Are Christian Scientists unmindful of the work and devotion to suffering humanity shown by honest, painstaking physicians, surgeons, nurses, and their helpers?

A. Christian Scientists respect and honor the efforts of all medical practitioners who sincerely labor for the alleviation of human suffering. They admire their devotion, their studious habits and self-sacrificing experiments for the upbuilding of a humanitarian profession.

Q. Is Christian Science at once a religious belief or doctrine, and a system of healing disease?

A. By Christian Scientists it is held to be the scientific understanding of the teachings of early Christianity. Healing sin or depravity, it denominates Christian reformation; healing bodily disease, organic and functional, it denominates Christian healing.

Q. Can it, as a religious belief or doctrine, be separated from its practice or demonstration in bodily healing?

A. As religious belief it relates to the moral and spiritual welfare of the people. Its method of healing evil thoughts or habits is purely spiritual. As a system of healing according to Biblical teaching its method of healing physical ills is spiritual, without drugs or material remedies. It is therefore not medical practice as the courts, public custom, statute laws, and doctors define the practice of medicine.

Q. Does the claim of religious freedom which gives to every citizen the privilege to enjoy "life, liberty, and the pursuit of happiness," cover the general question, Do Christian Scientists have an inherent right to *heal* and *be healed* without drugs, by spiritual methods, which are at once both Christian and Biblical?

A. I answer this from the standpoint of a layman, as I am not a lawyer. Religious liberty bases the American Commonwealth. Religious liberty includes the right to gain and preserve bodily health, which of necessity must base the ownership of "life, liberty, and the pursuit of happiness." Therefore under the normal and legitimate plea for religious liberty, Christian Scientists have a right to practise or demonstrate their methods of healing, inasmuch as these methods can be proven beneficial to the public health and general good. They heal where medical methods fail; reform where other moral systems have not reformed; their followers are friends to good government, civil liberty and law, and the good works of religion, both Christian and Jewish. Therefore their rights, both moral and bodily, are religious rights, and are surely safeguarded by our national constitution and the constitutions of the several states.

Q. Does the decision of the Supreme Court of the United States relating to the former polygamous custom of the Mormon Church in any way affect the claim of Christian Scientists that religious liberty gives them a right to practise and demonstrate their healing methods as a religious act, or as the expression of their second most important Article of Faith,—the healing of the sick through spiritual means?

A. Polygamy as a religious tenet of the Mormon Church was adjudged by public opinion, also by the law of Christian ethics, American sentiment, and civil law, as a menace to the public welfare and detrimental to the higher or spiritual integrity of the people of the United States. Because of this general attitude toward this institution as a so-called religious privilege, polygamous living was held to be not lawful, even under the guise of religious liberty. With Christian Science and its healing the case is entirely different. It is a friend to good morals, ethical integrity, and the purity of the home. It cures the sensual, liquor, drug, and tobacco habits, destroys sin and depravity, promotes moral sentiment, supports the civil law, heals thousands of suffering people given up by the doctors, and proportionately loses fewer patients (notwithstanding it is often used as a last resort) than medical practitioners. It is therefore not a menace to morals or the public health of the people.

Q. Do Christian Scientists believe in obeying the health laws of cities, towns, and villages, in reporting contagious diseases, in submitting to vaccination, if the law insists, and in co-operating with all who stand

for good government, public health, sanitary reform, and a definite lessening of the death-rate?

A. Yes. This has been publicly announced in the Christian Science official publications. [See letter of Rev. Mary Baker Eddy in this number.—EDITOR.]

Q. Should Christian Scientists admit the contention that they should submit to an examination by the State Board, which passes upon the qualifications of those desiring to practise medicine?

A. Christian Scientists do not practise medicine, nor do they desire so to do. Hence they are not asking this State Board of Medical Examiners for the privilege of practising medicine. The Board of Medical Examiners is composed of physicians of the three recognized schools allopathic, homœopathic, and eclectic. Why should those who stand for, and attempt to, and *do*, heal through metaphysical or spiritual methods according to scientific Mind-healing, be asked to pass an examination in a system or systems that they neither endorse, believe in, nor wish to practise? Who on the present Board of Medical Examiners would be really qualified to examine and pass upon the qualifications of a Christian Scientist,—perhaps a student and practitioner of Christian Science Mind-healing for a period of over fifteen years?

Last year the legislature of the great State of Illinois, the state of Abraham Lincoln, by a legislative enactment, added to the health laws of that state, which are in substance the same as the present health laws of New York, the following amendment: "Provided that nothing in this section shall be construed to apply to any person who ministers to or treats the sick and suffering by mental or spiritual means without the use of any drug or material remedy." A joint health committee of both branches of the Missouri Legislature has recently taken the same attitude toward Christian Scientists in that state.

Editorial Comment.

Free Choice of Doctors.

ANOTHER Christian Science healer—this time in Cincinnati—has been acquitted of practising medicine illegally, and this closes the old year with an unbroken series of victories for the "irregulars" over the forces of the recognized schools of medicine. The courts have uniformly decided in favor of the Scientists.

The question has been an interesting one, because it involved something more than a mere dispute between regularly licensed medical practitioners and those who professed to heal disease without the use of drugs. It involved the freedom of the individual. That is to say, it involved the right of a man to call in any one he wanted to and to intrust his health to the care of physicians who acknowledged no allegiance to any medical school. And it is very well that the question has been answered in the affirmative. For if it had been decided that the Christian Scientists, for instance, should not act as physicians, there is no telling when the prohibition might have been extended to some other medical sect, relatively small in numbers, though perhaps fully as efficient as the "regulars" or the homœopaths. Proscription is a dangerous precedent to establish.

So long as his vocation does not involve a trespass upon the rights of his fellows, the individual is the supreme and final judge of his own actions. And rightly so.

Therefore it is not to be regretted that the prosecution of Christian Scientists and similar practitioners has failed. The question is left just where it should be left—for the decision of the patient. The sick man is the one most deeply interested. It is not for the law to make the decision for him.—*Chicago Chronicle.*

Medical Legislation.

IN regard to legislation to regulate the practice of medicine, it may be well to observe that the choice of medical attendants and advisers is a matter which each man has a right to make for himself. It hardly comes within the range of subjects to be regulated by law as matters of sanitary or other things affecting public health.

The same principle applies to the theory of medicine to be followed. One person may believe in one theory and another in something very different. The decision of one may be wise and that of the other foolish, or both may be alike unwise. Schools of medicine are matters largely of prejudice and taste. As a general proposition, the person consulting a physician of a particular school knows nothing about the merits of the theory on which the physician professes to practise his profession. Sometimes the physician himself knows but little more. So, in respect of the choice of school and theories, it is for most persons a leap in the dark at best.

Open and notorious charlatanism should be prohibited. But a doctor is not necessarily a charlatan because he is not connected with a recognized school of medicine. He may be able to effect cures by use of simple remedies, or, for that matter, by the employment of no medicine whatever. It would be carrying matters to an extreme to say that the work of all such medical or alleged medical men is a public evil which should be prohibited by law.

Denver Republican.

A Dangerous Measure.

CHRISTIAN SCIENTISTS claim that a measure introduced at Albany, pursuant to the recommendations of the so-called regular practitioners, is a blow at personal liberty and permits the Board of Health of the State of New York to exercise autocratic powers in dealing with people who may have offended it. The bill to which they object is so sweeping in its provisions that it makes the layman who meets another on the street and advises him to take a certain course of treatment or to try a given medicine, guilty of a crime. This is hedging the doctors about with too many safeguards. They don't know everything about the science of healing and there is no reason why legislation should be passed upon the theory that they do. Christian Scientists have gone too far in their claims. They have disregarded many of the rules of common sense in dealing with sick people, but there is something more than theory in their belief and the fact should be recognized. The aim of the law-making body should be to strike a happy mean, to enact a statute which shall protect the public against extremists of both schools, against the regulars as well as other people who are making independent researches in the realm of therapeutics. This is the sort of legislation that would be favored by the people of New York, legislation which would protect the public and at the same time be fair to every conscientious man and woman working for the alleviation of human misery and honestly anxious to extend his or her knowledge.—*The Buffalo Review.*

Somewhat too Sweeping.

THE Bell Bill so-called, now before the legislature, has been thus amended:—

"The construction of this article is that any person shall be regarded as practising medicine within the meaning of this act who shall give treatment to any other person by the use of any remedy, agent, or method whatsoever, whether with or without the use of any medicine or instruments or other appliances, for the relief or cure of any wound or fracture, bodily injury or infirmity, physical or mental disease."

Under this broad-gauge prohibition, a mother would not

be allowed to try to cure any of her children of ailments that generally do not call for professional assistance; and it is not certain that if a man fell and broke his leg on the sidewalk, it would not be contrary to law to help him up before a physician in "regular practice" appeared.

The Buffalo Commercial.

Unconstitutional Legislation.

THE Bell Bill aimed at the Christian Scientists is not only assailable on the ground of unconstitutional interference with religious liberty, but with personal liberty as well, for the right of people to employ whatever kind of healers they choose cannot be taken away by statute. The present legislature is trying to do too much work.

Buffalo Courier.

Rights of Christian Scientists.

CHRISTIAN SCIENTISTS are before the Missouri legislature looking after their rights. They are entitled to them, whatever they may be. Christian Science has a remarkable following in St. Louis and all over the country. It is believed in and practised by men and women of such a standard of education and enlightenment as to render it extremely hazardous to declare that it has no legal rights. It is not the fad of the ignorant, nor the pastime of the fanatic. Sober, sensible men and women have indorsed it highly on all sides.

The *Star*, as the organ of all the people, wants to see the Christian Scientists properly represented in any controversy that may ensue concerning pending legislation at Jefferson City. It consequently offers its columns to the friends and promoters of Christian Scientists for any fair discussion of matters now on or that may come up during the pendency of the legislation in question.

St. Louis Star.

Scientists win a Victory.

ST. LOUIS, Mo., February 6.—A special to the *Post-Dispatch* from Jefferson City, Mo., says:—

It is announced that as a result of the hearing given last night by the joint committee on ways and means of the House and Senate to prominent Christian Scientists the public health committee will strike out those paragraphs of the Hull medical bill which are objectionable to them.

The Hull Bill provides for the establishment of a state medical board which shall pass on the qualifications of all applicants for medical practice, and requiring each to have served a two-year course at a duly recognized medical college.

Further, it is specified that "all persons professing to heal the sick or afflicted" must undergo this examination. The Christian Scientists based strenuous objections to this clause on the ground that it would restrict their religious belief.

At the hearing last night probably one thousand Christian Scientists from St. Louis, Kansas City, St. Joseph, and other parts of Missouri were present. The most prominent of these presented their arguments against the provision in the bill which they said was inimical to their faith.

St. Louis Post-Dispatch.

Victory in California.

SACRAMENTO, February 8.—The Christian Scientists, electric healers, osteopaths, and other irregular practitioners in the art of healing have won their fight against the Maggard-Hasson medical bill and the section of the measure directed against them was amended in the Senate on

third reading this afternoon in a manner that practically meets their wishes. The bill was reached late in the morning and had held attention after recess until mid-afternoon. Devlin of Sacramento moved the vital amendment and Rowell of Fresno, a regular physician of the old school in private life and a strong advocate of the bill in its original form, was the committee of one that reported it.

The amendment struck out the section defining the persons who shall be deemed as practising medicine and substituted this wording: "Those who for a pecuniary or valuable consideration prescribe or use any drug or medicine, appliance or medical or surgical treatment, or perform any operation for the relief or cure of any bodily injury or disease."—*San Francisco Chronicle*.

Among the Churches.

Opening of New Church at Jacksonville, Fla.

The opening services at First Church of Christ, Scientist, in their new home, corner Monroe and Newnan Streets, yesterday (Sunday, January 27) were highly interesting and attractive. The church was entirely filled in the morning, and there was a good attendance in the evening.

The decorations were tasteful, consisting of fine ferns, palms, blooming callas, bride roses, carnations, and other choice flowers.

After the Lesson-Sermon, the congratulatory letters and telegrams from leading Christian Scientists, friends of the church, coming from North and South, East and West, were read.

The following are two of the letters referred to above:—

I heartily congratulate you. These are glorious steps, and mean everything to us in our progress out of the old. May God bless you in every good endeavor to further our loved cause.

Lovingly,

SARAH J. CLARK, C.S.D.

Beloved Brethren:—First Church of Christ, Scientist, in Concord, N. H., sends you hearty greetings in the step forward which you are taking. "God is with us, and who can be against us?" You are enlisting in a holy cause. Your mission is to enthrone the Christ spirit in the hearts of men. Your only aim is to reflect that divine Love which heals sickness and sin. Under the guidance of our beloved Leader and Mother, we shall win a victory for Truth and righteousness.

Yours in Divine Love,

IRVING C. TOMLINSON, C.S.B.

Florida Times-Union and Citizen.

Third Annual Church Meeting in Reading, Mass

The third annual meeting of First Church of Christ, Scientist, Reading, Mass., was held in Odd Fellows Upper Hall, Monday evening, January 7. The reports of the officers of the church were listened to with more than usual interest on account of the general growth of the church in each of its several departments. Financially, there has been an increase of forty-five per cent over the cash receipts of 1899. Every debt is paid, and a cash balance on hand.

The attendance at the Christian Science services held Sunday morning and Wednesday evening has steadily increased until nearly every sitting is taken at each service. The actual average attendance per Sunday, for the month of December, was ninety-one.

The Christian Science reading room in Manning's Block, opened to the public last February, has proven a marked success. On its tables may be found all the genuine Christian Science literature for perusal, for sale, or

to loan. The cash sales of this literature since February, 1900, has amounted to over \$475. The number of visitors at the reading room during the last seven months was 1,878.

The happy and kindly thought expressed by the townspeople in regard to our reading room and the object of its establishment is gladly recognized and appreciated. In return for this hearty good-fellowship manifested, the church is pleased to welcome cordially the public to its reading room for the coming year, as well as to its regular services, Sunday morning and Wednesday evening.

CLERK.

Reading (Mass.) Chronicle.

Annual Meeting at Toronto, Can.

The congregation of First Church of Christ, Scientist, held their annual meeting at the church edifice last evening (Monday, January 14). The reports presented by the clerk and treasurer of the church on behalf of the Board of Directors were received with many expressions of approval. A substantial addition to the church membership was shown to have been accomplished in the receiving into fellowship of forty new members in 1900. The financial report reads as follows:—

Sundry collections.....	\$1,845.59
Monthly contributions.....	1,739.85
From other sources.....	473.60
For public lectures.....	290.85
Total	\$4,349.89
Expenditure	4,268.99

Balance on hand..... \$ 80.90

The meeting concluded with a report from the Advisory Board appointed by the church to consider the work done during the year. The report presented by the chairman of the committee, was most flattering in its praise of the church officers of 1900.—*The Mail and Empire.*

From Billings, Mont.

I became interested in Christian Science during my stay in New York last winter. On arriving here in July I at once inquired to see what was being done in this town. I found seven loyal workers already in the field. Regular meetings are held every Sunday forenoon. On my first Sunday there were seven of us in attendance, one visitor and five children. There are several others in the city who are now reading "Science and Health with Key to the Scriptures," and becoming quite interested.

Sunday School is held after services with a usual attendance of seven children.—E. J. M., Billings, Mont.

Christian Scientists at Columbia, Mo.

The band of Christian Scientists in Columbia who have been holding services at the residence of John N. Belcher for the past year or two, have rented the Phi Delta Hall, in the O'Rear Block in which to hold public services. The hours of meeting are 11 A.M., Sundays, and 8 P.M., Wednesdays. All persons are welcome at the services. Later, this congregation hopes to have a house of worship of its own.

Missouri Statesman.

Reading Room at Armstrong, Ia.

The members of First Church of Christ, Scientist, Armstrong, Ia., have opened a Christian Science reading room in the Felkey Block. It is a very pleasant room and is supplied with all the works of our Leader, the Rev. Mary Baker G. Eddy, and all the publications of The Christian Science Publishing Society.—GRACE THOBURN, Clerk.

From Our Contributors.

Never-Failing Blessings.

BY NELLIE V. FRESHMAN.

EVER a Thank-off'ring do we send,
For blessings, e'en now pouring
From Him, "Our Father," *Truest Friend*,
We stand in awe—adoring.

In *thought* we oft have gone astray,
Yet, never past redeeming:
For Love, "The Shepherd," passed our way,
And broke the spell of dreaming.

Then, if in *word* we failed to prove
Life, Truth, and Love "The Power;"
Sweet Silence: what a balm—to soothe;
'Twas given in that hour.

In daily life—our *deeds* and *acts*,
If thought be "none of mine,"
We find that Truth is never lax,
And we rejoice "in Thine."

Thus through all time, in *thought* or *word*,
If Principle be guiding,
We have a "never-failing Lord,"—
Omnipotence—abiding.

And for this Omni-present Love,
Our grateful hearts ascending,
Thought, Word, and Deed, in Heaven above
Will echo "Never ending."

A Comparison.

BY ELLA BERRY RIDEING.

ONE of the most impressive features to me, during the Communion week in Boston in June last, was the wonderful ease and quietness with which the great crowds of Christian Scientists handled themselves. I have known what crowds of people mean, always having lived in large cities, Chicago and New York, and in my estimation a crowd of any size was to be avoided. To be hedged in by people on all sides and there to stand and wait, I never thought I would willingly do, to get into any place.

There is no thought of being in a crowd, when surrounded by Christian Scientists. Whatever the number may be, no animal instincts manifest themselves there, no crowding, or pushing ahead of each other, as I have seen outside of Christian Science gatherings, even when only culture and refinement were considered to be present.

Communion Sunday I stood for an hour at least in front of the Mother Church, with the gathering members constantly increasing, until fully fifteen hundred must have been there, yet not an unpleasant look or gesture from any one. Each face wore a bright, sunny smile, patient and content to be in his present place as long as was necessary.

"All with one accord in one place" was truly manifested there, trying to realize the One Mind and to "love his neighbor as himself," knowing full well, that, to crowd a brother out of his place would do self no good.

It made little difference where one sat or stood in the church that day, the good one gained depended entirely on individual growth, on the work of previous days and months, not on the advantageous position gained on entering the edifice. The benefit received would be in propor-

tion to the ability to comprehend the Truth given there that day in word and thought.

So typical of individual growth in Christian Science was the entrance made into the church that day. Not a step was taken forward except as a body, all moved together that one step, and by those single steps at intervals, each one drew nearer and nearer until inside the doors of the church.

At the meeting of the members of the Mother Church on Tuesday in Mechanics Hall it was the same, only on a large scale; no ordering, no excitement, no managing, all led by the One Mind, everything "done decently and in order." It was wonderful! The ease and quietness of that great body of people under the guidance of Love.

This was all impressed upon me most emphatically when returning home. A number of Scientists, among other people, took the Fall River train at Back Bay Station; it never occurred to me but that I was still surrounded by Christian Scientists. As the train came to a standstill I was quietly waiting my turn to step aboard; when suddenly a woman from the side violently pushed ahead of me, and, needless to say, got on ahead of others too, who had been in front of her. It was so unexpected I was thrown against a little woman half my size, who never would have returned me the sweet smile that she did, had she not been a Christian Scientist. She would, at least, have been too busy thinking she was hurt to do so, much less to smile.

One thing I am sure of, only through previously having lived up to my highest understanding of God as Love, as taught in Christian Science, enabled me to meet that incident without the least bit of resentment or indignation. One of the most helpful and precious thoughts to me has been, "Who hath not learned that when alone, he has his own thoughts to guard, and when struggling with mankind, his temper, and in society, his tongue?" (Miscellaneous Writings, by Mary Baker G. Eddy, p. 126). What a comfort this thought has been to me under many different circumstances! and it was the first thought which came to me at that time. What a strong support is the understanding of Truth, as revealed through "Science and Health with Key to the Scriptures."

The Inflow of Truth and Love.

BY C. F. HACKETT.

HAVE you never noticed the stones and weeds on the seashore when the tide is out? But soon the tide commences to come in, so slowly as to be hardly noticeable. The waves flow in and out, but each time come a little higher and a little higher, and do not recede quite so far, until after some time the tide is in, and where the weeds and stones were is a beautiful expanse of water, glistening in the sunlight. When we first come into a knowledge of the Truth in Christian Science, because we long for something better and because material life does not satisfy, how hard and full of weeds our thought appears to be; in fact, it seems as though there were nothing but weeds; but the tide of Truth has commenced to flow into our lives. The flowing of the waves is like our daily experiences; some days we seem so clear and free, and at other times the claims of error try to cast us down; but if we cling to God, we rise higher, and the stones and weeds do not assert themselves so strongly. Whether the sea is stormy or calm, nothing can prevent this action of divine Principle in our lives, any more than storms at sea can prevent the tide from rising. As we progress, the thoughts of mortal mind give place to pure thoughts of Good. The tide of divine Love in human consciousness will never ebb, never go back to the old conditions, but flow on and on until "the knowledge of our God covers the earth, as the waters cover the sea."

Religious Items.

The *Universalist Leader* says editorially: "Why should we not pay for our religion as one of the necessities of our life? Why should the church be looked upon as an object of charity and the minister as one to whom we are doing a favor? We do not make the grocer and the coal dealer feel that they exist only through our generosity; we pay for what we get and hold the dealer in the highest respect. We do not resent it when his monthly statement comes. Why should we not place the church on the same high business level? Why not pay for our religious culture, just as frankly and freely as we pay for an education and for our food? When will the people who want their church to stand well in the community cease telling about what they give to the minister and speak of what they pay, and are glad to pay, for their religion?"

Rev. Geo. R. Wood says in the (Baptist) *Standard*: "Most Christians desire to be strong. They covet strength to overcome their own difficulties and long for power to influence others. In their desire for power they frequently overlook many simple and practical sources of strength. One of these simple but most efficient, sources of strength is suggested in Nehemiah, 8:10, in which Ezra, the scribe, declares to Israel that 'The joy of the Lord is your strength.' 'The joy of the Lord is your strength.' Then let the world know it. Let the Christian speak of the joy that comes from being a holier, healthier, happier, more peaceful and hopeful man, instead of always telling of his burdens, trials, and failures."

The *Congregationalist* says: "The Orthodox, or Established Church in Russia is, relatively to other churches, fully as predominant as was the Established Church in England one hundred years ago. It is even more insistent in controlling educational and social life and in giving superior privileges to its members. Yet of the 130,000,000 people in Russia no less than 12,000,000 assert their independence of the ecclesiastical control of the Greek Church, while they hold faith in Christ and worship in various religious organizations. Some of these removed to Siberia in order that they might enjoy greater religious freedom than in Russia proper."

A writer in *The Unity Herald* says: "It is a bad sign for the Christianity of this day that it provokes so little opposition. If there were no other evidence of its being wrong I should know it from that. When the world and the church can jog along comfortably together you may be sure there is something wrong. The world has not altered. Its spirit is exactly the same as it ever was, and if the Christians were equally faithful and devoted to the Lord and separated from the world, living so that their lives were a reproof to all ungodliness, the world would hate them as much as ever it did. It is the church that has altered, not the world."

The (Unitarian) *Christian Register* says: "Women as sovereigns have often been extraordinarily successful. There is something in the traditions of history and the influence of events which in a mysterious way prepares great nations to submit to the sway of a woman, even when others of her sex of the same nationality are exposed to all the disabilities of tradition and custom. That at the same moment two women could rule over great nations in Europe and Asia, with conspicuous ability, the one the native of a country where women are highly honored, and the other of one where they are despised, is one of the curiosities of history."

The (Methodist) *Christian Advocate* says: "Is it not a fitting time to kindle anew the fires of spiritual religion? These fires have not gone out, but they do not burn and blaze as we should like to see them. If the religious life and activity of the Church should not keep pace with commercial and secular progress, the result will be disastrous. Our prosperity will be a curse instead of a bless-

ing. It is impossible to measure the progress of religion and to compare it with secular advancement. We can count numbers, but no one can measure or estimate spiritual growth and power."

Ian Maclaren says in the *Christian Endeavor World*: "The depreciation of kindness in private life which is one of the features of our day, is very largely due to the fashion of intellectualism; but yet human nature below the surface of crazes and phrases remains the same, and his fellows still judge a man by his heart rather than by his head. When the jury is selected, not from a coterie, but from the marketplace, the person who is kind will ever be preferred to the person who is clever; and thoughtful, to use a cant word of our day, is still less than warm-hearted."

Bishop Hendrix says in the (Baptist) *Examiner*: "Men see clearly the realism of evil. What is needed is some one to proclaim the realism of good. The secular press, current literature, the stage, all portray, and ceaselessly, the realism of evil. Good men take up the refrain and exhort, 'Be not overcome of evil, but overcome evil with good.' The mind of Christ is expressed so long as there are men to proclaim the fundamental fact, the underlying principle of the mission of Christ: 'For this purpose the Son of God was manifested, that he might destroy the works of the devil.'"

The (Unitarian) *Christian Register* says: "President Jordan, describing a trip across Indiana, says: 'A common traveler got off the train and a coop of chickens was put on. The people had no welcome for the traveler and no tears for the fowls; yet at the station I counted forty men and boys,—farm boys, who ought to have been doing something somewhere,—every interest of economics and æsthetics alike calling them away from the station and off on the farm.' This is the strongest impression of travel elsewhere,—not gorgeous scenery, but human waste."

The *Universalist Leader* says: "Naturalness is needed everywhere. Artificiality, pretentiousness, straining after effects by unnatural methods, are sure to avail but little as novelties, and in the long run weaken the influence of all who practise them. . . . Artificiality and assumption are dangerously near hypocrisy. Even in the dramatic profession it is naturalness that attracts and wins. Let a man be himself everywhere, his best self as fully as he can, and he will be justly rated by his fellows, whether his field of action be a private or a public one."

The *Sunday School Times* has the following: "To speak a kindly word of commendation or encouragement may be a very little thing for you, but a very helpful thing to the one to whom it is spoken. Never a day passes without bringing you opportunities for such service to others. Does a day ever pass without your improving such an opportunity? If so, you have reason to reproach yourself with the omission, and others have reason to regret your failure. Inasmuch as you did it not you failed in your positive duty."

A writer in the *Homiletic Review* says: "Love is the broad idea of charity, an affectionate sympathy with men in their sorrows, and a kindly disposition toward everybody. Love in the abstract we have; but have we love in the concrete? We can love well-dressed, cultured people of our own kind; but can we love lowly, ignorant, and unlovely men of an alien race? Have we that broad charity toward all which suffereth long and is kind?"

At a meeting in New York recently, Bishop Potter had occasion to praise the intelligence of the Chinese, and gave the following instance in support of what he had said: "I once had a Chinese servant who, in filling an order for me, described me as Number One Joss Pigeon. He had in these few words fully described my title. Joss

meant religion and pigeon business. I was the number one religious man, and my curate was number two joss pigeon."

"Name, in Scripture," says Swedenborg, "signifies quality." To be saved by the name of Jesus, the "name above every name," therefore means that we are saved by having the Christ quality in ourselves; and to spread his name is simply to publish the kind of life which Jesus had in himself and manifested to others. There is no power in mere names or words; the letter kills.

Universalist Leader.

The (Baptist) *Standard* says: "The total membership of the evangelical churches in the United States is in the neighborhood of 19,000,000, or about one-fourth of the population. Even if we discount this fifty per cent for padded statistics, inactive members, etc., the remaining Christian force should be capable of accomplishing great things for God and righteousness."

The story is told that Cardinal Manning, upon going to his publishers for a copy of his book entitled "Confidence in God," was told that he would have to wait to hear from the stockroom, and in a few minutes heard in a loud voice bellowed from an upper floor: "Manning's 'Confidence in God' is all gone."

The Advance.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York or Boston*, exchange on Chicago or cities other than Boston or New York will not be accepted.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTIAS.

An illustrated poem. Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental ideas; 120 pages, cloth covers, gilt edges. Price by mail, \$1.00; \$5.00 half dozen; \$2.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$1.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *as is* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE ~~versus~~ PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1888. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$5.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$11; per half dozen, \$7.50. Full Morocco, \$1.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., 103 pages, illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1806, 1892. A Poem by CAROL NORTON. Illustrated in photographure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

Russia has imposed a thirty per cent additional tariff on American imports in retaliation for an increase made by the United States in the tariff on Russian sugar. The Secretary of the Treasury claimed that the Russian Government was paying a bounty to exporters of sugar and the tariff was increased by the United States to neutralize the effect of the bounty. American exporters of machinery, who have built up a splendid trade with Russia, are displeased at the action of Secretary Gage and declare it was a serious blunder. The St. Petersburg newspapers have nearly all expressed regret that their government imposed the retaliatory treaty. Both press and people seem very friendly to America.

Former Congressman Tom L. Johnson, the well-known Single Taxer, was nominated for mayor of Cleveland, O., by the Democratic party February 19. Mr. Johnson has been for many years a successful steel manufacturer and street railway manager, being reputed a millionaire, yet he was one of Henry George's most intimate friends and he never lost an opportunity of pointing to the success of such men as himself in rolling up enormous wealth, as object-lessons proving the existence of special privileges which make the rich richer at a rate of increase wholly out of proportion to what it should be under equitable conditions.

The Oregon Senate has voted, 29 to 1, in favor of resubmitting woman suffrage to the voters. The suffrage amendment submitted last year received forty-eight per cent of all the votes cast on the question.

Elaborate preparations are being made in Washington for the public ceremonies attending upon the inauguration of President McKinley on March 4.

Foreign News.

For a while the Chinese Government manifested great reluctance to mete out the extreme punishments to the leaders of the Boxer uprising that were demanded by the Powers, and their delay was very trying to the patience of the peace envoys of the foreign nations. About two weeks ago Field-Marshal Von Waldersee invited the commanders of the troops of other nations stationed in Peking to join him in an expedition against the Chinese in force. No pains were taken to keep the proposed movement secret, and, taking it seriously, the Chinese government yielded to the terms of the Powers. Then it was announced that Count Von Waldersee's threat was merely intended to frighten the Chinese.

In a debate in the British House of Com-

mons on February 19, Thomas O'Donnell, an Irish member, attempted to address the House in his native language, the Gaelic tongue, the first attempt of the kind on record since Ireland was united with Great Britain. The speaker of the house requested Mr. O'Donnell to speak English, but he persisted in talking Irish until peremptorily ordered to desist. He refused to speak English, asserting it to be his right, as the representative of an Irish constituency, and a member of a nation still possessing a language of its own, to address the house in his native tongue.

The Cuban constitution was signed by the members of the constitutional convention on February 21, and a copy was sent to Governor-General Wood. Press reports from Washington indicate that an extra session of Congress is likely to be called to consider the Cuban constitution. Some of the more radical Cuban patriots hotly protest against submitting their constitution to the United States Congress, on the ground that Cuba is already an independent nation, and that the Americans have no right to interfere in the making of Cuba's fundamental law.

Russian students have of late been troublesome to the government on account of their revolutionary spirit, and a recent press dispatch from St. Petersburg says: "By a verdict of the special court, posted in the St. Petersburg University, three students have been sentenced to three years', six to two years', and nineteen to one year's service in the army. It is reported that sixty-one students, in addition to those already sentenced, have been condemned at Kieff."

The Boers seem to be holding about all the advantages they secured by their bold operations in Cape Colony, but they do not seem to be strong enough to press on to the capture of any populous towns. Dewet, the Boer general, who for weeks has been using a considerable force of men to good advantage on the borders of Cape Colony, is reported to be about to fall into the hands of a superior British force.

Some of the conservative members of the Canadian Parliament are urging the Dominion Government to buy a controlling interest in the Grand Trunk and the Canadian Pacific railways to prevent them from falling into the hands of American capitalists.

Snow fell in the City of Mexico February 16, for the first time since December, 1856.

Industry and Commerce.

Statistics recently furnished by the United States Government show what strides women have made in the professions during the past thirty years. There was but one architect in 1870; now there are fifty. Painters and sculptors have grown from 412 to sixteen thousand, literary and scientific writers from 109 to 3,161, preachers from 67 to 1,522, dentists from 34 to 417, engineers from 67 to 201, journalists from 35 to 472, lawyers from 5 to 417, musicians from 5,763 to 47,309, doctors from 527 to 6,882, accountants from 0 to 43,071, copyists and secretaries from 8,016 to 92,824, and stenographers and typists from 7 to 50,633.

Contracts to the aggregate amount of one hundred and ten thousand dollars have been awarded for the purchase of schoolbooks for Cuba. The successful bidders are Ginn & Co., Houghton, Mifflin & Co., the Hammett Company, the American Book Company, and Silver & Burdett.

London press reports state that J. Pierpont Morgan, the New York organizer of huge financial schemes, has become interested in the company controlled by Americans for the exploitation of electric transit in British cities.

Chicago press reports say that it is estimated that there are in the neighborhood of fifty million bushels of grain in Chicago, Duluth, and the Twin City elevators.

General News.

Plans are being made for a party of scientists to leave Victoria, B. C., in June for the big glacier on Mount Fairweather, where the "Silent City of Alaska" is seen every year about that time. The expedition will be backed by some Californians. Tents, and photographic and surveying apparatus will be taken. The mirage, which stretches for a distance of five miles across the great glacier, is said to be a representation of the town of Bristol, England, and in order to investigate this the expedition will note the time and weather when their observations are made and all characteristics of the mirage. Then as soon as one of their number can get into communication with the city of Bristol inquiries will be made by telegraph with scientists of that city of the weather conditions prevailing at Bristol when the observation was made.

On Sunday, February 17, Mrs. Carrie Nation and a number of followers raided several saloons in Topeka, Kan., and finally broke open the doors of a cold storage warehouse and searched the place for hidden liquor. Mrs. Nation and several other women were arrested and held under heavy bonds to await the action of the grand jury. The charge against them is of breaking and entering, and after hearing the testimony, the judge pronounced it a clear case. Mrs. Nation's bond was fixed at \$2,000. She refused to furnish sureties and was remanded to jail to wait for the outcome.

A Washington writer says: "About nine hundred persons a day on an average visit the White House the year round. The number rises sometimes to fifteen hundred or two thousand, and the hours for visitors are not many, being from 10 A.M. to 2 P.M. In spite of this constant tread the old-gold figured carpet in the east room looks as well as when it was first put down, before Mrs. Cleveland left the mansion for her new home in Princeton.

The Pacific Mail steamship, City of Rio de Janeiro, while entering the harbor of San Francisco in a fog on the morning of February 22, struck a sunken rock and went down in thirty fathoms of water. There were 234 people on board. Seventy-nine persons were rescued, and most of the others were probably drowned. Among those reported missing were Rounseville Wildman, United States consul at Hong Kong, wife, two children, and nurse.

The executors of the estate of C. P. Huntington have deposited with Comptroller Coler of New York a certified check for seven hundred thousand dollars to cover the amount of the inheritance tax which will be collected by the State. The deposit indicates the worth of the estate at the time of the testator's death to have been approximately seventy million dollars, making the present worth eighty million dollars.

The highest of all office buildings is to be erected at the corner of Broadway and Thirty-third Street, New York City. The distance from the ground to the extreme top will be 455 feet. There will be thirty stories. The next highest building in New York is the Park Row, or Irvin's Syndicate, Building, of twenty-nine stories, and 382 feet.

New York will soon have its long-talked-of hotel for the exclusive use of women. The Women's Hotel Company has purchased the House of Industry on the north side of Twenty-ninth Street and the south side of Thirtieth Street.

At the congress of the Daughters of the American Revolution, held in Washington last week, the register general reported an increase of 12,759 in membership last year, which makes the total membership at present 35,002.

Washington's birthday was fitly observed by Americans wherever they were, and remembered by the people of other nations.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Recent Discoveries in the Ancient Homes of the Hittites.

THREE thousand years before the birth of Christ a mighty nation ruled with the strong hand in Syria and Mesopotamia. Its influence extended far beyond the borders of the realm, and made itself felt among the outside nations, enduring long after the nation itself had ceased to be. This was the Hittite nation, the mystery and baffling puzzle of archæology. What little is known of the Hittites is derived from the Bible and from Assyrian and Egyptian inscriptions. All the erudition of modern scholarship, all the genius and patience that translated the arrow-headed inscriptions and made clear the ancient writings cut into the bricks of Nippur, have failed to throw a single ray of light upon the strange language of the Hittites, or to cull from their enduring records in stone one definite historical fact about this once mighty race.

Endeavor in this direction has recently been stimulated by the finding among the ruins of the ancient city of Babylon, by the German scholars and explorers now excavating there, a stone monument of Hittite art and literature, in perfect condition, and inscribed with a long legend in the untranslatable language. The monument was recently found in the ruins of a Babylonian temple to the goddess Nin-Mach. It is forty-nine inches high, twenty-one inches wide, and fourteen inches thick. On one side is a bas-relief sculpture of a Hittite deity, excellently preserved. There is no doubt that this is the god of thunder, for he grasps in one hand the triple fork which so often represents lightning in ancient art. But the inscription is not so simple a matter. Clear cut as the characters are, not all the scholars in the world can translate the legend, or even evolve from the characters an alphabetical system. But even to the eye of one who has no acquaintance with ancient languages the inscription is interesting pictorially. One character represents an arm; another a leg and foot; still another the outline bust of a man with his hand raised to his face; and there are squares, angles, and other familiar figures, each one seeming to mean something when considered by itself, but without attainable meaning when regarded in total. Within those simple looking characters lies the secret that an archæologist would give a lifetime of toil to learn.

Students of the Bible will recollect that among the nations which were driven out of the Promised Land by the Israelites, under the leadership of Joshua, the Hittites are mentioned. This, scholars agree, must have been when the Hittite power was waning, for it was several centuries before this that Seti and Hameses, Pharaohs of Egypt, sent out several expeditions against the Hittites and reduced them to subjection if the inscriptions upon the walls of the great temple at Karnak are to be believed. It is also known that the Hittites held sway in the city of Carchemish on the Euphrates, for many of the puzzling inscriptions attributed to them have been found in the ruins of that great emporium of the day. It is not known with certainty to what

race they belonged, although the pictures of the Hittites found in Egypt have led many to the conclusion that they were Mongolians, for the pigtail, still found in China, and the straight nose and receding forehead prove absolutely that they could not have been of the Semitic race, like the Babylonians, nor of the Egyptian stock. Some have suggested that the Hittites were Turanians, but no one can do more than guess at the matter. Before a language can be deciphered it is necessary to know to which stock it belongs, and this uncertainty about the origin of the Hittites has only deepened the difficulty in reading their inscriptions.

Some, like Colonel Conder, have thought that at last a solution of the problem has been found, only to be proved wrong in a few weeks by other scholars. The only hope seems to lie in finding some Hittite inscription, side by side with one in another language, now known, which will serve as a key. This was the fortunate accident which led to the reading both of the hieroglyphics and the cuneiform inscriptions, for in one case it was the Greek parallel version, in another the Persian, which led to the decipherment of the lost tongue. There is good ground for hope that the German expedition to Babylon may offer the long sought solution of the problem by finding some monument bearing a double inscription in both the Hittite character and the Assyrian, which would give the key. The rest would be only a matter of detail. The finding of this monument in so perfect a state of preservation shows that at some time the Hittite power must have been great, even in the city of Babylon itself, and where one monument has been found it is almost certain that others will be discovered. Then some of the German scholars who have pored in vain over the Hittite characters without the aid of any parallel will explain it all in the twinkling of an eye.

But this mysterious monument of a vanished race, utterly swept from the face of the earth by the power of Egypt and Assyria, and once an ally of the world powers of its day, is not the only valuable discovery which has been made by the German expedition. With true German thoroughness the entire mound or series of mounds covering the site of ancient Babylon is being cleared away. Without striving for sensational finds that may astonish the world, the explorers prefer to work thoroughly, and reveal at last the glories of the civilization and architecture of the city of Nebuchadnezzar and his predecessors on the throne of Assyria. They have already succeeded in finding the great wall described by Herodotus, and regarded as fictitious by critics of the Father of History, whom they curtly termed the Father of Lies. Herodotus, who visited Babylon in the time of Artaxerxes I. (465 B.C.), said that the wall surrounding the city was fifty royal ells wide and two hundred ells high (84 by 336 feet), and that on top of the walls, on each edge, were one-story houses, leaving a space between the rows of houses, on which four chariots could be driven abreast. This wall has been found, but it surpasses the description of Herodotus. The retaining wall was built of baked bricks laid in asphalt, and was twenty-three and one half feet thick. Beyond this was a filling in

of sand and gravel sixty-nine feet thick, and then another retaining wall of forty-four feet thick, making the entire breadth of the wall one hundred and thirty-six and one half feet.

This wall surrounded the city, in which was the palace of Nebuchadnezzar and all the temples, covering as much ground as does London. Only one of these temples has been found so far, the temple of the Hittite monument, but this is a fine structure, built in the usual Assyrian fashion of a step-tower or Ziggurat, and many of its rooms have now been uncovered. From inscriptions found there it seems that this temple was built by Assurbanipal (668-626 B.C.), and by him dedicated to Nin-Mach and called Emach. The leader of the expedition, Dr. Robert Koldewey, states that the court of the temple, containing a well, is surrounded by rooms which are shut off by doors from the court and show interesting mural ornamentations. In the court and rooms there is a double tile pavement, with a space of six and one half feet between the two pavements. In this peculiar store chamber a great number of inscribed clay tablets have been discovered, bearing the names of the workmen, and the wages paid to those engaged in building the temple. These pay-rolls are dated, giving day, month, and year of the reign of Nebuchadnezzar and Evil-Merodach. From this it is evident that the construction of the building began during the reign of Nebuchadnezzar and was merely completed by Assurbanipal, or Sardanapalus, as the Greeks called him.

A cylinder found in this temple has been translated by Dr. Meissner, the Assyriologist of the expedition, and reads as follows:—

"Assur-bani-pal, the great king, the mighty king, the king of the world, the king of Assyria, the king of the four ends of the earth, the king of kings, the peerless prince, who rules from the upper sea to the lower sea, and treads all lower kings beneath his feet; the son of Asarhaddon, of the great king, of the mighty king, of the king of the world, of the king of Assyria, of the lord of Babel, the king of Sumer and Akkad: grandson of Sanherib, the mighty king, king of the world, king of Assyria am I. I completed the building of Esagila, which my father, my beggetter, did not finish, and the gifts for offerings of Esagila and for the divinities of Babel I established well and the government of Babel I made firm. So that power might not harm the weak, I have entrusted the dominion of Babel to my beloved brother, Shamas-sun-ukin. At the same time I established Emach, the temple of the goddess Nin-Mach, in the midst of Babel. Do thou, O sublime Nin-Mach look down with favor upon my pious deeds and daily beseech my prosperity before Bel and Belit. Set a life of many days as my fate and make my dominion firm as heaven and earth. And as to my dear brother, Shamas-sun-ukin, king of Babel, grant that his days may be long and that he may be satisfied with many successors. Whoever craftily erases my name or the name of my dear brother, or breaks my inscription, or changes its place, may Nin-Mach implore misfortune for him before Bel and Belit, and wipe out his name and his seed from the land!"

It has been proven in the course of the excavations that the site of this temple really lies in the suburbs of the city, and it was supposed that a mound called Amran by the Arabs, covered the chief Babylonian ruins. Excavations are now proceeding rapidly at this point, and already some of the ancient ruins are being brought to light. Deep down in this mound it is expected that the palace of Nebuchadnezzar will be found, and here, too, must be those marvelous hanging gardens, one of the wonders of the world. A large canal, used for bringing the water from the Euphrates, probably for watering these gardens, and called Libil, has been found, and within a short time it is

probable that the very arches upon which the gardens were planted will come to light. They were not actually hanging gardens, but rather elevated gardens, planted upon arches seventy-five feet high and extending five hundred feet in every direction, but covered with so deep a soil that the largest trees grew there. From a distance these gardens seemed to hang in the air, hence the name. But it was necessary to water these artificial layers of earth, and the water of the Euphrates was brought over in canals and raised to the proper height by some method not yet clear, but soon to be explained by the discovery of the gardens themselves.

It is in this more ancient part of the city that a large amount of Babylonian and Assyrian remains have come to light, consisting not only of ancient walls, but also of many cylinders inscribed in cuneiform characters, numerous ornaments and votive figures, besides a building, the top story of which contains stamped bricks of the time of Nebuchadnezzar. The lower portion must be much older, but it is only now being uncovered. Here, too, have been found, upon some of the seal cylinders, pictures of the god of thunder and lightning, Hadad, much like that of the Hittite deity; and one of Marduk, a chief deity in the Babylonian pantheon. The representation of Marduk is of especial interest, because here he stands in all his glory, with "wide open" eyes and ears, the symbol of omniscience, and with a powerful right arm, the symbol of omnipotence. On the cylinder to the left of the figure are eight lines of inscription, as follows:—

"For Marduk, the great lord, the powerful, the exalted, lord of all, lord of lords, mighty judge, who decides the fate of nations, lord of the lands, lord of Babylon, who dwelleth in Esakkil has Marduk-nadin-schum, king of all, the sublime, his worshiper, dedicated this seal, so that he may live, that his family may prosper, that he may live long and his rule be established, that he may destroy the land of his foe, he has given this seal of shining lapis-lazuli, covered with beauteous gold, an ornament for his shining neck."

From the inscription on this precious amulet it is evident that it was a gift to Marduk, and was placed about the neck of one of his statues, or was worn about the neck of that Babylonian king who was aided by Salmanezzar II. (858-824 B.C.), the Assyrian monarch, who helped him to take away the throne from his brother, Marduk-bel-usate. It was in the eighth year of his reign that Salmanezzar came to the assistance of Marduk-nadin-schum, putting his brother to flight, and afterwards slaying him in the mountains. In this way the discovery even of small amulets confirms great historical occurrences or legends, or gives us bits of ancient history unsuspected before. The value of the German discoveries grows with each month, and it is probable that when the work is finished at old Babylon we shall have a more complete view of the palaces and temples, and of the life of the Assyrians before their fall from power, than has yet been presented to the world in the case of any other nation buried under the dust of ages.

Denver Republican.

We must make time to be alone with God. The closet and the shut door are indispensable. We must escape the din of the world to become accustomed to the accents of the still, small voice. Like David, we must sit before the Lord.—F. B. MEYER.

Our minds are small because they are faithless. If we had faith in God, our hearts would share in His greatness and peace. For we should not then be shut up in ourselves, but would walk abroad in Him.—MACDONALD.

Among the Churches.

Work of the Cambridge, Mass., Sunday School.

The members of the Sunday School in connection with First Church of Christ, Scientist, of Cambridge, Mass., have been so cheered and encouraged by reports from other parts of the Field, that they would like to contribute their testimony as to the way that Love has led and blessed them.

Our Sunday School was organized in February, 1899, with a membership of sixteen children, three teachers, and a superintendent, the vice-superintendent being one of the teachers. We met in a small room, each class clustered together in a separate corner; but our growth was rapid, and room after room was secured, so that each teacher might have her class by itself for the study of the lesson, all assembling in one room for the opening and closing exercises.

The first year our collections, with a small sum volunteered by a few friends, enabled us to buy a fine organ and sufficient hymnals for the use of the school. The second year our growth increased steadily, and we proved the truth of the statement in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 490, "Divine Love always has met, and always will meet, every human need."

We now have a membership of fifty-nine, an average attendance of forty-three, divided into six classes. We meet in a large, sunny hall which can be divided by folding doors into two large rooms, each accommodating two classes; the other two have smaller class-rooms of their own. We have purchased more hymnals, and have quite a fund on hand with which we hope to aid in providing a church home for the dear church of which we are the nursery.

The rapid growth of our Sunday School seems remarkable to one who has no understanding of Christian Science; our methods are so different from those of other churches.

We do nothing to entertain or amuse; there are no elaborate Christmas entertainments with gifts; no monthly concerts at which the brightest of the pupils are given an opportunity for display; no picnics; no festivals; and in the regular Sunday services no effort either to amuse or to pour in information; but the teacher's loving, prayerful effort, for which she has been preparing by daily study through the week, is to lead the pupils to read and study for themselves the Bible and Science and Health, and to discern the footsteps in the pathway out of material sense into the life which is Spirit, that they may say with Paul, "Now we have received, not the spirit of the world, but the spirit which is of God; that we might know the things that are freely given to us of God. Which things also we speak, not in the words which man's wisdom teacheth, but which the Holy Ghost teacheth; comparing spiritual things with spiritual."

We have proved the truth of Jesus' saying, "And I, if I be lifted up from the earth, will draw all men unto me." And if it be true that *all men* will be drawn by the uplifting of Truth and Love, how much more is it true of the little children, "For of such is the Kingdom of Heaven."

All the children, with the exception of the infant class, read references from the Bible and Science and Health selected from the regular lessons in the *Christian Science Quarterly*; and frequently an opportunity is given for them to tell how they have been able to demonstrate through the week the truth of what they are taught in the class; and some very beautiful testimonies are given, showing how the Truth has been understood and applied.

One little girl told of being tempted to play truant from school with a number of her mates, but this sentence from the spiritual interpretation of the Lord's Prayer as given in Science and Health helped her to overcome—"Love leaveth

us not in temptation,"—and she overcame and influenced one of her friends to do the same.

Another little girl said that some one had strewn ashes on the hillside where they were accustomed to coast; she got a broom and commenced to sweep it off, feeling rather cross; she slipped and fell, striking her head. At first she thought she must go home, but she sat down on her sled and thought, "Divine Love is reflected in love" (Science and Health, p. 322), and in a few moments she was as well as ever.

Another said she had to go to the dentist's to have a tooth filled; she had some fear, as she had never been to a dentist before, but she worked for herself and went alone. It commenced to hurt, and the dentist told her the nerve was exposed, but she held the thought that there was no pain in Love, and got along without further trouble. She realized that Love was the only power that governed her.

A little boy about six years old was telling the story of the boy Jesus in the temple. He said, "Jesus knew more than the doctors did; there were *some* things the doctors knew which he didn't, but those things didn't amount to anything."

A little boy five years old repeated the verse, "Overcome evil with good." His teacher asked him what that meant. He said slowly, thinking it out as he spoke, "It means God comes over *all* the evil, so we can't see it; and—Why! There isn't any!"

EMMA H. McLAUTHLIN, *Superintendent.*

Progress at Seattle, Wash.

It may be of interest to our friends at headquarters to know what is being done in this extreme northwest corner of our country. Seattle, the largest city in this section, has grown very rapidly, has indeed outgrown the supply of halls and places for public gatherings. This growth is due partly to the rapid development of the country, partly because it is an important shipping point to the Orient, and in part because it controls the Alaska trade.

For more than a year this church, numbering about one hundred and twenty-five at present, had been meeting in a room designed for commercial uses. We were recently obliged to surrender it for its intended purpose. A thorough search by those well acquainted with the city failed to find a hall that could be leased. Indeed, not a hall could be found that could be secured for both Sunday morning and Wednesday evening except one in the extreme outskirts of the city, or one in such location and with such history that members of other churches might hesitate about attending a service there.

Confronted with such conditions we were much perplexed, for the notice that we must remove was quite unexpected. But a way for the time being was opened. The Unitarian congregation had taken the Seattle Theatre for their Sunday morning meeting during three months. They kindly rented us their building for that time, but what or where next? The large rentals that could be had made owners and agents willing to open the doors of their rooms to anything and everything, so that even if a hall for meetings were found it compelled us to present Science amid surroundings where mortality in its many phases held carnival. A sense of the beauty, sweetness, and purity of Science had so grown upon the church that they felt very reluctant to do this. Another consideration was that the high rents demanded would go far in a little time toward paying for a building of moderate cost. Summing up the whole situation we determined to build such a room as we could at once. A central location was found, but it could not immediately be redeemed from under mortgage, the owners preferring investment to cash. Upon this we began the erection of a neat frame structure, costing about \$3,500, and seating about five hundred. The church follows the

rule of Science in the construction, and pays as it goes. Work has been pushed rapidly, and it is believed that it will be ready for occupancy about March 1. Under such circumstances we did not lay a corner-stone, and we shall have to forego the pleasure it would give us to invite our fellow-students to a dedication of our work. But we shall have the consciousness that our effort has provided for Science a neat and sufficient home for the present. It has taken it out of the power of mortal mind to drive it here and there for a hearing. We reverently believe that Truth will soon enable us to build a structure worthy of the city and the cause we love. It is the purpose of this church to go forward at once with such a work. Our church is growing steadily both in numbers and in understanding of the Truth.—ALLEN H. ARMSTRONG, *First Reader*.

New Churches in Chicago.

A special collection taken yesterday morning (Sunday, February 10) in the various congregations of Christian Scientists in the city insures the speedy completion of the two new church edifices which that denomination is constructing.

Over ten thousand dollars was raised, leaving a deficit of only about twenty-five hundred dollars to complete the amount of two hundred and thirty thousand dollars which will be expended on the new buildings. This sum, it is expected, will be raised before the new churches are dedicated, so that they can be turned over to the congregations without a single dollar of indebtedness.

One of the new churches, which will be known as the Second Church of Christ, Scientist, is on the North Side, at the corner of Wrightwood and Pine Grove Avenues. The other, which will be the Third Church, is on the West Side, at the corner of Washington Boulevard and Leavitt Street.

Both are substantial buildings and when completed will be among the finest church edifices in the city.

The construction of the churches was started over a year ago, and it was intended to have them completed by last fall. The strike greatly delayed the work, however, putting the construction back several months. But now the work will go right ahead and both churches will be finished by spring.

The original estimate of the cost of the buildings was \$224,000. This was somewhat increased by the delays and certain improvements which were afterward decided upon.

It was desired, however, to keep the buildings free from debt, and the special collection was taken yesterday at the morning services for that purpose.

There are five Christian Scientist congregations in the city, and it has been the plan for the whole body to assist in the construction of each of the churches. When the First Church, on Drexel Boulevard, near Fortieth Street, was built some time ago, the money was raised among the various congregations. At present this is the only church edifice in the city that the denomination has completed.

The new church on the North Side is being constructed of Bedford stone and the work is well advanced. This building probably will be completed within six weeks. The church on the West Side is being built of glazed brick with terra cotta trimmings, and cannot be finished before spring.

Chicago Times-Herald.

Christian Science in Santa Barbara, Cal.

About eight years ago there were something like a half dozen persons in Santa Barbara, Cal., who were interested in Christian Science, and about one year later they commenced to hold Sunday services at the residence of one of their number. The attendance at these services increased to the extent that in 1895 regular Sunday services were held in a public hall, and a Sunday School was organized.

In August, 1896, twenty students who had received class instruction from one of Mrs. Eddy's loyal students, organized a Christian Science Society, rented an unfurnished hall in a good locality, furnished it neatly, and ever since have held regular Christian Science services, both on Sunday morning and on Wednesday evening.

On the 2d day of October, 1900, First Church of Christ, Scientist, was regularly organized under the laws of the State of California, with sixteen members, thus merging the Society into a church; and at the semi-annual Communion service on December 9, 1900, six more members were added to our number. As soon as our church was organized we commenced to discuss ways and means for a Christian Science reading room, and very soon we experienced the power of Love, manifested to us through one of His children.

A Christian Scientist of London, England, who had been living near us, and was about to depart for Europe, rented a beautiful suite of rooms, centrally located, on the ground floor of the principal business street of Santa Barbara, furnished them nicely and supplied them with Christian Science literature, and presented all, with a prepaid lease for five years, to our church for a Christian Science reading room.

We have good workers in our church, our services are well attended, and much interest is manifested in Christian Science by many who a few years ago had not even heard of it. We have always been nicely treated by the members of the other Christian churches in our city, and also by the physicians of the different schools of medicine.

R. D. SMITH, *Clerk*.

New Quarters at Janesville, Wis.

The local Christian Science Society has recently opened a new hall in the Phœbus Block—the block in which the public library is located. The room is on the third floor and is forty by fifty feet and well lighted by windows looking down on Milwaukee Street. They have put in fifty chapel chairs with hat-rack and book-rack, a piano owned by the Society, two reading desks, a table, and enough other furnishings to make an attractive assembly hall.

The room is heated by circulating hot water and is lighted by electric lights. Ferns in hanging baskets in the windows give a homelike look to the room, and as it is always warm, and gets all the afternoon sunshine, it is a comfortable place to drop into during the two hours daily that it is open as a reading room and for the sale of Christian Science literature.

The Society was incorporated about four years ago, although religious meetings have been held during ten years or more. Its business is conducted by a board of directors, board of trustees, clerk, and treasurer; all elective officers. There are also two Readers: Mrs. Cora J. Persels, First Reader; and Mrs. Helen Sherer, Second Reader.

Regular services are held each Sunday morning at 10.30 followed by Sunday School, and there is a mid-week meeting at 7.30 Wednesday evening. The growth in Janesville has been steady and healthy, and now that there is a church home to meet in, on which rests not a dollar of debt except the current expenses, the members feel that they have cause for congratulation.

Christian Science has called for no martyrs, has no established propaganda, and antagonizes no existing sect. All who come are made welcome, but no one goes out seeking proselytes. Expenses are met by voluntary contribution. Begging or urging is not recognized by them as legitimate methods of work. A great deal may be said in favor of its external methods, and those who have looked at it esoterically claim to have been richly repaid.

Janesville Gazette.

Church Edifice to be Erected at Grand Rapids, Mich.

Grand Rapids is soon to have another church. A new edifice for worship is contemplated for First Church of Christ, Scientist. Negotiations for a site have been completed, and the congregation now owns a lot at the north-east corner of Washington and South Lafayette Streets. The transfer was made by W. H. Gilbert and the consideration paid Mrs. D. P. Clay, whose residence now occupies the site, was eight thousand dollars. The lot has a front on Washington Street of 134 feet and on Lafayette Street of 114 feet. The new structure, about eighty by one hundred feet, will be so situated as to be back from the street, so as to be entirely unobjectionable to the residents on either side.

The Christian Scientists throughout the country make it a rule never to build a church on debt, and for that reason it will be some time before the plans for the new church will take definite shape. The congregation intends, however, to have the new structure large enough for a seating capacity of twelve hundred. The edifice will be of the Grecian type of architecture. In this respect the church will be different from the other churches in the city, which are all fashioned after the Gothic style. This congregation was organized October 13, 1893, and was incorporated July 11, 1894. During the seven years of its existence the church has prospered greatly, and the average attendance at the regular services is four hundred. A Sunday School is maintained with an enrolment of seventy-eight. For some time the services have been held in the St. Cecilia Building, and they will continue to be held there until the new church can be built.—*Grand Rapids Herald*.

Reading Room at Racine, Wis.

An event of more than usual interest to the people of Racine was the opening to the public, of the reading room of First Church of Christ, Scientist, corner of Main and Seventh Streets.

The subject of Christian Science is engaging the attention of the thinking people in every community, and in order that those desiring correct information may have an opportunity of being informed as to what Christian Science is, and what it has done and is doing for mankind, the reading room has been established. All authentic literature of Christian Science will be found on the tables and all are welcome to peruse it.

The Christian Science text-book, "Science and Health with Key to the Scriptures," and all other writings of Mary Baker G. Eddy, together with the publications of The Christian Science Publishing Society of Boston, Mass., will be on sale.

The rooms presented a very attractive appearance, being handsomely furnished and beautifully decorated with plants and flowers.

It is the intention of this church to keep these reading rooms open to the public every week-day afternoon from 2 to 4, and on Tuesday and Saturday evenings from 7 to 9. Visitors will be welcomed by those in charge.

Racine Daily Journal.

Annual Meeting at Cranford, N. J.

The second annual meeting of First Church of Christ, Scientist, of Cranford, N. J., was held at the Christian Science reading room, 23 Holly Street, on Tuesday evening, January 22. Officers for the coming year were elected, and marked progress was noted in all the reports. There has been a great spiritualization of thought followed by beautiful demonstrations of the healing power of divine Love.

We have proved that this church is founded on the spiritual rock of Truth, against which no power can prevail,

and we wish to express gratitude for our Leader, Rev. Mary Baker G. Eddy, who has shown us the way. Our Sunday School is growing and the scholars are attentive and quiet throughout the service.

Ten new members have been added to our number, and a building fund has been established, which is increasing rapidly.—*BERTHA D. WOODLING, Clerk.*

G. A. R. and W. R. C. attended Services.

First Church of Christ, Scientist, in this city, having no church building of its own, holds regular services in the G. A. R. Hall on South Anderson Street, every Sunday morning at 10.30. A special service was arranged for yesterday (Sunday, January 20), an invitation to which was extended to the G. A. R. and W. R. C.

The invitation was accepted and a large number of the members of both orders were present to listen to the lesson sermon on this occasion. "Truth" was the subject of the lesson, and those who listened to the services were well repaid. In fact, all present gained an insight into the principles and workings of the denomination of Christian Scientists that went far toward correcting an erroneous impression of these people and their religious beliefs.

Elwood (Ind.) Call Leader.

Christian Science in Fort Dodge, Ia.

As in other places throughout the United States, the Christian Scientists are rapidly adding converts to this new-old religion, many well-known people of the city being numbered among its followers. The Scientists of Fort Dodge have secured the use of the new Midland Theatre for their Sunday service. They have now opened a room, neatly furnished, on the second floor of the Mason Building, for a free public reading room, where all authentic publications pertaining to Christian Science may be found, including all the works of the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science. The Wednesday evening experience meetings are held in Recital Hall, Mason Building. These meetings are free to all.—*The Messenger*.

A Word from Kenosha, Wis.

We have just moved from a private house, where we have held our meetings for nearly two years, into rooms in the Meyers' Block, a new and modern building, finished during the last year. We occupy two rooms that have a seating capacity of about fifty. We held our first meeting there Sunday, January 27, and the lesson seemed especially fitting for the occasion.

We have some good, earnest workers in our little band, and hope soon to organize a church and have a reading room.—*F. MOORE.*

The Course of the Day.

The following is the correct reading of the second stanza of the poem published on page 379 of the *Sentinel* for February 14:—

Amid the tumult of the world's unrest,
Where sin, disease, and death their places claim,
In questioning and doubt, oft in dismay,
I seem to stand,—yet always this my aim:
To see the Christ; to turn from things of sense,
Knowing that Truth alone is real; to find
On those unclouded heights where Spirit reigns.
The harmony of all-controlling Mind.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy's Reply.

THE following telegraphic communication from the Rev. Mary Baker G. Eddy appeared in the *New York World*, February 24:—

The teachings of Christian Science were the feature, in fact the basis, of the Brush will contest before Surrogate Fitzgerald during last week. Dr. Allan McLane Hamilton, the noted alienist, was asked:—

"Do you say that a person who believes in the power of God, operating through a human agent to cure disease without material means, suffers from delusions?"

"Yes," he answered, "most decidedly."

Mrs. Mary Baker G. Eddy, the head of the Christian Scientists, was telegraphed the substance of Dr. Hamilton's testimony and requested to reply. She sent the following:

Concord, N. H., February 22.

To the Editor of *The World*.

Is faith in divine metaphysics insanity?

All sin is insanity, but healing the sick is *not* sin. There is a universal insanity which mistakes fable for fact throughout the entire testimony of the material senses. Those unfortunate people who are committed to insane asylums are only so many well-defined instances of the baneful effects of illusion on mortal minds and bodies.

The supposition that we can correct insanity by the use of drugs is in itself a species of insanity. A drug cannot of itself go to the brain or affect cerebral conditions in any manner whatever. Drugs cannot remove inflammation, restore disordered functions, or destroy disease without the aid of mind.

If mind be absent from the body drugs can produce no curative effect upon it. Mind must be, is, the vehicle of all modes of healing disease and of producing disease. Through the mandate of mind or according to his belief, a man can be helped or he can be killed by a drug; but mind, not matter, produces the result in either case.

Neither life nor death, health nor disease, can be produced on a corpse whence mind has departed. This self-evident fact is proof that mind is the cause of all effect made manifest through so-called matter. The general craze is that matter masters mind; the specific insanity is that brain, matter, is insane.

MARY BAKER G. EDDY.

Contagious Disease.

THE card of the Rev. Mary Baker Eddy published in the last number of the *Sentinel*, and which will appear, also, in the next number of the *Journal*, will forever set at rest the question of the attitude of Christian Science practitioners in reporting to the proper authorities contagious and infectious diseases.

Inasmuch, also, as it is absolutely authoritative this instruction should remove all apprehension from the minds of those outside the ranks of Christian Science. There should no longer be any doubt on the part of the non-Scientist public, including the medical profession.

The opponents of Christian Science have made a special point of this matter of contagious diseases, and have persistently charged that Scientists have refused to report this class of cases. There is no reason for this position. If there has heretofore been any cause for misunderstanding on the part of Scientists, it is removed. A communication from Mrs. Eddy published in the *Boston Herald* in February, 1900, and republished in the *Sentinel* March 1, was clear enough on this point and should have left no room for doubt.

We may be pardoned if we say before closing this subject that we have never known or heard of a single instance in which Christian Scientists have, in any manner, caused the spread of contagious or infectious diseases. We do know, on the other hand, that Christian Science has been a marvelous instrument in God's hands towards preventing their spread.

Nevertheless, all Christian Scientists gladly yield compliance to the Scriptural injunction: "Render therefore unto Cæsar the things which are Cæsar's; and unto God the things that are God's."

Dr. Brundage on Christian Science.

REV. DR. BRUNDAGE, pastor of the Unitarian Church of Albany, N. Y., recently preached a sermon on Christian Science, from which we liberally extract. Although not accepting or endorsing all the teaching of the Christian Science text-book—which he has carefully read—he is in agreement with much of it, and as to that with which he differs, he is reasonable and tolerant.

We gladly give space to the following synopsis, quoting from the *Albany Sunday Press*.

Dr. Brundage said:—

While I am not a Christian Scientist because I am unable to accept all the claims advanced by Mrs. Eddy and her disciples, I gladly recognize the good that Christian Science is doing. I believe that this religious movement, for it is essentially a religious movement, does in very many instances succeed not only "in the healing of sickness, but also in the healing of sin." Men may cavil at it as they will, Christian Science does foster the development of finer characters. The most of the Christian Scientists whom it is my good fortune to know are choice people. They are thoughtful, earnest, kindly, helpful, hopeful idealists. Many a light and frivolous woman has been given through Christian Science a serious purpose in life which has transformed her. Drunkards have been saved from drink. Slaves to all sorts of vicious habits have been set free.

All that I have said thus far, however, is merely introductory to my main purpose this evening. I stand here to make a plea for granting fair play to Christian Scientists. Their liberties are being invaded by those who are hostile to them. A bill is now before the legislature which practically prohibits them from carrying on their work in the State of New York. I refer to the "Bell Bill" in the Assembly. Every citizen ought to understand clearly the significance of this proposed legislation.

As you all know, there are at present three schools of medicine which are recognized by the law of our state, allopathy, homœopathy, and eclecticism. Boards of examiners pass upon the qualifications of physicians of these schools, and they are the only legal medical practitioners.

Now the Bell Bill proposes to define in what the practice of medicine consists in these words: "Any person shall be regarded as practising medicine within the meaning of this act [that is section 152, of chapter 661, of the laws of 1893] who shall prescribe, direct, recommend or advise, for the use of any person, any remedy or agent whatsoever, whether with or without the use of medicine, drug, instrument, or other appliance, for the treatment, relief, or cure

of any wound, fracture, or bodily injury, infirmity, physical or mental, or other defect or disease."

In other words, this bill proposes to make it a criminal offence for a believer in faith cure to pray over a patient, or for a Christian Scientist to treat a patient according to the principles of his system. The faith healer and the Christian Scientist are by this bill declared to be medical practitioners, and they must submit to examination and be licensed as such. This is something to which they cannot conscientiously consent, because they do not believe in any kind of medicine whatsoever. They heal by faith or by changing the thought of the patient; they make no diagnosis; they use no medicines.

Mr. Bell introduced the bill, he declares, at the request of the New York Medical Society, and of the Medical Society of the State.

I do not for a moment believe that the motives of these physicians can be criticised. It has been said that they are jealous of the cures wrought by Christian Science; that they are afraid that their livelihood will be gone if Christian Science continues to advance as rapidly as it has during the past few years. All this is absurd. No one acquainted with our physicians could make such a charge. I believe that as a class they are the noblest of men, second to those of no other profession. The young man who chooses the life of a physician chooses a life of hard work and of continual sacrifice. Of course there are exceptions; there are exceptions in every class; but I am speaking of the class as a whole.

The physicians who recommend this proposed legislation actually believe that the people should be protected against Christian Scientists and other fanatics as they term them, just as good orthodox churchmen a few years ago believed that the people ought to be protected against Unitarian and other heretics of a similar sort. They are sincere, most certainly, but just as certainly, in my humble opinion, are they mistaken, at least mistaken in proposing such legislation as that of the Bell Bill. I do not say that there ought not to be some additional measures taken against the spread of contagious diseases by those who deny their existence. Christian Scientists ought to consider the rest of us, who do not believe as they do, but are, as they themselves affirm, under the dominion of mortal mind and therefore subject to disease, and they ought to see to it that they do not carry contagion out of sick-rooms. Some protective measures to avoid a peril of this sort may be necessary, but this is a very different matter from that which is proposed in this Bell Bill.

Those who feel as I do protest against this proposed legislation:—

(1). In the first place, because it is an unjustifiable invasion of the rights of the individual. This law would prevent me, a patient, from seeking relief of the very persons in whom I most confidently believed. Suppose that I have faithfully tried the regular physicians and they can do nothing for me, or at least I have come to believe that they can do nothing for me. This has occurred again and again. Suppose I have lost my confidence in drugs of every sort. I desire a faith-healer to come in and pray with me, or a Christian Scientist to treat me according to his system, but the law forbids him to come. If he visits me, he becomes a criminal and can be treated as such.

Certainly, when a man's life is in peril he ought to be free to seek relief from every quarter whatsoever. In the light of what Dr. Osler has said about the power of faith, and of equally strong testimonies from other distinguished physicians, is there any reason why my liberties should be restricted in this way? Has medical science reached such a perfect stage of development that it is entitled to prohibit me from seeking outside means of relief? Have the regular physicians reduced the death rate to an absolute

minimum? Is my only hope in their treatment and remedies?

So far is this from being true that the greatest physicians are the humblest of men and the readiest to recognize the limitations of their knowledge and skill. Some of you perhaps recall the statement in this connection made by Dr. Oliver Wendell Holmes a few years ago: "The shortest system of medical practice that I know," he said, "is the oldest but not the worst. It is older than Hippocrates, older than Chiron the Centaur. Nature taught it to the first mother when she saw her first-born child putting some ugly pebbles or horrid berry into its mouth. I know not in what language it was spoken, but I know that in English it would sound thus: 'Spit it out.'" Dr. Holmes' moral is patent to all.

Medicine as such is relied upon less and less. As a leading physician of this city said to me not long ago: "I do not claim that my remedies cure my patients. Nature cures them. I simply help as I can."

Dr. Brand reports 1,223 cases of typhoid fever treated by him, with 1,211 recoveries and twelve deaths. Not a single death occurred in a case that came under his treatment before the fifth day of the fever. Not a particle of medicine was used to effect a cure; he relied entirely upon cold water baths.

Cleanly and wholesome surroundings, simple diet, the free use of pure water, plenty of good air, and a hopeful mind are of more importance in most cases of disease than drugs. If this be so, why should the law of the state confine the treatment of disease simply to students of *materia medica*? Why not continue to grant to the people liberty to choose whatever treatment they prefer, the particular treatment in which they believe?

(2). We protest against this proposed legislation in the second place, because we believe it to be an unjust interference with the freedom of religious belief. Christian Science is a religious system in which its adherents most profoundly believe. According to the constitution of the state, every man is guaranteed protection in the exercise of his religious conviction.

The first Constitution of the State of New York, adopted in 1777, which D. Campbell, in "Puritan in Holland," etc., says was the "first organized government in the world to assert by constitutional provision the principle of perfect religious freedom," says:—

"And whereas we are required by the benevolent principles of rational liberty, not only to expel civil tyranny, but also to guard against that spiritual oppression and intolerance wherewith the bigotry and ambition of weak and wicked priests have scourged mankind, this convention doth further, in the name and by the authority of the good people of this state, ordain, determine, and declare that the free exercise and enjoyment of religious profession and worship, without discrimination or interference, shall forever hereafter be allowed within this state to all mankind."

What the Christian Scientist seeks to do is to win adherents to his philosophy of Being, to his attitude to Mind, Truth, Love, God, to his religious system. The healing of disease accompanies the change of thought and of life which he seeks to produce. You cannot separate the two. To him they constitute the one act of the commitment of his life to his ideal. Judge Lincoln, not a Christian Scientist, made this point very plain in his address before the Assembly committee, last Wednesday afternoon.

I cannot see how, if this bill is passed, the Roman Catholic pilgrimage to the shrines of the saints for religious devotion and for the purpose of healing diseases can be any longer tolerated. The worship and the expected cure form parts of the same act. The church encourages such pilgrimages and is responsible for them. She considers them a part of her religious system. If the healing of disease

without a medical examination and the granting of a license is declared criminal, the Roman Catholic Church will be a criminal before the law.

The Bell Bill plainly says that certain, classes of the people shall not enjoy the free exercise of their religious beliefs, provided such beliefs involve the healing of disease, and I am therefore convinced that the proposed measure is unconstitutional as well as ethically unjust.

If, however, the bill becomes a law it will certainly be broken. It will be absolutely futile. If an honest attempt is made to enforce it the Christian Scientists will become martyrs to their convictions, martyrs for conscience sake. This has been the result of every form of persecution in the past; it will be the result of the present act of persecution. Such a persecution would strengthen their cause more than any amount of legal favoritism. I almost believe that the Christian Scientists have erred in opposing the proposed legislation, erred if what they desire more than anything else is the advancement of their cause.

My purpose, however, in this address, is simply to be true to our Unitarian principle of freedom; all that I plead for is justice and fair play to all, injustice and persecution to none.

One word in conclusion. I trust that in what I have said I have not offended any honest, sincere thinker, Christian Scientist, or any other. This is furthest from my thought. I heartily sympathize with all men and women to-day who are devoting their lives to the pursuit of an ideal, who are seeking to lift humanity to a higher and holier plane of thinking and living. The world needs us all, no matter how our convictions may differ. The greatest need of the world is for more men and women of positive convictions for which they will live, in behalf of which, if need be, they will gladly die. We all serve the same—Infinite Good Will. We are all disciples of Truth.

We faintly hear, we dimly see,
In differing phrase we pray.

I cannot believe as you believe, but this ought not to prevent us from working together towards the same noble, divine ends.

The Board of Lectureship.

In answer to inquiries we will say that Judge Ewing is still a lecturer at large. It was not intended to indicate to the contrary when his name was published in connection with his district, in recent numbers of our publications.

The Lectures.

At (Harlem) New York City, N. Y.

Under the auspices of Third Church of Christ, Scientist, the Rev. Arthur R. Vosburgh, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., delivered a lecture in the Ellerslie, 82 West 126th Street, Thursday evening, (February 14), on the subject, "Christian Science is Scientific Christianity." About four hundred persons were present, the sexes being pretty evenly divided, and at the close of his address Mr. Vosburgh received a hearty round of applause.

Mrs. Carrie Harvey Snider, C.S.D., who presided, in introducing Mr. Vosburgh, said: "Dear friends, as my eyes rest on this audience before me, involuntarily my thoughts travel swiftly backward over a space of eight years, and three retrospective pictures present themselves. First in this group I see a little company of men and women, but nine in number, starting out to plant the first seeds of Christian Science in Harlem. For this purpose they engaged a small front room in the Hamilton Bank Building,

there to meet and study the Bible and the Christian Science text-book, 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, the Discoverer, Founder, and Leader of Christian Science. In the earnest, faithful devotion of this small Bible class was laid the foundation of the present work. The second picture is one year later, where in the same building, but in larger quarters, the original company is found gathered together with added numbers, numbers drawn from the inexhaustible ranks of those men, women, and children who ever seek to learn more of, and to come closer to, God. The third picture, three years later, finds us in our present place, and indeed at that time, although we have outgrown our old quarters, our numbers were still small enough to make this hall appear very spacious; but it has steadily filled until now the hall begins to seem small in comparison with our ever-increasing congregation, and to-day we can say with deep thankfulness that our work of establishing Christian Science in Harlem has been abundantly blessed with rich fruit and 'signs following,' as promised to us all in the Scriptures by Jesus the Christ, through the healing, physically, morally, and spiritually. I have the pleasure of introducing to you the lecturer of the evening, the Rev. Arthur R. Vosburgh, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass."—*Harlem Local Reporter*.

In an editorial in the same issue the *Reporter* said:—

"When a system of religious doctrine gains converts by the thousands among sincere and intelligent people, as Christian Science is doing, it is fair to assume that its teachings and principles are of interest to all thinking people. Therefore it is that the *Local Reporter* to-day gives considerable space to a report of the lecture delivered in the Ellerslie, West 126th Street, on Thursday evening by Rev. Arthur R. Vosburgh. This lecture is the first formal and thorough exposition of the doctrine and applied practice of Christian Science to be made in Harlem outside the regular Sunday services of the local church. It will repay a careful reading, and as an example of reasonable and intelligent exposition will commend itself to whoever peruses it with a mind free from prejudice.

"It is not necessary to approve the creed and practice of Christian Science in order to acknowledge the sincerity and zeal of the tens of thousands who profess the doctrine and practise its precepts. Christian Science has obtained too large a following among intelligent people to make it wise to ignore its existence or sneer at its philosophy and claims. The new creed is entitled to a fair hearing and honest, unbiased consideration. Its purpose is to make the world better by persuading men and women to conform their lives more nearly to the life of the Founder of Christianity. We may disagree with Christian Scientists as to methods, but no one who desires the spiritual conversion of mankind can take issue with the motive of the myriads who in their daily lives preach and practise Christian Science."

At West Chester, Pa.

Last evening (Thursday, February 14) those who believe in or sympathize with the Christian Science movement, and many others who wish to learn something of its beliefs and doctrines, listened to an eloquent lecture on the subject in the Assembly Building. The speaker was Hon. William G. Ewing of Chicago, well known as an able lawyer and judge, and as an orator of no mean order.

The gentleman proved to be most earnest in his advocacy of the doctrine which he professes, and held his hearers throughout the evening in close attention.

Before coming on the stage the gentleman had the reading desk removed and spoke during the evening without notes and with simple but forceful gestures.

J. Frank E. Hause, Esq., in introducing the speaker of the evening, said that he believed no one present would deny that West Chester was privileged to hear a man of marked ability, and felt sure that his words would receive a careful consideration and attentive hearing. The gentleman is well known in his state, Illinois, and far beyond its boundaries. He has been much in public service, has occupied the bench of the Superior Court in Chicago, and has been for many years a lawyer of ability. Although there might be people in the audience who would not agree with the views of the speaker, yet he felt sure that the lecturer would voice his opinions earnestly and eloquently, and would at least give them much food for thought.

Daily Local News.

At Ottawa, Ont.

Hon. William G. Ewing of Chicago, lectured last evening (Tuesday, February 5) to a large and appreciative audience in Orme's new Concert Hall on Wellington Street. The stage was beautifully decorated with United States and British flags in honor of the distinguished lecturer.

Judge Ewing was introduced very briefly by Mr. Ormond Higman, chief electrical engineer of the Canadian government. The large audience contained among its numbers representatives of the bench, bar, ministry, and medicine, and all were loud in their praise of the lecture and the very able manner in which it was delivered by Judge Ewing. The impression created will be of lasting benefit to the cause.—*Correspondence.*

Lectures at Other Places.

Lancaster, O.—William G. Ewing, February 10.

Ontario, Cal.—A. A. Sulzer, January 20.

Fitchburg, Mass.—William G. Ewing, January 31.

Montreal, Canada.—William G. Ewing, February 3.

A Grateful Acknowledgment for Science and Health.

Librarian Hild, Chicago Public Library, City.

My Dear Sir:—I ask the privilege of contributing to the Chicago Public Library a copy of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Six years study of this book has brought to me an understanding of the Bible, which has made the Bible an exceedingly useful and practical book in my daily business career, and in sending this book to your library I desire to do so only with that thought of love supporting the act which will enable the book, if it be possible, to carry to those who shall read it a greater realization of the fact that "God is Love, and he that dwelleth in Love dwelleth in God, and God in him."

Very sincerely yours,

IRA C. HUBBELL.

THE CHICAGO PUBLIC LIBRARY.

Chicago, January 19, 1901.

Dear Sir:—The Board of Directors of the Chicago Public Library has received your gift, consisting of Eddy, Mrs. Mary B. G., "Science and Health with Key to the Scriptures," for which I am instructed to return a grateful acknowledgment.

Very respectfully,

FRED H. HILD, *Librarian.*

To Ira C. Hubbell, Esq., City.

I have no sympathy with those who are always bewailing "the good old times." My dear sir, the good *new* times, thank God, are a great deal better; and they are going to be a great deal better still.—MARK GUY PEARSE.

From our Contributors.

Keeping Guard.

BY IDA HODNETT.

WHAT darkens now my window pane?
Self-will peers in, and smiles.
Away, base cheat, so long my bane,
Away, that I the Light may gain!
No longer try your wiles.

Shine in this room, O will of Light,
And flood it with Truth's ray,
Mine be the prayer of Ajax—Sight!
That with true aim my foes I smite,
And see them fall away.

Some beast is tearing at my gate!
Up, up, strong bar of Love!
'Tis the destroying monster, hate,
And red-eyed anger, his mad mate;
That bar they cannot move.

All gone, you say? take rest and ease?
Nay, Sloth, my ancient foe,
Some lustful thief creeps 'neath the trees
The treasures of my Lord to seize;
And you would have it so.

Thought is this house I watch and hold;
Mind is the over-Lord,
Rich are its treasures, bright its gold,
For Mind is Substance, wealth untold;
In love must I keep guard.

Disease and sin's mesmeric hand
My human house would spoil.
Armed with the sword of Mind I stand;
They turn to dust at Truth's command;
Rejoicing, on I toil.

Awakened to a New Life.

BY ROSA SCHOEN.

I ENCLOSE extracts from letters written by a young man from this city, who is at present serving out his time in the Joliet Prison.

Previous to his imprisonment, this young man had been disowned by his family as a worthless fellow. His case came to my notice through his aunt, who, having received the benefit of Christian Science, felt that it might be helpful to her nephew. After reading tracts sent to him, his interest was aroused at once and he asked for treatment. An effort was made at the same time to interest his family, which soon brought about a loving reconciliation.

The following is from his first letter of August, 1899:—

"I have read very carefully the tract and *Journal* sent to me and will say I became deeply interested. I was glad to hear my aunt had been healed by Christian Science. She has undoubtedly told you about my errors and I hope I may find the same help that has come to her. I must admit your interest in me is very kind and unlooked-for. I have suffered a great deal, and as yet have found no one who could brighten my future or give me some little relief. I have now before me 'Science and Health with Key to the Scriptures' and 'Miscellaneous Writings' by Mary Baker G. Eddy, and shall read and study them both very carefully, to become more enlightened upon this subject. No one can tell how much I have suffered and what a burden has been upon me. I trust that I may now find happiness and

a new adviser. I hope you will honor me with more about Christian Science, and I assure you that I shall spend all my time while here reading and studying it."

In a letter to his brother he wrote as follows:—

"I am very much interested in Christian Science and would like to follow it up. I derive great benefit from it and would like to have the books, Science and Health and 'Miscellaneous Writings' by Mrs. Eddy, on hand to read. You may buy them for me, or send me the money and I can get them for myself. Attend to this at once please. We have them here in the library, but cannot hold them longer than two weeks. I prefer to own them. (Get the latest edition, by all means.) You have no idea how much better I feel since reading Christian Science, and I cannot say too much or express my feeling about it. I know it will do me a great deal of good and make a good man of me again. When I am in my cell, I sometimes think there is no escaping the result of one's sins. The judge, the jury, the prison-cell are not the worst penalties meted out to erring humanity. The inner tribunal with its secret trials and hidden punishment is a harder one to face, is more pitiless.

"By all means send me what I ask for so I can get the books. It is never too late to do good. I want to read them so much, and I pray you will comply with my request."

Later, in a letter to his father and mother, he said:—

"I am studying Mrs. Eddy's book very hard. I have no desire for tobacco any more, and profane language is used by me a great deal less each day. I have certainly turned my back on error and sin and I look for an early day for me to be set free.

"I want to say so much about Christian Science and how much it has helped me, that sometimes I think this sheet of paper too small to express my feeling. But the time will come when I will be able to tell you all what it has done for me. . . . To-morrow evening I commence teaching school here. . . . It is the common school they have, to give all an opportunity to learn to read and write. . . . I now have Science and Health before me, and the thought comes to me that God is good, is able to deliver us from every temptation and is with us in fiery trials. . . . I am not ashamed to be seen at prayer."

In a letter of June, 1900, he wrote:—

"I have no ailments and do feel so good. I shall be glad of the opportunity to attend one of your testimonial meetings and show how I have faced such dreadful errors of various kinds. I long to be home again and under the shadow of the Almighty. I have studied the answers to the questions, What is Substance? Life? Intelligence? page 465. I studied the true and scientific definition of God until I gained the thought of God, Mind, Principle, Love, Truth as limitless. When going to sleep at night I try to repeat and realize somewhat of the meaning of the twenty-third Psalm. I begin to realize that He who heal-eth all our diseases will deliver us, and nothing can rule out God, Divine Mind. I am learning not to be deceived by the erroneous expectation of sudden and complete transformation: the change from sense of physical existence to the recognition of man as spiritual being, is not made at a single bound, but is a gradual growth. I try to keep before my thought the perfect model, and do hope I can keep my thought turned in the right direction to gain the understanding of God."

On November 18, 1900, he wrote:—

"I have learned not merely to talk *about* Science, but to improve myself and to try to improve others in the many ways Love inspires; also, to speak *to* others and not *about*

them, and to impress upon them such thoughts as may make them useful and successful in this life and save them from the temptations that meet them everywhere. I have learned that not what is without, but what is within, determines a man's character. I have learned that if I wish to live in a beautiful world I must create it: it may be a difficult task, but with the help of God it can be done. If I have hatred, envy, and ill-will in my heart; if I have an uncontrollable temper; if I am narrow in criticism and suspicious of those about me; if I am enjoying a mean and contemptible sort of happiness, which is stained and soiled by the suffering of others,—if I am living in such a world, getting all I can but giving nothing, I am making a very hell for myself.

On the other hand, if love and the desire to be helpful and true are the supreme incentives to action, I am making a heaven for myself. With God's help I have wrought a miracle. I have learned that life may be made beautiful or wretched by the good or evil thoughts which we cherish. How thankful I have been through the past months for the Divine touch that has wrought such a complete change in me!—that has not only brightened the future, but has brought me, together with my family and friends, into the true and only way of spiritual thought, where God is found to heal our sins no more willingly than our sicknesses."

From this young man's family I have heard that he has gained the respect of those in charge of the prison, and has been given privileges and a degree of freedom allowed to but few of the prisoners.

Earnest Striving.

BY KATE N. HOGE.

THERE is no success in any condition that does not represent work, sacrifice of personal ease or pleasure. Just so, it seems to me, we must earnestly strive in Science, letting no argument of discouragement influence us, but persevering faithfully, always adhering to the Truth, turning away from error as a reality, strong in our understanding of the knowledge of God as all.

"Work out your own salvation" is an imperative command, a demand unchanging. To be sure at times we shift the duty, and perhaps enjoy for a season the fruit of another's work, feeling a little comfort that some trouble has been overcome without effort on our part. Suddenly a greater trial appears, and if the previous demonstration has not been ours, we suffer. We must be alive to the needs of to-day, always conscious that it is "God working with us," if we would not have the necessities of to-morrow press hard.

What respect or position has a tramp in this world—one whom from choice prefers to eat the bread of idleness and poverty?

A thousand times worse is a tramp thought claiming to be a Christian Scientist, yet continually living off of the labors of others, borrowing oil of those whose lamps are always burning brightly, reflecting Love and obedience.

Success in Science means continual application, unflagging, unfaltering persistence in adhering to the teachings revealed in Science and Health. We may to sense be oftentimes cast down but never destroyed. The only chance a lie has, is to be mistaken for Truth and taken into our consciousness. If we are obedient, and never off guard, we shall be careful to admit no evil intruder, quick to dismiss everything that would make us believe in aught but Good or God. Let us ever be alert to deny quickly every subtle claim of error with firmness, knowing that God is all, and that no power can prevent or interfere with our individual work.

Some of the Blessings I have Received.

I was grateful, but recalled my former condition and wondered whether it would return. Surely enough it did in about the next paragraph. I discovered my mistake, and declared the Truth through which my vision must be perfect, and was blest by the return of perfect sight. Like

This time I most emphatically denied the error, declared the Truth concerning the positive harmony of God's man, treated myself as thoroughly as I understood, and sat down to read Science and Health, beginning on page 389 or 390. As I read I applied every statement to my par-

ticular case, realizing in effect the only condition that can exist in Truth. In less than an hour the symptoms had disappeared. The tissues of the face were relaxed, all aches and pains were gone, there was no stoppage of the nostrils or discharge from them. There was no grip. I felt in splendid condition both bodily and mentally.

One hour or less ending in joy and peace of mind, with less likelihood of any return of the claim, is to be compared to two weeks of distress ending in a cranky, downcast, melancholy disposition, with increased susceptibility to a return of the complaint. I have within the last two months withstood the greatest exposure of my life to storms and cold. I worked all day in the snowstorm in Idaho the latter part of November when a heavy snow fell, rather enjoying it, and tramped through it during many cold days which followed. I have worked eight or nine hours a day when the thermometer registered below zero throughout the day, and continued well and strong.

To those who think that the climate caused the change, let me say that I spent about five weeks in the city of Butte, Mont., during one of its most smoky periods, when the sun looked like a drop of blood in the sky, and was no more dazzling to the eyes gazing at it; when the people on the streets were wheezing and coughing from the sulphur, etc., with which the air was saturated.

Oh no! Butte is no health resort. Pleasure and health seekers pass it by for a more comfortable clime. But a Christian Scientist need not shrink an inch from wherever duty calls him, and I think I could not have found a more suitable place for making a convincing proof of the efficacy of Christian Science by freedom from all phases of ill health, even to a cough or a cold.

These physical benefits can be described to a reasonable degree, but the glory of the spiritual uplifting and development in understanding the divine Mind cannot be expressed in words of mine. Can any intelligent being be so ungrateful as to cease his songs of praise to the Giver of all good? The realization of Life, Truth, and Love is indescribable, but as fitting this thought recurs the exclamation of a Scientist friend: "What a blessing it is to find that our God is to us all He has promised to be. 'We can look to Him in every need, and never look in vain.'"

B. F. MEREDITH, Pittsburg, Pa.

Convinced by Reading Science and Health.

I was not brought into Christian Science through physical healing, nor argued into it by zealous advocates. I did not embrace this Truth to please some one else, nor start my investigations hoping that Christian Science was the Truth and seeking to be convinced thereof. After years of blind, unreasoning opposition to the name (that was all that I knew correctly), I concluded to attend a testimonial meeting of this church, and was thoroughly convinced of the intelligence and sincerity of the witnesses for the Truth. I resolved to read the text-book of Christian Science and find out what was working such wonderful results. "Science and Health with Key to the Scriptures" appealed to my reasoning power from the first. It was logical, complete, and unanswerable. It revealed the rational, consistent, and demonstrable science of the relation of God to His universe.

Shortly afterward I tested its healing power by placing myself under the care of a Christian Science practitioner, and in twenty-four hours was healed of a trouble of three years' standing. This was four years ago, and there has since been no recurrence. But the delight to mind and relief to body are not to be compared to the glimpses caught of the spiritual possibilities of man regenerated by Christian Science. It has made me a constant attendant at church, a student of the Bible, and has shown me that the kingdom of heaven (harmony) is a present possibility.

It proves that there is no reality in sickness, no pleasure in sin, and no profit in dishonesty.

I do not claim to have overcome all erroneous conditions, but this I have acquired,—an aversion to everything unlike Good. This scientific displacement of sin results in a purer mind, a happier disposition, and a healthier body; and on these foundations a more complete manhood is possible.—J. W. HIGINBOTHAM, Chicago, Ill.

The Power of the Word.

It has been my great pleasure to see two cases of disease disappear, each within a two hours' conversation, by a few simple statements of what the mission of Christian Science is. One was that of a young child of eight months, who from birth had suffered from constipation. The fear of the parents because of this condition was intense, and the little one was continually subjected to material means for relief. An explanation was given of the view Christian Science takes in such cases, and with the assurance of the groundlessness of their fears, the fears disappeared. From that time the child has been perfectly free, and in a few weeks was so much improved in appearance that the father, having been gone from home for those few weeks immediately following the healing, was amazed at the great change in the child, and said had he not known the nurse-maid who was with the child in the street upon his return, he would not have believed it to be the one he left at home.

The second was that of a gentleman who went to explain his wife's needs to a practitioner one evening, and entered into conversation with her regarding the subject of Christian Science. They spent an hour or so talking together, in which the gentleman made no mention of his own needs. In a day or two he was much surprised to find that the chronic diarrhoea to which he has been in bondage for years, and consequently in fear of many things to eat, had disappeared entirely. Both of these instances go to show the spoken word of Truth and Love to be "quick and powerful."

MISS ETHELYN GILL, Chicago, Ill.

Interested through Reading Science and Health.

I have heard it argued that all who come into Christian Science become interested through the healing. I did not become interested through a desire for healing, but through reading "Science and Health with Key to the Scriptures." It explained the Bible so that I could understand it. I could not understand it previous to reading Science and Health, although I had tried to do so. I was also very much impressed by this fact—that Christian Scientists practised their religion as well as preached it.

After learning of the benefits to be derived from this beautiful Truth, I had a great desire to be able to help others who needed the help Christian Science could give. With this thought I began to read and study Science and Health. After several months, I was healed of a disease of five years' standing. Besides taking many kinds of patent medicines, I had been treated by several of the best physicians, and seemingly helped at times, but never healed until I was healed through the understanding of the Truth. I have had many demonstrations of Truth over error, and feel that I have much for which to be grateful to our Leader, as the one who has searched, and found, and shown us the true way.

MISS MARION E. CAVANAGH, Cambridge, Mass.

I only know that God is right,
And that the children of the light
Shall tread the darkness under foot.

WHITTIER.

Religious Items.

The oath taken by King Edward February 14, was the "no popery oath" imposed by the Bill of Rights and the Act of Settlement of the time of William and Mary. It is as follows:—

"I, Edward, do solemnly and sincerely, and in the presence of God, profess, testify, and declare that I do believe that in the sacrament of our Lord's Supper there is not any transubstantiation of the elements of bread and wine into the body and blood of Christ at or after the consecration thereof by any person whatsoever, and that the invocation or adoration of the Virgin Mary or any other saint and the sacrifice of mass, as they are now used in the Church of Rome, are superstitious and idolatrous, and I do solemnly, in the presence of God, profess, testify, and declare that I do make this declaration and every part thereof in the plain and ordinary sense of the words read unto me, as they are commonly understood by English Protestants, without any evasion, equivocation, or mental reservation whatsoever, and without any dispensation already granted me for this purpose by the Pope or any other authority or person whatsoever, and without any hope of any such dispensation from any person whatsoever, and without thinking that I am or can be acquitted before God or man of any part thereof, although the Pope or any other person or persons or power whatsoever should dispense with or annul the same and declare that it was null and void from the beginning."

The King repeated the oath after the lord chancellor and kissed the scarlet-bound Bible.—*London press despatch.*

A writer says in the (Baptist) *Standard*: "The most selfish man in the world is the one who is most unselfish—with his sorrows. He does not leave a single misery of his untold to you, or unsuffered by you—he gives you all of them. The world becomes to him a syndicate formed to take stock in his private cares, worries, and trials. His mistake is in forming a syndicate; he should organize a trust and control it all himself, then he could keep every one from getting any of his misery. Autobiography constitutes a large part of the conversation of some people. It is not really conversation, it is an uninterrupted monologue. These people study their individual lives with a microscope, and then they throw an enlarged view of their miseries on a screen and lecture on them, as a stereopticon man discourses on the microbes in a drop of water. They tell you they did not sleep a wink all night; they heard the clock strike every quarter of an hour. Now, there is no real cause for thus boasting of insomnia. It requires no peculiar talent, even though it does come only to wide-awake people."

A writer in the (Swedenborgian) *New-Church Messenger* says: "The recent announcement that the Russians have found in Monksden important manuscripts, and that an expedition of scholars will be sent from St. Petersburg to examine them, will be received with much interest by those who respect the teachings concerning the Ancient Word. This older Scripture from which were taken the early chapters of Genesis and some other passages of our Bible, is spoken of in some twelve places, but nowhere quite so definitely regarding its possible place as in 'Apocalypse Revealed' 11, where these words are found: 'Seek for it in China and perhaps you will find it there among the Tartars.' The words used by Swedenborg rather mean 'inquire after it,' but the difference is slight."

In an editorial the *Universalist Leader* recently said: "The need of the world to-day is good men. The unique product of the true Christian Church is the good man. When the Church ceases to produce good men the kingdom of heaven recedes; when the Church is producing good men the kingdom of heaven approaches. Let the churches of America start in at once to turn the raw human material now in stock in their membership into the perfect products of good

men, and the Church need have no anxiety about private or public wrong-doing. The good men will look after political, industrial, and social conditions."

In a recent editorial the *Universalist Leader* said: "Faith is no less powerful to-day than in the olden times, but its use is often neglected, or if used, it is misnamed. The victory still belongs to faith. . . . The only trouble with the Christian world to-day is lack of faith. If Christians believed what they profess to believe, the conversion of the world would proceed with gratifying and ever-increasing rapidity. He who has confidence in his mission speaks with decision and acts with courage. Many an institution lags because its head is not sure. Churches have no following where there is no leadership."

The (Unitarian) *Christian Register* says: "The great nineteenth century, with its wonderful discoveries and inventions, its mighty strides in science, has left human nature unchanged, save as it has always been changed by the broadening and adjustment to spiritual verities, and the awakening to new conceptions of the universe, which have not yet been worked up into the materials of faith, into new creative impulses and compelling motives for the guidance of life."

A writer in the *Universalist Leader* says: "Better gifts than we can imagine are held in reserve for us. The blessings refine with our refinement and greater with our greatness. Who can fully explore the recesses of light, the reaches of divine beauty, the spreading avenues of virtue, the endless depths of truth, the shoreless sea of God's love? It will require an eternity to reach and realize the rising degrees of life and joy."

The (Baptist) *Examiner* says: "If we want to save our cities, these swarming centres of power,—and, alas! of iniquity,—we must depend on no mere philanthropic or industrial or social scheme, but on the Christianization of the individual men that make up the multitude. There was a plan of Christ and the Apostles, and no one has yet succeeded in improving upon it."

The (Methodist) *Christian Advocate* says: "The charge made against Christ by the formalists of his time was, 'He stirreth up the people,' so he did, and only those who stir up the people to think and feel on truth, duty, opportunity, responsibility, and the future life can add in any considerable number to the Church 'of those that are being saved.'"

The *Advance* quotes an English bishop as saying to a recent church congress that the adherents of Christianity had increased during the nineteenth century from 200,000,000 to close upon 500,000,000, and that the Christian nations now wield sovereign influence over 800,000,000 out of 1,400,000,000 of the world's population.

An editorial writer in the (Methodist) *Christian Advocate* says: "At the bottom of all spiritual slothfulness is spiritual destitution. Whatever may be the occasion, those who are at ease in Zion have lost the gift of the Holy Ghost. Whoever is baptized with the Holy Ghost is baptized with fire."

It is stated that with the exception of the Moslem Moras and the pagan tribes, the entire population of the Philippines, numbering 6,559,998, according to the church registry in 1898, belong to the Roman Catholic Church, there being 746 regular parishes and 221 missions.—*Boston Transcript.*

A writer in the (Baptist) *Watchman* says: "J. G. Holland said, 'Ideals are the world's masters.' The ideal is a picture of the complete triumph of an idea, or the working model which an idea fashions. Christ gave the world a Saviour, the Christian an ideal, and the church an idea."

The *Independent* says: "This generation

needs not merely example and exhortation; it needs instruction. It wants leaders who can lead its thinking along religious lines. People will find religion the most interesting of all subjects if it is properly presented."

The *New York Observer* says: "Faith is the greatest constructing and reconstructing agent in the world. The doubter is a public enemy. The true friend of society is the man who believes."

Says a newspaper item: "To-day the Christian religion is accepted by practically 500,000,000 people," but by how many is it practised? That is the question.

"The only sure way to destroy the power of any temptation is to make the young superior to the pleasures that tempt," says the (Unitarian) *Christian Register.*

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is It Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that until April 1, the beginning of the *Journal* volume, back numbers of *The Christian Science Journal* may be procured at five cents a copy when ordered in lots of ten or more. Orders for special numbers cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00

Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00

RETROSPECTION AND INTROSPECTION.

A biographical
sketch of the author. The way she was led to the discovery of
Christian Science; its growth and fundamental idea; 120 pages,
cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half
dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the
history and to the readers of Christian Science; containing
Dedicatory Sermon delivered at the Mother Church, and scin-
tillations from the press on that occasion; 132 pages. Price
by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating
and enforcing practical Christian Science, thus affording inval-
uable directions for all true Scientists. The following are
some of the topics treated: SEED-TIME AND HARVEST, DEEP
THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUF-
FERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80
pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50
half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00
each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable
book, containing a brief and concise statement of Divine Science,
alias Christian Science, in the form of questions and answers.
It is a very succinct statement of Christian Science; 35 pages.
Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00
per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeri-
tus' Message delivered at the Communion Season in the
Mother Church in Boston, June, 1898. A clear and strong
refutation of the charge that Christian Scientists are Pantheists.
Leatherette covers; 21 pages. Price by mail, 26 cents; per
dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message
of the Rev. Mary Baker G. Eddy to the Mother Church on
Communion Sunday, June, 1900. Leatherette covers, deckle-
edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in
Christian Science; 56 pages. Pebbled cloth covers. Price by
mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music
by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per
dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIP-
TURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder
of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in
Boston, Mass.

The Journal is published on the first of each month, and con-
tains interesting reports of cases of Spiritual and Physical healing
as well as instructive discussions of the Principle and the Practice
of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United
States, Canada, or Mexico. Two Dollars per annum; One Dollar
for six months; Single Copies, Twenty Cents; Foreign Subscrip-
tions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday
Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one
address, one year, each, 50 cents. Foreign Subscriptions, one copy,
one year, 60 cents. Postage prepaid to any part of the United
States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies
or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by
REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHN-
SON. Price, 50 cents per copy; \$5.00 per dozen. Words used
by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY
BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For
soprano or tenor, C sharp to A; for lower voices, B flat to F.
Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother
Church, also list of members. Price, one copy, \$1; six copies
to one address, \$5; twelve copies to one address, \$9.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass. Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

The world's interest was centred in the passage of the army bill in the United States Senate and House of Representatives last week, not on account of the bill itself, but on account of two amendments that were attached to it; one providing for a civil government to be established in the Philippines, and the other for establishing a protectorate over Cuba. The Philippine amendment provides for delegating all the rights over the Philippines secured by the United States under the treaty of Paris, to the Taft Commission of five men appointed by the President. A number of amendments to this amendment, seeking to commit the administration to extend the benefits of the constitution of the United States to the people of the archipelago, were voted down, which leaves the President and the commission acting under his authority free to govern the Philippines until a permanent government is established.

The Cuban constitutional convention had adopted a constitution providing for a republican form of government; but the amendment to the army bill places certain limitations on the proposed government which are briefly (1) that Cuba is not by treaty to impair its independence or alienate any of its territory; (2) that the United States shall have authority to limit its power to contract debts; (3) that the United States must be accorded the privilege of armed interference to protect life and property in case of international troubles; (4) that all acts of the military government be ratified; (5) that the United States be allowed to dictate in regard to the sanitary measures in Cuban cities; (6) that the Isle of Pines be not considered Cuban territory, but that the title must be left to negotiation; (7) that the United States shall be allowed to buy or lease such tracts of land on the coast of Cuba for naval and coaling stations as this government may see fit; (8) that these requirements must be embodied in a permanent treaty between the United States and Cuba.

The members of the Cuban constitutional convention were bitterly resentful when these conditions were first made known before the actual passage of the bill, and armed revolt was freely threatened, but after the amendment passed the Senate the Cuban convention took up the matter in a more pacific spirit, and adopted a statement of what should be the relations between the two countries, which seems to embody most of the demands contained in the amendment, though not so clearly as the President may desire.

An agreement on the bill reducing the revenue was reached by the Senate and House of Representatives on February 28, the conference report being adopted in both

houses and the bill became a law before the adjournment. The new law, it is estimated, will remit about \$45,000,000 in stamp taxes annually. The largest reductions are on beer and tobacco. The tax on bank checks, express receipts, telegrams, and some other documents are abolished.

Minister Conger has obtained a sixty days' leave of absence and he will leave Pekin immediately for the United States. During his absence Commissioner Rockhill will have full power to perform the duties of minister including the conduct of peace negotiations.

On March 4, President McKinley and Vice-President Roosevelt were inaugurated and Congress adjourned.

Foreign News.

General Kitchener reported on February 24, that General Dewet was routed in an engagement with Colonel Plumer on that day, and that the scattered Boers to the number of about five thousand were being pursued. Dewet escaped. General Kitchener has given the following summary of losses inflicted upon the Boers up to February 16: "Two hundred and ninety-two Boers known to have been killed and wounded in action, 56 taken prisoners, 183 surrendered. One 15-pounder gun, 462 rifles, 160,000 rounds of ammunition, 3,500 horses, 70 mules, 3,530 trek oxen, 18,700 cattle, 155,400 sheep, and 1,070 wagons and carts captured."

The indemnity question will be the next issue to be taken up by the ministers and Chinese envoys at Pekin, and Secretary Hay has instructed Mr. Rockhill, who succeeded Mr. Conger, to propose that the Powers agree on the sum total of two hundred million dollars for indemnities, this to be divided among the Powers afterward by agreement. If the above sum is considered too small, Mr. Rockhill is to try to get the envoys to agree to as small an amount as possible to be distributed under the same circumstances.

A Washington press dispatch says that President McKinley has cabled Special Commissioner Rockhill directing him to notify the representatives of other powers in Pekin that he is opposed to beheading any more Chinese officials in explanation of the anti-foreign outrages, and that he is in favor of milder forms of punishment in the remaining cases. It is expected that Japan and Russia will support the United States in this position.

The census taken December 1, 1900, shows the population of the German Empire to be 56,345,014, of which number 27,731,067 were males. Thirty-three of the largest towns have populations of over 100,000 each, or an aggregate of 9,108,814. Since 1895 the increase in the population of the empire has been about four millions, or 7.78 per cent, the highest rate of increase for any quinquennial period during the last thirty years.

It was found by the recent national census of Italy that the country has a population of thirty-five million, while it was thought the census would show not to exceed thirty-one million. The ratio of growth is greater than in any other European country. The last previous census was taken twenty years ago.

A Madrid dispatch states that Professor Solmeron, chief of the Republican party, made a stirring speech at Cadiz on February 22, in which he openly declared himself in favor of converting the government of Spain into a republic, and he urged Republicans to prepare for the "decisive moment."

Replying to a question in the British House of Commons regarding the cost of the South African war, the chancellor of the exchequer said on February 23, that up to that time \$407,500,000 bonds had been issued, and that the weekly issue was from \$5,000,000 to \$6,250,000.

King Edward of Great Britain went to see his sister, the Empress Dowager of Ger-

many, last week. He arrived at Frankfurt-on-the-Main February 25, and was met by Emperor William. Cordial greetings were exchanged.

Industry and Commerce.

Vessels plying between Lake Superior and the northeastern part of the country hauled 25,643,000 tons of freight through the Sault canals the past season. The Suez canal, which is open the year round and is the channel of trade for a hemisphere, moved only two-fifths as much last year. The United States canal moved 92 per cent of the freight and the remainder passed through the Canadian canal. The principal items of the season's business were iron ore, \$61,666,000, (15,500,000 tons); copper, \$39,319,000; wheat and flour, \$56,000,000; other grains, \$14,000,000; coal, \$14,500,000, and merchandise, \$54,130,000. Ten years ago the largest ships of the lakes were able to carry about twenty-six hundred tons; ships of a size to carry from six to seven thousand tons are now the most popular. Fifty-five new ships valued at \$11,000,000 will be added to the lake fleet next season, their total seasonal capacity being 3,000,000 tons.

According to the *Boston Herald's* special correspondent at Washington the United States now stands at the head of the world's exporting nations. He states that the complete figures of total exports from the United States for the year 1900, compared with those of other nations are as follows: United States, \$1,453,013,659; Great Britain, \$1,418,348,000; Germany, \$1,050,611,000; France, \$787,060,000. Since 1875 the United States has increased her exports from \$497,263,737 to \$1,453,013,659, or 192 per cent; Germany, from \$607,096,000 to \$1,050,611,000, or 73 per cent; Great Britain from \$1,087,497,000 to \$1,418,348,000, or 34 per cent, and France from \$747,489,000 to \$787,060,000 or five per cent.

The new steel trust, which, according to current reports, has been formed, and which is to include all the existing iron and steel trusts, will have a capital stock of \$800,000,000, if the newspapers have it right.

General News.

A new star was discovered in constellation Perseus on February 21, by Dr. Anderson who was also the first to see Nova Aurigæ in 1892. The new star was so exceedingly brilliant at first that it could be easily observed in broad daylight by telescopes of moderate power, but it has been gradually growing dimmer. The extreme brilliancy is attributed to combustion resulting from the rapid passage of the star through an immense cloud of gas or meteoric dust. It is estimated that the star is not less than six million times as far from the earth as the sun. Professor E. A. Fuertles of Cornell University is reported as saying that the Anderson star is identical with the Star of Bethlehem. "Astronomers find," said he "that there are records of a star similar to Tau (the star of Bethlehem) in Chinese reports made thousands of years before the birth of Christ, and with all deference to the beautiful Biblical story, undoubtedly the Chinese saw the same star that was the guide of the wise men."

They are getting ready for the annual harvest of Easter lilies in Bermuda. But if an experiment that is now being made for a Philadelphia firm at the State Experiment Farm at Charlotte, N. C., shall prove successful, the time may come when Bermuda will not be called upon every year to supply millions of the plants. The Philadelphians, who handle many thousands of the white flowers, are having an interesting test made in growing fifty thousand of the plants at the North Carolina station.

Goldfish live to a great age. There are a few in the Royal Aquarium at St. Petersburg that are known to be one hundred and fifty years old, while the Chinese claim to have goldfish whose ages are counted by centuries. The great goldfish farm of the world is in Indiana, where thousands are reared and exported to England every year.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

History of the "New Star."

Nova Persei has always stood where it does now.

THE name "new star" is unfortunate as it starts the inquirer on a false track. The object in Perseus is, in all probability, an old star with a new and temporary brilliancy. The star has always existed in its present place in the heavens. Its temporary brilliancy makes it new.

In November, 1572, a star of the sort was observed by Tycho Brahe. It was, at first, equal to Jupiter in brightness. For a few days it increased so as to rival Venus, and was visible in the daytime. After some three weeks it began to fade, and by March of 1574 it was no longer visible to the naked eye. In the situation described by Tycho there is now a very faint star visible only in telescopes. To Tycho and his contemporaries this object was a "new" star. They had only catalogued a few of the many stars visible to the naked eye. In a place where there was no star laid down in their catalogues an object suddenly appeared, waxed brilliant, and disappeared utterly.

Many stars of the kind have appeared since Tycho's day. In all likelihood every such appearance was due to a change in the light of a previously existing small star. Such objects do not disappear utterly. They remain in their former situations with greatly diminished light. They have gone through a cycle of brilliancy from feeble light to feeble light again. A sudden change of the sort suggests a sudden catastrophe. What is the cause of this catastrophe? This is the crux of the whole matter. To understand the question, let us take the history of the new star of 1892 as an example.

Dr. Anderson of Edinburgh, an amateur astronomer, was observing the heavens during January, 1892, with a small hand telescope. Comparing the stars in the sky with the dots on his star map, he noticed that an object in the sky was not represented in the map. Astronomers all over the world were notified, and the star was thoroughly observed, especially at the Lick observatory. During the month of February the star slowly declined, with some variations in brightness, from the fifth to the sixth magnitude. During April it declined rapidly from sixth to twelfth magnitude. At the beginning of the month it was just visible to the naked eye; at the end a six-inch telescope would just show it. During May the star's brightness fell to the sixteenth magnitude; it was but just visible in the thirty-six-inch telescope of the observatory. In four months the brilliancy had fallen off more than ten thousand times. Daylight then interfered with the observations until the middle of August, when, to the surprise of the observers, the star was found to have increased in brightness to tenth magnitude, and to have become nebula.

A star is an object like our sun; it is a body with a nucleus, which may be solid or liquid or gas under great pressure, surrounded by a gaseous atmosphere. A nebula is a body uniformly gaseous. The spectra of stars and of nebulae are characteristically different. A new chapter in the evolution of Nova Aurigæ had begun.

It was at first a star. The nebular hypothesis of LaPlace declares that stars are the results of the evolution from nebulae. A catastrophe in its history occurred. The star at first increased in brilliancy, then declined almost to extinction. Its last observed stage was nebulous. But the nebulous stage is the starting-point for an evolution upward from nebula to star. Part of the cycle has been observed. In all likelihood, the remaining portion will be traced out in ages to come, and the nebula of 1893 may be known to the astronomers of millions of years in the future as once more a star.

In our ordinary observations of the heavens we see objects in all stages of evolution—here a brilliant, highly heated star; there a fainter one; there again a nebula. It is for the eye of reason to deduce the cycle through which such objects must pass in æons of time. New stars exhibit these changes in the short lifetime of a man.

But what was the nature of the catastrophe which determined such immense changes as these? It was marked to the eye by tremendous changes of brilliancy. Changes of brightness signify changes of temperature. We must conclude that the new star was suddenly raised in temperature. From glowing feebly it began to glow intensely. So far all is plain. Let us consider for a moment what the effect of high temperature is.

No two bodies are more different than the earth and the sun. The earth is surrounded by a cooled crust; the condition of its surface and of its atmosphere is stable; everything is in a condition of equilibrium. The sun is a fiery mass, surrounded by fierce flames of incandescent hydrogen, in whose atmosphere fiery clouds of vaporized iron, gold, silver, and the like are flung to and fro by hurricanes of inconceivable violence. Yet it is a commonplace of science that if the earth were to be raised to the temperature of the sun the two bodies would be alike in everything but size. Every element present in the sun is present on the earth. The enormous difference between the earth and the sun is a matter of temperature, and of nothing else.

A rise in temperature would change the earth into a dim star; if the rise were sufficient, it would change into a brilliant star—as brilliant as you please. Deprive a star of its heat, lower its temperature sufficiently, and it would become a cool body like the earth.

Recent work in spectroscopy has proved that there are many "dark" stars in the sky. If it were not for their effect on neighboring lucid stars we should never dream of their existence. Dark stars revolve with bright components in the systems of Sirius, Procyon, Algol, and many others; and dark stars are moving through space with velocities of scores of miles per second, just as bright stars move.

Suppose that a dark star of this sort were to collide with the earth, or even to meet it in a merely grazing collision. In an instant the earth would be raised in cosmic dignity from a dark star, as it is at present, to an exceedingly brilliant one.

There are strong reasons for believing that the brilliancy of the new star of 1892 was due to the grazing collision of two bodies of the sort, one dark perhaps, the other bright. It is impossible to describe the details of such an impact. The spectroscopic evidence indicates that after the impact the system consisted of three, or it may be four, separate bodies. It is likely that the explanation of the new star of 1901—Nova Persei, to give it its proper name—is to be found in the history of its fellow of 1892.

A star is peacefully shining in its place. Fate brings it in collision with another object of the same sort. The energy of impact is transformed into the energy of heat—from molar it becomes molecular. Every shooting star that we see in our August sky is a tiny model of just such an effect. Its energy of motion is partly transformed into the energy of heat. It blazes forth into a mass of glowing gas and disappears. If the mass were moving outside of the earth's sphere of attraction the residuum of gas would become a tiny nebula. The case of Nova Persei promises to be interesting. It appears that on February 25 its spectrum was continuous. It contained no lines, either bright or dark, such as mark the presence of glowing or absorbing gaseous atmospheres. On February 26 the bright and dark lines had developed, and the spectrum is, in general, like that of its congener of 1892. We have observation, then, of an earlier stage of development in 1901 than we possessed in 1892. It would be easy to speculate on the meaning of this appearance, which is, so far, unique in the history of new stars. It is better, however, to wait until a series of observations has been obtained, and to seek for an interpretation of a longer series of facts. The general explanation will, in all probability, be the same for the two Novæ of 1892 and 1901. The differences will be differences of detail, and cannot fail to be instructive and important.

EDWARD S. HOLDEN.
In the *New York Sun*.

The following regarding the new star appeared in *The Baltimore Sun*, February 26, 1901:—

In speaking of the discovery of a new star in the constellation Perseus by Dr. T. D. Anderson of Edinburgh, Dr. N. E. Dorsey, associate in physics of the Johns Hopkins University, said yesterday to a reporter of *The Sun*:—

"It is very interesting to note that the most important of new stars recently discovered is Nova Aurigæ, which was discovered in 1892 by Dr. Anderson. An examination of the Harvard plates showed that it was recorded on the plates exposed between December 10, 1891, and January 10, 1892. It was brightest on December 20, when it was of the 4.4 magnitude. By April 1 it had become invisible except through a large telescope, but in August, 1892, it temporarily brightened up again, and through the years 1893 and 1894 it remained between the ten and eleven magnitude. Professor Barnard's observations with the large Lick telescope showed it in 1895 as a small, bright nebula, with a star-like nucleus.

"A swarm of meteorites swiftly traversing a remote gaseous nebula would account for most of the peculiarities of the spectrum of Nova Aurigæ. But a thoroughly satisfactory explanation of new stars has not yet been suggested.

"Other recently discovered stars are Nova Normæ, discovered in 1893; Nova Carina, in 1895; the Nova Sagittarii, in 1896."

A special dispatch to *The Sun* from Charlottesville, Va., last night says: "The wonderful new star, which the scientists at the University of Virginia for the present call Nova Persei, was seen a few minutes after 7 P.M. on Friday by Mr. Richard D. Micou of Alexandria, a student in the academic department of that institution. He drew a map of the constellation Perseus, with the position and magni-

tude of the star indicated, and reported the facts, exhibiting the map to Prof. M. W. Humphreys Saturday morning. Whether he was the first to discover it can be determined only after the exact time of its discovery at other places, as Edinburgh and Munich, shall have been reported."

A dispatch from Ithaca, N. Y., quotes Prof. E. A. Fuerties, of Cornell University, as saying: "This new star has undoubtedly appeared to inhabitants of the earth thousands of years ago. This new discovery recalls the famous Tau, or Star of Bethlehem, which guided the Wise Men to the place of the birth of the Saviour, except that, from the published reports of the body, it is even more brilliant than the Biblical star. Astronomers find that there are records of a star similar to Tau in the oldest Chinese reports, made thousands of years before the birth of Christ, and, with all deference to the beautiful story, undoubtedly the Chinese saw the same star that was the guide of the Wise Men. This new star is probably that of Bethlehem, but it is a star whose period of appearance is perhaps many times longer than that of Bethlehem."

Dispatches from Lick Observatory, California, say that the star is easily found in full sunlight with a twelve-inch telescope. It has also been seen at Yale and Harvard in daylight.

How Victoria Averted War between England and America.

It was at the time of the "Trent Affair" that Queen Victoria rendered her never-to-be-forgotten service to the English-speaking race by modifying an official note that would have provoked war between the United Kingdom and dis-United States. The seizure and removal of Messrs. Mason and Slidell, Confederate commissioners to England and France, who were passengers on the Royal Mail packet which sailed from Havana, by Commander Wilkes of the United States warship *Jacinto*, violated international law and constituted an affront which no first-class power could brook. The blunder was immediately recognized at Washington, but public opinion throughout the North justified Wilkes and made a hero of him.

On the other side of the Atlantic, under which there was no cable in those days, the British nation had been stirred to its centre by the exaggerated reports of the high-handed manner in which the sanctuary of the British flag on the high seas had been violated. In garrison and barracks there were feverish preparations for war, the shipyards were busy day and night, and troops were being dispatched to Canada with all the energy the emergency seemed to demand. The South was elated at the prospect of a conflict that meant success for the Confederacy.

On November 29, 1861, Lord Palmerston laid before the Queen the copy of a letter which the Council of Ministers had prepared to send to Lord Lyons, the British Minister at Washington. It was a peremptory demand for the release of the prisoners and a disavowal of the act. In case of refusal Lord Lyons was to demand his passports. This meant war, for the Yankee dander of the American people was up.

Victoria and the Prince Consort examined the proposed dispatch with the greatest care. The Queen disapproved of the harsh language in which it was couched, and at her suggestions Prince Albert prepared a memorandum for the ministry which she revised with her own hand. That memorandum, as it appears in the "Life of the Prince Consort," is as follows:—

The Queen returns these important drafts, which upon the whole, she approves, but she cannot help feeling that the main draft—that for communication to the American government—is somewhat meagre. She would have liked to have seen the expression of a hope that the American

captain did not act under instructions, or, if he did, that he misapprehended—that the United States government must be fully aware that the British government could not allow its flag to be insulted and the security of its mail communication to be placed in jeopardy, and her Majesty's government are unwilling to believe that the United States government intended wantonly to put an insult upon this country and to add to their many distressing complications by forcing a question of dispute upon us; and that we are therefore glad to believe that upon a full consideration of the circumstances of the undoubted breach of international law committed, they would spontaneously offer such redress as alone would satisfy this country, viz., the restoration of the unfortunate passengers and a suitable apology.

The dispatch to Lord Lyons was modified in accordance with Victoria's suggestions into that soft message "that turneth away wrath," and opened the door Lincoln and Seward were looking for to escape from the consequences of an act of ill-starred folly.

Looking back we shudder at what would have been the consequences if the instructions to Lord Lyons had been of a nature to further inflame northern sentiment against England. It would have meant war with Great Britain, the opening of every Confederate port to supplies, the replenishing of the southern treasury, and we know not what assaults upon our seaboard cities.

The suggestion that we should "spontaneously offer" restitution where by the law of nations, as interpreted by ourselves, we were in the wrong, saved the two nations from falling upon each other and probably saved the Union.

For this we have to bless and honor the memory of Queen Victoria.—*Chicago Times-Herald*.

The Lectures.

At Los Angeles, Cal.

After ten days of cloudy weather, and almost steady rain, Sunday morning, February 10, dawned bright and clear. By noon not a trace of cloud was to be seen in the sky. First and Second Churches of Christ, Scientist, had united in calling Dr. A. A. Sulcer, C.S.B., of Riverside, Cal., to lecture at Los Angeles in the afternoon. An audience of eighteen hundred just comfortably filled the large auditorium, and listened with evident interest during the entire hour and twenty minutes that the lecturer was speaking.

The *Los Angeles Herald* gave the following account of the lecture:—

Yesterday afternoon at three o'clock an immense audience of citizens of Los Angeles, Riverside, Pasadena, and other Southern California cities and towns gathered at Simpson Auditorium to hear an interesting exposition of the theory and practice of Christian Science by Dr. Abraham A. Sulcer, C.S.B., of Riverside, Cal. The doctor for twenty-seven years practised medicine in the allopathic school at Riverside. Seven years ago he abandoned the regular practice of medicine and began the study and practice of Christian Science. Dr. Sulcer is a member of the Board of Lectureship of the Christian Science Church.

The people began to fill the building at two o'clock. Dr. Sulcer stepped on the platform at exactly three o'clock. He was accompanied by A. H. Naftzger, president of the Fruit Exchange, who introduced the lecturer in a brief address, saying:—

"*Ladies and Gentlemen:*—The invitation extended to me by the lecturer of the hour to say an introductory word was due to the kindness of his heart, and not to my relation to

the cause, since my understanding of the doctrines of Christian Science is not such as to entitle me to be denominated a Scientist. I trust that what I lack in an understanding of it is more than made good in my admiration of the fruits of the doctrine as exemplified in the uplifting and inspiring lives of Scientists whom I have known.

"It may well be said that religion in its objective phase is a matter of interpretation; subjectively it is a matter of experience. However little we may know of the theories of Christian Science, many of us have witnessed such demonstrations of its benefits as to win our esteem.

"It comes, as I understand it, with a great note of hope to those who are in doubt and discouragement; it promises relief from sickness and redemption from sin; to chase the lines of care from the face, and by the supreme mastery of love to dispel the torment of fear. Whatever will achieve these things challenges our instant attention. Your presence here this afternoon is the best proof of your willingness to lend a patient ear to what the lecturer may say of this new thought.

"My first acquaintance with the lecturer, years ago, was when he was engaged actively in the practice of what I believe he sincerely thought was the true healing art. With equal conscientiousness he will tell you now what he believes to be a better way, and I am sure that you will listen attentively and without prejudice from hereditary or acquired opinions. None of us will fear to think or express an honest thought. I take pleasure in introducing to you Dr. A. A. Sulcer, C.S.B., of Riverside, Cal."

Correspondence.

At Ann Arbor, Mich.

Judge William G. Ewing of Chicago lectured here Sunday (February 17), before a large audience in the Athens Theatre, on the subject of Christian Science.

Despite the inclemency of the weather, every seat on the lower floor was filled and a number were standing. The Law Department of the State University was well represented.

The speaker was introduced by Capt. William K. Childs who spoke in part as follows:—

Ladies and Gentlemen:—At this time, more than at any other in the history of civilization, men and women of learning are searching after knowledge and truth in religion, as well as in science. And now it may be said we are upon the threshold of that time mentioned in prophecy when "the earth shall be full of the knowledge of the Lord, as the waters cover the sea." We are coming to understand that there is no conflict between true religion and science.

I doubt not that many of you here this afternoon, like myself, are investigators of the truths of Christian Science, with an honest purpose for good. At this time we are unusually fortunate, as we are to listen to an address from one who is known through the length and breadth of the whole land; a man who having risen to high positions of trust and honor as jurist and judge, is now devoting his time and bright genius to the advancement of the truths of Christian Science.

Ladies and Gentlemen, I have the honor and pleasure of introducing to you Judge William G. Ewing of Chicago, who will address you upon the subject of Christian Science.

We must tramp upon our feelings when principle is at stake.—S. J. WILSON.

Selected Articles.

Insanity and Religion.

THE testimony of Dr. Flint in the Brush will case, in answering affirmatively a question as to the sanity of a Christian Science believer, opposes a view taken by certain alienists and by many other people which is really dangerous to society. It is a very convenient way to dispose of a religious belief by describing and treating those who have it as pestilent victims of lunacy, but such a method involves an interference with the liberty of religious opinion that outrages a fundamental principle established after centuries of bloody struggle.

The religious world is divided into a great number of contradictory sects and cults, and in this country they are especially numerous; there is hardly a possible form of belief which has not its representation in them. Over against them is the now vast body of infidels of one sort or another, —atheists, agnostics, and what not,—to whom the evidences on which all these believers found their faith seem purely fanciful if not actually the fruit of delusion,—mere creations of the imagination which defy the laws of nature; and in the ranks of belief one camp may look on the faith of another as approximating the absurdity of lunacy.

The course of Christian history has been reddened with the blood of people who were tortured and slain like noxious reptiles, on the ground that they imperilled the souls of true believers. Faith in miraculous cures, devoutly held even yet by millions in Christendom, is smiled at both by believers of other religious faiths and by infidels as a fanatical delusion which defies the laws of nature and the absolute limitations of the art of healing.

When once we have passed beyond the realm of fact and scientific demonstration we enter into a mysterious supernatural country where there is no restraint upon the imagination. To that of the agnostic all religions seem delusion when they are taught as other than mere human speculations. To him the only real sanity is in himself.

The Christian Science belief cannot be said to depart so completely from the original faith of Christianity as to be absolutely new and singular. It is rather an extreme extension of a faith and practice always preserved in Christendom, based on this injunction of the Epistle of James:—

"Is any among you afflicted? let him pray. Is any merry? let him sing psalms. Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him."

If a body of Christian believers, rejecting all authoritative interpretation of this passage, and interpreting it for themselves as a divine command, proceed to act upon it practically, how can they be accounted legally insane any more than the others who interpret for themselves and act upon other injunctions of Scripture literally? If a man believes that God has promised that the simple prayer of faith, as he understands faith, will cure his ailment, how can you clap him into a lunatic asylum for acting on the belief without doing outrage to the religious liberty to which he is entitled under the law? Nor can you restrain his freedom of proclaiming his belief without such interference. You may think him a fool, but most people are fools, according to Carlyle and to many besides.

Moreover, experience proves that by adopting any method for the extirpation of Christian Science which approaches persecution you will only give further stimulus to the fanaticism. It has already made surprising progress in this country and, together with faith cure, it has appealed to many people whose minds could not be called otherwise

than healthy by alienists, more especially to women whose intelligence as to other subjects cannot be disputed. It will have to run its course, and the more violent the means adopted to stamp it out, the longer and the wilder will be the run.—*New York Sun*.

Not Christian Science.

Chattanooga, Tenn., December 27, 1900.

To the *Chattanooga Times*.

We as Christian Scientists are accustomed to having so many foolish and absurd things said of us that we cannot find time, nor is it necessary, to answer them. But when something particularly unjust is said, as was your article from the *New York Times* in yesterday's paper, a due regard and respect for our principles demand a reply.

In reply to the question, "What about the poor? what do you do to relieve their wants and suffering?" the supposed Christian Scientist says, "Oh, we do not go among them with material aids, as you do. There's no poverty; it is a mere idea, and has no reality in the divine Mind. We think about them when we meet together, and by absent treatment reduce their self-supposed sufferings. Then we teach them to disbelieve in the reality of poverty and its imaginary trials. In this way we remove the root of their trouble."

No Christian Scientist would ever make such a foolish statement. In one respect the words are true: Poverty does not exist in the divine Mind, for that Mind is God, and even the opponents of Christian Science would admit that poverty, want, and suffering of all kinds exist only in the human mind, for it is the human mind and not the divine Mind which suffers. No Christian Scientist believes, nor would he say, that poverty, suffering, sin, sickness, and death are imaginary. They are the most real things in the world to one suffering under their yoke. Mrs. Eddy, in her book, "Science and Health with Key to the Scriptures," which with the Bible is the text-book of Christian Science, says on page 457: "Sickness is neither imaginary nor unreal,—that is, to the false sense of the patient. It is more than fancy, for it is solid conviction. It is therefore to be dealt with through right apprehension of the Truth of Being."

When we speak of sin, we say "sin"—we call disease by its right name, and of death and any other form of want or woe, we speak just as others do. We do believe they are not God-given, neither in nor of the divine Mind—hence as that Mind is understood, they will disappear. Because some of our tenets are transcendental to the material senses, there is an even greater necessity for its followers being practical and sensible; and I believe as a rule they are. Like all other bodies, the Christian Science denomination contains a few people who at first have more zeal than wisdom, who say and do things that are not indorsed by its teachings nor its sober-minded followers. Yet I venture to say that nowhere, among no class of people, can be found more practical, sensible, reasonable folk than we, and I say it after mature deliberation.

No Christian Scientist believes the universe as we see it is only imaginary. But if we are to believe the Bible, and we do, it is not the real universe of God's creating, and must pass away. This material world contains all the sin, all the suffering, sickness, and death there is, and because of this we desire to rise above it. Yet we believe this can be done only step by step, by seeking understanding, and obeying God, divine Love, who fills every need, and who is all-powerful and ever-present.

A hungry man is not a whole man, any more than a diseased one is. He is suffering from a sense of lack, and that must be filled. It is evident, then, that the best and only way to satisfy his present wants is to supply him with

good, wholesome food. As obedient followers of Christ, we try to fulfil all his commands. His heart went out in compassion when he saw the hungry multitudes, and he fed them. I am quite sure that every Christian Scientist in Chattanooga and elsewhere is doing his or her best to alleviate poverty and want on every side. None but they themselves and the Father know the good done in this way, for they try always to let their right hand be ignorant of what the left doeth. The chief of police and the charity commission, if they were permitted, could tell of good done, of contributions made, and help rendered, and this under promise of secrecy, for man can never reward, but God.

But sufficient to say that the teachings of Christian Science never make one callous to suffering, indifferent to distress, nor turn a deaf ear to the needy. Because of these teachings, our hearts go out in a larger, fuller, and broader sense than ever to all mankind, and we desire to help them, not only temporarily, but permanently, how to avoid the necessity of suffering, and we believe the remedy to lie solely in a right apprehension of God, divine Love, the supplier of every need and the Father of all.

EDWARD E. NORWOOD.
In the *Chattanooga Times*.

Defence of Christian Science.

New York, February 19, 1901.

To the Editor of the *Daily Eagle*.

Dear Sir:—A great deal of attention has been directed to Christian Science by the recent legislative activity at Albany, and many misconceptions of Christian Science, based on a very superficial knowledge of it, have found their way into newspapers. I have read with interest your able editorial of Saturday, February 16, and beg that you will allow me to say a word in reply.

You remark that Christian Scientists "should be required to report all their contagious diseases, and maintain the same regulations, as to quarantine, etc., required of others." Mrs. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, has always made it plain to her followers that human laws must be obeyed, at the same time we recognize the higher law of Spirit. Only within the last few days Mrs. Eddy issued the following statement, bearing directly on this subject, and as it is apropos of your editorial and the agitation at Albany, I present it herewith. Mrs. Eddy says:—

"On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law-abiding; and, actuated by this conviction, I authorized the following statement, which appeared in *The Boston Herald* about one year ago: 'Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights, and governmental usages.' This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: 'Render unto Caesar the things that are Caesar's,' even while you 'render unto God the things that are God's.'"

Nothing can be more definite or incisive than the above, and it ought to satisfy all those who think they have any criticism to make of Christian Science.

It is amazing that persons, who to-day will admit the efficacy of the power of God, working through human agents, to destroy disease without material means, two thousand years ago, will deny that this same power of God can work in the same way at the present time. Such

persons will readily grant that Paul and Peter, and the disciples and apostles cured all manner of diseases by the action of the divine Mind reflected through them. The Christian Scientist says that, in a feeble way as yet, he is reflecting the same omnipotent God, whose power is no less to-day than it was then.

The futility and uselessness of insisting that Christian Scientists should take a regular course of study in physiology and hygiene and *materia medica*, only to be allowed to practise Christian Science after they have graduated from such a course of study, must be apparent to all. If the Christian Scientist takes a three or four years' course in a medical college; and upon graduating and being authorized to heal the sick with drugs, immediately begins to heal the sick by the power of God, to make his mental diagnosis, as he always has, the uselessness of his four years' study is very evident. The Christian Scientist would not thereby be converted to a belief in *materia medica*, and his understanding of the human anatomy, from a material point of view, would not assist him in any way in his metaphysical healing.

WILLARD S. MATTOX.
In the *Poughkeepsie* (N. Y.) *Daily Eagle*.

Not Opposed to the Bible.

Chicago, January 24, 1901.

Editor Gazette:—Please permit me to take exception to the caption, "Christian Science vs. Bible," which appeared in your issue of January 21. Christian Science is not and never was *versus* the Bible. The following quotation from page 493 of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is the first of the tenets of the Christian Science denomination, to which every person joining any church of the denomination is required to give written assent:—

"As adherents of Truth, we take the Scriptures for our guide to eternal Life."

The writer of the letter which you published under the above caption accuses me of advocating mental suggestion or hypnotism, but in that he is mistaken. The object of my letter, which you were kind enough to publish in your issue of January 18, was to make plain to all that Christian Science is neither mental suggestion nor hypnotism, and has nothing in common with such systems.

I am pleased to be able to assure Mr. Green—the writer of the letter in question—that Christian Scientists not only assent to all the Scripture, but they endeavor to put their faith into works which attest their sincerity. They are trying to preach no other gospel than that of Jesus Christ and his apostles. That Christian Science is healing the sick and reforming the sinner is so easily proved by the testimony of witnesses in your own city, that an answer to Mr. Green's question seems superfluous, but the following from *Law Notes*, a leading legal journal, published at Northport, N. Y., will not be amiss:—

"If human testimony is worthy of any credit, real cures have been accomplished by them [Christian Scientists], and at the very least, substantial peace of mind has been brought through their agency to sufferers pronounced beyond the powers of ordinary physicians. The positive worth of the results of Christian Science is not to be set aside dogmatically or contemptuously."

Also the following from the address of Rev. E. Winchester Donald, rector of Trinity Church, Boston, at the recent Episcopal Church Congress in Providence, R. I.:—

"Is Christian Science leading men out of the darkness of unbelief into the light of God? Yes, it is, it is; there can be no doubt about that. You and I know too many Christian Scientists whose lives are blameless to doubt that."

ARCHIBALD MCLELLAN.
In the *Kankakee* (Ill.) *Daily Gazette*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Church By-laws.

THIS is the denominational rule of Christian Science. Each Church of Christ, Scientist, shall have its own form of government. No conference of churches shall be held except the annual conference at the Mother Church in Boston in June of each year. Let individual intercourse and fellowship be among the churches and that love continue whereby the brethren may encourage and strengthen one another.

ARTICLE XXXVIII., SECTION 3.

IF the Publication Committee neglects to fulfil the obligations of his office and this becomes apparent to the Board of Directors, it shall be the duty of the Directors of this Church to immediately hold a meeting and discharge him from said office, and elect another Publication Committee. If the above delinquency on the part of this important Committee shall appear in any Church of Christ, Scientist, the Directors and First Reader of the Mother Church may notify that church to remove said Committee and to appoint another Committee, and it shall be the duty of that church to comply with this request.

A Ridiculous Falsehood.

THE falsehood which has appeared in some newspapers, to the effect that in the contest over the provisions of the will of Miss Helen C. Brush, recently had in New York City before Surrogate Fitzgerald, to the effect that Christian Scientists in large numbers were attempting to mentally influence the Surrogate's mind, so as to produce a favorable decision, is so utterly ridiculous that it has fallen flat. It is too absurd to address itself for a moment to the mind of any sensible person. It seems unworthy of notice, and but for the persistency with which it has been published and the seeming readiness of certain minds to accept as true almost anything that is said against Christian Science, however absurd, we should not give it even a passing notice. As it is, we simply say that on behalf of the entire body of Christian Scientists everywhere, we deny that there is a vestige of truth in the statement. Christian Scientists resort to no such methods. All the teaching of Christian Science is the reverse of this. If any member of the body should be known to make such an attempt, in the presence of a Court or out of it, he would be regarded by his co-religionists as doing a wicked and forbidden thing.

The text-book of Christian Science, "Science and Health with Key to the Scriptures," of which Rev. Mary Baker G. Eddy is the author, prohibits all such practices. On pages 285 and 286 we read the following:—

"From ordinary medical practice, the distance to Christian Science is full many a league in the line of light; but to go from the use of inanimate drugs, in healing, to the criminal misuse of mortal mind, is to drop from the platform of common manhood into the very mire of iniquity. To work against the free course of honesty and humility,

is to push vainly against the current running Heavenward. . . . The mental trespasser necessarily incurs the divine penalty due to this crime." This is understood by all students of the text-book as forbidding any effort to mentally influence the mind of another without that other's consent, in any way or for any purpose whatever. Any one attempting to influence the mind of any Court, in any way whatever, would be regarded by every Christian Scientist as a mental malpractitioner or hypnotist, and not a Christian Scientist; and as such he would come within the prohibition above quoted and many other similar statements contained in the text-book.

The falsehood here alluded to was promptly refuted through the press in New York City and there was therefore no excuse for its continued publication.

Suit against Christian Scientists Dismissed.

THE suit of Frank L. Tuttle to recover \$20,000 damages from Otto C. Nordhoff, C.S., Edward H. Hammond, C.S.D., and First Church of Christ, Scientist, of Baltimore, Md.,—in which suit the church of which Mr. Hammond is First Reader, was made a party on the ground of its alleged "misleading teachings"—was dismissed in the Court of Common Pleas, February 19, by Mr. Tuttle's attorney without costs to the defendants.

Thus is another unjust suit disposed of and Christian Science again vindicated.

Legislation in Utah.

LEWIS B. COATES, C.S.B., writes us that the following measure has recently become a law in the State of Utah: "It shall hereafter be unlawful for any Board of Health, Board of Education, or any other public board, acting in this state under police regulations or otherwise, to compel by resolution, order, or proceedings of any kind, the vaccination of any child or person of any age; or making vaccination a condition precedent to the attendance at any public or private school in the State of Utah, either as pupil or teacher."

Medical Legislation in Texas.

CORRESPONDENTS from Texas send interesting accounts of the history of the proposed medical legislation in that state.

On the 19th of February, 1901, the legislature of Texas passed a bill regulating the practice of medicine and surgery. When the bill came up for discussion in the senate, Senator Dibrell spoke in opposition to any bill which, while assuming to regulate the practice of medicine, should strike at those who do not use drugs. He cited instances where cures had been effected by the so-called "irregular" practitioners who used no drugs, after "regulars" had failed.

Finally he touched on Christian Science, and his eloquent appeal for the rights of its adherents commanded the attention of all who heard him. Among other things he said: "I do not profess the faith of the Christian Scientists, but I see no reason why any restraint should be imposed on their practice. A law which proposes to regulate the practice of medicine should not be made to apply to those who use no medicine. No harm can come from their practice of healing the sick through the exercise of faith and prayer, and I challenge any one to show where injury has been done through their practice in itself. I do not understand the mysterious power by which they heal, but they have the right that all American citizens have in the exercise of their religious faith. I may say I have no personal interest in this matter, and yet that is not exactly

true. I hope I may be pardoned for referring to a matter here which closely concerns me. I well remember how my mother was afflicted with a growth on her face which physicians called a cancer. She suffered with this many years without being able to obtain relief, and it was a source of constant anxiety to me."

By this time the attention of every one in the senate—visiting citizens, representatives of the various medical schools as well as the senators—was centred in the remarks of the eloquent speaker. Continuing he said, "As wicked and as insignificant as I am, every night for ten years I never closed my eyes without offering a prayer to the Creator for its removal. One night a man stopped at my father's house. He was a Christian Scientist and offered a prayer for its removal, and it did leave without administering medicine internally or externally. I do not understand this faith, nor the mysterious Power involved. I do not understand how this miracle was brought about, but I saw this result and I cannot give my support to any bill which will interfere with the Christian Scientists in the exercise of their faith."

As a final result, the bill which passed the legislature and went to the governor contained the following clause: "Provided that the provisions of this act do not apply to persons who do not prescribe or give drugs or medicines." This amendment removes all possible doubt as to whether the Christian Scientists were affected by the original bill. There seems to have been a difference of opinion among the lawyers and Scientists as to whether the bill really did or was intended to interfere in any way with Christian Scientists. A lawyer, who is also a Christian Scientist, referring to this matter, writes as follows: "We now have a just, fair, and equitable medical bill in the State of Texas, protecting the people from charlatans and quacks, and also granting the constitutional rights to the other class of free-thinking people."

This correspondent also makes the following statement, which we endorse: "Scientists cannot be too careful in matters of such great importance as such proposed legislation. They should be fully cognizant of the proposed measure before they enter a protest."

That is true. Unless legislation is directed against Christian Scientists, it is not wise to join in promiscuous protests, because, as a matter of fact, Christian Scientists are as much opposed to the practices of medical quacks and charlatans as the members of the regular profession can possibly be.

In other states than Texas many members of the medical profession, and in some instances those representing the Medical Boards of Registration, have not only not sought hostile legislation against Christian Scientists, but have asked their co-operation to aid in suppressing quackery and charlatanism. Christian Scientists, therefore, should be careful not to place themselves in apparent hostility to those who are manifesting toward our movement a friendly spirit, and whose only purpose is to suppress that class of people who, under the guise of practising medicine, prey upon the people for the purpose of getting their money and with no honest intention to help them. Robert L. Ziller, C.S.B., took a deep interest in the matters above related.

A Victory in California.

In the *Sentinel* of February 21, 1901, we published from the *San Francisco Chronicle* an account of the defeat of the Medical Bill, introduced into the legislature of California.

We have just received—but too late for our last issue, we regret to say—an account of the history of this bill, and of the work of the Christian Scientists of California in connection with it. This account is forwarded to us

by leading Scientists there who participated actively in the opposition to the bill, and we deem it of sufficient interest to the Field at large, and to others who may have similar work on hand, to publish a synopsis of it.

Following is the synopsis:—

THE HISTORY OF THE BILL.

On January 17, 1901, there were introduced into the Assembly and Senate of the State of California, identical bills. These bills were entitled: "An Act for the regulation of the practice of medicine and surgery in the State of California, and the appointment of a Board of Medical Examiners in the matter of said regulation." This bill was carried so quickly through the Assembly and such obscure notice given of it in the press, that it had passed the Assembly before we were awake fully to what was being done.

When we arrived in Sacramento, the bill had already passed its first reading in the Senate. Our plan was to see each Senator and show each one individually the injustice of the measure as a law, and especially the injustice to us as Christian Scientists. We succeeded in seeing all but four of the Senators, and met with the most courteous treatment. We gave each one a copy of the Supplement, "How Men of Affairs view Christian Science," a copy of the pamphlet, "Hearings on Proposed Medical Bills in Massachusetts and New York," and to the lawyers a copy of "Legal Aspects of Christian Science." I also put into the hands of most of them a letter that I had written at the instance of some of the officers of the Municipal League of San Francisco. In addition to this, we by telegraph and telephone reached the Field throughout the state, with the result that the members of the Senate received numerous telegrams from their constituents, asking them to oppose the bill.

By Tuesday afternoon there was so much sentiment against the bill that its supporters began to lose courage, and, much to our chagrin, the bill was put over and its second reading made the special order for Wednesday afternoon. When the bill came up for debate there were numerous amendments offered and all were voted down, the sentiment being at that time to defeat the bill as a whole. Among the amendments offered was one by Senator Shortridge taken from the Illinois law, viz: "That nothing in this bill shall be so construed as to inhibit the treatment and healing of the sick or injured by mental or spiritual means." This was defeated nine to nineteen. Near the close of the session the advocates of the bill proposed that the bill be allowed to pass its second reading and be amended when it came up for its third reading. This was agreed to and the bill read a second time. On Thursday night Judge C. C. Wright of Los Angeles, came up and gave us very valuable aid by getting three of the most influential Senators to speak against the bill.

On Friday the bill came up for its final reading but by noon the physicians gave up the fight and came and asked us what amendment we had to offer; saying they would for the sake of passing the bill amend it any way to suit us. We said, "Gentlemen, this is your bill, we have no more amendments to offer; you can amend it to suit yourselves." They consulted together and then moved to strike out all of Sec. 4, Art. 16, which was one of the objectionable clauses, and read thus:—

Art. 16. *Definition.*—The following persons shall be deemed as practising medicine or surgery within the meaning of this act:—

4. Those who shall investigate or diagnosticate or offer to investigate or diagnosticate any physical or mental ailment of any person with a view of relieving the same, or who shall, for pecuniary or valuable consideration, prescribe, suggest, or recommend any drug or medicine,

magnetism, electricity, appliance, application, operation, or manipulation *or treatment of whatever nature* for the intended relief, palliation, or cure of any wound, fracture or bodily injury, infirmity or disease, and inserted the following:—

Those who, for a pecuniary or valuable consideration, prescribe or use any drug or medicine, appliance, or medical or surgical treatment, or perform any operation for the relief or cure of any bodily injury or disease.

This was carried unanimously. At this point a recess was taken for lunch. During the recess we were asked if we still had any objections to the bill. We pointed out to them that Sec. 3, Art. 16, was just as objectionable as the section that had been eliminated. They then offered to and did amend it as follows: After the word "medical," line 11, strike out the comma, and the words "or any," so that it reads: "or medical means or appliance." The following is the section as it was before it was amended:—

3. Those who, for pecuniary or valuable consideration, shall employ surgical, or medical, *or any means* or appliances for the treatment of disease, injury, or deformity of human beings, except dealers in surgical, dental, and optical appliances.

The bill was then passed as amended and sent to the Assembly for their concurrence, which was had without debate, and it is now in the hands of the governor.

SCIENTISTS DID NOT ASK FOR LEGISLATION.

The Christian Scientists appeared on the scene in large numbers and it was assumed by promoters of the bill and some of their friends in the legislature that they were there for the purpose of securing affirmative legislation for themselves. This was not the case, and to show that fact, the Scientists promptly circulated among the Senators the following statement:—

To the Honorable Senators of the State of California.

Greeting:—Christian Scientists do not ask legislation at your hands.

What they do ask is, the right granted by the Constitution of these United States to *every* citizen, viz.:—

The right to choose their own physicians and pay for their services.

Just the same as it grants every citizen the right to purchase any brand of groceries and eat them, as also the right to refuse to take, or have a brand they don't want.

This statement, it seems, had the desired effect, and friends quickly came to the rescue of the Scientists in effective numbers, as the result shown by the above report indicates.

AN OPEN LETTER.

One of the interesting features of this event was the following letter, written by Dr. C. N. Miller, a physician of prominence and good standing in San Francisco:—

San Francisco, January 30, 1901.

F. B. Carpenter, M. D., Chairman Committee on Medical Legislation, Medical Society of the State of California.

Dear Doctor:—In a circular letter of recent date you ask my support of the bill for a new medical law, a law that shall confine the practice of medicine entirely and absolutely to the three dominant schools.

Thanking you for the invitation to co-operate in the endeavor to have the bill become a law, I must say that I am inclined to oppose rather than to favor the measure.

Such a law would savor so strongly of class legislation as to be entirely un-American.

By its protection it will deaden rather than stimulate professional effort and enthusiasm.

Again, the bill provides that we with licenses shall remain undisturbed, but that others as good as we, and as competent, who would hereafter obtain licenses, must be subjected to ordeals that were not for the elect. In this, there is shadowed forth in the bill a spirit that may be typified by that domestic animal that squeals when hurt, but only grunts when satisfied, and is wont to stand with forefeet in the trough, and with its nose close to the spout.

So, Doctor, in brief, the bill should be opposed because un-American, un-progressive, and decidedly hoggish.

These views are more fully set forth in the argument following, to which I would respectfully invite your attention.

Yours for Liberty, without license,

DR. C. N. MILLER.

We should not have dared of ourselves to have used as plain and vigorous language as the doctor employed in his letter, but inasmuch as it is, on the whole, a fair, good-natured, and sensible production, we feel warranted in publishing it.

A SOUND EDITORIAL.

In connection with the above we have pleasure in republishing the following sound editorial entitled, "An Obnoxious Measure," from the *Los Angeles Herald*:—

Assembly Bill No. 284, introduced by Dr. Hasson of Orange, will, if it is enacted into law, form a medical trust and perpetrate a great injustice upon a large and eminently respectable portion of the community. The bill creates a board of medical examiners composed of allopathic, homœopathic, and eclectic doctors exclusively, without whose permission no person may practise medicine in California.

Such a law would undoubtedly do some good; but it would operate against the belief and the interest of a very large class of citizens. The practice of Christian Science, osteopathy, and the like would be impossible with a law and with such a board of medical examiners. The *Herald* has already taken a position with respect to osteopathy, and it must protest against any measure that denies, so to speak, the right of Christian Scientists to live and to exercise the faith that is in them. There are now over one million Christian Science believers in the United States; they are sincere in their belief, and their method of healing has effected many and remarkable cures. It would be gross injustice to class Christian Science healers as quacks. A system that is founded upon the Christian religion is entitled to respectful recognition.

Under the provision of this bill it would be unlawful for any person not a licensed physician even to suggest a remedy for an ailment. Smith could not advise Jones to take quinine for his cold without becoming liable to a fine of five hundred dollars and imprisonment for six months. Such a law would be an utter absurdity; and while proper restriction should be placed around the practice of medicine, a medical trust is not called for in the interest of the public welfare. It is surely possible to regulate the malpractice and fraud of the quack and the fakir without insulting a large number of sincere and thoughtful people.

An Anti-Healers' Bill Fails.

In California a doctors' bill to prevent Christian Science healing, very like the Bell Bill in this state, was introduced in the legislature, and a desperate contest resulted. There, as here, physicians constituted the only element urging such legislation, and as they have a direct pecuniary interest in suppressing competition, they were at a disadvantage at the hearings. Many people gladly testified before the committee that they had been healed by Christian Science, and some of the leading lawyers in the state actively opposed the measure on the ground that it contemplated

a medical monopoly, abridged the rights of citizens, and was against public policy. The fact that outside of the doctors nobody was asking for such a law, while many members in all classes of society were strenuously protesting against it, was prominently set forth. Its unconstitutionality was also alleged on the same grounds so ably presented by Judge Lincoln in this state. As a result, the Christian Scientists won a complete triumph, and every feature of the bill offensive to them was eliminated. The ignominious failure of the measure in California will undoubtedly have a strong influence in other states where the same sort of legislation has been sought under similar auspices and pretexts.

In this state the Bell Bill is likely to fail, as its authors have consented to so many amendments that its real animus is disclosed. As it stands to-day, however, it strikes many interests aside from the Christian Scientists. Under its provisions, physical culture in Y. M. C. A. gymnasiums would have to be suspended, and Sisters of Mercy in the Catholic church might be subjected to fine and imprisonment under the law if they should continue their ministrations. As a matter of fact, under the provisions of such a law as proposed, Jesus would have been a criminal for healing cases of lameness, leprosy, and blindness. Indeed, Dr. Morris of Brooklyn, one of the strongest advocates of the bill at the hearing, denied that Jesus had ever actually cured cases such as were reported by the New Testament, and ridiculed the methods specifically recommended by that book, such as prayer, faith, and the laying on of hands. The sensation produced by his statements showed that he went too far to aid the object he is seeking to accomplish.

No profession is more favored by law to-day than the medical, and in asking for still more special legislation in its own pecuniary behalf, the popular feeling is that it is going altogether too far. And the best physicians feel so themselves; they are willing to meet competition on their merits, and are only conspicuous at these Albany hearings by their absence. The Christian Scientists claim that it is their remarkable successes, and not their failures, that are stimulating disaffected doctors to hostile action, and point to the number, culture, wealth, and intelligence of their adherents as indubitable proof of their efficacy.

Outside of all question of merit or demerit on the part of the doctors and Scientists, however, is the general conviction that the rights of the citizen in a matter vitally affecting his life, liberty, and pursuit of happiness should not be further intrenched upon by vicious and obnoxious prohibitory legislation.—*Troy (N. Y.) Press.*

Mark Twain on Osteopathy.

ALBANY, N. Y., February 27, 1901.—“Mark Twain” was the feature of the hearing to-day on the bill to license osteopathy in the state—that is, Mr. Clemens appeared with the advocate of the bill, but he did not seriously ask for the bill’s passage or urge the benefits of the cult. He said:

“I find myself almost in embarrassing circumstances. A circumstance that I am rarely in. If I ever had a purpose in being here, these debaters knocked it out. They use terms that I don’t understand, and I don’t see how you can understand them. What impresses me is the way these doctors call off the names of all the diseases in the world. It makes me envious of the man who has had them all. I am an experimenter. I have had a number of diseases, but am willing to take more, but want to distribute them among, not only doctors, but the mountebanks.

“I came here to listen, and did not expect to speak, but now that I am here, and am to speak, I am glad of it, but there are others who are to show you osteopathy. I want the liberty of trying it.

“Adam probably did not want the apple until he found

he couldn’t have it. I wouldn’t have taken one apple, but the whole crop. I hold my mother responsible for my desire for experiment. She experimented on me. I did not enjoy it then, but I do now. When my mother heard of a new cure, she didn’t select one from the flock hazardly. No. She chose judiciously, and chose the one she could spare—which was myself.

“How well do I remember the water cure away back in 1842. It was tried on me. I was a boy about seven years of age, and every morning that I got up I had a bucket of ice-cold water thrown over me, and then came the rubbing with warm blankets. After that I was wrapped in a sheet wet with ice water and put to bed. And the perspiration that used to come out in that bed—but, fortunately, the bed was supplied with a life preserver.

“Why, you should have seen the yellow color of that sheet when they took it off me; but it was only the outpourings of my conscience, just spiritual outpourings, and, fortunately, it removed all that, so that I am not troubled with it now.

“When a boy my mother three times tried new remedies on me, and they left me so low that they had to pull me out by the means of the family doctor. I like osteopathy. It is quicker, and you don’t have to take any medicine, so I want liberty to do with my physical body as I choose, and experiment as much as possible.”

The hearing was a largely attended one, and lasted some hours, without any final decision by the committee. The physicians present argued against the bill in the same strain as they had previously against the Christian Science bill.

Boston Herald.

Be Careful.

In speaking of a person’s faults,
Pray don’t forget your own;
Remember, those in homes of glass
Should never throw a stone.
If we have nothing else to do
But talk of those who sin,
’Tis better we commence at home,
And from that point begin.

We have no right to judge a man
Until he’s fairly tried;
Should we not like his company
We know the world is wide.
Some may have faults, and who have not?
The old as well as young;
Perhaps we may, for all we know,
Have fifty to their one.

I’ll tell you of a better plan,
And find it works full well;
To try our own defects to cure,
Before of others tell.
And though I sometimes hope to be
Not worse than some I know,
My own shortcomings bid me let
The faults of others go.

Then let us all, when we commence
To slander friend or foe,
Think of the harm one word may be
To those who little know.
Remember, curses frequently,
Like chickens, roost at home;
Don’t speak of others’ faults until
You’ve tried to see your own.

Selected.

From Our Contributors.

God is Love.

BY WILLIAM CROFTS.

GOD is Love! sweet bells are ringing;
God is Love! Heaven's choir is singing;
Flowers of earth on hill and plain
Echo back the sweet refrain,
"God is Love."

God is Love! To mortal seeming
"God is Love" is idle dreaming;
Sin and sorrow, woe and pain,
Dull the song and mar the strain,—
"God is Love."

But when Love the Truth is voicing
In our lives with glad rejoicing,
When its power has snapped sin's chain,
Made the sick ones whole again,—
"God is Love."

When we see the dream of error,
Shorn of all its darkling terror,
Vanish at the dawn of day,
Fade in Truth's illumining ray,—
"God is Love."

When the broken heart is sobbing,
Panting, palpitating, throbbing;
Longing for a swift release,
Yearning for an inward peace,—
"God is Love."

When the happy tears of gladness
Wash away all mortal sadness;
When the heart goes out to God,
Melting 'neath His chastening rod,—
"God is Love."

Then for us sweet bells are ringing;
Then for us Heaven's choir is singing;
And our hearts catch up the strain,
Dwelling on the sweet refrain,—
"God is Love."

A Letter from a Christian Scientist to a College Friend.

My dear Professor:—Knowing your sincerity as a Truth-seeker, I am sure that your every criticism of Christian Science is the result of simple misapprehension, and I shall be glad indeed if I may throw some light upon the subject, in answer to your inquiries.

I am well aware, however, that the Truth cannot be taught; it is seen, apprehended in the quiet of the inner sanctuary through that individual enlightenment which is the essential fact of revelation; and all I can hope to do is to remove some of the occasions of stumbling, the grounds of that misunderstanding which lead to misjudgment.

You ask me to explain the act of faith, the "Science" which is so eventful and beneficent in its results. This question trenches upon a domain concerning which I express my own thought with ever-increasing modesty and hesitation. We know not the Philosophy of Being, and the how, the *modus* of the spiritual life is one of the many secrets embosomed in the Infinite. It may be said, however, that Science emphasizes the distinction between that faith which accepts as true some statement because of confidence in the one stating it, or because of satisfactory corroborating evidence, and that faith which is an apprehension, immediate and direct, of the truth stated. This

last Science declares to be demonstrable, the knowledge of the Truth which is the door to freedom, the understanding of God which is life eternal.

In keeping with this distinction Science declares that our only assurance of the possession of this faith is our ability to overcome evil, and the sickness and other disharmony it entails. You will readily see what an antidote this is for all self-complacency, self-deception and professional cant, and how it places religious faith upon that strictly Scientific basis which brings it into renewed accord with the position of Jesus who said: "The works that I do [in evidence of the truth of my words, the genuineness and adequacy of my faith] ye shall do also [and for the same purpose and end]."

Science further declares and demonstrates that divine Truth is the only effective agent, in the destruction of sickness and sin. It does not recognize, much less seek to utilize, any mental pose, any self-willed attitude of the sense-Ego which is the assertive fact of hypnotism, mesmerism, etc., with all of which Christian Science has practically nothing, either metaphysically or theoretically, in common. These, together with much mental healing, so-called, magnify the power and possibilities of the assertive material consciousness, in all of which they can but hinder the growth of true spirituality. Christian Science in its every phase, philosophy, and phenomena leads definitely and certainly to the realization of "the mind of Christ," the exaltation of God, Spirit, as the one in whom and through whom all real good is accomplished. Holiness, in Science, means health. The attitude toward disease is precisely that toward sin, and every effort toward health is a step toward holiness. This is a very distinctive and infinitely significant fact of Christian Science, that within its grasp every affliction, every limitation of the individual freedom, prompts and instigates to the achievement of a higher spiritual sense and standing, and herein is revealed the philosophy and demonstrable truth of Paul's declaration that "all things work together for good to them that love God."

In answer to your last query: "What causes this illusion of evil, this false belief?" I can only say that while the origin of the illusion of evil remains as one of the profoundest problems of the universe, a mighty stride is taken toward its solution when we apprehend the unreality of evil, for we are then relieved of that insistent query as to how God could persistently condemn any part or parcel of that universe which is sustained by the divine fiat, and manifests divine law.

"In him all things consist," and if evil has entity, any real being, it must be grounded in the one infinite source of being. Recognizing the unreality of evil we can but see that the illusion of evil (the evil sense with all its problems) will disappear with the acquirement of that true spiritual sense, that consciousness of good *which is the God-man*. The phantoms and obscuring mists will then vanish in the radiance of eternal verity, our apprehension of the truth of God, which can know no error. Until this higher plane is reached we shall find it more practicable and profitable to address ourselves to those problems which may and must be demonstrated in our schoolboy days, and in the solution of which we shall surely be led to the summit of broader and clearer vision.

Yours for the Truth,

J. B. W.

Unselfish Labor for Others.

BY M. I. M. T.

A RECENT editorial in the *Sentinel* contained a thought which has stayed in my memory ever since I read it. It was, in substance, that we must not live for ourselves, nor

even for others, but for God. In the old thought, to live for others seemed to me to be the goal for which all should aim, and that to be always trying to please those around us and make them happy was the greatest unselfishness. It was not till I came into Christian Science that I began to see the worthlessness of this so-called unselfishness; to see that to live for God and to live for others (in the old sense of the expression) were two very different things. To some it is a pleasure always to be doing things for other people and trying to please them, it makes them happy to be liked by every one and to be thought unselfish, and so they are not denying themselves at all but pleasing themselves, and all the time being deceived into thinking they are unselfish.

When we make up our minds to try to live for God, then we begin to be tested as to how far our unselfishness is genuine. Are we willing to sacrifice ourselves even when we receive no love or gratitude in return? Are we willing to risk people's displeasure for the sake of benefiting them? There is often much more unselfishness in withholding something from those we love than in indulging them. Are we ready to face their disapproval by sticking to a course which we feel to be right? Do we not often yield to those around us just for the sake of a quiet life or to avoid a scene; from laziness more than from unselfishness? Lately I have often come to the point where I have had to choose between pleasing God or pleasing man.

Although living to please others does not necessarily mean living to please God, yet if we are living for God alone it must follow that we are living for the good of others, though to their sense it may seem otherwise. The Master gave his life for the whole world, and yet he did not always please them. We must learn the true unselfishness and love that he had,—love that does not encourage selfishness in those whom it is lavished upon, or teach them to lean and depend upon *us*, but turns them away from themselves and us to God, who alone can supply all their needs. To deny ourselves utterly, as Jesus commanded, is to be absolutely governed by God, to do everything with reference to Him, not with reference to persons, and to be able to say from our hearts, "Not my will, but Thine, be done."

The Brotherliness of True Christian Scientists.

BY THOMAS W. WILSON.

WHEN one gains the understanding of Christian Science even in a small degree, he has taken upon himself the responsibility of using his understanding to the glory of God and the help and enlightenment of his fellow-men. The law is that he shall love all and do good to all.

There can be no conception in the mortal mind of material riches and good things that will for one moment compare with the unspeakable gift of God's love; for while all things material will waste away and disappear, the more of love we give to our brothers and sisters, expressed in thought, word, and deed, healing the sick and sinful, the more we shall have to give. Instead of decreasing our wealth, the giving of love increases our capacity to receive. All this wealth may be ours if we but cast aside the mortal self and become as a little child and thus enter into the kingdom of God.

They are coming from the east, the west, the north, the south; all nations, creeds, and tongues swell the throng; and just to the extent that they are able to realize the beautiful truth of Christian Science, they will cease to criticise and discredit each other, for they will know and acknowledge the one common Father of all. Individual Scientists who were formerly members of one denomination no longer draw the mantle of self-righteousness about them and cast critical remarks at a brother or sister who

was a member of another church; because just to the extent that he holds a discrediting thought over a brother because of his former belief, has he failed to divest himself of his own error, his old prejudice and hate. He recognizes they are brothers in the love that surpasseth all understanding. Each one found a thread in his former belief that has led him into the glorious light of the boundless love that Christian Science has revealed to him, and therefore is more or less sensitive to adverse criticism or harsh condemnation of his former faith falling from the lips of another.

The true Scientist does not give a stone to his new-found brother for the reason that he came from the east, the west, the south merely because of the fact that he himself came from the north, or because he formerly held some religious belief contrary to his own. He knows he must pluck the mote from his own eye. He realizes he has enough to do to build his own house aright, and that unless he is able to love his neighbor as himself he can in no wise enter into the kingdom. If he has realized the Truth of Christian Science, he knows that to drink freely at the beautiful fount, he must love his brother. This is the Divine law, and by it we shall be measured. Christian Scientists do not go far in earnest endeavor before they realize this truth, and learn "how good and how pleasant it is for brethren to dwell together in unity."

Lost Opportunities.

BY SOURIE LEE VAN HOOSE POLHILL.

How often do we Christian Scientists reproach ourselves, sometimes bitterly, because we failed to present the Truth to certain of our friends. How often does error tempt us to talk of other matters, thinking that Christian Science will not be interesting to this person, or that our friend may not be receptive. How do we know that this heart as well as many others in this day and time, is not also hungering and thirsting for the Christ-Truth? This is perhaps a God-given opportunity to you and to that dear one. In my own experience my punishment for such neglect is often swift and sure. And on the contrary, when I have put Satan behind me, trusted in divine Love, and poured out words of Truth and Life, I receive my reward often just as swiftly and surely. I will cite one instance.

This past summer, while at a pleasure resort in a large hotel, I met a celebrated Italian pianist and composer. I was much interested in and charmed by this gentleman. He was highly intellectual and produced wonderful music. I soon found, however, that he was at times moody and despondent and a great sufferer from dyspepsia. I longed to talk to him of Christian Science. One day when he was complaining and miserable, I told him of my own healing, and he was at once greatly interested; he begged to see the "little book" that had wrought such a wonderful cure. I gladly went to my room and brought forth "Science and Health with Key to the Scriptures," which he eagerly grasped, and was soon devouring its contents.

The next morning he met me with a radiant face, saying: "It is all good—it is really! Such sleep as I had last night, and no dyspepsia this morning, and I am bright and happy and enthusiastic," etc.

I remained there about a week longer. He still continued to read Science and Health and had not another trace of his old enemy. He seemed to see from the first that Science and Health was inspired, and constantly talked of its wonderful logic. He intends soon to order a book for himself. Let us not lose our opportunities. Be not afraid. Go out into the highways and hedges and compel them to come in.

Testimonies.

Overcoming Worldliness.

When sixteen, I came to New York to start in business, and had not been working long before several experiences brought me to the full realization that I would have to attain more than human goodness or human methods to overcome the worldliness and sensuality which was then in my way. I had known of Christian Science several years previous to my coming to New York, and believed thoroughly in its teachings, but I was evidently blind to the fact that I might use it in overcoming and destroying these worldly ways and be able truly to say, "I have no pleasure in them." I then resolved that there was but one way, and that the way Jesus taught and demonstrated. So, with this thought, I took my stand for Truth and with "Science and Health with Key to the Scriptures," I have been enabled to follow with a higher understanding the example which was set before us nineteen centuries ago.

It is needless to say that my desire for worldliness has diminished to such an extent that I feel I can honestly state the demonstration is being made daily.

I should like to tell of an experience which I had a few months ago. While riding on an electric car I started to walk down the side of the car, it being an open one. In stepping from my seat I lost my footing as well as my hold on the rail and fell to the ground. The car was going quite fast and I landed heavily on my right hand and shoulder, cutting my hand severely and straining the ligaments of my arm so that it was soon swollen twice the normal size. As soon as I had picked myself up, I realized that there was no accident in Truth, and that God was my protection, therefore I need have no fear. After treating myself that night the pain gradually disappeared. The next morning my arm was perfectly well and within a week every trace of the gash on my hand had disappeared. This is but one of the many things I am most grateful for.

The past three years of my life have to me been those of greater happiness than all the previous sixteen. If three years' practical experience in Christian Science will give five times as much pleasure as five times as many years in the old thought gave us, and it is happiness we are seeking, I will say, if the young men of to-day learn by another's experience, they will not waste so many years in learning the nothingness of all these material pleasures.

The stranger may say, "Yes, that is very well; but if I have not the wisdom or understanding, what then?" I refer that person to our text-book (Science and Health), wherein he will find a knowledge that will enable him to read the Scriptures with a higher understanding and attain the wisdom which meets all our needs. In James we read, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him," also in Proverbs, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding."

In Science and Health, p. 270, we read, "From the logic of events we learn that selfishness and impurity alone are fleeting, and that Wisdom will ultimately put asunder what she hath not joined together." From this we can readily see that worldly wisdom, understanding, and pleasure are of no avail when man is recognized as God's image and likeness, reflecting Life, Truth, and Love.

A. R. MACKINZIE, Brooklyn, N. Y.

Desire for Liquor and Tobacco Disappeared.

I first heard of Christian Science four years ago. At that time drinking and smoking were my comforters. I had lived almost constantly from childhood in that atmo-

sphere. I had no other associates. Though I was far from being satisfied with my condition I failed to see how to better it until I read Science and Health. I used occasionally to listen to a sermon, but sermons did not give me any more comfort than I derived from my pipe, hence I concluded the orthodox church could not satisfy me and I preferred drinking and smoking. When I began to read Science and Health I saw it offered something substantial. After a few months' study all desire for drinking and smoking disappeared. I did not give them up; I made no sacrifices, I simply found something better. I might mention that I smoked ever since I can remember. I used to smoke years before I left school, and, like most Englishmen, loved my pipe, and would almost prefer to miss a meal rather than to go without my smoke. I used to think it gave me comfort.

During my four years' study of Christian Science I have not spent a cent for doctors or medicine, neither have I lost a day from my work on account of sickness, which compares wonderfully with the previous four years. I take a great interest and pleasure in reading the Bible and studying the lessons in the *Quarterly*. The Bible used to be a most mysterious book to me, but "Science and Health with Key to the Scriptures" makes it a most precious book, making its meaning clearer, plainer, and simpler.

I take this opportunity to express my gratitude to Mrs. Eddy and to the friend who invited me to attend the service held in the Auditorium four years ago. I also wish to acknowledge the benefit I have had from the *Journal* and the *Sentinel*. They have helped me wonderfully. If the value of Science and Health and these publications were measured as business men value things, by the results or benefits they bring, they certainly would be priceless to me. It would be impossible to measure their value, as I have got something from Science and Health that all the money in the world could not buy.—H. P. H., Chicago, Ill.

The Fields are White already for Harvest.

During the month of December, having occasion to visit the town of Winsted, Conn., it was suggested that we should arrange to meet a few friends of the patient we were to call upon and talk to them in an informal way on Christian Science. On entering the parlor we found twenty-three persons who had come to learn something of the truths of Divine healing. After an hour spent in talking and answering questions, it was suggested, as there were so many interested, that they arrange to meet each Sunday and read the lesson. The following Sunday there were thirty-four persons present, and much interest was shown. On the third Sunday we visited the town for the second time, and in the afternoon there were forty-six present. At this meeting the regular service was held, the lesson for the day was read, and our hymnal was used, the friends having secured twelve copies from the publishers. At the service held January 13 there were forty-five in attendance, and all were much impressed with the beauty and simplicity of the whole service.

There were so many present at the third meeting who accepted the truth of Christian Science, and so much general interest was shown, that it was suggested that the friends arrange to form a society for regular service. This was done, and now as soon as a First and Second Reader can be secured in accordance with the requirements of the Church Manual, they will organize a permanent church society.

Truly the fields are white already for the harvest, and it only needs that those who have been blessed and made free be faithful to the teachings of our inspired Leader to assure a bounteous harvest.

C. A. Q. NORTON, Hartford, Conn.

Religious Items.

In an editorial on the "Falling off of Candidates for Orders" the (Episcopalian) *Church Standard* says: "In every great overflow of missionary zeal from the times of the Apostles until now, the economic element has counted for nothing. The men who carried Christianity to Gaul thought nothing of it. The Celts who carried Christianity to Scotland, who were the real Apostles of the Cross in England, and whose labors spread from Burgundy to Northern Germany—what did those men care for economic conditions? It is not a quite unthinkable hypothesis that our modern missions are failing to a very large extent because they are so generally administered on economic rather than on spiritual principles. Let the Church once breathe the Spirit of Christ and nothing that she undertakes will fail for lack of men to do her work. When the Church grows cold, is it surprising that her men grow cold along with her, and that, before they seek the ministry, they want to know the economic conditions on which they are to accept it?"

The following is from a sermon published in the *Homiletic Review*: "As a result of our faith, we are to have perfect peace of mind, and heart, and conscience—a sweet inward feeling of rest. We are also to be of an irenic disposition, and to maintain peaceful and harmonious relations with our fellow-men. The nature of our work here is inclined to make us quarrelsome and combative, and we should be on our guard against this. There are some men with whom you can hardly quarrel if you try, because they are of a peaceable mind; there are other men with whom it is difficult to spend one evening in social intercourse without getting into a dispute, because they are pugnacious. Now the proper attitude of the Christian is a peaceable one, and unless we have attained that disposition the Spirit has not accomplished His perfect work in us."

The *Congregationalist* for February 9, publishes an article by the Rev. Dr. Beach, one of the leading clergymen of the denomination, on "The Progress of Faith," in which he says: "Christianity's God of a century ago was far off; the world, the universe, were his structures, arbitrarily made, and operated by him from without, as a locomotive is built and driven. . . . The God of a century ago was Ruler, Sovereign; He ruled with inexorable moral sanctions; so much sin, so much punishment. The God of the beginning of the twentieth century is Father, Brother, Friend; His authority is not less, but it is a reasonable authority. It is not only God's law but the law of human nature, rooted by Him in the human constitution, so that one does a kindness to himself when he obeys the law. Of all this love is the mainspring."

The *Universalist Leader* says: "The man who takes for granted all the gifts of God, and only begins to realize their number and magnitude when bereft of any, lives a narrow, starved existence that scarcely merits the term 'life.' And if poverty or pain or sorrow become his guests, he has no solace to lessen the bitterness of their presence, but is either crushed or desperate, despairing or defiant. He has deliberately made himself a stranger to the possibilities of comfort and peace and patience and trust, and he shudders and shivers in the cold, dark night of misfortune, where he might find compensations that are the reward of the grateful man who gladly recognizes and esteems his mercies, and who renders thanks to God, the giver of every good and perfect gift."

In an editorial article regarding the formation of great industrial combinations, the *Church Standard* says: "It is curious to see how the socialistic tendency is being swept on by individual will; but the social demand is growing quite as rapidly as corporate power; and, in the end, society will always be found mightier than the greatest of its parts. Yet in human hands power is a perilous possession. Let us hope that the new-born socialism of corporations may be wisely used. If it shall be so, it may guide the

modern world into many a good thing in the coming century; if not it may collapse as suddenly as it has risen."

A sermon published in the *New-Church Messenger* contains the following: "The prayer that counts most is the living prayer of a good life, which looks continually to the Lord and, from Christian habit, brings every word and act in line with the teachings of the Christ. . . . The watch the Lord would have us keep is a life-long watch, a constant guarding against evil, a wide-awakeness to spiritual things, a never-ending hope of better things, an expectation of them, and a working for them. Doing this we shall be faithful and wise servants that wait for the coming of their Lord."

A committee representing the members of St. Paul's Protestant Episcopal Church of Boston, refused an offer last month of \$1,500,000 for their old place of worship on Tremont Street, in the heart of the shopping district. This site is an exceptionally fine one for business purposes and it will continue to increase in value. If the property were subject to taxation on the same terms as adjoining sites, the congregation would not likely be able to maintain religious services in the old house. The edifice was built eighty years ago.

The *Congregationalist* reports the following: "The owner of a factory in Washington, Ind., has engaged the pastor of the Presbyterian Church of the town to visit his factory each morning and give a fifteen minutes' sermon to the operatives, the preacher being on the pay roll of the factory and the men receiving pay for the time taken to listen to the sermonette. Since the men will not go to the church, they are to have the gospel taken to them."

William R. Moody, son of the great evangelist, said in a recent address at a meeting of the Boston Young Men's Christian Association: "Sin is a stain, and when a man has sin in him, he is befouled, corroded, blighted. Sin separates us from God. No man really prays to God if he is still living in sin. There is nothing more lonely than sin. A man with sin has the worst disease that any man can have—one infinitely more to be feared in its results than the small-pox."

The *Universalist Leader* says: "If you are not in the place to do the best of which you are capable, get into that place as soon as you can. Show by your fitness, your faith and earnestness, that you are qualified for it. If you are not doing all you can where you are, stay there until you more than fill the position. Overflowing labors of the sort demanded by the situation open the way to larger fields and improved circumstances."

The *Chautauquan* says: "American people pay \$2,000,000 a year for Bibles, \$500,000 a year for hymn and tune books, \$60,000 a year for prayer books, and \$11,750,000 for religious periodicals and other Christian literature. Methodists North alone pay into their two book concerns in New York and Cincinnati over \$8,000,000 each four years, and since their establishment in 1848 have paid to them almost \$70,000,000."

A writer in the *Congregationalist* says: "Unkind words may be forgiven, but long years go by and they are not forgotten. We who spoke and they who heard may desire to have them drop out of remembrance, but they come back to thought again in spite of us and hinder love. How brief the gratification of their utterance! How indelible their record in the heart!"

The (Baptist) *Standard* says: "If the world is to be saved through the instrumentality of the churches, the churches need to be more largely made up of those whose religion is becoming more and more their very life; something that determines and regulates and controls all the relations and activities of life."

The sacred rights of mankind are not to be rummaged for among old parchments or

musty records. They are written as with a sunbeam, in the whole volume of human nature, by the hand of the Divinity itself; and can never be erased or obscured by mortal power.

Alexander Hamilton at eighteen.

The *Christian Register* says: "All the world has been celebrating greatness and goodness. In America the virtues of the English queen and the great qualities of a chief justice of the United States have made noble ideals of character familiar, and have renewed the hope that they will finally prevail in human society."

The accession of King Edward to the throne makes it necessary to discard all the copies of the "Book of Common Prayer" now in use in the Church of England and substitute a revised book embodying the changes in the prayers for the royal family.

"It is a lovely and graceful thing to see men natural. It is beautiful to see men sincere without being haunted with the consciousness of their sincerity."

F. W. Robertson in the *Examiner*.

The (Methodist) *Christian Advocate* says: "The law of God includes thoughts, feelings, and words no less than acts. To qualify him for this every man must be born again."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston, exchange on Chicago or cities other than Boston or New York will not be accepted.

All orders for Journals, Sentinels, Quartermasters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

Political and Governmental Notes.

Senator Morgan of Alabama, the most persistent advocate of legislation looking to the construction of the Nicaragua canal, made a speech in the Senate on March 6, on his resolution to abrogate the Clayton-Bulwer treaty, in which he insisted on the absolute right of the United States to annul the treaty and build the canal without consulting Great Britain. He indulged in fiery language in denouncing the attitude of Great Britain, and prophesied the downfall of the empire if the United States should be provoked to war. The London press made no serious comment on the speech.

The river and harbor appropriation bill which was left to the last hours of Congress, failed to pass because it was overloaded with provisions for some localities where the expenditure of the nation's funds was deemed unjustifiable, and in making up the bill provision could not be made for the enterprises of national importance without satisfying the demands of Senators and Congressmen who wanted some of the government's money spent in their own states or districts, regardless of the utility of the works they proposed to have done.

Statements of the appropriations of the Fifty-sixth Congress have been prepared by Chairman Cannon of the House committee on appropriations, and Representative Livingston, the senior Democratic member of the committee. Both place the total at \$1,440,062,545, the appropriations for the first session at \$710,150,862, and those for the second at \$729,911,683. The total appropriations made by the Fifty-fifth Congress was \$1,568,212,637, and of the Fifty-fourth Congress, \$1,044,580,273.

In one hundred and ten years the United States Government has lost through dishonest agents and officials, approximately \$16,000,000 in the handling of gross receipts of \$32,663,313,548.13. At the solicitor's office in the Treasury Department is kept a minute record dating back to 1789. It includes not only defaulters and embezzlers, but their bondsmen as well. It is an interesting fact that for twenty years after the organization of the Government there was not a single defalcation.

The inaugural ceremonies on March 4, were on an imposing scale, exceeding in magnificence anything ever known in the history of the country, and the crowds of spectators were vastly larger than ever known. Although it rained in the latter part of the afternoon, the weather was very satisfactory all the rest of the day. While the President was taking the oath of office the weather was all that could be desired and the crowds witnessed the ceremony in comfort.

The lower house of the Indiana Legislature has passed a measure providing for submission to the vote of the people of a constitutional amendment giving women the same voting privileges as men. If the Senate passes the measure it will still have to be approved by the next Legislature, before the amendment can go before the people.

The Hay-Pauncefote treaty, intended to pave the way for the construction of a ship canal across the Isthmus of Panama, lapsed at noon, March 4, without having been ratified. Negotiations will be taken up between the United States and Great Britain again in the near future for the purpose of making another treaty.

A special dispatch to the London *Daily Mail* from Copenhagen, dated March 8, says that the United States has addressed a note to the Danish government to the effect that it will not permit the transfer of the Danish West Indies to any foreign power.

Carter H. Harrison was nominated by acclamation for mayor of Chicago for the third consecutive term, by the Democratic city convention March 5. A resolution was adopted favoring municipal ownership of all public utilities.

The bill appropriating \$5,000,000 for the St. Louis exposition got safely through both houses of Congress before adjournment, and was promptly signed by the President.

The United States Senate convened in extraordinary session March 5, at the call of the President. The deliberations were confined to executive business.

Foreign News.

Lord Kitchener reported on March 6 that he was sending reinforcements to the relief of the British garrison at Lichtenburg which was surrounded by the Boers on March 3 and fiercely attacked, resulting in losses to the British. The garrison consists of five hundred men.

Reports were published in the London papers last week that Lord Kitchener and Sir Alfred Milner were in consultation with General Botha, commander-in-chief of the Boers, with regard to terms of surrender, but the reports lacked confirmation. The British government is continuing to forward reinforcements, the announcement having been made that twelve thousand fresh troops will sail for South Africa this week.

The most stormy scene that has probably been known in the British House of Commons in a century was enacted early in the morning of March 6, by the Irish Nationalist members and the London police. Thirty or forty Nationalists were ordered by the speaker to retire, and they refused. The police were called in and a desperate struggle followed. Ten Irish members were carried out bodily before the House adjourned. The ejected members struggled so fiercely that four or five policemen were needed to handle each member. On March 7 the unruly members were suspended.

Acting Minister Rockhill has advised the State Department at Washington that the aggregate of demands for indemnity against China is likely to be between \$500,000,000 and \$600,000,000. He says that China cannot pay such an amount.

General Weyler, whose treatment of the Cubans did so much to arouse the anger of the American people, has just been appointed minister of war in the newly formed Spanish cabinet.

It is announced that King Edward has issued a letter patent empowering the Duke of Cornwall and York to confer knighthood while he is in Australia.

The municipal expenses of London are about sixty-six million dollars per annum.

Industry and Commerce.

On account of the demand by Alaska miners for Navajo blankets, these fabrics, which have sold chiefly as novelties, are taking rank as merchantable commodities. These blankets are made by the Navajo Indians, who occupy a reservation containing some eight million acres of land in Arizona. They raise sheep and make blankets, and are enjoying a very fair degree of civilization. Their method of making blankets has been handed down from remote generations. It is very primitive and entirely unique. The blankets are very heavy, weighing from twenty to fifty pounds each, and they are said to be practically imperious to cold. It is claimed that they wear for centuries.

A huge steel floating dry dock is being built for the United States navy at Baltimore, which, when completed some time this spring, will be towed around the coast to Algiers, on the Mississippi River, near New Orleans, where the water is deep and free from salt. This dry dock will be the largest in the world, and will accommodate the heaviest warships either now existing or being built. Four tug boats will be required to tow it on its voyage to the Gulf.

The dam across the Nile at Assouan on the first cataract has been completed, and more than half a million acres of arid land will be made fertile. The great service the dam will render all Egypt, is in the storage of the Nile waters, so that they may be held back and regulated according to the needs of the crops in the Nile valley.

The one hundred and twenty-four lake vessels operated by the various companies absorbed by the new steel trust, are to be formed into two great fleets to be operated by two auxiliary companies.

There was not an inch of railway laid in Britain when the late queen was born; to-day there are twenty-one thousand miles and one thousand million passengers travel over them every year.

The Inter-Island Telegraph Company has given formal notice of the opening for business of the wireless telegraph system between Honolulu and the island of Maui.

According to recently published statistics Berlin possesses more than 50,300 telephones.

General News.

Circuit Judge W. C. Benet of South Carolina has discovered and exposed what is represented to be practically a system of negro slavery in that State, conducted under the guise of penal servitude. He has charged the grand jury to investigate the outrages and has appointed June 1, for hearing the cases of those to be indicted. It is charged that in Anderson County innocent negroes were arrested and leased to farmers as convict laborers, in some cases without any pretense of a trial, and that the farmers treated the negroes just as brutally as the most cruel slave holders in the days before emancipation. They were herded together in a stockade at night, and armed guards placed over them, and they were whipped by the farmers and the overseers.

The famous mansion which A. T. Stewart built as a residence for himself more than a quarter of a century ago at the corner of Fifth Avenue and Thirty-fourth Street, New York, which later was the home of the Manhattan Club, is being torn down. The mansion cost over one million dollars, and it was sold as it stood for its estimated value as a pile of second-hand building material.

A committee of the Alumni Association of the United States Naval Academy has undertaken to raise \$1,000,000 to build a colossal arch and water gate in honor of the navy. The site selected is on the sea wall of the Battery at the foot of Broadway, New York.

CHRISTIAN SCIENCE SENTINEL

The World's Outlook for Peace.

What has been Accomplished During the Past Century.

It is not safe to judge of any great movements by short views. Superficially, the present condition of international politics is not encouraging to lovers of peace. The great armies and rapidly growing navies of the world, if one look no further, half incline one to believe that war is to be eternal, and that civilization is to be finally crushed out under the ponderous wheel of the juggernaut of militarism. But a comparison of certain conditions existing at the opening of the nineteenth century with those found at the beginning of the twentieth makes it impossible to hold any such pessimistic opinion.

1. At the commencement of the nineteenth century war was practically universal and unceasing in Western Europe, or what was considered the civilized world. Of duelling there was no intermission. The campaigns of Napoleon,—from 1796 to 1815,—which cost Europe between five and six millions of men, are sufficient proof of the former statement; the latter needs none. At the opening of the twentieth century duels are unknown in a large part of the civilized world; and Western Europe has had not a single battle for thirty years. Wars are now not only much more infrequent, but also much shorter than they were a century ago.

2. At the beginning of the nineteenth century there had been no cases of international arbitration worth speaking of. At the opening of the twentieth, the record shows, according to the list given in Dr. Darby's "International Tribunals" (London, The Peace Society, 1900), no less than 195 disputes settled by arbitral tribunals. The first decade of the nineteenth century saw no cases, the third decade but four, while from 1890 to 1900 there were 63 cases; and a number are now pending.

3. At the beginning of the last century no peace association had come into existence or even been thought of. At the present time there are 91 general peace societies, with 347 branch associations, or 437 organizations for the promotion of international peace, doing their work in all parts of the civilized world. Many of these societies have for years been on a permanent footing, and they have for eleven years been united into a permanent international union through the Peace Bureau at the international city of Berne. Some of the most vigorous of these organizations are associations of women, of which there was not the remotest prophetic hint a century ago.

4. At the beginning of the nineteenth century no peace congress or conference had of course been held. There was nothing out of which to make one. At the close of the century, besides the official Hague Conference, fourteen international peace congresses have been held,—a series of five between 1843 and 1852 and a series of nine from 1889 to 1900,—in which twenty-four nations have been represented. Besides these, various national conferences for the promotion of arbitration and peace have occurred, like that held annually at Lake Mohonk for the last six years. The peace congress is one of the settled phenomena of the day.

5. At the beginning of the last century no national legislative body had considered, or been asked to consider, a resolution in favor of the general application of arbitration in the settlement of controversies between nations. At the close of the century, resolutions of this nature had been passed by the Parliaments of nearly all constitutional governments, a number of the most important of them by unanimous vote. The civilized world, through its parliamentary representatives, is now on record as not only believing that arbitration is practicable, but also that it *ought* to be generally adopted.

6. At the commencement of the nineteenth century, arbitral clauses in treaties of commerce were unknown. At the close of the century nearly all important commercial treaties contained an article stipulating that questions arising in the application or interpretation of the treaty should be referred for settlement to a board of arbitrators. The insertion of the arbitral clause in commercial agreements is now the fixed practice. Industrial arbitration also, which was unthought of a century ago, has recently come into great prominence; and ordinary cases at law are in our time, with increasing frequency, coming to be settled by arbitral methods instead of being allowed to go through regular legal processes.

7. A hundred years ago the idea of international treaties of arbitration had not appeared. Now we have The Hague general treaty between twenty-six powers, representing five sixths of the territory and people of the globe. Besides this, Italy and the Argentine Republic have for three years had a treaty of *obligatory* arbitration, under the provisions of which they pledge themselves to submit to arbitral tribunals all differences arising between them which cannot be adjusted by diplomacy. The Argentine Republic is in process of negotiating similar treaties with neighboring South American States, and there is a strong movement of opinion in favor of treaties of this kind between all the great civilized powers.

8. At the opening of the nineteenth century there was no organization for the study and development of international law, which was then only a shapeless and incoherent mass of customs and precedents. Now for about thirty years two organizations of this kind have been in existence,—the Institute of International Law, a body of experts, and the International Law Association, an organization of experts and others, the chief purpose of which is the reform and codification of international law. In addition to these the leading bar associations of the civilized nations now give large attention to the subject of international law.

9. At the beginning of the last century—even at the middle of it—no member of a national parliament had ever thought of entering into fellowship with members of other national legislatures to promote good understanding and the pacific settlement of controversies. One who had proposed such a thing would have been declared a traitor to his country. At the opening of the twentieth century the most important unofficial body of public men in the world is the Interparliamentary Peace Union. It consists of about fifteen hundred members and ex-members of Parliament, who for eleven years past, by means of annual conferences

and conferences of the national groups, have been doing most efficient service for the establishment of a permanent system of international justice. One or two Russian statesmen, though Russia has no Parliament, have been admitted into the Union.

10. At the beginning of the nineteenth century he would have been declared the wildest and absurdest of dreamers who had predicted the setting-up of a permanent international tribunal of arbitration within a hundred years. The possibility of such a tribunal was not much talked of till after 1830. Only within the last decade of the century did it become clear that civilization had reached a point where such an institution was absolutely indispensable. This supposed absurdest of dreams is now a reality, for the President has officially announced from Washington that the Permanent International Court of Arbitration is now fully organized and ready for business.

11. At the beginning of the nineteenth century there was no peace literature except the New Testament, some passages in the works of the Church Fathers and the Reformers, William Penn's "Essay toward the Peace of Europe," Kant's "Eternal Peace," and two or three other tractates of similar character in France and England. Today the body of peace literature has grown so large that it would require not much less than fifty duodecimo pages to contain merely the titles of the books and pamphlets which have been written. Three of the important—in some respects the most important—works which have been published in the last decade are Prof. John Bassett Moore's "History of Arbitration," in six volumes; Mr. John de Bloch's monumental work on "The Future of War," in six volumes; and Mr. Novicow's work on "The Federation of Europe," just published in Paris. The cause of international peace is fast invading all literature. The cause has now its own established organs,—nearly a score of them,—and many of the common newspapers have frequent slight attacks of the peace malady.

12. At the beginning of the nineteenth century war was almost universally considered great and glorious. It was the career of honor, and there was no open opposition to any war arising. The people of every country went, as a matter of course, *en masse* with their government into every war that arose. The present contrast with this condition of a hundred years ago is very marked in three respects: there is a considerable body of people in civilized countries, the number of which is steadily increasing, who declare all war to be wrong, irrational, and barbarous, and who do not hesitate to lift up their voices in open protest, not only against wars in general, but with equal vigor and directness against the wars upon which their own countries enter. The class is still larger of those who, though believing war to be not fundamentally evil, consider it to-day to be outgrown, unnecessary, and grotesquely absurd, and who protest against it no less vigorously than the radical men. Then, thirdly, the general dislike of appealing to the sword has become so deep-seated and wide-spread in civilized lands that any government which goes to war to-day is compelled to justify its course on the ground that it is demanded by humanity.

These twelve contrasts between the opening of the last century and the dawning of the present make it perfectly clear that the hope of the speedy coming of permanent international peace can no longer with any justice be characterized as groundless and absurd. If the development of the movement goes on as rapidly the next hundred years as it has the past,—and there are many reasons for believing that it will be more rapid still,—it is difficult to conceive what other result it can possibly have at the close of the twentieth century than that of universal and permanent peace.

In the *Christian Register*.

Selected Articles.

Vital Questions Answered.

HAVING noted much in the press on certain questions relative to Christian Science, including frequent public reports of deaths under this system, a reporter for the *Journal* interviewed Alfred Farlow, the well-known Christian Scientist, with the following results:—

"Do Christian Scientists lose many patients? And why are their losses so extensively published?" queried the reporter.

"A few cases published in multitudinous ways give the impression of a multitude of cases," said Mr. Farlow, "and I presume that such is the purpose in the minds of those who write these reports for the press, most of which are prepared by the enemies of Christian Science, or at the instigation of its opponents, and are handed to the newspapers, where they are generally published without much thought.

"After many years' experience with newspaper men I find them usually fair and broad-minded, and this fact is evidenced in their willingness to publish both sides of all questions. A large majority of those who place themselves under Christian Science treatment have already exhausted their faith in other remedies, so that their condition is critical when they fall into the hands of our practitioners. Many of such cases are saved, while some are lost. It would scarcely be just to charge such failures to neglect or the alleged fanaticism of Christian Scientists, since these patients are already considered incurable. Whatever others may think, Christian Scientists, most of whom have tested the regular schools, are convinced that a smaller per cent of people die under Christian Science treatment than any other system, and I think it is quite generally conceded by those who are not believers that a more general uniformity of health and happiness is to be found among those of this faith than any other class. A friend said to me, 'I will admit that you Christian Scientists keep provokingly well and happy.'

"A very large proportion of the failures which are charged to Christian Scientists are erroneously so charged, while the reports of others are exaggerated, only giving those points which are unfavorable, and excluding historical facts in the various cases which would make the reports much more favorable toward this form of treatment. For example: A short time ago it was reported that a Christian Scientist in New York City died from pneumonia. This I learned to be true; while I also learned that he had been healed several years ago of an organic heart trouble which had been pronounced incurable. Another case was reported to have died from consumption. Investigation revealed the fact that the woman had exhausted all hope in medical skill, and was given up by her physicians twelve years ago; but had been kept alive all these years by her dependence upon Christian Science. A child was said to have died of diphtheria; and after thorough investigation we failed to find any individual by the name given; neither could we find any case which had been under Christian Science treatment in that place, nor any one who had died with that disease. I might enumerate many more instances, but space will not permit. To name Christian Science and the healer in connection with a death, even when true, is irregular and hence unfair; since the school and doctor are not usually named in connection with those who die under other systems, and the effect, therefore, is to emphasize the impression that the practitioners of this faith are losing more cases than other systems."

"Do Christian Scientists believe in vaccination and in sanitary laws? Is it true, as has been alleged, that the Christian Science text-book inculcates a disregard of san-

itary measures and common cleanliness, or principles whose logical conclusions lead thereto? And do Christian Scientists report contagious diseases?"

"The following," replied Mr. Farlow, "is a statement which has recently been given out by Rev. Mary Baker Eddy, the leader of this movement:—

"On the subject of reporting contagion, I have this to say: I have always believed that Christian Scientists should be law-abiding; and, actuated by this conviction, I authorized the following statement, which appeared in press about a year ago:—

"Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights and governmental usages."

"This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: 'Render unto Cæsar the things that are Cæsar's,' even while you 'render unto God the things that are God's.'"

"Some Christian Scientists are careless in reporting contagion for the same reason that many who are not of this faith are thoughtless in the same respect; simply because they are careless generally, not having proper regard for others, and proposing to do as they please. It in no way conflicts with Christian Science treatment to report such cases, and to do this is the intention of our denomination. The lives of Christian Scientists will attest that their doctrine inculcates that 'Cleanliness is next to godliness,' and they are for this reason firm believers in all reasonable sanitary methods. The logical conclusions of our religion are full of good sense, and stimulate the Christian desire to love one's neighbor as one's self.

"Some of our critics confound the mental modes of this school with its teachings in respect to outward dealings with our fellow-men. Whereas, while conviction forces the Christian Scientist to be radical in his reliance upon spiritual power, on the other hand, moderation and charity toward others' views place him under an equal obligation to respect the laws and customs of the people among whom he lives. Such we believe to have been the practice of the early Christians. For example: This Science reiterates, 'Take no thought for the body,' but 'Seek ye first the kingdom of God and His righteousness.' This teaching of our Lord must refer to the mental recognition of God's power and His government to the exclusion from thought of the material body and its wants, as Paul indicated in the statement: 'We are confident, I say, and willing to be absent from the body, and to be present with the Lord.'

"The Christian Science text-book, 'Science and Health with Key to the Scriptures,' criticises the placing of undue dependence upon bathing, scrubbing, etc., as a means to health, while the better part, the mental recognition of the omnipotence and omnipresence of God, is forgotten. Christian Scientists believe in a high degree of cleanliness and decency, and their doctrine on this point should be judged from the general practice of its adherents. Are Christian Scientists less scrupulously neat in life and person than other people?"

"Do Christian Scientists neglect their patients?" was the next question.

"While the practitioners of this school do not administer medicines," Mr. Farlow answered, "yet they are very attentive to their patients and always see that their material wants are well supplied. The sick are always given proper food and attendance."

"What about the charge that children should be pro-

tected against the practice of being forced under Christian Science treatment?"

"The children of Christian Scientists as a rule understand this faith and can heal, and are anxious to have Christian Science treatment when they cannot conquer for themselves. Young children have been known to heal and to keep themselves well. We see no reason why Christian Science parents and guardians should not be allowed the same privilege which is accorded to other believers—a choice of remedies for their little ones. If *materia medica* had proven itself a sure cure there would be just cause for forcing every one to resort to the use of medicine; but so long as thousands die daily under the regular schools, a large per cent of these being children, there is little ground upon which to assume that Christian Scientists should be forced to the same remedies under which millions of their neighbors have fallen.

"To decide the efficacy of a given system of healing, its general or aggregate results must be considered. To assume that Christian Science is a menace to life and health simply because it differs from other schools is perhaps natural, but not fair. All established methods have had at least some success, while the untried seems a risk to the conservative, however much virtue there may be therein. Christian Scientists have great charity for the opinions of those who are not thoroughly conversant with their methods and their results. They nevertheless have a right to expect that a very broad hearing should be had on this subject before judgment is passed—such a hearing as will include a general review of the successes of their practitioners, and not merely a scrutiny of their failures.

"It has been asked: 'Can Christian Scientists diagnose cases sufficiently to know when to report a contagious disease?' Christian Science will surely provide for all the necessities of its practitioners. God's promise is to just such an occasion, and it cannot be less applicable to direct men's thoughts rightly on such important subjects when healing disease. Jesus said: 'Ask, and ye shall receive.' Furthermore, it should be remembered that while Christian Scientists do not claim an intimate physical knowledge of the ills of the flesh, they are able to diagnose correctly from a spiritual standpoint, and thus note the true nature of disease and are enabled thereby to heal by means of their understanding of the divine Power.

"As a proof of this they would point to what has been accomplished. So far as contagion is concerned, this seldom enters the homes of Scientists, for their understanding of the Divine power and presence is generally sufficient protection, and they have also been very successful in healing these troubles when called upon to do so."

Boston Journal.

Christian Science and Anti-healing Ordinance.

Editor *Times-Union and Citizen*.

A number of Christian Scientists have been questioned as to the ordinance on healing lately passed, the substance of the questions being as follows: "Does the late ordinance affect the Christian Scientist and his work?" Not at all. The statement of Councilman Perry that there is a large difference between Christian Science and practices simulating it, covers the ground. There is absolutely no connection or semblance between Christian Science and any other kind of healing, medical, magnetic, hypnotic, etc. Christian Science practice is prayer to God, and the recognition of man's spiritual estate, his exemption from condemnation of mind and body, because he is under "the law of the spirit of life in Christ Jesus," which makes him "free from the law of sin and death."

"But how about the healer of the sick, lame, etc.?" In the first place, God alone is the one and only Healer. No

Christian Scientist ever yet claimed to heal anything or anybody. It is the word of God, scientifically understood and applied, which heals the sick. As David said: "He sent his word and healed them." Though endeavoring to follow Christ in all his ways, no Christian Scientist claims to have equaled or excelled the Master, and even he did not many mighty works in some places because of their unbelief.

"But you know the receiving of pay for services might be termed 'doing business.'" If time and space were allowed me, I feel that I could make that so plain, from Scriptural authority and reasoning, that even the so-called bitterest enemy would never say another word. But the money question provokes a smile. I have never yet heard of a Christian Scientist who has accumulated wealth from his Christian Science practice. From my own knowledge of the work here, nine tenths, I may truly say, has been freely and gladly given to humanity, and the only recompense has been joyfully to see the power of God heal and regenerate. When the Christian Scientist, trying to love his neighbor as himself, endeavors in every way possible to help the sick and unfortunate, even, in many cases, supplying the material necessities of life, think you that any body of men could, or would, make a law to lay one straw in the way of such Christly work? The prosperity of our church is not due to "fat fees" extorted or received; but from a fuller trust in God as their healer and supply, the members are enabled to give more to the cause they love.

"Then you are not alarmed, and will go right on with your work as usual?" Understanding God's loving care, we see "his hand in all things, and all things in his hand," hence nothing can truly alarm or dismay. Earnestly striving for the kingdom of God, and having put our hand to the plow, we cannot look back.

It is earnestly hoped that every member of that council may be present at our opening services next Sunday, if for nothing else than to learn that he has not laid a straw in the way of those who carry only love, as a beacon light, to the sick in their darkness, and that "love is the fulfilling of the law."

A. R. DORAN.

In the *Florida Times-Union and Citizen*.

Not a Christian Scientist.

THE impression at Marlborough, that the man who lectured in the M. E. Church at that village on Physiology, was a Christian Scientist, has done great injustice to the adherents of the latter faith. The minister of the M. E. Church of Marlborough says the man was not a Christian Scientist, but a music teacher from Newburgh, and the false impression may have been occasioned from the fact that at one time he circulated a paper called *Divine Healer*.

The following letter from Willard S. Mattox covers the incident so clearly that there is no mistaking the position of the Christian Science Church upon a subject of this character. It also declares that there are no irresponsible lecturers associated with that church in any part of the world:—

OFFICE OF THE
CHRISTIAN SCIENCE PUBLICATION COMMITTEE
FOR THE STATE OF NEW YORK.
No. 143 West 48th St.

New York, February 8, 1901.

To the Editor of the *Leader*.

Dear Sir:—Your issue of February 5 contains an account of a so-called Christian Scientist who gave a series of lectures in Marlborough. I do not know the person referred to by you, nor is his name given in your account, but I desire to correct the impression that he is a Christian Scientist. Whether this impression emanated from the man referred to, or not, makes no difference.

If your report be correct, he is not a Christian Scientist,

—for two reasons. There are no irresponsible peripatetic lecturers associated officially, or in any other way, with the Christian Science Churches of any part of the world. There is an organized body of lecturers, known as "The Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass." Lectures are given by members of this body, under the auspices of the various churches. There is no Christian Science Church in Marlborough. But if this were not enough, there is ample reason for knowing that this man was not what you say he claimed to be. If your report of this lecture be correct (and my denial is based on the assumption that it is) this individual could not be a Christian Scientist; for nothing that a Christian Scientist would say, could cause "modest men to blush with shame." No Christian Scientist would "degrade and belittle womanhood;" no Christian Scientist could utter a syllable that could be designated an "immoral talk."

It must be plain that if this man were a follower of Mrs. Eddy, and *did* say the things attributed to him, then the public would have reason to condemn Christian Science and its adherents. But I know too well what the teachings and practices of Christian Science are to believe for an instant that any one, actually a student or member of a Christian Science Church, could speak aught that would degrade or demoralize. Christian Science stands for purity and morality; for godliness; for all that is clean and healthy and normal in life. The Christian Scientist reckons himself as God's child, and remembers Jesus' command, "Be ye therefore perfect, even as your Father which is in Heaven, is perfect." The carnal mind, with its deeds, is being put off day by day by the faithful Christian Scientist, who is trying to live closer to the mind which was in Christ Jesus. Such efforts cannot result in evil, but make man better, because they bring him nearer to God.

The only purpose and desire of this letter is to correct the false notion that Christian Science is responsible for such affairs as you describe, and to show how utterly impossible it is for a consistent Christian Scientist to say or do what is credited to the person referred to.

Yours truly,

WILLARD S. MATTOX.

In the *Kingston (N. Y.) Daily Leader*.

The Unparalleled Century.

One hundred years ago! What a remarkable story the panorama of the closing century reveals! In 1800, our country was a plucky fledgeling, healthy, vigorous, ardent in hope, high in resolve. Our total population was less than 5,500,000. Germany and Britain each had four times our number, Spain twice as many, and even little Portugal had as big a family of sons and daughters as Uncle Sam. West of the Mississippi, all was wilderness. We had thirteen little states and few cities of prominence except Philadelphia, New York, Baltimore, Boston, and Charleston. The entire revenue of the United States government under our first administration was only \$4,500,000, while it now costs annually \$98,100,413.33 to defray the expenses of the government of Greater New York. Washington was then a new settlement, with only a few thousand population, and had been only lately made the capital. The total wealth of the country was roundly estimated at \$200,000,000, or a very little less than forty dollars per capita.—WILLIAM BROOKE SANDISON, in *Success*.

To-day our hearts like organ keys
Our Master's touch are feeling;
The branches of a common Vine
Have only leaves of healing.

WHITTIER.

The Lectures.

At New York, N. Y.

The Broadway Theatre, the largest in New York City, on Sunday afternoon, March 3, contained an audience of upwards of twenty-four hundred persons, all deeply interested in a lecture on Christian Science.

John Carroll Lathrop, C.S.B., Second Reader, Second Church of Christ, Scientist, New York City, opened the afternoon exercises by reading a brief selection from the fifth chapter of Matthew, the Christian Science tenets, and two pertinent paragraphs on the restoration of Christian healing from the Christian Science text-book, at the close of which in a few words, he introduced Mr. Norton, who spoke for an hour and fifteen minutes on the primary teachings and works of Christian Science, as shown in its first third of a century's existence.

The lecture was given at a time in the history of the movement in the metropolis when public interest was conspicuously marked.

Says the *New York Journal* of March 4:—

"'A Third of a Century of Christian Science,' was the subject of a lecture delivered before an audience that filled the Broadway Theatre yesterday afternoon, by Carol Norton, C.S.D., of New York City. Mr. Norton is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston. John Carroll Lathrop, C.S.B., Second Reader of Second Church of Christ, Scientist, of this city (the marble temple now being erected on Central Park West at the corner of Sixty-eighth Street), presided at the lecture and introduced Mr. Norton."

Mr. Lathrop spoke in part as follows:—

Friends:—We have gathered here to-day to learn more of a subject which is arresting the attention of the civilized world. I shall not encroach upon the time allotted to the speaker of the afternoon, but desire simply to say that I only wish that every person in this audience knew what Christian Science really is. I believe that if it were clearly known that Christian Science finds man, the real man, to be the image and likeness of God; and that it finds this real man to be the idea of God, and the reflection of God; and thus finds that man has dominion over all the ills of the flesh, such as sin, disease, and death; if it were known that this system of religion (which is at once a religion, a medicine, and a science), has not come to destroy the law but to fulfil the law,—I say that if this were clearly known,—none would strive to discourage it, but all would love, honor, and seek it.

I have the great pleasure of introducing the lecturer of the afternoon, Carol Norton, C.S.D., of New York City, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., who will address you on the subject "A Third of a Century of Christian Science." I bespeak for him from this fine audience an impartial and just hearing.—*Correspondence.*

At Jacksonville, Ill.

A lecture was given here Thursday evening (February 21) by Judge William G. Ewing. The hall, seating about four hundred, was comfortably filled, the audience was very attentive and appreciative, and the time passed altogether too quickly. The sweet message of love, so lovingly presented, comforted many a heart, and the extent of the good accomplished may not be realized at present, but it is immortal and will bring forth fruit. A man in the audience who knew nothing about Christian Science before hearing the lecture, said, "That was the sweetest sermon I ever heard." Scientists were in attendance from Springfield, Ill.

We are grateful to the Board of Lectureship, as well as to The Christian Science Publishing Society in its field of labor, for the good being done in presenting so ably to all the world the message of Truth and Love.

Correspondence.

At Lincoln, Neb.

At a largely attended meeting at the Oliver Theatre yesterday afternoon (Sunday, February 24), Dr. S. J. Sawyer, C.S.D., of Milwaukee, Wis., spoke on "True Sonship in Christian Science." He was introduced by Dr. F. L. Wharton of St. Paul's M. E. Church.

Nebraska State Journal.

Description of Christ.

THE following beautiful description of our Saviour is said to have been found in a manuscript written by Lucius Lentulus, President of Judæa, to the Roman Senate, and is well worthy of preservation by those who are his followers at the present time:—

"There is at present a man in Judæa of a singular character, whose name is Jesus Christ. The barbarians esteem him as a prophet, but his followers adore him as the immediate offspring of the immortal God. He is endowed with such unparalleled virtue as to call back the dead from the grave and heal every kind of disease with a word or touch. His person is tall and elegantly shaped, his aspect mild and reserved. The hair flows in those beautiful shades which no united color can match, falling into graceful curls below his ears, agreeably touching on the shoulders and parting on the crown of his head, like the head-dress of Nazarenes. His forehead is smooth and large; his cheeks, without spot, are of a lovely red; his mouth and nose are finished with exquisite symmetry; his beard is thick and suitable to the color of his hair, reaching a little below his chin and parting in the middle like a fork; his eyes are large, bright, and serene. He rebukes with mildness and invites with the most persuasive language, his whole address, whether in words or deeds, being elegant, grave, and strictly characteristic of an exalted being. No man has ever seen him laugh, but the whole world beheld him weep, and so persuasive are his tears that one cannot refrain from joining in sympathy with him. He is modest, temperate, and wise; and whatever the phenomenon may turn out in the end, he seems a being of excellent beauty and divine perfection, in every respect surpassing the children of men."—*Selected.*

The Beauty of Holiness.

BY ELIZABETH EARL JONES.

Oh, worship the Lord in the beauty of holiness,
Wholly apart from sin;
Wholly one with the heavenly throng,
Conscious of the peaceful song
Of angel thought within.

Wholly one with Thee, dear Father,
Trusting in Thy might;
Rejoicing amid the angry storm,
Knowing the herald of the morn
Is the darkest hour of night.

Oh, worship the Lord in the beauty of holiness,
Murmuring not at the rod,
For wholly free from self we must be
To show forth, in Love's ministry,
Man's unity with God.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Scientists and Compensation.

WE have pleasure in herewith republishing the able article of Alfred Farlow, C.S.D., recently published in the *Daily Press-Knickerbocker and Albany Morning Express*, upon the above topic. Mr. Farlow sets forth many sensible views which should and will address themselves to sensible people everywhere. We might discuss at length the injustice, if not the folly, of any attempt to prevent Christian Scientists from receiving fair compensation for their services. As a matter of fact, their scale of charges, so far as they have any, is more to secure reasonable compensation for the time actually given to their work, than compensation for services rendered, although the latter is an entirely just factor to be considered.

Mr. Farlow's article is as follows:—

Editor Press-Knickerbocker-Express:—In answer to the question, Have Christian Scientists a right to charge for their services? I would say:—

The universal law of compensation would grant this. One might be unselfish enough to labor for another without a fee, but in so doing he is allowing the other to be selfish. Paul said: "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?" Moses said: "Thou shalt not muzzle the ox when he treadeth out the corn." It has been sometimes said that Jesus accepted no money from those whom he healed, and yet Bible history records that he had a man specially appointed to carry the money bag, and it seems that he had plenty. He said to his disciples, "Provide neither gold, nor silver, nor brass in your purses, nor scrip for your journey: . . . for the workman is worthy of his meat," showing clearly that he expected them to be supported in their ministry, and did not deem it necessary that they should take a supply with them. Upon their return he asked them, "When I sent you without purse, and scrip, and shoes, lacked ye anything?" They replied: "Nothing." This showed that they had been supplied with all necessities. Thus we note, if our great Master is to be considered the example, Christian Scientists are justified in the light of Christianity in accepting compensation for their services. That a Christian Scientist practitioner receives a stipulated price for treatment does not indicate that he is mercenary or that he is engaged in this work for the purpose of accumulating wealth. There may be some among the ranks of Christian Scientists, as there are in the ministry of other denominations, who are eager for filthy lucre, but this is not a fault of the teachings of any religious faith, but is due to a departure therefrom. A clergyman is paid a salary by his congregation, and this is quite generally conceded to be just, as it enables him to give his entire time and energy to the ministry. A Christian Scientist who gives his entire thought to the ministry of teaching and healing is better qualified than the one who divides his time between this work and some other vocation. In order that he may be exclusively devoted to the propagation of his faith and its good works it becomes necessary that he should be

compensated by those whom he benefits. That he preaches to a congregation of one in some instances does not in any degree lessen the justice of his fee, since the compensation is always due from the one or ones who receive benefit, and the practice of receiving remuneration does not belong exclusively to a business, but may apply with equal good sense to a ministry, and every Christian Scientist is a minister whose gospel heals the sick. Is the Christian Scientist any less entitled to compensation because his preaching heals bodily as well as spiritually? The effort which is being made to classify the practice of Christian Science as a business is evidently based upon a misapprehension. The workers in this field of labor would desert it if there were nothing more in it than the accumulation of wealth. There are very few of them who could not earn more with much less labor in any other vocation. Even the Founder of this movement, who has a comfortable though moderate fortune as the honest wages of a hard working woman, could doubtless have accumulated much more if she had used the same talent, industry, and perseverance in some other line. Indeed, the question of finance is entirely independent of the question as to whether Christian Scientists have or have not the right to practise their faith; the all-important question being, Is it efficacious, and a benefit to mankind?

The effort to force Christian Scientists to pass a medical examination in order to prove that they are qualified to pray or heal mentally seems a strange procedure. It is equally strange that one class of citizens should demand the right to set aside the universal liberties granted by the Constitution of the United States, in forcing another class to cease from their religious usages by starving them out. Some one has said, "If these Christian Science practitioners were forced to work without pay they would soon cease." This is perhaps true, and why? Because they would be forced to do something else for a living. Might not this same argument be applied to the practice of the physicians? If they were forced to labor without pay would they not be forced to seek some other occupation? Might not the same be said of the clergy, teachers, and people in all vocations in life? And yet, this is not a logical argument against these various professions. We might go even further than this and say that if a man is not allowed to live, there is nothing left for him but to die. What would be thought of a law making it a misdemeanor, punishable by fine and imprisonment, for a clergyman to accept a salary? What would Christian people think of such a monstrous method of choking out the preaching of the gospel? The ministry of a Christian Scientist is more dear to him than his life, and he will regard this effort to starve him out of his sacred work as a violation of religious liberty.

ALFRED FARLOW.

We herewith republish also, from a former issue of the *Sentinel*, the following upon this subject:—

Why should Christian Scientists charge for healing the sick?

Why should any one charge for anything? Why should the laborer charge for his day's labor? Why should the grocer charge for groceries, the butcher for meat, the merchant for his goods, the cobbler for mending shoes, the farmer for his produce, the lawyer for his professional services, the preacher for preaching, the physician for prescribing for and attending upon the sick?

First: Because it is right. There should be just compensation for every service rendered. This is in accord with the law of justice, and justice is God's law. It is Scriptural doctrine that the laborer is worthy of his hire or meat.

Second: Because it is a law of human necessity. Human beings must live. They are inter-dependent. In a sense, they must live off each other. In this, however, there should be trustfulness and mutual regard for the rights of

each. The Golden Rule should prevail—Do unto others as you would be done by.

By every fair consideration, are not Christian Scientists entitled to reasonably adequate remuneration for their services? What rule of ethics, law, or equity, would deny them this? It is a puerile spirit indeed that seeks to dispute this right. It costs them time, money, and much pains and study to acquire the knowledge of how to heal. It costs them suffering and persecution to become Christian Scientists, and sometimes their ordinary means of subsistence. They have to live, as well as other people. Would those who dispute their right to fair compensation have them go naked, hungry, and cold? Would they have them houseless and homeless?

Many of them give their whole time to their patients, sometimes spending whole days and nights with a single patient. Should they do this for nothing? If their material wants are not met they could no more give their time to their healing work than can others spend their time without pay.

Who but a craven would accept their goodly services without a desire to repay? Who but a critic gone mad with malice would dispute their right to reasonable reward?

Christian Scientists' charges are insignificant as compared with those of ministers, lawyers, and doctors, and nearly all other lines of business.

Within our own knowledge many who had spent thousands of dollars on physicians without receiving benefit have, for a mere pittance, been healed in Christian Science.

The true Christian Scientist endeavors at once to show his patient how to heal himself by placing in his hand the book that heals. He does not seek to hold him as a patient.

Ignorance of and prejudice against Christian Science and its methods is the only excuse for the foolish claim that Christian Scientists should not charge reasonably for their work.

But Jesus received no compensation for his work?

Who ever said he did not? He wore clothes. He ate and slept. He was entertained. He was not a beggar. He did not starve. He evidently was provided for. His material, human needs were met.

He and his disciples had money provided them in some way. One of them carried a bag of silver. Jesus commanded his disciples to shake the dust off their feet in all places where they were not hospitably received—provided for. He it was who said the laborer is worthy of his meat—hire. How strange that it should be urged that those who are now doing the Master's work should go naked and starve. It is neither asked nor expected of any but Christian Scientists. Queer, is it not?

Legislation in New York.

THE much discussed Bell Bill, presented in the Assembly branch of the New York State legislature, which is said to be aimed at the suppression of Christian Science practice, is still apparently undecided. The bill was framed for, or by, the New York County Medical Society, and has received the able opposition of such well-known public men as Judge Charles Z. Lincoln of Albany, who has been the constitutional adviser to the governors of the state for several years. Three public hearings have been given by the Assembly Committee on Public Health, which have been largely attended by Christian Scientists from all parts of the state. In its original form, as first read, the Bell Bill was phrased as follows:—

"Any person will be regarded as practising medicine within the meaning of this act who shall prescribe, direct, recommend, or advise for the use of any other person any remedy or agent whatsoever, whether with or without the use of any medicine, drug, instrument, or other appliance, for the treatment, relief, or cure of any wound, fracture, or

bodily injury, infirmity, physical, or mental or other defect or disease. This article shall not be construed as prohibiting the service of any person in an emergency or domestic administration of family remedies."

Since its introduction, several amendments have been offered, intended to exempt various classes. The latest suggestion was to amend so as to provide that if Christian Scientists practise for financial gain, they must take the regular physicians' examination. It was argued to the Committee that the way to remove the religious objection was to proceed on the theory that if cures are performed as a matter of religion, no fees should be charged.

Not the least noteworthy feature of this legislative stir, has been the attitude of the newspapers of the state on the questions involved. The press has not been undivided, and while some papers have advocated the passage of the bill, many have been editorially neutral, and others have defended Christian Science and objected to the bill. A few editorial comments are presented herewith, as being of interest, and showing the changed attitude of the papers, as contrasted with one or two years ago.

The Commercial, Buffalo, N. Y., February 7, 1901.

"It is not within the power of legislation in behalf of the 'regular' schools of practice to prevent men and women from resorting to whatever means or remedies seem likely to relieve or cure them. If they prefer Christian Science they will use it; if they have faith in any of the 'pathies' they will demonstrate it. In religion and in medicine people will do pretty much as they want to nowadays."

The Review, Buffalo, N. Y., February 2, 1901.

"Christian Science has had a big week at Albany. The believers in that interesting cult are a prosperous, well-dressed, healthy looking lot of people. A more imposing delegation was never seen in Albany than the one which overflowed the Assembly Chamber Wednesday last. They certainly compared more than favorably with people who have faith in the doctors."

The Review, Buffalo, N. Y., February 15, 1901.

"The Christian Scientists are making a hard fight for their rights at Albany. There is no doubt that the bill against which they are contending seeks to impose stringent conditions, and that its enactment would be an abuse of authority."

The Republican, Binghamton, N. Y., February 15, 1901.

"The measure known as Assemblyman Bell's Anti-Christian Science Bill is still before the legislature and under consideration. Probably no attempt will be made to stop the reading of prayers for the sick. Only the Christian Scientists are to be empaled now. The attempt to outlaw everything except organized societies of physicians has failed. It would be better now to amend what is left by erasing the enacting clause, or permit that and all other personal legislation to die in committee rooms. Its spirit is a revival of the intolerance of the Middle Ages.

"There are laws now to prevent any person, except licensed and registered physicians, from prescribing treatment for the sick. There is no law against relieving temporary ailments by taking or giving simple remedies that everybody understands, and which harm nobody. Peppermint, catnip, boneset, cherry bark, and such nurse remedies will be given in the family, no matter how much they are outlawed by the legislature. If the legislature desires to have its laws respected and obeyed, it should pass laws the people are willing to obey. Otherwise the statute books will be filled with dead letters.

"If a Christian Scientist disobeys a general law passed for the government of all the people, he should be and will be prosecuted and punished. At this age of the world

everybody should know that a religious sect cannot be crushed by persecuting it. 'The blood of the martyrs is the seed of the church.' It always was so, and always will be."

The Commercial, Buffalo, N. Y., February 14, 1901.

"The so-called Bell Bill now before the legislature ought not to pass. Legislation protecting the people against reckless or ignorant so-called medical treatment might do some good; but the people will never patiently submit to any law obviously designed to protect those only who call themselves 'regular.'"

Regulating Medical Practice.

THE following editorial from the *Topeka Daily Capital* gives some good reasons why state legislatures should make haste slowly in enacting laws that to hundreds and thousands of intelligent people and good citizens seem unjust and uncalled for:—

There is a bill pending in the Missouri legislature, and favorably reported, to revise the medical legislation of the state, one of the objects of which is to suppress the Christian Scientists. There is nothing more difficult than regulating medical practice and states have frequently caused more harm than good by attempting to define the legitimate art of healing. The assumption has been in the legislation of most of the states that the people are fairly capable of protecting themselves, with laws to back them against irresponsible fakers and frauds. Doctors themselves, who have always been sticklers for strict legislation, are becoming more liberal every year. The best physicians admit that, after all, the things they don't know about the human system and its antics are more than the things that they do know. The progress of the healing art has been largely empirical from the beginning of time to the present, and if greater progress is being made to-day than in times past, much of the credit may be fairly assigned to the greater open-mindedness of the profession and the increase in the number of cults and schools.

Time was when the old school or "regular" practitioners were ready to legislate the homœopaths out of existence. Now they fraternize and have a joint association in some states. Perhaps the regulars and homœopaths would now be willing to go in together to put osteopathy on the *index expurgatorius*. Next year the regulars, homœopaths, and osteopaths may be found working hand in glove to oust the Christian Scientists and magnetic-healers.

These schools all have their intelligent supporters, and Missouri would be wise to follow the example set by Kansas this winter and go slow in enacting laws which to a wide circle of intelligent people and good citizens, presumably capable of knowing their own interests, seem unjust and tyrannical.

From The Christian Register.

THE following editorial from *The Christian Register*, of Boston, Mass., February 14, 1901, is sound in principle and forcible in argument:—

In various parts of the country bills relating to the practice of the healing art frequently come up for discussion in the state legislatures. Christian Science is the occasion for several attempts to define the rights of practitioners. It is often difficult to do exact justice to all parties, when the opinions or the whims of the individual conflict with what is believed by the majority to be for the good of the community. But one principle surely has a broad application to all legislation of the kind. The end sought by the law should be not the protection or the enrichment of any class of practitioners, medical, legal, or ministerial, but rather the protection of society. If, in an epidemic of smallpox, scarlet fever, diphtheria, or the bubonic plague

or any other pestilence, it could be proved that any individual or any company of men and women were becoming infected and were causing these diseases to spread in a community, they should be restrained by law. But laws should not be passed simply to make it more profitable for the medical profession to practise at such a time. Laws concerning the marriage ceremony are not made in the interest of ministers and justices of the peace, but for the good of the community.

Medical Monopoly Legislation.

UNDER the above heading the *Chicago Post* of March 8, 1901, publishes a very strong and a very sensible editorial in reference to the bill providing that Christian Scientists shall not receive compensation for their services, from which we extract the following:—

To circumvent constitutional obstacles there is a little joker in the bill declaring that "it is not intended to prohibit gratuitous service to and treatment of the afflicted." This at once exposes the hypocritical and selfish motives behind the bill. Christian Scientists may treat, but they may not ask or receive pay. What becomes of the public health pretext? If faith cure is dangerous, how does the fact that it is rendered gratuitously remove that objection, the sole ground of state interference? In truth, the bill is vicious, self-contradictory, and grossly invasive. It cannot be constitutional in any American state.

Letter from a Soldier.

THE following letter from a soldier will not only explain itself but prove most interesting to all.

Culasi, Panay Island, P. I., December 26, 1900.

Calvin A. Frye, Pleasant View, Concord, N. H.

Dear Sir:—Your letter of inquiry to the 1st Sergeant of Co. C. was handed to me. In reply I will acknowledge being the donor, but do not know as I can hardly explain why. I had only lately been discharged from the hospital where I had been for four months with a severe bullet wound in my body. I received four months' pay in gold on joining the company at San Jose, and somehow I did not deposit with the paymaster. I kept it in my locker a day or so, then one night the thought occurred to me: I wish I were good enough to send it to Mrs. Eddy as a present. Then succeeding thoughts presented themselves in the manner you have indicated, and, of course, I kept my vulgar name off the package. I presume the package was unmolested. It had ten pieces, or fifty dollars, when I gave it to a discharged soldier to register in Iloilo.

Believing the Mother has already read in the package more than I can write, I will try not to weary you. I attribute the preservation of my earthly existence to Christian Science, and it is now delivering me from dreadful delusion, which no one but myself can appreciate. I believe every word that Mrs. Eddy has written and every statement that she has made in Christian Science is the Truth from God. I shall seek no further. I am perfectly satisfied. The brightest star that has ever shone since the foundation of the world now shines and sends its rays across the globe. How beautiful it is to know that the chaff has been separated from the wheat in Christian Science, and children and infants may partake of the food without fear of eating too much or of swallowing something we ought not. What a wonderful nurse is the Mother.

It was over two years ago in Portland, Maine, at Mrs. Watson's church, that I first knew of Christian Science. I am looking forward to the day when I can be with God's children and be instructed in the Word.

Very respectfully yours,

(Private) G. D. D., Co. C., 19th U. S. Infantry.

Among the Churches.

Noble Temple to Christian Science.

After nearly two years passed in erecting a house of worship, the Second Church of Christ, Scientist, is about to enter into one not often surpassed in religious architecture since the days of classic Greece and Rome. Few houses designed solely for religious observance exist in this country wherein the materials used have been limited to pure white marble, steel, bronze, and cathedral glass. None is, both in exterior and interior elevation, fashioned of these materials.

This temple, situated at Sixty-eighth Street and Central Park West, is of white marble above the foundation of granite. The dome which arches over the auditorium is framed in with bronze, the spaces reserved for light being of fish scale design, in cathedral glass, with the word "Love" in the centre in chipped plate glass. Not a bit of masonry above the foundation is of other material than white marble. The pieces have been so closely joined as to present the aspect of an unbroken marble elevation.

The church varies from accepted designs in that it is practically a huge square, crowned with a concentric dome of noble proportions. At first the members of the society were tempted to have the rearward elevation of baser materials. Other counsels prevailed, and the four elevations are practically replicas one of the other. The sole variation is in the main entrance on Central Park West side. This is flanked by handsomely designed columns of bronze, whereon rest lamps.

A reading room and retiring rooms are placed in the basement for the members and those who seek their aid.

In constructing the church, designed and superintended by F. R. Comstock, architect, the best features of the most imposing piles of ancient architectural art have been utilized. Interior and exterior are harmonious. Not a piece of stone other than marble is used in either. In the hallways, in the great auditorium, everywhere excepting where hard wood was found necessary, there is marble or bronze. The great quadrangular auditorium is seated with opera chairs.

The grand organ will be one of the features. Perched in a loft well above and in the rear of the auditorium, it rises in three arches. It is built on the tubular pneumatic plan, and is in elevation as well as practical adaptation to the needs of the society, a masterpiece of the organ-builder's art. It has four manuals, twelve couplers, and numerous pedal and organ combinations. It is to be operated by compressed air expelled by weights on the big bellows. The pumping and blowing plant is in the basement. The touch of a button will set the electric motor to filling the bellows with air.—*New York Herald.*

Organization at White Plains, N. Y.

It was with thankful hearts that the Christian Scientists of White Plains assembled December 29, 1900, to organize under the name of First Church of Christ, Scientist, of White Plains, N. Y., with a charter membership of eighteen.

The beginning of the work in this town was a small gathering at the home of a Christian Science family on August 13, 1899, for the purpose of hearing the Sunday lesson read. Thirteen persons, one of whom was a class student, were present, and from that time Sunday services have been held regularly.

A lecture was delivered by Carol Norton, C.S.D., the following October. November 1, the reading rooms at 114 Railroad Avenue, were opened, where services have since been held. The Sunday School, which at this time was started with an attendance of but two children, has since increased to eleven, and the first Wednesday evening in November the regular mid-week meetings were begun.

Interest in the work has so grown that the present

quarters are inadequate to accommodate the attendance, and the procuring of a larger hall is contemplated.

The Master said, "Freely ye have received, freely give;" and it is with joy that this little body of Scientists unite to spread the Truth as it has been given through the spiritual interpretation of the Bible as taught in "Science and Health with Key to the Scriptures."

HELEN V. ALLISON, *Clerk.*

A Pleasant Incident.

A pleasant incident in the history of the Roxbury Church occurred February 27. It was the Wednesday evening meeting of the church held, by invitation of the Elm Hill Baptist Church, in their house of worship, while the hall at present used for the Christian Science services is being enlarged for our accommodation. The last speaker of the evening arose saying these words:—

"'And there shall be one fold and one Shepherd.' In entering this house of worship, opened so kindly to-night for us by another denomination, these words of Scripture came to my consciousness as a prayer that God would hasten the day when this prophecy should be fulfilled. There is but one way to accomplish this, and it must come by living the life which is Love. Our dear Master said if he were lifted up from the earth, he would draw all men unto himself; and just so far as we are lifted above the earth, material sense, shall we draw mankind to the religion of Christian Science.

"We are trying to live above the human mind and human body, and in this attempt are considered impracticable by those outside of Christian Science; but we hold no position which is not endorsed by the Scriptures. Jesus said he could of himself do nothing, yet what the Father did, he did also; showing that even he recognized no power in his mind, but realized the omnipotence of the God-Mind.

"Also we are instructed by the Apostle Paul that 'Ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you.' Now as we realize more fully the truth of those injunctions, and our life corresponds with our religion, shall we know the vital power of these words: 'And there shall be one fold and one Shepherd.'"—C.

Organization at Lisbon, N. H.

The Christian Scientists of Lisbon, N. H., met and organized as a society with ten members January 28, 1901. For the past two years we have held our services in Franklin Hall, Masonic Temple, with an average attendance of about twenty.

A feeling of harmony and earnest endeavor for the work of Christian Science has always prevailed, and we know that the heaven of Truth is silently at work and in due time we shall see the reward of faithful obedience.

The children of the Sunday School, six in number, started a building fund two years ago with the sum of thirty-seven cents. With their weekly contributions, aided by kind hearts in other folds, the fund now amounts to a little more than two hundred and fifty dollars.

One may plant and another may water, but 'tis God who giveth the increase.—C. C. M.

New Church at Hamilton, Ont.

The Christian Scientists held their opening services in their new hall at 10 and 12 James Street, North, yesterday (Sunday, December 2) at 11 A.M. and 7 P.M. Their new quarters are commodious and elaborately finished off, and the Scientists hope rapidly to increase their numbers, which have already reached the two hundred mark.

Services will hereafter be held at 11 A.M. and 7 P.M., and a reading room will be started in connection with the church, shortly, which will be open every afternoon.

Morning Post.

From our Contributors.

Permanence and Praise.

BY EVA COLE.

INFINITE Spirit! unceasingly breathing
Blessings unmeasured on all, as on me,
Thy peace like a river,
In tenderness ever,
Meets fully the need of the earnest heart's plea,
My thought now adoring,
Its praise is outpouring
In anthems of love, that I'm ever with Thee.

Times when I questioned, Is God there, or Father,
Who knoweth and careth for all, and for me,
Whose bounty supplieth,
Whose Love satisfieth,
Whose Presence doth strengthen, and make the bond free?
There came such assuring,
With hopes most alluring,
I believed, yea, I knew, my Creator to be.

Yet knowing, I find Thee so near and so loving,
To know I am Thine is a glory to me.
I lose sense of sorrow,
I lose sense of sinning,
I know no false self as I cleave unto Thee.
I see Thy perfection,
Unchanging affection;
It heals every discord Thy wholeness to see.

All joy that Thou knowest no suffering, nor sorrow,
Thine atmosphere ever is holy and free.
No change in Thy purpose,
No change in Thy Being,
Thou Light before which every shadow doth flee!
I live in beholding
Thy glories unfolding,
Satisfied, if I but image forth Thee.

Thoughts Suggested by the Eclipse.

BY L.

I HAVE had some helpful thoughts suggested by the recent total eclipse. Man is created perfect, for he reflects the Light which is God; thus he is and always will be, no matter what belief says of him. But the false claim of passion, fear, envy, malice, hate, aversion, love of place and power, often obscures the perfect Light which he should reflect.

Just as it appears as a tiny crater, just as the moon first seemed to cut out a small disc from the surface of the sun. If we strive against and overcome this shadow grows no larger, obscuring more and more the Light.

As the truth of God occurs but seldom so we seldom see any one whose every mental word seems to be totally de-purged.

The ignorant people and even animals become frightened when the sun is dimmed, while those who have some understanding of the nature of astronomy know that but for the moon the sun is still shining, which understanding enables them to master fear, so when the thought of a darkness and death comes into the mind of those who have some understanding of the character of Being, they overcome the fear and so escape darkness. They see that there is no darkness, and that material error alone causes the light to seem as if it were not there at all, and this understanding brings peace.

As is the case of the universe, so is the case of the individual.

reflected light to see men distinctly, so although the errors of mortal man seem dark indeed, there is still enough reflected Light for a Christian Scientist to see man as the perfect child of God, free from error of every sort; and those under the glow and warmth of Light—Love—see the claims of error dissolve, and the real man is made apparent.

"Jesus beheld the perfect man, who appeared to him, where sinning mortal man appears to us; in this perfect man the Saviour saw God's own image and likeness, and this healed the sick" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 472).

The Unreality of Fear.

BY F. W. B.

AN object-lesson presented itself last winter which gave me a clear illustration that fear is without foundation. My little daughter had been throwing out crumbs to the birds each morning. When the deep snow came, I suggested that she put the crumbs on the window sill. She did so, and when the little birds came for their expected breakfast, they were, at first, afraid to approach so near us. But some of them soon overcame fear, proved its nothingness, and were rewarded by receiving their breakfast. Others went away without one crumb, although plenty were within their reach.

I thought how often we make a reality of fear when it is nothing, and we, too, go without the good that is within our reach by making a reality of fear instead of overcoming it and proving its nothingness.

Manner of Giving.

BY HENNIE PEEBLES.

LAST spring a morning glory came up near my window. I noticed one day that it looked thirsty, so I put some water in a bowl and threw it on the flower. I nearly uprooted the little plant. I stopped and learned a lesson. The plant needed water, and love prompted the giving. The water was pure and would have filled the need. Yet a mistake had been made. What was wrong? The manner of giving.

So we often fail in giving this Truth to thirsty souls. We present it in a mistaken way, and wonder at our failure to help those we so greatly desire to help.

Christian Science is a perfect and exact Science, and must thus be presented. He who fails to keep one law is guilty of the whole. Till he sees his mistake and corrects it, his problem is wrong.

Peace, be Still.

BY FANNIE ISABEL S. WARDWELL.

Be still, oh restless heart, and know
That God is All-in-all;
That from His gracious, outstretched hand
No ill nor sorrow fall.
Be still and let heaven's holy calm
Through all thy being thrill.
When o'er the storm-tossed waves there sounds
The sweet words, Peace, be still!

Be still, oh trembling child of earth,
So weary and so worn,
So tossed with doubt, so compassed
So by the power of the mom.
There shines across the dark sea wild
Light from Truth's heavenly home.
Above the breaker's roar, oh hear
The sweet words, Peace, be still!

Testimonies.

Learning the Lesson of Perseverance.

I had a copy of Science and Health given to me some six years ago, but for a long time I scarcely looked in it. I did not realize the importance of it, so I did not give it any serious attention. After a while I became sensitive and morbid. I was about ready to give up, and I went on in this way, little believing that I could get any help in this world.

I was urged to try Christian Science, but I hesitated for some time, as it seemed to me it was no use; but finally I consented to try it for a while.

After I had been going to a healer for a time, I began to feel a sense of peace that I had not felt for many a day, and I began to think there was a God in heaven after all. I continued treatment through the spring and summer, and also part of the winter of 1899, with varying results. One day I would be upon the mountain, and the next day I would be in the valley of depression; but still I knew there must be something in Christian Science, as I had felt relief so often, so I kept at it. I tried to realize the allness of God and the ever-protecting care of His love, but with many stumblings, I must confess.

In the fall we moved to Philadelphia, my trouble still clinging to me, and I felt at times as if I should give up, though I knew God was taking care of me. Fortunately we had a healer in the house with us, and she was able to show me the way. As I went on I found I was able to help myself, little by little, and put more trust in God and less in material things.

Christian Science has taught me to love my neighbor better and to think of somebody besides myself. It has made me think what a great work it is to preach the gospel and heal the sick.

Not only have I been helped physically but I have also received great spiritual benefits for which I cannot be too thankful. I am thankful also for the slow healing, as it has made me more firm in Truth and taught me the great lesson of patience and perseverance which I apparently lacked before. It has uncovered to me different forms of error which I have been able to overcome through God's help.

It has been a great blessing to our family, and I for one can thank Mrs. Eddy for showing me what is the true way and how to walk in it, although it is with bleeding footsteps.

I feel very grateful to the friends who have been the human means of helping me. I never knew what perseverance meant before, but Christian Science has shown me what it is. Christian Science has made me feel that there is something better in life than earning money, and the thought grows on me more every day.

C. A. MAYNARD, Philadelphia, Pa.

Found Health at Last.

To be grateful for the blessings of Christian Science, is little in return for a healthy body and peaceful thought.

I had from childhood earnestly sought, in a blind, groping way, to find this peace, trying as mortals do to find it in material pleasure and work, and in human love. I spent years of constant effort in the field of mental improvement until only the finest and highest in literature could in any sense gratify the longing for intellectual food, with which I was trying to feed the starving human sense of life in material existence. I did not know that Life is a knowledge of God, Good, and that to know God, Good, is the work of eternity. These were the first thoughts that came to me with any clearness, after ten years of constant, al-

most unavailing, effort on the part of a sister to show me my way out of the ills of the flesh.

At the age of fifteen I was an invalid with stomach trouble. For weeks at a time I could retain almost no food. Scrofulous enlargement of the glands of the neck, the lumps or bunches reaching from the collar-bone to the ear, to the number of seven, and an hereditary tendency to consumption, made life much of the time a weary burden. This was followed by twenty years of much the same experiences in varied forms, such as facial neuralgia two successive summers, the grip and its resulting effects in spinal trouble of ten years' standing, so that walking was almost out of the question except with a cane, and then with great suffering. Finally, after traveling over the United States repeatedly for eighteen years, spending eight successive summers in Glenwood, Minn., one in Colorado, two in Idaho, one in Oregon, one in California, a winter in Texas, one in California, and one in Hot Springs, Ark., I finally finished in Santa Barbara, Cal., with pneumonia in May, 1896. When I came home in September I was the most discouraged of mortals, coughing constantly, frightened almost to death by the lung trouble, and ready finally, after all these years, to take God for my guide and listen patiently and humbly to the sister who had tried so lovingly and long to help me out of this sea of human troubles. I want to say here to those who may not know what is keeping them from this universal Good, Christian Science, as taught by Mary Baker Eddy, when they are trying unceasingly, as I did, to extricate themselves, that in my case it was a belief in human intelligence. I thought if Mrs. Eddy and my sister could find their way out I could. I stood all this time trying to put this sham of egotism in the place of divine Love, which fills immensity and is the only reality and power.

Like many another, I have had intense struggles in putting sick thoughts and a sick body in the background, but I have always said, that I was not able to comprehend how anything that I had so little knowledge of, could result in so much good. For instance, I overcame the fear of lung trouble without treatment. I took two years for its accomplishment, but was more than satisfied. During this time sleeplessness and stomach trouble were overcome, and in less than three years I had better health than I had even asked for, and much better than I had deemed possible, even in Christian Science. This once more proves that scientific Bible statement, "Seek ye first the kingdom of God, . . . and all these things shall be added unto you."

MARY STEVENSON THOMAS, Waterville, Kan.

Restored to Home and Friends.

When I first heard of Christian Science the outlook seemed very dark. My health had been slowly failing for over fifteen years on account of weak heart, grip, malaria, liver trouble culminating in extreme nervousness and weakness, and a throat trouble which I greatly feared would turn into consumption. I had to give up all business, not being able to do the lightest kind of work, mental or physical. A few among the many treatments tried were allopathic, homœopathic, electric, magnetic, spiritual mediums, osteopathic. Finally a leading physician of New York City informed me that my only hope was in an immediate change of climate. I went to Arizona and Southern California, taking a relative with me, as I was too weak to travel alone. I improved a little at first and then came to a standstill, feeling that climate had also failed me. I was among strangers, far from home, full of aches, pains, fears, anxieties. About this time Christian Science was recommended by the lady I was boarding with. I was not much impressed at first, but shortly after a fellow-boarder and health-seeker informed me that he had received immediate relief from a severe trouble of long

standing from a practitioner whom our landlady had recommended. I soon began to take treatment. No improvement was noticed at first, but in about a week I examined my tongue, which had been heavily coated for years. Imagine my surprise to find it perfectly clean. Insomnia was soon after destroyed; an improvement was noticeable in my appetite, and my nervousness diminished.

At the beginning of treatment I could only read about half an hour at a time and that only twice a day. In three or four months I was able to read practically all day. One of the most disagreeable and annoying troubles that affected me was a soreness of the hip-bones which prevented me from sitting long at a time and obliged me to lie down or recline in a hammock a great deal. This trying soreness began to grow less and less, and in seven or eight months I could sit all day if I wished. The throat trouble which I greatly feared would terminate in consumption, vanished completely. For years my body was covered with liver spots; they have disappeared. Many other troubles have vanished.

It is now over two years since Christian Science found me and I have not taken a drop of medicine during that time. My medicine bill used to run as high as fifteen dollars per month, not counting physicians' fees, which have ranged from one dollar to thirty dollars per visit. Christian Science has enabled me to return to my home, business, and friends; to be a help and comfort in the family where I had been a source of worry and anxiety. I have now been home a year and a half, gaining in health and strength, showing that we do not have to go to another climate for health. My healing has been slow—it is not yet complete—but enough has been done to make me feel deeply grateful to the Discoverer and Founder of Christian Science. Also to the kind and loving healers who have labored long and patiently to bring me into the Truth. I am also very thankful to the lecturers and all connected with the *Quarterly*, *Journal*, and *Sentinel*.

J. V. LONG, Jersey City, N. J.

Thankful for the Understanding of Science and Health.

When I was a child about ten years of age I had an attack of muscular rheumatism. It assumed a violent form, making me perfectly helpless for the time being and unable to move without pain. After becoming so helpless it was with considerable difficulty that I could resume walking. After that time, periodically, for a number of years, I had a similar experience. I took such strong medicines that they brought on dyspepsia, and I was troubled with this complaint in all its forms.

After trying a great number of remedies, dieting, etc., I was led to try Christian Science and was healed in a short time. I was very much impressed and joyous that I had been relieved of this trouble, and I purchased *Science and Health* and began to study it, to learn of this new religion that seemed so wonderful.

My healing of dyspepsia was rapid, and I was simply a willing subject, but I had to "fight the good fight" for my freedom from rheumatism. I had another attack of this trouble. The fear of the family and myself was such that a physician was called, and he visited me a few times. In 1893 I had another attack, in just as violent a form, and I was completely healed through Christian Science treatment. I have had no return of it and the fear of it is destroyed.

I had so many ailments that I was never free from some trouble, and now, when I think of what my condition was, mentally and physically, I feel that I was bound hand and foot to error and material beliefs.

When I turned to Christian Science for physical healing I did not think that I would be willing to give up my ideas of God, baptism, communion, and the church of

which I was a member, but as Paul says, "Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." I was glad to leave the old landmarks, and I rejoice to say I am a member of the Mother Church in Boston.

I am very thankful for the physical healing, but I am more thankful for the understanding of Christian Science whereby we can detect the thoughts that produce discord, and divide between Truth and error. This wonderful revelation has come through the study of "Science and Health with Key to the Scriptures." I am very grateful to our dear Mother who is leading the way, and to all who have aided me along the path from sense to Soul. I am striving to be worthy of this "new name."

MINNIE RAWSON SMITH, Chicago, Ill.

Many Incurable Diseases Healed.

For years I suffered with diseases which had been pronounced incurable. Asthma was thought to have been inherited. I had been treated by *materia medica* for some time, but to no effect. I also had catarrhal headaches, kidney and bladder trouble, and dyspepsia. On account of these troubles I was unable to eat or sleep, and life to me seemed a burden. These diseases were, however, not the special trouble for which I appealed to Christian Science for help. Chronic diarrhoea, which the doctors, after three months' treatment, were unable to cure, was the principal thing that I sought help for. This soon gave way before Christian Science treatment, as did all the troubles above mentioned. I was also entirely healed of hernia of twenty-two years' standing. I am enjoying the fruit of the Spirit, which Paul tells us is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, and temperance.

For over forty years I was a user of tobacco, chewing and smoking, but now I have no desire for it, the habit has been entirely destroyed.

Christian Science has brought to me and mine innumerable blessings. Before I close I want to thank my healer who so gently, and with such a sweet Christian spirit, brought me into Christian Science, and also to express my love to our Leader for the spiritual uplifting and conscious nearness to God, which is made possible by her book, "Science and Health with Key to the Scriptures."

A. D. ISBELL, Kendallville, Ind.

Inflammatory Rheumatism Healed.

For many years I suffered from inflammatory rheumatism, indigestion, and kidney trouble, and was most of the time in delicate health. I gave medicine a fair trial and was seldom without several kinds of it. I also tried mineral baths several seasons, but with little benefit. It was after one of these trips to mineral springs that a friend advised me to try Christian Science. In August, 1898, I wrote to a healer to take up my case at once. In two days the swelling went from my limbs, and in about three weeks I was completely cured of all my ailments. Since that time I have enjoyed good health.

July, 1899, I enjoyed class instruction. We have the lesson every Sunday at our home and have from ten to twelve in attendance. Quite a number have been healed in Pembroke through Christian Science. One of asthma: another, who was an invalid, is now in perfect health. We find God our strength and salvation, and have seen many ills destroyed through God's wonderful healing power.—C. WRIGHT, Pembroke, Ont.

A victory there must be one way or the other. Either we must overcome the world, or the world will overcome us.

C. J. PERRY.

Religious Items.

Rev. Everett D. Burr, pastor of the First Baptist Church of Newton Centre, Mass., has declined to accept a call from the Fifth Avenue Baptist Church, New York City, of which President Faunce of Brown University was formerly pastor. The Fifth Avenue church is known as Rockefeller's church because the Rockefellers contribute largely to its support. It is what has come to be known as an institutional church, carrying on benevolent and educational work among the poor in addition to the usual church activities. It is understood that the Rev. Mr. Burr was offered a salary of ten thousand a year. He was well fitted by experience to take charge of the varied interests of the Fifth Avenue church, for until about one year ago, he was the pastor of the Ruggles Street Baptist Church of Boston, which, under the princely patronage of Editor Ford of the *Youth's Companion* and other benevolent persons, contributed to the well being of thousands of poor people in Boston for years, and which continues the work; the liberal provisions of Mr. Ford's will insuring it a large income.

Among its news items the *Boston Herald* recently published the following: "The Rev. Dr. William C. Winslow of this city, vice-president of the Egypt Exploration Fund, yesterday announced the discovery of a valuable trophy among the large number of papyrus recently received by him for distribution among several universities. It is the oldest fragment of the gospels in the world.

"Dr. Winslow states that the papyrus contains a large part of the first chapter of the Gospel of St. Matthew. It was found at Oxyrhynchus, forty miles south of Cairo, near the famous 'Logia,' or 'Sayings of Jesus,' and its date is placed by some experts at 150 A.D., and by the editors of the society's publications at fifty or sixty years later. On an important doctrinal point it declares in common the exact language: 'Joseph, thou son of David, fear not to take unto thee Mary, thy wife; for that which is conceived in her is of the Holy Ghost.' It is to be noted, too, that the most ancient piece of St. Paul's epistles is in Boston."

Among its gems of thought collected under the head of "The Quiet Hour," the *Universalist Leader* quotes the following from the writings of James Martineau: "In truth, that which is deemed the happiest period of life must pass away, before we can sink into the deep secrets of faith and hope. The primitive gladness of childhood is that of a bounded and limited existence, which earnestly wishes for nothing that exceeds the dimensions of possibility,—of a human Paradise, about whose enclosure-line no inquiry is made; and through sorrow and the sense of sin we must issue from those peaceful gates, and make pilgrimage amid the thistle and the thorn instead of the blossom and the rose, and lie panting in the dust, instead of sleeping on the green sward of life, before we learn through mortal weakness our immortal strength, and feel in the exile of the earth the shelter of the skies."

A writer in the *New-Church Messenger* says: "One hundred years ago the thought of God was the thought of a Being vindictive, full of anger and unending in resentment. Children quaked in fear as they hid their heads beneath the coverlets at night. But lo a change has come—the thought of God as the heavenly Shepherd, the divine Father, has crept into the hearts of men, stealing away their fear and dread, and bringing to them in gentle ways the perception that the sheep of his pasture are men. And behold the spiritual life of the world is quick with the consciousness that 'God is Love,' and we find that after all we are all the sheep of one fold with one shepherd; and that he who is the lamb of God is gradually lifting the load of sin from the world."

The *Church Standard* says: "The Presbyterian Committee on the Revision of the Westminster Confession of Faith has unanimously agreed that some change in the credal state-

ment is necessary, but is divided as to the character of this change. The majority recommend that a change should be made by a supplemental explanatory statement, to cover certain points in the Confession of Faith, and also to include statements as to the doctrines of the Holy Spirit, missions, and the love of God for all men. The minority recommend a supplementary statement of doctrine without being restricted to specific and limited points in the Confession, but in entire harmony with the system of doctrine contained in the creed."

The *Congregationalist* says: "To become morally numb and indifferent is worse than to suffer pangs, however sharp, which stimulate towards repentance and reform. To fall permanently to a lower level of aspiration and effort and to face the peril of falling still lower and lower continually is more lamentable than any other possible penalty now or hereafter, here or anywhere. To choose to sin not as the occasional exception nor even frequently, yet in spite of repeated, persistent strivings after better things, but as one's habit, accepted and admitted—this is the worst of all possible penalties which can befall any one of us."

In one of its editorials the *Universalist Leader* says: "Christianity does not mean the running of all lives into the same mold; the making of all alike. It seeks not uniformity, but unity of diversities. It would bring each to his own individual perfection. That does not make John over into a Peter, or Philip into a Thomas, but in the perfection of each is found the perfection of all. The spirit of Christ in the hearts of men is like water at the roots of plants; the same water nourishes the lily and the rose, the grass blade and the oak-tree. The spirit of Christ in your heart will not make you some one else, but it will make you you."

D. T. Denman says in the (Baptist) *Standard*: "The man who makes his own religious welfare the one thing of prominence and subject for self-congratulation will forget God and his fellow-man. One of the great evils which threatens the religious life is superficiality. The superficial man is almost certain to become a formalist. There is a certain amount of religious energy in all of us and it must find some method of expressing itself. If it is not absorbed in vital communion with God and service for man it will run through the channels of ceremonialism."

A writer in the (Baptist) *Watchman* says: "Sincerity is equivalent to purity; a heart without guile, such as Jesus had. The Word of God lays great stress on this quality. 'Blessed are the pure in heart: for they shall see God.' Will any others see Him? We think not. The question in the 15th Psalm as to who shall dwell in the holy hill—a very personal question—has an answer which is based on the righteousness and truth of the heart. It is the heart that gives character to the life,—the life that counts with God."

The (Unitarian) *Christian Register* says: "Now, of all who have ever taught, Jesus was the most distinct in his utterances. He always meant just exactly what he said. His words were as limpid and as clear as a mountain stream. As fine glass, which is no obstacle to the incoming of light, are the teachings of Jesus. We take them accordingly, as sound money, at their face value; for, to understand them, we have not to explore the deep mysteries of a system of philosophy or theology."

A writer in the *New Church Life*, after describing the process of self deception of which self love is the beginning, says: "When the mind is thus formed from false doctrines within and without, then the clear perception of good and truth departs and in its place there comes the obscure perception arising from fatuous light, which, however clear it may appear to him who is in it, is nevertheless thick darkness itself."

The (Baptist) *Examiner* quotes the following from the writings of Gardiner Spring, D.D.: "With the exception of the writ of *habeas corpus*, a privilege not required under the Jewish government, simply because it did not allow of imprisonment, there is not a single feature of free government that is not distinctly developed in the Bible."

The (Roman Catholic) *Truth* quotes the following from St. Vincent: "The first step which he who desires to follow Jesus Christ should take, is to renounce himself; that is, his own sentiments, his passions, his will, his judgment, and all the motions of nature."

The (Methodist) *Christian Advocate* says: "Let all delays come to a speedy end. Live to-day. Do good to-day. Be as nearly like Christ as possible now. Measure up to your highest ideal now."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfillment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Notice is also given that until April 1, the beginning of the *Journal* volume, back numbers of *The Christian Science Journal* may be procured at five cents a copy when ordered in lots of ten or more. Orders for special numbers cannot be filled at this price.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem.
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental ideas; 120 pages, cloth covers, gilt edges. Price by mail, \$1.00; \$3.00 half dozen; \$5.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *as Christian Science*, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1888. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 20 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 50 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," "THE WAY," "CHRIST AND CHRISTMAS," "RETROSPECTION AND INTROSPECTION," and "CHRISTIAN SCIENCE MIND-HEALING."

Official Organ of The First Church of Christ, Scientists, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting articles of cases of Spiritual and Physical Healing, as well as valuable discussions of the Principles and the Practice of Christian Science.

Terms of Subscription:

Private or business postage free on any part of the United States, Canada or Mexico. Two Dollars per annum in Advance. Single Copies, 10 Cents. Foreign Subscriptions, \$3.00 per annum. \$5.00 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, with the text of the Scriptural passages from which they are taken, and the Christian Science Commentary.

Terms of Subscription:

The Quarterly is published on the first of each month, and contains interesting articles of cases of Spiritual and Physical Healing, as well as valuable discussions of the Principles and the Practice of Christian Science.

Political and Governmental Notes.

An effort was made in the Maine Legislature to have the prohibition amendment to the State constitution resubmitted to the people. After three hours' debate the proposition was put to a vote and it was defeated. The minority report in favor of resubmission stated that the United States internal revenue report for 1900 showed that in spite of prohibition fifteen hundred licenses to liquor dealers were granted in the State of Maine for the fiscal year ending June 30, 1900.

Although the Hay-Pauncefote treaty expired by limitation on March 4, the British government nevertheless made a formal reply to the United States on March 11, rejecting the Senate amendments, chief of which was the one which declared the Clayton-Bulwer treaty superseded. The reply will be useful as a basis for future negotiations.

The following St. Louis Exposition Commissioners have been appointed by the President: Thomas Carter of Montana, John M. Thurston of Nebraska, William Lindsay of Kentucky, and George W. McBride of Oregon, all of whom are ex-senators.

The sheathing of battleships and armored cruisers has been declared by the board of bureau chiefs and Secretary Long to be undesirable and not representative of the highest type of naval construction, and no more of it will be done.

An order was sent to General Chaffee by the United States War Department on March 15, for all the American troops to leave China by the end of April except a legion guard of one hundred and fifty men.

Both houses of the Utah Legislature passed a bill last week taking polygamy out of the felony list. The bill was vetoed by Governor Wells, himself a Mormon.

The assessed valuation of property in the city of Boston, according to the annual report of the assessors last week, was \$1,129,787,032.16.

Foreign News.

Russia has seemed of late to be tightening her grip on Manchuria, and the newspapers have been filled with rumors that interference is being considered by Great Britain, Japan, the United States, and possibly Germany. It was definitely stated that China had appealed to these powers to protest against the enforced concession of the control of Manchuria to Russia. It is apparent that the United States, Great Britain, and Japan look with much disfavor upon Russia's encroachment on Chinese territory,

but they seem unable to agree on any plan of opposition.

The British naval estimates for the ensuing year reach a total of £30,875,500, an increase of more than £2,000,000 over last year, chiefly for ship building. There is an increase of 3,745 in the number of officers and men. The new ship building programme provides for three battleships, six armored cruisers, two third-class cruisers, ten torpedo boat destroyers, five torpedo boats, two sloops of war, and five submarine boats. On some of these vessels work was begun in 1900. All the ships will be in course of construction this year.

The Duke and Duchess of Cornwall and York started on the first stage of their tour of the globe on March 15. They were accompanied to Portsmouth by King Edward and Queen Alexandra. Next fall the Duke and Duchess will reach Canada on the return voyage from Australia, and they are expected to visit the United States as well. On their return to England they will receive the titles Prince and Princess of Wales, the Duke being King Edward's oldest son and heir-apparent to the throne."

Although the reports from South Africa that peace terms were being discussed by Lord Kitchener and General Botha have lacked official confirmation, there seems to be no doubt that some such negotiations are under way. The *London Daily News* of March 14, says: "We understand that the Government has authorized Lord Kitchener to give a distinct promise that the government of the new colonies shall culminate in a complete grant of free institutions."

On March ninth and tenth heavy red clouds hovered over Palermo, Sicily, and over southern Italy, and the rain from them had the appearance of blood. The phenomenon was attributed to dust from the African deserts, transported by heavy winds that had been blowing.

The population of India, according to a recent official census, is 294,000,000.

Industry and Commerce.

Few realize the variety of uses to which peat is put. It is used for pavements, paper-making, buildings, ornamental work, tanning leather, deodorizers, disinfectants, and fertilizers. The peat ash abounds in carbonate, sulphurite, and phosphate of lime. By being mixed with coal dust it forms excellent fuel, while it can be combined with other substances in making gunpowder, fireworks, and gas. In making the fine candles for the Catholic churches of Germany, the paraffin used is obtained from peat. Some of its by-products are carbonate of ammonia, soda, vinegar, naphtha, paraffin, camphene oil, tar, sulphate of ammonia, acetate of lime, volatile oils, fixed oils, pyroxylic spirits, hydrocarbon oils, and aniline colors.

The School of Mines at St. Petersburg contains the most valuable stock of minerals and precious stones to be found in the world. The specimens on exhibition comprise nuggets of gold worth twenty thousand dollars, and of platinum weighing twenty pounds; there are perfect crystals of green beryl weighing five pounds, a single mass of malachite weighing more than two thousand pounds, as well as an enormously valuable collection of topazes, emeralds, chrysoberyls, garnets, amber, lapis lazuli, rock crystals, sapphires, jades, etc.

The National Tube Company has received the largest foreign contract for steel pipe ever awarded to an American firm, and one of the largest single contracts ever placed. It is an order for 125 miles of 30-inch pipe to be used in the construction of a water line in Roumania, the value of which when delivered will be nearly two million dollars.

A press dispatch from Sheffield, Eng., last week announced that the steel manufacturing corporation of William Jessop & Sons decided on March 12, to establish works in

the United States for certain branches of their business.

It is reported in the daily press that the salary of Charles M. Schwab as president of the recently organized steel trust is to be one million dollars a year. Mr. Schwab was president of the Carnegie corporation.

The United States seems disposed to take the lead among the silk producers of the world. During the last three years the consumption of raw silk in the United States has exceeded that of France.

General News.

In a letter to the president and managers of the Carnegie Company last week, announcing his retirement from active business life, Andrew Carnegie notified them that he had instructed his cashier to hand over to them bonds of the Carnegie Company to the amount of five million dollars to be held in trust for the following purposes: The income of one million dollars to be spent in maintaining the libraries built by him in Braddock, Homestead, and Duquesne, and the income of four million dollars to be used to provide for employes of the Carnegie Company in all its works, mines, railways, shops, etc., injured in its service, and for those dependent upon such employes as may be killed; and second, to provide small pensions or aids to such employes as, after long and creditable service, need help in their old age.

Concerning his gift Mr. Carnegie says: "I make this first use of surplus wealth upon retiring from business as an acknowledgment of the deep debt which I owe to the workmen who have contributed so greatly to my success. I hope the cordial relations which exist between employers and employed throughout all the Carnegie Company works may never be disturbed, both employers and employed remembering what I said in my last speech to the men at Homestead: 'Labor, capital, and business ability are the three legs of a three-legged stool; neither is first, neither is second, neither third; there is no precedence, all being equally necessary.'"

General Benjamin Harrison, President of the United States from 1889 to 1893, passed away at his home in Indianapolis, Ind., on March 13, after being in bed less than a week. Since his retirement from public office, General Harrison gained in influence. He maintained a dignified attitude in the political contests waged since his retirement, being frankly partisan, but a partisan who was ready at all times to expose what he considered violations of the foundation principles of the republic, regardless of party affiliations, and in consequence he stood very high in the esteem of the entire nation, Republicans and Democrats alike reposing confidence in his honesty.

The Pan American Exposition at Buffalo, N. Y., will open May 1. Wires will connect with the executive offices of the premier of Canada, the presidents of Mexico and all the Central and South American republics, and with President McKinley's private car which on May 1, will be en route to California. At two o'clock Buffalo time each of the rulers of the new world will touch a button in his office which will start some part of the machinery in the Exposition at Buffalo, and each of the rulers will be expected to send a message of greeting.

Dr. John B. Billings, director of the New York Public Library, made public on March 15, an offer from Andrew Carnegie to pay for sixty-five branch library buildings for Greater New York at an estimated cost of \$80,000 each, or a total of \$5,200,000 provided the city will furnish sites and make satisfactory provision for the maintenance of the libraries. If the offer be accepted New York will have the greatest library system in the world.

The announcement is also made that Mr. Carnegie has offered to give St. Louis \$1,000,000 for a public library, provided the city will furnish a library site and \$150,000 for maintenance.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Observations of the Planet Eros.

A Minute Satellite of Great Astronomical Importance.

Eros, the minute planet discovered by De Witt of Berlin, August 13, 1898, returned to view last September, after completing the cycle of visible positions it offered then, and is about to be lost to view again. Two series of observations are now available for the work of the computers, and in the course of several months the busy mathematicians may be able to reduce the enormous mass of work done. Nearly every observatory in the world worthy of the name has done all it could to note its position day by day, and a mass of data has been accumulated that presents an appalling task for the astronomers from which to reach the ultimate results expected.

After all, it may be asked: Supposing Eros was discovered, what of it? Why should the discovery of a vagrant body like it, twenty miles in diameter, as Eros is estimated to be, never visible to the naked eye, be regarded as one of the great events of the century, occupying the energies of the most expert observers for months, and the work of the most expert computers for many more months? What great munificent reward repays for all this effort? Are there not celestial questions, countless in number, pressing for solution that need not be postponed for this insignificant affair? What is there about this *rara avis* that the astronomical world should go mad on its appearance?

The full answer would be a treatise on the fundamental question of astronomy at least, and in some respects of science in general—how far is the sun from the earth? All the estimates thus far of celestial distance are expressed only in terms of that yard stick. Mars, Jupiter, the fixed stars, the velocity of light, of electricity, the force of gravitation, etc., anything on which an estimate of distance is ventured are dependent on an estimate that the thing is or the force acts through so many times more or less than the distance of the sun from the earth, and this latter measure is only approximately known.

The problem has engaged the acutest minds since astronomy was a science, and a result has been reached that makes the probable error in the reckoning very small. There is probable error, however—a matter of about fifty thousand miles—reserved by the conscientious scientist, in stating the sun's distance, and this error is perpetuated and most probably multiplied in any computations based upon it.

The most fruitful method yet known, indeed, the only one giving any promise of reliable results, is that of measuring the sun's parallax—the long, acute angle of which the centre of the sun is the apex and the ends of the earth's diameter the subtended base. It is about 8.8 seconds of arc according to the best astronomers, with a probable error of .01 second. This gives a mean distance of ninety-two million miles in round numbers, always bearing in mind the probable mistake of about fifty thousand miles.

It is this .01 second of arc, that the astronomers are after, or, rather, that they want to lose, and the aggravating

thing is they can never measure it directly. This is so small an angle that no means are as yet known for surely noting it, at least with so long a side as the distance of the sun. Some idea of what .01 of a second of arc is may be gathered by setting up a nickel coin twenty-five miles away and trying to measure the angle subtended by its diameter with the best instrument that can be devised.

The process of measuring the sun's parallax is arrived at by measuring something else. To get an observable angle it is obviously important to observe a body as near the earth as possible, provided it also goes around the sun. If the distance from the earth to the observed body is known accurately, and the deductions from the laws of gravitation, the velocity of light, of electricity, and other factors require another measure, as the distance of the observed body from the sun, the difference is obviously the distance of the earth from the sun. Really, then, any celestial distance, once certainly known, will give by calculation, the sun's distance from the earth.

Bodies like Venus and Mars, which sometimes come fairly near the earth, occur at once as likely objects, and they have been used for this purpose, but they are too large for the best results. The transits of Venus promised a high degree of accuracy when their careful observation was first proposed, and they did give a better approximation than was known before, the contact of the planet with the sun's disk, giving the point for observation needed for exact work. The end aimed at was to secure two simultaneous observations as far apart as possible of the same point. The ideal observation would be observers on each end of an earth's diameter, but this is not attainable in practice, and the difficulty in observing a large body, would be in agreeing upon some one point of the disk of the planet, say, for observation.

The best series of such observations is considered to be those of Sir David Gills, with a heliometer, at the Cape of Good Hope, on the positions of some of the minor satellites. Instead of arranging with a brother astronomer to station himself on the other side of the world and observe the positions simultaneously, Sir David observed a position of a given satellite early in the night and let himself be carried around by the rotation of the earth to a position giving an angle, from where, early the following morning, he would take another observation of the same satellite. He chose satellites instead of the larger bodies, because they present only a point of light for observation at any time.

Here is where Eros came as a godsend. It was a satellite; it came the nearest to earth of any known body except the moon, and it is never more than a mere point of light. It gave the largest possible angle yet known, with less chances of going astray in deciding what point to observe. Unfortunately for the astronomers, it has been learned that Eros reached the best position last for observation in 1896, two years before it was discovered. It was then about fifteen million miles away, and will not return

so near again until 1924, although there will be a better chance than now in 1917. It is clear that a body only twenty miles in diameter at a distance of fifteen million miles is only a point of light, for all practical purposes.

Let us say that a good series of observations on Eros were made at Pulkova, Russia, January 1, and that at the same date, or preferably the same moment, a series was taken at Mt. Hamilton, California. Here are two observers on opposite ends of a long base-line. Multiply these two observers by half the number of observatories in the world, multiply the result by a figure in the hundreds representing the number of observations taken at each observatory—an average figure, for some observatories take more and some less—and a sum will be arrived at expressing the amount of separate facts, to be compared, arranged, and calculated upon by the computers.

Their results are expected to remove some of that one hundredth of a second of arc of probable error in the sun's parallax that is troubling the astronomers, so that the astronomer of the future may give the parallax somewhere nearer 8.81 or 8.79, than he can at present, which is 8.80. Not that any one person or pair of observers has observed the small angle, but that out of the great mass of data one may assume a closer approximation with more confidence than at present, from an average of all the measurements.

This, after weighing each observation by methods familiar to computers, as to its weight as evidence, dismissing no honest observation as worthless, but giving full credit to work done under the most efficient auspices, as to skill, experience, possession of instruments, advantages of site, etc.

In speaking of Eros being lost to view, it should be remembered that it never goes beyond the range of vision, but goes behind the sun, or so far within its light as to be invisible.

Eros appears as a star of 9.3 magnitude, or far below the limit of naked eye vision. It revolves about the sun in one and three fourths of our years, pursuing a very elliptical orbit, that comes at one point within the orbit of Mars and at another point is outside the Martial orbit. Its distance during this winter was about twenty-seven million miles from the earth.—*Boston Herald*.

The Lectures.

At Exeter, Neb.

At a largely attended meeting at the Opera House Tuesday evening (February 26), Silas J. Sawyer, C.S.D., of Milwaukee, Wis., spoke on Christian Science. Dr. Sawyer was introduced by Hon. W. H. Taylor of our city, who said in part:—

Ladies and Gentlemen:—When the World's Fair was held in Chicago there was held in connection with it a Parliament of Religions, where were gathered together representatives of most of the different religions of the world. I became quite interested in the deliberations of that body, attended many of its meetings, and it was my privilege to hear a great many of the principles of the various religions expounded by their ablest exponents. I was surprised to learn how little difference, after all, there is between the fundamental principles of all the religions in the world. And the leading thought through the whole, was "The Fatherhood of God and the brotherhood of man."

There was one religious society at the Parliament, however, that I did not have the pleasure of hearing, and that was the Christian Scientists. And, as I never have read any of their books, never attend any of their meetings, and never heard one of their lectures, I know but little about

them, but I am not prejudiced either for or against their religious belief.

I know in a general way, that we have had a society of Christian Scientists in Exeter for several years, and I am sure they are good average citizens, and I don't think their religion has been an injury to any of them.

There is one material difference between the Christian Scientists and all other religious denominations, and that is this, whereas the others only claim to relieve our spiritual infirmities, our Scientist friends claim to cure both body and soul. Surely this claim is worth investigating.

I now have the pleasure of introducing to this audience, Silas J. Sawyer, C.S.D., member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.—*Fillmore County News*.

At Ashland, Neb.

Dr. S. J. Sawyer lectured on Christian Science at Simington's Opera House on Thursday evening (February 28) to a large audience. Rev. C. A. Huyck who introduced the lecturer said:—

Ladies and Gentlemen:—Nearly two thousand years ago one who was kind, loving, and compassionate, appeared upon the earth. He cooled the fevered brow; he fed the hungry; he opened the eyes of the blind; unstopped the ears of the deaf, and spent nearly three years of his life in doing good. He taught them a doctrine that would make their lives brighter; their minds broader; their intellects deeper; yet the cry rang out, Away with him! Crucify him! and the cruel spear and nails were his portion.

For nearly two thousand years this spirit has in a measure throttled investigations into new fields of thought and research. But a new era has dawned; liberality of thought, of action, of investigation has taken its place, and in this age of progress and research we cease almost to wonder at the seemingly marvelous, and simply ask ourselves, What next?

There appears before us for our consideration and investigation the subject of Christian Science, and we are thankful for the good that has been and is being accomplished through the adherents of this, to us, new system. It therefore affords me great pleasure to be able to state that we have with us one who is both authorized and qualified to talk to us upon this subject that is attracting so much attention, and I now introduce to you Dr. Silas J. Sawyer, C.S.D., member of the Christian Science Board of Lectureship of Boston, Mass., who will address you.

Ashland Gazette.

Lectures at Other Places.

Morrison, Ill.—William G. Ewing, February 19.

The Forest Reserves.

There are nearly 50,000,000 acres of national forest reserves in this country, and for their conservative management Uncle Sam's Forest Bureau is making working plans. The states are taking a most active interest in the matter, especially New York, in whose behalf the Bureau is preparing working plans for about 1,250,000 acres. In addition, the Bureau has applications for similar working plans for 2,500,000 acres belonging to private owners.

From 20,000,000 to 40,000,000 acres of government forest in the Philippines require attention, and the office in charge of forestry work at Manila, under Captain Ahearn, of the Ninth Infantry, is anxious to obtain the services of competent experts in this line.

Saturday Evening Post.

Selected Articles.

As Viewed by a Christian Scientist.

To the Editor of *The World*.

In response to a request of recent date I would submit reasons why Christian Scientists consider their religion an important factor in every walk of life; and especially so in that of the business man.

• In confronting the vicissitudes of life, mortals find they must have a resource above and beyond themselves. By example and experience they learn that mankind is always assured success, when handling a mathematical proposition, if governed by the science of numbers. The correct result is his desire, and he has learned that he must forego an egotistic desire to be apparently original, as there is contentment in relying upon an unerring principle. So with the musician, the law of chords is law unto him in the execution of music.

Primarily the successful business man is a very matter-of-fact individual, and must have the evidence well in hand as to the feasibility of every undertaking, to insure it a reasonable amount of success. I believe that at some stage of his experience a conscientious business man endeavors to find the key-note whereby God, or religious influence, might dominate both him and his business; but this attempt has met with indifferent success, and perhaps, in most instances, has been abandoned as not practical in the business world. I would not be understood that a good moral or business integrity is to be confounded with religious influence. It is true, that if this always prevailed it would transform the world, but religious influence would better even this condition of things infinitely.

Ninety-four per cent of business enterprises are a failure, mainly by reason of the lack of an absolute science or standard of excellence to govern the promoter of the business engaged in.

As true law, Moses taught the children of Israel to rely upon an unchanging, universal Principle, which is God, unseen to the physical senses, but can be understood by the spiritual senses. This ethical code, known as the Ten Commandments, was so plain that it left little excuse for any possible violation of its demands.

Jesus said: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." It is granted that a perfect knowledge of mathematics would leave no room or opportunity for a mistake in its application to human affairs upon the part of the one in possession of this knowledge.

Christian Science insists that it is possible to "Acquaint now thyself with him, and be at peace," and this law is carefully defined in Deuteronomy, 5 : 33: "Ye shall walk in all the ways which the Lord your God hath commanded you, that ye may live, and that it may be well with you, and that ye may prolong your days in the land which ye shall possess." Deuteronomy, 6 : 6, 7: "And these words, which I command thee this day, shall be in thine heart: and thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up." Jesus said he came not to destroy the law, but to fulfil. Moses as well as Jesus, insisted upon a spiritual rectitude, and Jesus' immediate disciple thus explains its relationship to business life: "Go to now, ye that say, To-day or to-morrow we will go into such a city, and continue there a year, and buy and sell, and get gain: whereas ye know not what shall be on the morrow. For what is your life? It is even a vapor, that appeareth for a little time, and then vanisheth away. For that ye ought to say, If the Lord will, ye shall live, and do this, or that."

While we acknowledge this knowing of God and His

ever-operative law is an education, yet, honestly desired, it is rapidly assimilated, and the application of it to all the events of a mortal's career is demonstrable. The real issue of life is the relationship of God to man, as Paul declares: "For as many as are led by the Spirit of God, they are the sons of God;" for thus only can God's kingdom come on earth as in heaven. God's business must be man's business, "for what shall it profit a man, if he shall gain the whole world, and lose his own soul?" asked Jesus.

Thus good business integrity, illumined by a comprehensive knowledge of the ever-present Principle, which we designate as God, the ever-operative nature of which we declare is Love, in its impartial dealings, becomes a guardian to the one understanding and trusting in it, exactly as the principle of mathematics, obeyed and applied, insures correct deductions. A business man thus explains his sense of its beneficial effect upon his life: "As a business man, I can say without hesitation that Christian Science simplifies all problems, and shows us clearly our way out, when in doubt. It eliminates the petty cares and troubles that are apt to divert us and take up the time needed for greater and better things."

One striking feature of the growing favor of Christian Science as a religion is the preference it has obtained with the men. Woman has always been the first to religiously appreciate the advantage of church relations. This is partly due to her more sympathetic nature, there being a natural desire tending toward spirituality, and a better comprehension of God; consequently any feasible theory or doctrine wins her by reason of its avowed divinity, while with the man it is entirely different. He approaches the subject cautiously, being sure of every step in his investigation. As a rule he halts when assured mysteries are unexplainable, and gracefully permits his feminine companion to identify herself fully with that which is not to his notion practical in his walk of life. The advent of Christian Science, however, finds the man, as well as woman, anxiously looking for the Messiah, and Christian Science appeals to his hungry heart, with its unerring principle and a given method whereby the divine nature of God enters into his life, with its exalted standard of unerring perfection, remoulding and shaping every detail of mortal existence, supplying the needed knowledge with which to realize the force of Paul's statement, whereby we put off the old man with his deeds and put on the new. Thus it is, with honest effort, that he endeavors to "seek first the kingdom of God and his righteousness." This effort insures him greater confidence in exalted and honorable dealings, mercy unconsciously creeps into his methods, the warmth and glow of Love illumines his career, and consequently we find no difference in the degree with which men and women grow heavenward.

Very respectfully yours,

JOHN H. WHEELER.

In the *Kansas City World*.

Wednesday Evening Meeting at Dayton, O.

THE following testimonies were given at a recent Wednesday evening meeting, at First Church of Christ, Scientist, Dayton, O.

A gentleman testified that some weeks ago a little girl was brought to him for treatment, suffering from nervous prostration. When walking she would stagger from one side to another, often bruising herself on objects she would run against; she was unable to feed herself, and very restless at night. A few days since, her father stated that she did not need further help, that she can feed herself and walk as well as any little girl, and is now at school, getting along nicely. The father also spoke of a demonstration of this child. One day her mother was suffering with pain in her stomach and laid down to rest. The

little girl went to her and asked permission to treat her. This was granted. She bowed her head in silent prayer, and in a few moments her mother was entirely relieved of suffering.

A lady told of the great value of Christian Science in overcoming sorrow, how the Truth had sustained her in this trying hour, and had it not been for this saving power, she would have been prostrated. The one who brought the sad news to her was greatly astonished not to see her break down at such a time. God's word in Christian Science enabled her to wipe her tears away.

A gentleman stated that he did not come into Christian Science because of the physical healing, but he had other reasons to be grateful. Christian Science has overcome the desire for intoxicating drinks, the use of tobacco, both chewing and smoking, also the use of profane language.

A lady who had for years labored in the Presbyterian Church, testified that her greatest joy for Christian Science was, that she had learned to know God better. She had been taught that God sent suffering, and that people must bear it; but in Christian Science she has learned that God is Love, and does not send suffering. She added that for six years she wore glasses, but since gaining a little understanding of this great Truth, she has laid them aside, and does not suffer any inconvenience, being able to read three or four hours by lamp light.

A gentleman told of a case of healing by a friend living in a neighboring city. A child was born and seemed to be almost a living skeleton. When five months old, it only weighed three pounds. Its parents expected it to die almost any time. As a last resort, Christian Science was given a trial, and the infant commenced to improve at once. At the end of three weeks, it was pronounced well, and weighed ten pounds.

A traveling man gave his experience. His business calls him over a large scope of territory. He was in poor health, having two hereditary diseases, and was troubled with dyspepsia. "At a hotel," he said, "where I was stopping, I heard of Christian Science. After having it explained to me somewhat, I purchased Science and Health. I had not read many pages until convinced that it was what I wanted. I was much impressed with an article in one of the Journals, entitled, 'Thy Will be Done.' After reading the literature for six months, I can say I was healed. Besides physical healing, I have found Christian Science very practical in business. I study the lesson every day, and this helps me in business, makes me a better salesman, and thus helps me to do better for the house for which I am working."

A young man testified that his mother had been in poor health for eighteen years, suffering from indigestion, nervous prostration, and other troubles. She had the service of the best physicians in this city and elsewhere, but medicine did not relieve her. She lived across the street from where the Scientists held their meetings. She had noticed people go there in poor health and in due time appear well. She was also impressed with the happy expression on their countenance. She decided to investigate Christian Science and give it a trial. She did so and was restored to health.

He also spoke of a severe case of bleeding of the gums which was healed through Christian Science, after material remedies had failed. He told of practical benefits he had received. At one time, when suffering with severe pain, he requested his mother to give him some medicine, but it did not bring relief. He got so bad that he fell to the ground in a faint. His mother used what she knew of Christian Science, and in a short time he was restored to consciousness. "These demonstrations," he said, "were convincing evidence of the power of Christian Science."

A lady testified that for fifteen years she had been in poor health, and during this time had been under the care

of some of the best physicians, but was unable to get relief so she could rest at night. Hearing of Christian Science, she decided to give it a trial. She remarked to the Scientist that if she could get one night's rest she would be the happiest person living. In Christian Science she found this rest, and ever since has continued to sleep at night. In many ways she and her family have been helped in Christian Science.

A lady whose countenance beamed with joy, spoke for some time of the great benefits received in Christian Science. She said when she was a child only twelve years old, she became afflicted, also other members of the family. They secured the best physicians from Richmond and Eaton. Her father and brother passed away, and she was not expected to live. She earnestly prayed to God that she might be spared to raise her little brothers. She commenced to recover and soon was well. From early youth there was a longing after immortality. She asked the ministers many perplexing questions about heaven, but never was satisfactorily answered. When she grew to womanhood, she was greatly troubled with her stomach and neuralgia of the heart. Christian Science was mentioned, but was at first opposed. She secured a *Christian Science Journal* and was greatly impressed by reading an article therein by Mrs. Eddy. Gradually, she began to get some idea of the Truth, and in due time was restored to health. That was six years ago. She added that in her family of six small children, she had found the Science very beneficial in overcoming accidents, croup and measles, and general complaints of little folks. The part most highly valued is the thought of immortality. "Science and Health with Key to the Scriptures" has answered the questions that had bothered her from childhood.

Dayton (O.) Herald.

Christian Science.

THE following letter was republished from the *Weekly Chronicle* in a recent number of the London *Daily Mail*, and kindly sent us from London by a Christian Scientist.

To the Editor of the *Weekly Chronicle*.

Sir:—There has been considerable interest displayed in Newcastle on the subject of Christian Science, and this interest has manifested itself in the publication in your columns of at least one letter which, though conceived, I have no doubt, with the best intention, has succeeded only in completely obscuring the teaching it attempts to elucidate. I am sure, therefore, that you will give me a little space in which to endeavor to explain to your readers what this teaching really is.

Christian Science, then, is simply the renewal of primitive Christianity. It is a revelation to this age, through its Discoverer, Mrs. Eddy, of the Gospel which Jesus preached, and the truth of which he demonstrated by what are commonly called the miracles. "Jesus of Nazareth," writes Mrs. Eddy, on page 209 of *Science and Health*, "was the most Scientific man that ever trod the globe. He plunged beneath the material surface of things, and found their spiritual cause." "He knew," she continues on page 356, "that matter had no life, and that real Life is God; therefore he could no more be separated from Life, than God could be extinguished;" and this great fact, she says on page 167, he imparted to his disciples, for "in Latin the word rendered *disciple* signifies student; and the word indicates that the power of healing was not a supernatural gift to these learners, but the result of their cultivated spiritual understanding of the Divine Science which their Master displayed, by healing the sick and sinful."

These few passages give a glimpse of that wonderful and beautiful book, "Science and Health with Key to the Scriptures," in which Mrs. Eddy has herself told the world,

with simple and direct earnestness, what Christian Science is. In writing it, she declares, on page 20, "the Bible has been my only text-book," and on page 122, she explains the object she had in view: "I saw before me the sick, wearing out years of servitude to an unreal master, in the belief that the body governed them, rather than Mind. The lame, the deaf, the dumb, the blind, the sick, the sensual, the sinner, I wished to save from the slavery of their own beliefs."

The outcome of this gentle solicitude is the Christian Science Church whose members are to be found to-day in every quarter of the globe, striving, in the light of their Leader's revelation to them, to acquire the spiritual understanding to observe the divine command to "preach the gospel" and to "heal the sick."

The London buildings of this church are situated at 55 Bryanston Street, Marble Arch, where every information can be obtained relative to the work, and where the only periodicals issued by the Publishing Society, namely the *Christian Science Journal* and *Sentinel*, can be purchased, as well as all Mrs. Eddy's books.

The motto which Mr. Lumley attributes to the church: "Prove all things; hold fast that which is good," though not the one chosen by its Founder, expresses very closely the thought which governs it. Christian Science to its students is no longer a theory; it is the most essentially practical thing that has ever come into their experience. They are proving it in every hour of their life; and as they realize their growing strength in the incessant battle against sin, their power to overcome disease in themselves and others, their new-born courage in moments of sorrow and fear, and above all, perhaps, the increasing harmony of their daily lives, they begin faintly to perceive the spiritual significance of the Sermon on the Mount, and why in the words of their Leader, on page 167 of *Science and Health*, "the eternal Life, not the death of Jesus, was its outcome."

I am, etc.,

FREDERICK DIXON.

Marble Arch, January 7, 1901.

Great Religious Awakening Begun.

UNDER the above heading we clip the following from the *Chicago Times Herald*:—

Rev. R. W. Rogers of the Lake View Congregational Church preached last night (February 3) on "A New Religious Era." In his sermon he said in part:—

At present there is nothing that so impresses the mind of the morally and religiously inclined as the consciousness that a radical change has taken place in the religious world during the last six months. In numerous churches where a half a year past there was indifference, to-day there is devotion; in many where there was only the critical discourse there is now affirmation. The breathing of a new life seems to be stirring through religious thought. The laymen feel it; the pulpit is most distinctly conscious of it, and many are at this very hour asking, What is its significance to the religious world?

Indications of a change can be noted on all sides. What does it signify that in every great city in our nation there is a movement toward moral purity? What are the inferences to be drawn from the fact that a year ago many of the sermons reported in our dailies were theological criticisms, while to-day we read ethical and devotional sermons only?

What has become of the heresy trials—why are they conspicuous by their absence? What are the conclusions that are to be deduced from the fact that nearly every Protestant church in the city is engaged in special sessions of worship; that the attendance at prayer services has in

many instances doubled in numbers, and that in every town and city there is special religious effort?

If we read the signs of the times aright, do they not tell us that we are entering a new religious experience, an age of constructive religious thought, an era of faith building? At the Congress of Religions one of the speakers declared that we are past the negative stage of advanced religious thought. But we are more than past the negative stage. To-day we are actually caught up in an enthusiasm not to "tear down," but "to build up."

Moral citizens organizing in our cities are declaring "we must stop theoretical discussion and do something." The churches feel with tremendous persuasion, "we must make religion a business." A new inspiration is abroad everywhere, the popular thought of which is construction, building of faith.

It is true that the plans inaugurated at the beginning of the century may have ushered us into this new spirit, but the fact that the multitudes gave immediate response to the call for a century movement certainly indicates that the people are dissatisfied with mere religious analysis and denial, and that in their hunger for affirmative truth they long to begin the hopeful task of reconstructing their faith. Dissatisfied with the gloom of doubt, multitudes in word and act are endeavoring to get a vision of God.

The era of faith-building has begun in earnest among the educated. No more hopeful session ever took place than that of the recent meeting at the University of Chicago, when the keenest scholars and the deepest critics came together for the purpose of mutually strengthening their religious faith. With clever logic they showed that science does not bow God out of the world; but, on the contrary, they found that it builds an intelligent faith.

The difficulty has been one of oversight. While studying the watch one is inclined to forget its maker. So, while engaged in examining nature, man is apt to overlook its Creator. But on bended knee many a scientist begins to feel like begging the pardon of God for a blindness that did not see His existence back of the cell or law.

Romanus says: "Science is moving with all the force of a tidal wave toward faith in Jesus Christ." So morally, religiously, and intellectually the age of criticism, more for the sake of tearing down—the era of Pope—is dead. And now through the present religious awakening an age of universal faith-building is being quickened into life. The age of destructive criticism lasted nearly half a century. But the age of constructive religious thought is now here.

Christian Science Healed Her.

LYONS, January 30.—Mrs. George Gardiner is just making acquaintance with the world. This week she took her first ride on an electric car. She has been in bed thirty years, rigid in every muscle, helpless, only moving her lips sufficiently to murmur her needs and to receive nourishment.

Three months ago she became interested in Christian Science and her family allowed a healer to treat her. Improvement was apparent in a few weeks and progressed so that Mrs. Gardiner at the end of two months was walking about the house, and last week took a trip to Syracuse.

Physicians say that paralysis was brought on at the age of twenty by a fall downstairs, and that for the last few years the invalid could have walked could she have been persuaded that the physical crippling had passed away.

Syracuse (N. Y.) *Herald*.

Thrice blest whose lives are faithful prayers,
Whose loves in higher love endure:
What souls possess themselves so pure,
Or is there blessedness like theirs?

A. TENNYSON.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Something New.

ALL the Churches of Christ, Scientist (from this date), are requested to read at the close of services, and before benediction, the "Scientific Statement of Being."

There is no life, truth, intelligence, or substance in matter. All is infinite Mind and its infinite manifestation, for God is All in all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness; hence, man is spiritual and not material.

And the correlative Scripture according to 1 John, 3 : 1, 2, 3.

Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God; therefore the world knoweth us not, because it knew him not. Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when He shall appear, we shall be like him; for we shall see him as He is. And every man that hath this hope in him purifieth himself, even as He is pure.

Beloved brethren all over our land and in every land accept Mother's Spring greeting, while

The bird of hope is singing,
A lightsome lay, a cooing call,
And in her heart is beating
A love for all—
"Tis peace not power I seek,
'Tis meet that man be meek."

MARY BAKER G. EDDY.

Church By-law.

Amend Article XX., Section 4, to read as follows:—

Those beloved brethren who are distant from the Mother Church, and whose teachers have left them, can elect readers of their churches who are ready for this high calling and continue the meetings of their associations. If they have not a Christian Scientist Association, they can organize one, and select for its leader one of their number, or any loyal student who properly accepts their call and is duly qualified to teach Christian Science.

In Answer to Prayer.

In a recent issue of *The Saturday Evening Post*, Rollin E. Smith tells the story of "The Passing of the Great American Locust Plague." The event transpired in April, 1877, and was believed by hundreds of God-fearing men and women to have been a direct answer to prayer.

"In the summer of 1873," says Mr. Smith, "considerable damage was done to the crops in two or three counties in the southwestern part of Minnesota by grasshoppers, or Rocky Mountain locusts."

In 1874 the number greatly increased, and in 1875 the grasshoppers had spread over the whole of southern Min-

nesota. Various devices for killing the grasshoppers were employed, but all to no purpose. As they continued to increase at such an alarming rate, it was believed they would soon spread over the remainder of the state and into the adjoining states. By the close of the summer of 1879 the situation was one almost to cause despair.

As everything else had been tried to no avail, the question was asked as to whether the prayers of the people might not bring an end to the plague. Some ministers of the state petitioned the governor to issue a proclamation appointing a day for prayer and fasting throughout the state. Finally the governor decided to act, and the following proclamation was issued:—

State of Minnesota, Executive Department.

St. Paul, April 9, 1877.

A general desire having been expressed by various religious bodies in this state for an official designation of a day of fasting, humiliation, and prayer, in view of the threatened continuation of the grasshopper scourge, I do hereby, in recognition of our dependence upon the power and wisdom of Almighty God, appoint Thursday, the twenty-sixth day of April, instant, to be observed for such purpose throughout the state; and I invite the people, on the day thus set apart, to withdraw from their ordinary pursuits, and in their homes and places of public worship, with contrite hearts, to beseech the mercy of God for the sins of the past and His blessing upon the worthier aims of the future.

In the shadow of the locust plague, whose impending renewal threatens desolation of the land, let us humbly invoke, for the efforts we make in our defense, the guidance of that hand which alone is adequate to stay "the pestilence that walketh in darkness, and the destruction that wasteth at noonday." Let us pray for deliverance from an affliction which robs the earth of her bounties, and in behalf of the sufferers therefrom let us plead for comfort to the sorrowful, healing for the sick, succor for the perishing, and larger faith and love for all who are heavily laden.

Let us, moreover, endeavor to deserve a new prosperity by a new realization of the opportunity vouchsafed us, and a new consecration to those things which make for the well-being of men and the glory of God.

J. S. PILLSBURY, Governor.

The proclamation attracted widespread attention and was generally endorsed, although a few scoffers were disposed to ridicule the idea. Among the God-fearing people, however, the proclamation created a profound impression.

We give the conclusion of the story in Mr. Smith's own words:—

When the day came an air of Sabbath stillness proclaimed that it was not as other days. The unusualness of the occasion impressed all alike, and the scoffers had little to say. Shops and places of business were generally closed, and when the bells announced the hour of service, men and women, in Sunday attire, went their way to their places of worship.

In recalling that day, recently, Governor Pillsbury said: "I never saw a stiller day in Minneapolis."

On this day all denominations forgot their creeds for the moment, and the prayers of Protestant and Roman Catholic mingled in one fervent appeal for relief from the visible enemy that was destroying their state.

The twenty-seventh of April, the day following the day of prayer, the sun shone clear and hot over Minnesota, and an almost summerlike warmth penetrated the moist earth, down to the larvæ of the myriads of grasshoppers. Quickened by this genial warmth, the young locusts crawled to the surface in numbers that made the countless swarms of the preceding summer seem insignificant; in numbers sufficient to destroy the crops and hopes of half a dozen states. For a day or two the mild and balmy weather lasted, then it

grew colder, and one night the moist earth was frozen and with it the unhatched larvæ and the young and crawling locusts above ground. And though the earth thawed again in a few days, the locusts, with the exception of a scattering few, had disappeared. "And," to quote Governor Pillsbury, "we have never seen any grasshoppers since."

There is much food for thought in this incident. Numerous instances of a like character are related in the Scriptures, wherein it is affirmed that the "effectual fervent prayer of a righteous man availeth much." If God was a present help in every time of need in ages which have passed,—and Christendom universally believes that He was,—why is He not such a help now? Has God changed? Is there any power or influence to cause Him to withhold any good thing from His children? If the answer to these questions is in the negative, and it certainly must be, then the failure to experience a full and complete salvation must be due to man's failure to place himself in a position to receive, rather than that God is unwilling to give.

How truly has it been said that "man's extremity is God's opportunity." And why? Simply because mortals do not turn to God for help until all things else have failed them. Then they find that God is able and willing to do for them what they could not do for themselves with all their material means and methods. How much discord and suffering mortals would escape if they would look to God for help in the first instance. But it seems that they must have "precept upon precept; line upon line; here a little, and there a little," before they learn to make God first in all things.

There is certainly an abundance of Scriptural authority in support of the declaration that all forms of evil may be overcome by living in obedience to the law of God. In Leviticus, 26 : 3-5, we read: "If ye walk in my statutes, and keep my commandments, and do them; then I will give you rain in due season, and the land shall yield her increase, and the trees of the field shall yield their fruit. And your threshing shall reach unto the vintage, and the vintage shall reach unto the sowing time: and ye shall eat your bread to the full, and dwell in your land safely." Then again in Malachi, 3 : 11, "And I will rebuke the devourer for your sakes, and he shall not destroy the fruits of your ground; neither shall your vine cast her fruit before the time in the field, saith the Lord of hosts."

How great and manifold are the blessings promised to those who are found dwelling in the secret place of the most High? "There shall no evil befall thee, neither shall any plague come nigh thy dwelling."

The fulfilment of these promises and all others given in the Bible can be expected only as God's laws are understood and obeyed. If mortals are ignorant of God's law or, knowing it, are disobedient thereto, they must not complain if they do not receive the reward of understanding and obedience. They must come into harmony with the law of God, and then they will experience the blessings which have been promised to the faithful. There is no limit to what God can and will do for humanity. It can be said to all "according to your faith, be it unto you,"—according to your fitness to receive you will receive of the blessings wherewith God hath blessed you. How necessary, then, that God's laws be understood and obeyed, for obedience to the law of God is the way of salvation from all evil. It demonstrates the eternal fact that God saves man from everything unlike Himself.

Calls it Dangerous Action.

THE following remarks of Hon. J. A. McLain, representative in the legislature of Missouri, upon the medical bill then pending before that body, are so forceful and eloquent that in the connection in which they were made,

they are worthy of the highest place in our American literature. They stamp their author as a man of profoundly conscientious convictions, as well as an orator and rhetorician of a very high order. We are glad indeed to give them place in the *Sentinel*. They will be perused with deep interest.

"First," he says, "it is the rankest sort of class legislation, and if enacted into a law would be null and void because unconstitutional. All laws must be general in their nature, must affect all persons in the same class alike.

"In this state we have four distinct systems of medicine—the allopaths, who believe in large doses of medicine; homœopaths, who believe in small doses on the doctrine of *similia similibus curantur*; the eclectics, who strike midway between, and the osteopaths, who do not believe in giving any drugs. By the terms of this bill the legislature is called upon to legally determine that osteopathy is the best of the four systems named—in fact, to say it is the only system whose school is so managed that its graduates need no further examination by the State Board of Health.

"Is it possible that allopathy, the oldest system of medicine, is inferior as a system to osteopathy? Or that its schools and teachers are inferior? If the position of the author of the bill be true, then it is inferior, because the author, Mr. Hall, promptly and cheerfully accepted the amendment that makes it necessary for all persons other than those graduating from a school of osteopathy to not only be examined by the State Board of Health but to pay fifteen dollars for the pleasure of being examined. Does the state claim that the equipments and faculties connected with allopathy, homœopathy, and eclectic medical colleges are inferior to those managing the colleges of osteopathy? If not, why should their students be required to do more than is required of students attending schools of osteopathy? This bill discriminates against all systems of medicine save one—osteopathy. To that extent it is class legislation.

"Second, this bill is bad, is a dangerous measure, because it strikes a blow at the fountain-head of religious liberty. It sets at naught the fundamental doctrines that all men have an inalienable right to worship God according to the dictates of their own conscience. Is the dawn of the twentieth century to be blotted with a prohibition upon free thought and free speech? You cannot by law legislate thought into the people. You cannot by law legislate thought out of the people. The fountain-head of truth is higher than mortal man. Society is composed of individuals, and when the lawful rights of one individual, or of a class of individuals, are infringed upon or taken away, society is injured. If one man's right can be taken from him, if his right to worship God as conscience dictates be denied, then this right can be denied to any number of persons until the religious liberty of all is destroyed.

"If a Christian Scientist can be restrained by law from doing good, from healing the sick, and preaching the gospel, so may those of the Presbyterian, the Methodist, and the Catholic faith. We are treading on dangerous ground. This legislature's reasoning, if carried to its ultimate end, will take us back to the dark ages. It turns our thoughts backward to the days of the early Christians.

"Truth has always met with stern opposition. The Roman emperors tried to snuff out the light of truth. They condemned Christians to be burned on gridirons, to be boiled in oil. They used to have matinees where Christians were masticated by wild beasts, simply for the amusement of the people. Men were burned at the stake. The rack, the fagot, the torch, and the thumb-screw were common in those days. At last a little band of God-fearing men fled from England to Holland and from Holland to America, seeking a haven where they could worship God with none to make afraid. These persecutions continued until St. Bartholomew's day, when the streets of Paris were

drenched with human blood. All because men dared to think.

"If men in those dark days, days that tried the souls of men, were brave enough to think, why should men hesitate now? The trouble with some of the doctors is that men are thinking. The man who does think places brains at a premium; the man who refuses to think places nonsense at a premium and brains at a discount. I believe every man owns his own brains and ought to do his own thinking. Every man ought to have courage enough to express his own thoughts and to do his own voting, though it differs from every other person in the state. The theory of this government is that every citizen thinks and acts for himself. The spark is never seen until the steel strikes the flint.

"This spirit sustained Galileo, Watts, Arkwright, Fulton, and Morse in the face of what would have driven timid men to despair. It stood like a pillar of fire by night and a cloud by day by Melancthon, Luther, Calvin, Wesley, and Eddy. It was like a sheet anchor to Fox, Wilberforce, and Lincoln in their crusade against human error until human bondage ceased to be. This right to think has acted like a divine coal of fire. It has touched the tongues of the world's orators. It has inspired and warmed the hearts of our philanthropists. It has steeled the nerves of our warriors. It has converted the forgotten flames of persecution of the early Christians into chariots of fire for our martyrs, and it has made a prison cell sacred and a scaffold honored. It displays angels passing by the graves of thieves to roll back the stone from the sepulchre of a Christ. We see heaven bending to kiss the truth while barbarism was forgotten in its grave.

"From the graves of stoned prophets, beheaded apostles, burned preachers, persecuted reformers, and the sepulchre of Christ we get our religious ideas. The lips that plead for Israel on Sinai, the lips whose doxology unlocked the prison cell at Philippi, the lips that touched the hemlock rather than tell a lie, speak to us to-day across the centuries, in thoughts that breathe and words that burn. Have no fear, 'truth crushed to earth will rise again.'

"I believe in the intelligence and patriotism of the people. The jewels that have been gathered for twenty centuries are not to be lost. If God is God He will care for His own. Too many patriots have fallen in behalf of human liberty for it to take a backward step. The memory of all the heroic dead must be forgot. I could easier think that every star in Old Glory would forever cease to be than to think that all the deeds of all the heroic dead should come to naught. Because I don't think as you think is no proof that I am right and you are wrong.

"For the reasons mentioned herein and others not mentioned for want of time and space I am against this bill."

Christian Science and Insanity.

THE following appeared in the editorial columns of the *Troy (N. Y.) Press*, Monday, February 25, 1901:—

Dr. Allan McLane Hamilton took the ground that Christian Scientists were insane. He was asked in court:

"Do you say that a person who believes in the power of God, operating through a human agent to cure disease without material means, suffers from delusions?"

He answered:—

"Yes, most decidedly."

Dr. Austin Flint, an equally eminent alienist, took the opposite ground, declaring that Christian Scientists could not be accounted insane on account of their religious belief.

The *New York World* telegraphed Mrs. Mary Baker G. Eddy, the highest human authority on Christian Science, a

statement of Dr. Hamilton's views, and received the following in reply:—

Concord, N. H., February 22.—Is faith in divine metaphysics insanity?

All sin is insanity, but healing the sick is *not* sin. There is a universal insanity which mistakes fable for fact throughout the entire testimony of the material senses. Those unfortunate people who are committed to insane asylums are only so many well-defined instances of the baneful effects of illusion on mortal minds and bodies.

The supposition that we can correct insanity by the use of drugs is in itself a species of insanity. A drug cannot of itself go to the brain or affect cerebral conditions in any manner whatever. Drugs cannot remove inflammation, restore disordered functions, or destroy disease without the aid of mind.

If mind be absent from the body drugs can produce no effect upon it. Mind must be, is, the vehicle of all modes of healing disease and of producing disease. Through the mandate of mind or according to his belief, a man can be helped or he can be killed by a drug; but mind, not matter, produces the result in either case.

Neither life nor death, health nor disease, can be produced on a corpse whence mind has departed. This self-evident fact is proof that mind is the cause of all effect made manifest through so-called matter. The general craze is that matter masters mind; the specific insanity is that brain, matter, is insane.

MARY BAKER G. EDDY.

As a great deal of space has been devoted to the Brush case and the testimony of the witnesses who are Christian Scientists, it is well to have a statement clearly defining the matter of insanity from Mrs. Eddy herself. We therefore copy her letter without comment, and our readers can judge for themselves whether she or Dr. Hamilton has the better position.

But there is one phase of the comments on the Brush will contest that deserves attention because all our readers are liable to be placed on the witness stand and be questioned in relation to their religion, politics, and habits of life.

Without doubt some of the witnesses in question voiced absurdities which grossly if innocently misrepresented the character of the Christian Science belief as authoritatively proclaimed in *Science and Health*, the only text-book of that faith. But what if an average layman who is a Roman Catholic, or an Episcopalian, or a Baptist, or a Methodist, or a Unitarian, were to be put on the stand and cross-examined in respect to his religious belief by a sharp lawyer anxious to make the faith of the witness appear ridiculous? It would be an easy matter. Only an exceptionally well-schooled layman could clearly expound the various points of doctrine to which he subscribed as a loyal church member. For the press to take up the evidence of an ordinary witness as the true premise of his doctrines, and use it to attack the church to which he belonged, would be manifestly preposterous. Indeed, many a clergyman, or even bishop, would rather suffer a day in purgatory than be subjected to an hour's cross-examination in regard to the various articles of his faith by a well-posted and hostile lawyer. It is easy to ask a series of questions that would be hard to answer consistently and clearly.

But when the person who has no superior in authority speaks, whatever the church or party, his or her deliverance must be regarded as truly defining the doctrines of the movement of which he or she is a leader. Consequently, Christian Scientists are bound to uphold Mrs. Eddy's interpretations as completely as the Catholics are Pope Leo's. She is the recognized Founder of the church and promulgator of its doctrines.

A Card of Thanks.

THE following card of thanks which appeared in the *St. Joseph Daily News* explains itself:—

ST. JOSEPH, Mo., March 9, 1901.

Friends and Fellow-Citizens:—We, the undersigned, members of Committee of First Church of Christ, Scientist, St. Joseph, Mo., desire to extend our sincere thanks in behalf of every member of this church (and we feel that we are voicing the sentiment of all Christian Scientists in the state), first, for the signatures of over twelve hundred petitioners, including lawyers, bankers, editors, prominent business men and clergymen of this city, who, while not being identified with Christian Science, and many, perhaps, not being in sympathy therewith, yet manifested a kindly interest and showed that they were in favor of individual rights and personal liberty bestowed upon all by the constitution of our state and of the United States as American citizens.

We further desire especially to thank Senator Haynes for his grand effort in our behalf, also Senators Mathews, Morton, ex-Senator Lyman, and ex-Governor Stone. Also forty-two representatives in the House who took such a noble stand and wisely and ably championed our cause against the "Hall Medical Bill," introduced in our legislature. They have made a record that the people will remember.

Abraham Lincoln, William Lloyd Garrison, Wendell Phillips and many others are characters which stand out in bold relief in our nation's history in the abolition of American slavery; but in this, our day, our revered Leader, Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, and hundreds of noble men and women, have entered the contest for the abolition of a far greater and more widespread mental-slavery, from which mankind is ultimately to be redeemed, and the human race restored to their God-given rights and the liberty of conscience. And above all we thank the great Giver of all good that such an opportunity has been afforded for discussion and consequent enlightenment of the people of our state and nation in regard to this all-important subject, Christian Science.

CHARLES M. HOWE, *First Reader*.

MARY C. KEEDY, *Second Reader*.

EDWIN J. TOWNSEND, *Clerk*.

Legislation in Kansas.

A CORRESPONDENT from Topeka sends us the following regarding the medical bill passed at the recent session of the Kansas legislature.

The legislature of the State of Kansas, which has just adjourned, passed a medical bill, providing for a state board of medical registration and examination. A bill was introduced in both branches of the legislature, and then referred to the committees on public health. The bill read in part, "Any person shall be regarded as practising medicine and surgery within the meaning of this act who shall prescribe, or who shall for a fee recommend for use, any drug, or medicine, appliance, application, or treatment of whatever nature for the cure or relief of any wound, fracture, or bodily injury, infirmity, or disease of another." The wording of this part of the bill did not meet with the approval of the Scientists, and the committee on public health were called upon by a few of the Scientists, who asked that their rights to worship God, and to choose whatever help they preferred in times of sickness be not taken away from them. The committee from the House of Representatives consisted of seven members, four of whom were doctors, one doctor was on the committee of five from the Senate.

When talking with this committee not one expressed himself as wishing to interfere with the work of Christian Science, and when the objectionable portion of the bill was pointed out to them they were willing to change it.

Other portions of this bill incurred the opposition of those practising osteopathy, while the whole bill met with disapproval from the broader-minded practitioners of the old schools of medicine.

The result was, a new bill was prepared and offered as a substitute for the original bill. The substitute when considered by the house was passed with a few minor changes; it went to the Senate, and was passed without a change or word of comment for or against.

The bill now reads in part as follows: "But nothing in this act shall be construed as interfering with any religious beliefs in the treatment of disease, providing that quarantine regulations relating to contagious diseases are not infringed upon."

Among the Churches.

Dedication at Logansport, Ind.

The dedication exercises of the new church edifice at the corner of Ninth and North Streets of First Church of Christ, Scientist, of Logansport, occurred yesterday (Sunday, March 3) at 10.30 A.M. They were very impressive because of their earnest, quiet, unostentatious simplicity. The cozy appearance of the church outside is far outdone by the taste of adornment on the inside. The light streaming through amber and brown opal chipped glass windows and being reflected by a harmonious selection of white painted woodwork and tinted plastic walls, produced a most beautifully soft and mellow effect. Added to this, was a liberal display of potted plants and cut flowers. The pulpit was surrounded by a tasty arrangement of roses, carnations, calla lilies, and palms. It was a beautiful scene long to be remembered by those who were present.

After some excellent music by the choir, Scripture reading, and prayer service, the chief address was delivered by the First Reader, who read a most excellent paper. With well chosen words, she showed what Christian Science has to offer to the world. Among other things she said:—

"God is Substance, Truth, Love, and Power. He is the source whence comes all goodness; all the blessings, spiritual, intellectual, and physical. The doctrine of Christian Science is the teaching of Christ. We are to follow his example of going about in a humble way healing the sick, comforting the afflicted, and lifting up the down-trodden and oppressed. God is Love. He is ever ready to help us if we will only ask Him, trust in Him, and get ourselves in a right attitude toward Him. This new religion is the old religion of the days of Christ. One of the chief reasons why Christian Science flourishes is because of its healing power. The teachings of Jesus Christ as represented in Christian Science will improve mankind, physically, mentally, and spiritually. Christian Science is a practical religion. It makes the individual better. It lifts him to a higher plane. Seek to learn the Truth and the Truth will be made plain."

This address was followed by the reading of a letter from Max Wertheimer of Dayton, Ohio, formerly a Jewish rabbi, now a Christian Scientist.

The Second Reader devoted his address largely to the growth of Christian Science in this city. It was as follows:

"Christian Science was introduced in Logansport in a quiet way in 1888. In the spring of 1889, one of our citizens became interested, and began the study of its text-book, 'Science and Health with Key to the Scriptures.' Soon after, a lady from Boston, one of Mrs.

Eddy's students, came to Logansport and was able to organize a small class which she taught. This class teaching resulted in holding weekly meetings at private houses. A year later a hall was rented and services were held weekly, to which the public was invited.

"The first formal organization of Christian Science adherents was in 1891. This organization bore the name of 'Church of Christ, Scientist, of Logansport, Ind.' In 1898 this first organized church, by re-organization, was merged into the present church under the name of 'First Church of Christ, Scientist, of Logansport, Ind.' Soon after this re-organization, owing to the difficulty attending the renting of a suitable hall in which to worship, the church started a building fund, with which to purchase a lot and erect a church or chapel thereon.

"This thought met with unanimous approval, and in less than two years this fund reached the sum of five hundred dollars. In June, 1900, the church learned that the lot on the corner of Ninth and North Streets could be bought for four thousand dollars by paying two thousand dollars cash and the residue in payments; and it was unanimously decided to purchase this lot and remodel the stone residence so as to adapt it to church uses. The necessary fifteen hundred dollars was promptly raised by the voluntary contributions of Christian Scientists, and the property purchased.

"A deed was obtained for it the following September, when the work of converting the residence into a chapel began. There was no money in the treasury, but it was nevertheless decided to go forward. It has taken six months to complete the building and furnish it, at a cost of twenty-five hundred dollars, which was raised and the bills paid as the work progressed. The entire sum was raised by the voluntary contributions of Christian Scientists, without any call having been made in any way upon the public for assistance. However, liberal donations were made to the building fund from outside Christian Scientists, so that yesterday their modest little chapel, and the west half of the lot on which it stands, were, in accordance with Christian Science policy, dedicated to the worship of the living and true God, and His Christ, free from debt."

The chief addresses in the afternoon services, delivered by Mrs. Anna B. Dorland of Indianapolis and William B. Dickson of South Bend, were devoted to church doctrine and experiences.

There were many out-of-town Scientists present. The most unique feature of this dedication was that not a dollar was raised to pay off a church debt, as there was none. No collection was taken at either of the three services. The society starts out with bright prospects, having no heavy church debt, which only too often cripples the progress of church organizations. The meeting in the evening was also well attended.—*Logansport Daily Pharos*.

Anniversary at Marinette, Wis.

The edifice owned by the Christian Scientists of Marinette was one year old yesterday (Monday, March 4); that is, it was a year ago yesterday when the dedicatory services were held, it having been completed only a day or so before, and in commemoration of the event, the members of the congregation celebrated the first anniversary of the new edifice last evening, in a very fitting way. The church was appropriately decorated with palms and potted plants.

About one hundred and thirty persons were present, including a number of friends not members of the congregation, all of whom were delightfully entertained. A short, but very attractive and enjoyable informal programme was rendered, which was preceded by a social gathering in the auditorium.

The Scientists of Marinette are a progressive and growing church organization, and enjoy the distinction of being among the very few who own their own church entirely free from debt; in fact there never was an encumbrance upon the edifice. It cost ten thousand dollars and when the church was completed, the total amount was all subscribed, and unsolicited except among the members of the congregation. It was begun in May, 1899.

Daily North Star.

From Rice Lake, Wis.

We are happy to say to the Field through the columns of the *Sentinel*, that another church edifice will soon be added to the number of those already built. During the past year the members of First Church of Christ, Scientist, of this city, have purchased and paid for two lots, cornering on Main and Douglass Streets. The location is a desirable one, and work on the building will be commenced in the near future. Thankful hearts unite in praise to God, and would express their gratitude to our dear Mother, through whose loving sacrifice we have been taught the way to make practical the truth of the Scriptures, and so prove the saying of our Master, "If ye shall ask anything in my name, I will do it."

M. C. S., Rice Lake, Wis.

Teaching a Young Lark.

How its Mother Coaches it to Hop About and Fly.

J. M. BARRIE, the noted Scottish story writer, tells in *Scribner's Magazine* how a young lark got its first lesson.

A baby lark had got out of its nest sideways, a fall of a foot only, but a dreadful drop for a baby.

"You can get back this way," its mother said, and showed it the way. But when the baby tried to leap it fell on its back. Then the mother marked out lines on the ground on which it was to practise hopping, and it got along beautifully so long as the mother was there every moment to say, "How wonderfully you hop!"

"Now teach me to hop up," said the little lark, meaning that it wanted to fly, and the mother tried to do it in vain. She could soar up, up, very bravely, but she could not explain how she did it.

"Wait till the sun comes out after the rain," she said, half remembering.

"What is sun? What is rain?" the little bird asked. "If you cannot teach me to fly, teach me to sing."

"When the sun comes out after rain," the mother replied, "then you will know how to sing."

The rain came and glued the little bird's wings together. "I shall never be able to fly or sing," it wailed.

Then, of a sudden, it had to blink its eyes, for a glorious light had spread over the world, catching every leaf and twig and blade of grass in tears and putting a smile into every tear. The baby bird's breast swelled, it did not know why; it fluttered from the ground, it did not know why.

"The sun has come out after the rain!" it trilled. "Thank you, sun! Thank you! thank you! Oh, mother! Did you hear me? I can sing!"

Then it floated up, up, calling: "Thank you! thank you! thank you!" to the sun. "Oh, mother, do you see me? I am flying!"

Memphis, Tenn., March 15, 1901.

To our dear Mother:—This is how Mother taught me to "fly." The difference is, though, *she does* know how to "explain it." In loving humility,

Your student,

CHARLES NOBLE CHURCHILL.

The Gift of God.

BY M. LOUISE BAUM.

THIS humble, landlocked marsh may know
Through all its winding water-ways,
In pulsing tides that come and go,
The thrill of ocean's joy and praise.

I watched it all the twilight through
Drained, dreary, bare, and dry;
'Tis flooded full of living blue
Now sun and tide are high.

My heart, in darkness, Love, doth fear,
To yield Thee all its me and mine,
Nor knows, with channels bare and drear,
My giving clears the way for Thine.

But when my night by day is riven,
Then pouring full and free,
The measure of Thy grace is given,
And I am one with Thee.

"Be Courteous."

BY ELIZA P. T. HOUK.

IN the first Epistle general of Peter "an apostle of Jesus Christ, to the strangers [those "chosen" of God, who had been dispersed by persecution] scattered throughout Pontus," etc., this admonition occurs, third chapter, eighth verse: "Finally, be ye all of one mind, having compassion one of another, love as brethren, be pitiful, *be courteous*."

Webster defines courtesy as "an act of kindness or favor performed with politeness." Are we, as Christian Scientists, careful at all times and under all circumstances, to obey this injunction? Our Leader says we can obey the Scriptures in every instance. She, as does our Master, teaches us that Love is the fulfilling of the law.

But love to be love must have expression. The Apostle of Love writes, "Whosoever may be in possession of the livelihood of the world [any of the good things of this world?], and may be viewing his brother having need, and may shut up his tender-affections from him, how is the love of God abiding in him? Dear children, let us not be loving in word, nor yet with the tongue, but in *work* and truth. And herein we shall get to know that of the truth, we are" (Rotherham's Translation).

That Scientists are a busy people, goes without saying; the study of the Infinite is an infinite theme. To learn to know Life as the origin of man is a glorious, all-absorbing starting-point, but to know its ultimate is the work of eternity. Our life-problem is before each one of us. It demands every thought and hour; but is it not wise not only to do "our work" faithfully, but to consider the gathering of the flowers and fruitage of daily living as we go along life's pathway as a legitimate and very important part of that work? Yes, and the scattering of these flowers and sweet fruits of Love along the often sorrowful path of the strangers who may cross our own paths in their wanderings or sojournings among us, is still more important.

A memory, never to be forgotten, is recalled in this connection. There was a piece of work to be done that required much time and care, a mother, with a houseful of little people to work for, was instructing a young girl in doing it, and to her protest, that she could now get on alone, thankful for the aid already given,—her kind friend must do no more,—received this reply, "Never mind, dear, my work

will never be done, and I am going to help you now." A smile through tears was the grateful acceptance of the proffered aid, and that little deed of loving kindness is and has been through long years of mingled sunshine and shadows, an illuminating ray of divine Life, Light, and Love. Is anything common or unclean that can perpetuate such a memory?

"As we have therefore opportunity, let us do good unto all men, especially unto them who are of the household of faith." "And if ye do good to them which do good to you, what thank have ye? for sinners also do even the same."

"Lest we Forget."

BY RACHEL F. MARSHALL.

IN Rudyard Kipling's Victorian Ode, entitled, "Recessional," each verse has the refrain, "Lest we forget—lest we forget!" Lest we forget from whence we came,—lest we forget whither we are tending in our journey from sense to Soul!

Think you the Israelites alone were reminded by infinite Love? "By strength of hand the Lord brought us out from Egypt, from the house of bondage." Did dire distresses and dreary wasted years of servitude to sin, sickness, and death make us rebellious? Did even tearful repentance bring us aught but repeated sorrow and sighing? How hath God opened our eyes to see our captivity—our bondage—laden with error's chains! Divine Science, our deliverer, was nigh. We heard the voice of Truth. Out of the wilderness of mortal mind we were led through trying ordeals. Out of darkness and gloom, into the dawn of the promised Celestial City of Peace, a haven of rest.

The shackles are gone! It is no more exacted of us that we make bricks without straw. The master serves the servant and in his turn, the servant serves the master. (Matthew, 10:24.) All alike are free. The joys of Spirit are unfolded; and, turning its back on Egypt forever, a nation increases in divine power and strength. Success is on its banner.

Now in doxology the earth sings:—

Be Thou, O God, exalted high,
And, as Thy glory fills the sky,
So let it be on earth displayed,
Till Thou art here and now obeyed.

God hath brought us out valiantly, with glorious results; yet is there not danger that, in our very success and security we forget? "Lest we forget!" Lest a thought of triumph fill the hour, and we forget to guard the gates, and the flood-tide of error again submerges us,

Lord God of Hosts, be with us yet—
Lest we forget—lest we forget.

Hope.

BY THERESA V. HARDY.

Does the path seem dark and dreary,
Limitless the reign of night?
Let the brightness of His presence
Shine upon thee,—God is light.

Does the battle seem unending,
Truth seem vanquished in the fight?
Gird your heavenly armor on you,
Heaven is near, and God is might.

Art thou tried, and sorely tempted,
Losing hopes that once were bright?
Still thou hast the One unchanging
God, the All, th'eternal right.

Testimonies.

Physical and Spiritual Benefits Realized.

My husband had, for years, been a sufferer from rheumatism and its attendants, kidney and heart trouble; the latter so pronounced that he was unable to walk a single block with ease. As a last remedy we decided to try Christian Science, not having any intention to come into Science except for the physical healing. The spiritual, however, developed much more rapidly and we found the physical not to be compared with the spiritual uplift we both received. To know that God is All-in-all, and that He sent no sickness, was indeed a ray of light in the darkness of our ignorance, and we wondered why we had not known this Truth before.

The healing was slow, but now my husband is the picture of perfect health; so much so, that one remarked of him, "He is the healthiest looking man I ever saw." Many less serious troubles have also been overcome from time to time, for all of which we feel profound gratitude to the one Mind, omnipotent Good.

One day last summer a member of our family was suffering greatly on account of stone in the bladder, about 8 A.M. Those present were very young in Science and had never seen an acute case brought out. However, the patient, so far as possible, realized the Truth, and the Bible and "Science and Health with Key to the Scriptures" were read alternately. At 3 P.M. the sufferer was quietly sleeping, and next morning showed no evidence of the suffering of the previous day, so beautifully and completely was the Truth demonstrated.

How beautiful, how profoundly convincing are these demonstrations of divine Love. This Truth is here, waiting to be demonstrated, yet how many, even of those who need it most, refuse it. We are thankful that we have a measure of this understanding. We find, as we study and work, that the path grows brighter, the Truth unfolds beautifully, and with the Psalmist we can say, "I will take the cup of salvation, and call upon the name of the Lord. I will pay my vows unto the Lord now in the presence of all his people."

A. J. BEACH, Philadelphia, Pa.

Testimony of a Business Man.

When, three years ago, I was refused by an insurance company on account of Bright's disease, I did not at first credit the medical examiner. I did not understand that that which I most feared, had befallen me, so I consulted other physicians, one of them a specialist in this line.

Their verdict, upon making both chemical and microscopic examination, was that I had the much-dreaded disease. This was verified by my own examinations, for one of the medical gentlemen had shown me how to confirm my own doom. Only those who know the dull fear, the ever-impending dread of invalidism, and after that of the unknown beyond, can know what I was lifted out of at that time. Christian Science came to me, and I can safely say that from the time I read the first hundred pages of Science and Health, I knew that God's help was at hand. I had treatment and my disease was healed. The symptoms melted away like mist before the sun. A recent examination proved what I already knew, that the last vestige had disappeared.

In spite of my healing I did not at first fully grasp the import of Christian Science, and it was not until class instruction was had, that I realized the limitless possibility of this great system. It was then there was shown me the way, bright and clear, which leads to our oneness with the Father. The way becomes broader and more clearly defined, as we remove that rubbish of the ages,—the beliefs

of mortal mankind,—for then we perceive that Christ, Truth, is the Way.

As a practical business man, I can testify in conclusion, that Christian Science is the most eminently practical plan that has ever been presented to my notice. The Principle it teaches is of service in every phase of one's existence, and becomes increasingly valuable to me, as I learn more of it and apply what is learned to every-day life.

J. F. B., Philadelphia, Pa.

Helped by a Little Child's Faith.

The article "A Child's Faith Rewarded," which appeared in the *Sentinel* of January 3, reminds me of the beautiful work our little ones do. I was so quickly helped by my little eight-year-old Ruth during the Galveston storm of September last, that I can appreciate just what is meant by the Scripture, "And a little child shall lead them." About 9.30 or 10 P.M., when the storm was at its height and our home was floating in eleven feet of water and we were upstairs in the only dry room, I seemed for a moment to be anxious and awoke the children, and asked my husband to take one in his arms, and I took the other, so that if the house (which was rocking like a cradle) tipped over, we would have them with us. I kissed Ruth, and said to her, "Now we must all be brave," but I soon realized who was the brave one, for with her bright little eyes looking into mine she said, "Mamma, you know there is no separation in divine Mind and God is caring for us, so this house will never go over." Tears of joy rolled down our cheeks, for the fear was cast out. I simply said, "No, my little girl, we will not go over."

In a few minutes both the children and my husband were in bed and asleep, and I was reading the Bible and Science and Health, with "that peace of God, which passeth all understanding." In an hour's time the water was receding and the storm about over. Words can never tell how grateful I am to God and Mrs. Eddy for this blessed Truth, that even our little ones can understand. This is only one of the many blessings that I have to be thankful for in Christian Science.

MRS. GUSSIE M. WILLIAMS, Chicago, Ill.

Sight Restored through Christian Science.

When a child my eyes became so bad I had to be in a darkened room most of the time for a year. Several physicians attended me during that time, leaving my left eye so I could not see anything. I went to a specialist, who said I would never see out of that eye, and the other in time would be the same. There appeared to be something over the pupil.

When I first accepted Christian Science, one who had known me all my life, said to me, "Do get glasses; your sight is getting so bad you can hardly see at all." My reply was, "I shall never wear glasses. When I have read that book [pointing to "Science and Health with Key to the Scriptures"] long enough and get understanding through that and the Bible, my sight will come to me perfectly again." I never thought of having treatment for this trouble, as it seemed to me such a real thing.

When I had read about a year, I was reading at night, and it so surprised my family that they said, "You are not reading, only repeating from memory." Another book was handed me; I read it; closing my right eye I read as well with the left as the right. How long I had been seeing in this way I do not know, having never given thought to my eyes from the time I made the statement that I would never wear glasses. That was five years ago, and I see better as time goes on, for which I am very thankful. Many other troubles have been met by the understanding received through Christian Science.—IDA ROGERO, Jacksonville, Fla.

Religious Items.

In an article in the (Unitarian) *Christian Register* a writer says: "What is there material in algebra, in geometry? We see the principles of these sciences reflected in everything that is material, but they are just as distinct from the reflecting matter as the sunlight is from the mirror which reflects it. Should you proceed in the study of analytical geometry, you would get to a point where your mind seems to get lost, and no graphical representation can come to your help. In algebra you will find formulas expressing in an abstract way truths of the most complicated nature. And never anything material will be found in all these most wonderful branches of human learning, these mathematical branches which disclose to us the way to the understanding of the material universe. Remember that mathematics alone guided the two astronomers, Leverrier and Adams, when, after long calculations, they foretold the place in the heavens where the new planet would be found about which Sir John Herschel had said the memorable words: 'We see it as Columbus saw America from the shores of Spain. Its movements have been felt along the far-reaching line of our analysis with a certainty hardly inferior to ocular demonstration.' And, when the telescope was pointed in that direction, the planet was found which mathematics had discovered. The field of these sciences is nothing but a field of discovery in which man is led only by his intuition,—by nothing material."

In an article headed "Was this the Tower of Babel?" the *Independent* says: "The eminent French savant, De Mely, gave recently before an audience at the Paris Académie des Inscriptions, information based on a newly discovered manuscript written by a Greek traveler named Harpocraton, who shows the condition of a remarkable tower in the year 355 A.D. This document contains the description of a Chaldee temple which Harpocraton visited, and of which he gives accurate measurements. The identity of the temple with the Birs-Nimrud, or the 'Tower of Babel,' he claims, cannot be doubted, and this is the oldest important account. The tower was renovated in the days of Nebuchadnezzar in the sixth century B.C., and this king reports in the inscription he caused to be made that the tower had been erected forty-two generations before his time. Thanks to the reports of Harpocraton, we now know that as late as the fourth century this temple was still a place of worship, although it ceased to be such some time before 380. The tower was ninety-four kilometers from Ctesiphon, south of Babylon."

In an article on "Seeing the Invisible," the *Homiletic Review* says: "This is the age of the agnostic, who scoffs at all that is spiritual, and will not tolerate belief in anything that cannot be seen, touched, analyzed, or submitted to some kind of physical test. His boast is that science deals with the real, the visible, the tangible. All that does not somehow declare itself to the senses must be left hopelessly in the realm of the Unknown—whether it be God's, or one's own soul. But now science itself is smashing the agnostic foundation. Its farthest advance in every direction is bringing us—nay driving us—resistlessly to believe in the existence of the invisible. There has never been a time in the history of science when so many things were required to be believed simply because of their effects."

The American School of Oriental Research and Study has recently been established at Jerusalem, and its continuance for five years is assured by subscriptions from private individuals and educational institutions. Its purpose is to make excavations similar to those made by antiquarians in Greece, Egypt, and Babylonia, for the purpose of bringing to light lost records of the ancient Hebrew people, which must exist in the buried ruins of cities. It is surprising that this field of exploration, in which the whole

Christian world is interested, should have been so long neglected, while excavations in other ancient countries have been carried on at enormous cost. It is not doubted by scholars that the explorers will be rewarded by the discovery of records of the highest importance.

The *Universalist Leader* says: "The world may be far off from good, if we judge it by the daily record of events as made in newspapers; there is recorded the evil men do, with which we compare the past as recorded in eulogistic history. We see to-day the details of the world's evil, where once men saw only the doings of a little community. There are a hundred crimes reported to-day against one in the last century, but it does not mean that there is one hundred times more crime; it is only that a wider field is under survey. It is only fair to judge the world by centuries,—twere better that it be by millenniums,—then shall we see that God has not lost His grip on the helm of things."

The (Baptist) *Examiner* says: "It is being asserted nowadays by some good men that a man can be a Christian without being a follower of Christ—that is, he can be attached to Christ, as a branch to the stock, but neither grow nor bear fruit. Jesus himself did not so teach. He made fruit-bearing the test of faith. Whether it be the vine-branch or the fig-tree, unfruitfulness condemned it—the branch to be 'taken away,' the fig-tree to be 'cut down.' And the entire New Testament is permeated with this view of the Christian life. Spiritual activity is everywhere held to be the mark of genuine Christian faith."

In the (Baptist) *Watchman* we find the following: "The writer was once a passenger on a steamer that ran into a sand bar. Tugs came out from the neighboring city to pull the ship off. She seemed occasionally to be on the point of being delivered; but the tugs could not do it. When, however, the tide came in, she swung free without an effort. Any observer of prevailing religious conditions is apt to be impressed that we have been doing good work with our tugs and hawsers, but that what we really need is an inflow of spiritual influences."

The Rev. A. E. Dunning says in the *Congregationalist*: "Jesus Christ came to introduce a new life into the world. The principle was as old as the law of Moses, that men should love God and their fellow-men. But Jesus revealed God as the Father and men as brethren because they were children of God, and thus made the principle new with a new motive. It was received by men with indifference, contempt, or aversion according as it affected their interests; but it is now recognized as a new thing and the chief thing in the world."

In its editorial columns the *Universalist Leader* says: "Abraham Lincoln had, as all the world knows, the art of 'putting things.' His gift in this direction is well illustrated by what he said once in regard to religion and business: 'I think that we should make all our secular business not only subordinate but subservient to our religious interests.' Notice here the fine use of two words sometimes confounded, as well as the sound principle set forth in this concise manner."

A writer in the *Congregationalist* says: "To my mind the tie between us and our fellow-men and God is a single strand. Interest in man must inevitably lead to interest in God, and the reverse is equally true; but if any one questions this let him begin at the simpler end of the problem; let him try to love his brother whom he sees, and if he truly loves him and serves him he will come to love and serve Him whom he hath not seen."

Prof. Rufus M. Jones of Haverford College contributes an article to the *Congregationalist* regarding the Friends, in which he says that the orthodox branch of the Friends have a membership in America of ninety-three thousand, organized into fourteen independent

bodies, called Yearly Meetings; that they control eight colleges, including Haverford and Bryn Mawr, and that the Friends are most numerous in Indiana.

The *Presbyterian* says: "The wrong-doing of others is often so patent that one can hardly help observing and condemning it, but to be constantly on the alert to ferret out the shortcomings of church members is both little and unprofitable business. A Christian ought to have no time for it, or, if he has he ought to be better engaged. It is his to be kindly disposed, charitable, noble, and benevolent."

Christian Life says: "In arranging for the religious instruction of her children the queen was careful to insist that the teaching should be simple and reverent. The Athanasian Creed, and the fear and hatred embodied in the doctrine of eternal torment, were to be carefully avoided."

The *Morning Star* says the church should not exist in the world to-day as a money-getter, or as an object of charity to be supported as we support the helpless and the weak; but as a power in the world to fight, to purify, and to enlighten.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on New York or Boston, exchange on Chicago or cities other than Boston or New York will not be accepted.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each,
prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for
pocket, 4½x6½ inches, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners,
gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address,
may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, contain-
ing articles written by the author and published in the CHRISTIAN
SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for
pocket, 4½x6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners,
gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one
address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which
include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

- An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50
RETROSPECTION AND INTROSPECTION. A biographical
sketch of the author. The way she was led to the discovery of
Christian Science; its growth and fundamental idea; 120 pages,
cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half
dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the
history and to the readers of Christian Science; containing
Dedicatory Sermon delivered at the Mother Church, and scin-
tillations from the press on that occasion; 132 pages. Price
by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating
and enforcing practical Christian Science, thus affording inval-
uable directions for all true Scientists. The following are
some of the topics treated: SEED-TIME AND HARVEST, DEEP
THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUF-
FERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80
pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50
half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00
each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable
book, containing a brief and concise statement of Divine Science,
alias Christian Science, in the form of questions and answers.
It is a very succinct statement of Christian Science; 35 pages.
Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00
per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeri-
tus' Message delivered at the Communion Season in the
Mother Church in Boston, June, 1898. A clear and strong
refutation of the charge that Christian Scientists are Pantheists.
Leatherette covers; 21 pages. Price by mail, 26 cents; per
dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message
of the Rev. Mary Baker G. Eddy to the Mother Church on
Communion Sunday, June, 1900. Leatherette covers, deckle-
edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in
Christian Science; 56 pages. Pebbled cloth covers. Price by
mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music
by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per
dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIP-
TURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder
of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in
Boston, Mass.

The Journal is published on the first of each month, and con-
tains interesting reports of cases of Spiritual and Physical healing
as well as instructive discussions of the Principle and the Practice
of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United
States, Canada, or Mexico. Two Dollars per annum; One Dollar
for six months; Single Copies, Twenty Cents; Foreign Subscrip-
tions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday
Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one
address, one year, each, 50 cents. Foreign Subscriptions, one copy,
one year, 60 cents. Postage prepaid to any part of the United
States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies
or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by
REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHN-
SON. Price, 50 cents per copy; \$5.00 per dozen. Words used
by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY
BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For
soprano or tenor, C sharp to A; for lower voices, B flat to F.
Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother
Church, also list of members. Price, one copy, \$1; six copies
to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, pre-
paid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half
Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half
dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History
of the Building of the Mother Church, The First Church of
Christ, Scientist, in Boston, Mass. 103 pages. Illustrated.
One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL
NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of
the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
**SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF
CHRISTIAN SCIENCE.**

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A.
Kimball. 24 pp.

Editor. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

A new record in the accumulation of gold was made March 20, at the United States treasury. The combined funds in the custody of the treasurer rose to a total of \$494,061,450, an amount never before accumulated under one control in the western hemisphere. The gold actually credited to the treasury in this amount was \$243,250,351, leaving a little more than \$250,000,000 in outstanding gold certificates.

Orders have been issued by the Secretary of War for the early departure of over forty-five hundred regular soldiers to Manila. The War Department has been using every effort to arrange a plan by which all the volunteer organizations can be returned to this country before the end of June without at any time reducing General MacArthur's force below sixty thousand men.

The next class entering the West Point military academy will be the largest since the foundation of that school, and the percentage of those admitted of the great list appearing for examination is, perhaps, higher than ever before.

An enabling act will be presented to the New York General Assembly at once for adoption, providing for the acceptance of Andrew Carnegie's offer of \$5,200,000 by New York City for library purposes.

Lieutenant-General Miles is making a tour of inspection of the military posts in Cuba.

Foreign News.

A dispute between the British and Russian generals over the laying of a railway siding at Tien Tsin seemed for a time last week to threaten a general war. The over-zealous friendliness of the French troops for their allies, the Russians, led them to disregard their own officers and treat the English troops very offensively, which led to several altercations. The unrestrained temper of the French troops, it was feared might precipitate serious trouble in spite of the desire of the commanders for peace. Another element of seriousness in the situation was that the Russians in Corea were said to have been found violating their treaty with Japan by building barracks and arsenals in place of hospitals, as the treaty stipulated, and in landing such large numbers of troops as to menace the rights in the country claimed by Japan.

The trouble at Tien Tsin was temporarily settled by the governments of Great Britain and Russia ordering their respective commanders in China to withdraw their troops from the disputed territory. By the time the order reached Tien Tsin each side had received strong reinforcements and the outlook was very threatening. The dispute was

occasioned by a party of British engineers commencing to build a siding on land on the bank of the Pel River, which Russia claimed by right of conquest confirmed by a subsequent concession from China.

A London dispatch of March 22, says that the Foreign Office takes a pessimistic view of the immediate future in the far East, in spite of the settlement of the Tien Tsin incident, and entertains grave fears that the relations between Japan and Russia may shortly reach the danger point over the question of Russia's attitude with regard to Manchuria as well as Corea.

King Edward has commissioned the American artist, Edwin A. Abbey, to paint the coronation scene in Westminster Abbey. The artist is at present living at Morgan Hall, Gloucestershire, where he has been working for some time on the remaining pictures in the "Holy Grail" series for the Boston Public Library. Mr. Abbey's appointment gives great satisfaction to Americans, and the dispatches say that there is no less satisfaction expressed by members of the Royal Academy, as the artist is deservedly popular in England. Mr. Abbey has made a deep study of Shakespeare and is regarded as the greatest living painter of Shakespearean scenes.

A riotous demonstration of disapproval was made by a mob of three thousand Russian students and their sympathizers in St. Petersburg in the neighborhood of the Cathedral of Our Lady of Kasan on Tuesday, March 19, where mass was being celebrated for M. Bogolopoff, the Minister of Public Instruction, who recently died as the result of being shot in a conflict with the students. Over seven hundred students were arrested.

It was officially announced in the British House of Commons, March 19, by Joseph Chamberlain, the Colonial Secretary, that General Botha had rejected the terms of peace offered the Boers by Lord Kitchener on the authority of the government.

The arrival of Andrew Carnegie at the docks in Southampton, Eng., was awaited by a throng of people representing all sorts of institutions, who wished to solicit the philanthropist's aid. He arrived on March 21 on the St. Louis.

Industry and Commerce.

President Bancroft of the Boston Elevated Railway Company, which owns and operates all the street railways of Boston, gave some interesting information in a recent speech concerning this great business as conducted in Boston. He said that his company now operates three thousand surface cars, carrying about seven hundred thousand people daily; the number carried last year being two hundred and fifty millions. The company employs seven thousand men, five thousand of them on the cars. Last year the sum of \$734,000 was paid in ordinary taxes; \$84,000 for compensation tax; \$212,000 for rent of the subway; \$200,000 for the equivalent of paving a street sixty-five miles long and fifty feet wide; and \$300,000 for removing snow and ice and mud. The new elevated system is expected to be in full operation by June 1.

It is announced by J. P. Morgan & Co. that all the interests of John D. Rockefeller in the iron business, including mines, railways, and lake transportation lines, are to go into the United States Steel Corporation. These interests include the Lake Superior Consolidated Iron Mines, which concern has a capital stock of \$30,000,000 of which \$29,887,448.97 is outstanding.

John W. Gates of the United States Steel Company and his friends are reported to be planning to build a magnificent hotel at the corner of Fifth Avenue and Fifty-second Street, New York. The ground is valued at \$1,000,000 and the cost of the building is expected to be \$2,000,000. It is to be eighteen stories high and will be of steel and marble construction.

A press dispatch from Detroit, Mich., says that the Pennsylvania Salt Manufacturing Company, which purchased 138 acres of river front adjoining Wyandotte a few years ago, has made arrangements to build on the property a \$9,000,000 plant, and that one section, which will cover twenty acres and cost about \$2,000,000, will be built this year.

Consul Nelson at Bergen, Sweden, reports to the State Department that steel is being produced by electricity in that country. Already about twenty-five thousand pounds have been produced. It is of excellent quality, and meets with ready sale at high prices. On account of the cheap method of production the profits are said to be large.

A number of the largest tin can manufacturing concerns in the United States have combined their interests and formed the American Can Company. The company was incorporated under the laws of New Jersey on March 19, with an authorized capital stock of eighty-eight million dollars.

A press dispatch from Bangor, Me., dated March 19, says: "There is as yet no sign of spring in eastern and northern Maine, the ice being as strong and the snow as dry and deep as in midwinter. Present prospects are that the good log hauling will continue later than usual this year."

General News.

The Boston papers announced last week that in a month or two a beginning will be made in the construction of the new building for the New England Conservatory of Music at the corner of Huntington Avenue and Gainsborough Street, which is one block from the new Symphony Hall, the new Horticultural Hall, the new Chickering Hall and Emerson College of Oratory, and a little more than two blocks from the Mother Church. The Conservatory building will have a frontage on Huntington Avenue of 120 feet and on Gainsborough Street of 180 feet. The architecture will be of Grecian model, and the elevation gives three floors above the basement. There will be sixty recitation rooms and two fine auditoriums, one seating four hundred and the other one thousand people. Terra cotta, brick, and stone will be the building materials.

A new system of housing the students is to be provided, as the building above described will be exclusively for school purposes. For the female students ten or twelve separate dwellings are to be erected on land adjacent to the main building, each dwelling to accommodate about twenty-five students. Concerning the new Conservatory, the *Boston Transcript* says: "It is intended that this building shall represent the best ideals, both as to its external appearance and its adaptation for the purpose intended, and will add materially to the group of buildings on Huntington Avenue, which are evidently to form the nucleus of not only Boston's, but America's great art interests."

Two-inch ice will sustain a man or properly spaced infantry; 4-inch ice will carry a man on horseback, or cavalry, or light guns; 6-inch ice, heavy field guns, such a 80-pounders; 8-inch ice, a battery of artillery, with carriages and horses, but not over one thousand pounds a square foot on sledges, and 10-inch ice sustains an army or an innumerable multitude. On 15-inch ice a railway could be built, and 2-foot thick ice will withstand the impact of a loaded railway carriage after a 60-foot fall (or, perhaps, fifteen hundred foot-tons). Trautwine gives the crushing strength of firm ice as 167 to 250 pounds to the square inch.

Mrs. Emmons Blaine has given \$1,000,000 to the University of Chicago School of Education, recently organized by the affiliation of the Chicago Institute with the University. The Chicago Institute was founded by Mrs. Blaine. Her latest gift is to be used partly for ground and buildings and partly for endowment.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Old-Time and Modern Mails.

Some Peculiarities of the Postal System.

THE adhesive postage stamp was invented about sixty years ago. Ever since men began to write letters there had been some system for carrying them, but the sending of a letter was a complicated piece of business until the little gummed patch of paper was invented. Then, seemingly, everybody took to writing upon the most trivial pretext, and presently the postal system was doubling its capacity each year.

Now, when anything grows too fast, it is apt to tie itself in a hard knot. That is precisely what happened in this case. When folks had learned the convenience of the mails at home they began to send letters into other countries. Each nation had its own postal system, and when it received a letter from outside it made a charge for delivering it. If an Englishman sent a letter to Switzerland the French post-office charged a small sum for carrying it to the border, and the Swiss post-office charged a trifle more for taking it to the addressee. This made it necessary for each country to do an enormous amount of book-keeping, and even led to disputes as to which owed the other at the end of each year. To add to the confusion each nation had its own rate for letter carrying.

Finally, in 1873, the world's postal business grew so large that no system of book-keeping could keep track of it, so a conference was held at Berne, Switzerland. Herr von Stephan, a German, submitted a plan for simplifying matters. He thought that postage was too high, for one thing, and that all the book-keeping and wrangling were so much waste of time and money. He had made a great many figures, and had found that each nation's correspondence with other countries was so nearly equal that it was not worth while reckoning the difference. The United States received about as many letters from as it sent to Australia, and a great country, such as Russia or England, made very nearly an even exchange with little Cuba or Uruguay. He proposed that every one stop keeping count altogether, and that a uniform rate of five cents be set upon all foreign letters. It was a most sensible plan, and before the conference ended the leading governments of the world signed a treaty and the Universal Postal Union was formed. To-day every country on earth is in the union, with the exception of China and a few nations too small to matter, and a half-ounce letter may be sent clear around the globe for a nickel.

The great collection of earthen tablets found in El Amarna serves to give an idea of the postal service between Egypt and Babylon as it existed thirty-four centuries ago. The date of these tablets is between 1500 and 1450 B.C. The inscriptions on them are in Babylonian Semitic, which at that period was the diplomatic language of the East. Most of them are reports from Egyptian officials in the provinces and foreign lands, and are addressed to Pharaoh. These clay tablets are no bulkier than modern official letters. In many cases the tablet was inclosed in an earthen vessel or envelope, which was inscribed with the address and a summary of the contents of the letter.

We assume that these clay letters were handled much as modern mails are handled. They were probably carried in bags. Excellent post-roads connected Egypt with every part of western Asia, and there were post and relay stations for the king's messengers, who probably also forwarded private letters. According to the El Amarna tablets, Pharaoh was in correspondence with Babylon and Assyria, Cappadocia, Palestine, and Syria. The post-roads followed the old paths of war and commerce, which had been trodden by caravans and armies through countless generations.

The Canaanites corresponded with the Babylonians, as Hiram, King of Tyre, did with Solomon. Long before the Israelites came to Canaan the land was crossed and recrossed by post-roads.

In northern India, among the Himalayas, letters are carried by native runners at the end of a cleft stick. Sometimes one of the postmen will travel a hundred miles to convey his precious missive, the letter being delivered in as clean condition as when it started.

The commonest type of Indian post-runner, or *Tappalwallah*, wears a long white coat, very light trousers, and a huge light blue turban. His letter bag is slung from his shoulder, and he carries a long stick with a sharp iron point, which can be used as a weapon in case of need. The stick is adorned with six little brass bells, which serve to give notice of the approach of the post.

If you were in Japan you would see lithe, wiry runners, with very little clothing on their brown bodies, darting here and there among the crowd. Everybody gives way before them, for they are the postmen of the empire. Their mail is carried in small baskets strapped to their sides. They are capable of sustaining a good deal of fatigue, and make wonderful journeys at times.

Among the placid Chinese, hurry is a form of vulgar impatience, consequently very little dispatch is used in carrying the mails in that great empire. They are content to convey all ordinary communications either by slow paddling or poling boats, or else by foot runners, whose high sounding title of "the-thousand-mile-horse" does not quicken their pace beyond about twelve miles in twenty-four hours. They carry a paper lantern and a paper umbrella, and their letter bag is secured to the back by a cloth knotted across the chest.

Among the most picturesque letter-carriers of the world are the "Camel Express Messengers" of Bokhara. The men wear a serviceable red uniform and a large green turban embroidered with gold thread. From their girdle hangs a curved sabre in a red sheath. The camels are adorned with trappings of gay cloth and tassels ornamented with blue beads and cowrie shells, and with small brass bells round their neck to give notice of their approach. The rough and rapid trotting of these animals, sometimes at the rate of eighty miles a day, is so trying to the riders as to shorten their lives.

Of vehicles, we find every conceivable variety used to aid the post runner in his labor. In Natal the post cart is a light four-horse vehicle, not much to look at, but capital as a means of getting over vile roads with deep ruts. In the mountain district of Brazil a two-wheeled wagon, drawn

by oxen, is in use, the wheels being cut out of a solid block and fastened to the axle.

In some parts of Russia buffaloes harnessed to two-wheeled vehicles carry the postmen on their road, but more frequently mail sledges are drawn by horses, by reindeer, or, in the far north, by dogs.

A letter can be sent in thirty days from Florida to the Klondike for two cents. To carry the same by courier would cost something like three hundred dollars. The total length of the routes traversed by the mail service in this country is 496,948 miles, or more than a round trip between the earth and the moon. The number of miles traveled in carrying the mails per annum is over 445,000,000, or more than two round trips to the sun. The cost per annum of carrying the mails is over \$53,000,000. By "star route" is meant a route where the transportation is something other than railway, steamboat, street car, or pneumatic tube. The daily travel for one year by the star routes is 361,830 miles, or seventeen times around the world. The number of miles traveled per annum by the mail-carrying railroads is nearly three hundred million, the daily travel being 813,000 miles, or thirty-one trips around the world. In one year the railway postal clerks alone have handled 13,351,992,725 pieces of mail. In addition they handled 17,537,058 packages of registered mail. It has been calculated that the railway mail clerks make one error for over ten thousand correctly forwarded pieces of mail.

The mail-carrying steamboats cover in a year 4,327,028 miles. The street car service in the United States amounts to 4,978,130 miles in a year. The pneumatic tube service is, of course, small, there being only 8.05 miles of pneumatic tube in the whole country. This service is confined to Boston, New York, Brooklyn, and Philadelphia. "First class" mail matter includes letters, postal cards, and sealed matter. "Second class" matter includes newspapers, periodicals, and so on. "Third class" matter includes printed books, pamphlets, circulars, etc. "Fourth class" matter embraces merchandise and samples of all kinds. Of first class matter there was carried, in the year ending June 30, 1899, over 3,588,000,000 pieces. There are nearly ten million pieces of first class matter mailed daily. This would make a pile more than seven miles high. The total number of pieces of second class matter in the same time was something over 2,173,000,000. The number of pieces of third class matter was something over 747,000,000, and the number of pieces of fourth class matter was a little over 66,174,000. The total number of pieces mailed in the year was 6,576,310,000, and if these pieces were placed together they would make a band seven feet wide around the earth. The total weight was 664,286,868 pounds. To carry this enormous weight would require 33,214 freight cars, forming a train three hundred miles long, hauled by five hundred locomotives.

There was enough money received by the postal department for postage to make a pile of ten-dollar gold pieces forty-seven thousand feet high. The number of registered pieces carried in the year was over sixteen million. The number of post-office money orders issued was nearly thirty million. The dead letter office, which is a department of the post-office to which unclaimed and defectively addressed mail is sent, received nearly seven million pieces. Of these 367,469 were misdirected, 71,919 were without an address, 4,903,700 were unclaimed, and 113,917 had fictitious addresses. The number of stamps issued was 4,917,269,025. There are not far from seventy-five thousand post-offices in the United States, with about two hundred thousand employees.—*Boston Herald*.

I hate to see things done by halves. If it be right, do it boldly; if it be wrong, leave it undone.

BARNARD GILPIN.

The Lectures.

At Rochester, N. Y.

A lecture on Christian Science was given Sunday evening, February 24, in the auditorium of First Church of Christ, Scientist, of this city, by Rev. Arthur R. Vosburgh, C.S.B., member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., under the auspices of First and Second Churches. The subject was "Christian Science is Scientific Christianity." The entire audience listened very attentively and showed every evidence of appreciating all that was said.

The introductory address by Elmer J. Smith, C.S., was as follows:—

Ladies and Gentlemen, Brother and Sister Scientists:— The pleasant duty has been assigned to me of welcoming you to our hall, and for the present our church home. I do this with great pleasure, because we have, for every one of you, a message. That message is Love.

When I was ten years old I was received as a member of a Baptist Church. One of the good old deacons, in examining me, asked, "Do you love the brethren?" I answered that I thought I did. I remember well how for days and weeks afterwards I perplexed and worried myself whether I did love the brethren or not. I knew that I loved some of them; but there were others whom I did not think I did. I knew that I did not love my enemies. After thirty years, during which I remained a member of, and learned to love the dear old Baptist Church with a love that can never be effaced, I was no nearer answering the perplexing question than when it was first propounded to me in my boyhood days. Not until the study of Christian Science taught me a purer, higher, holier meaning of Love, could I conscientiously say that I loved the brethren. I used to see the same good old deacon reading his Bible, as it seemed to me, all the time. I wondered if he read it because he loved to do so, or because he thought he ought. I read mine some; but I knew it was only because I felt it my duty. I could not see how any one could love to read it more than anything else. Not until the study of Christian Science lifted the veil from that sacred Word, did I understand what I have found among Christian Scientists from the least to the greatest—that they love the study of the Word of God above everything else. We love that most which brings the greatest good into our lives.

I have the pleasure of introducing, not as a stranger to you, but as a member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., the Mother Church, Rev. Arthur R. Vosburgh, C.S.B., who will address you on "Christian Science is Scientific Christianity."—*Correspondence*.

At Sandusky, O.

A large and representative audience listened to a distinguished Illinois jurist at Odd Fellows Hall, Monday evening (March 11), the Hon. William G. Ewing, formerly one of the judges of the Superior Court, who spoke on Christian Science. In the audience were leading business and professional men, railroad men, office holders, and laborers.

Judge Ewing came here from Chicago to deliver the address, for which no admission fee was charged. Arrangements were made by the local Christian Science Church.

The address was thoughtful and demanded the attention of all who heard it. The argument was good, and in every way the address gave evidence of earnestness and careful study.

Mr. H. M. Linn was chairman for the evening, and presented Judge Ewing with the following brief introduction:—

Ladies and Gentlemen:—An introduction by myself of so distinguished an advocate of Christian Science as the speaker of the evening, is something of an anomaly. It is, in fact, a position not entirely free from embarrassment. So far as Christian Science is concerned, I am an unbeliever, a heathen, so to speak, and entirely without the fold.

However, the rapid progress of Christian Science during the last ten years is in itself sufficient to convince any one that there is something in it worthy of the consideration of thoughtful men and women. I am willing to be a learner, and in this respect I am certainly not alone in this audience of intelligent people.

Although we may be unacquainted with Judge Ewing personally, he is not entirely unknown to us, for his reputation as a jurist has preceded him, and is known to you all. He served as district attorney for the Northern District of Illinois under President Cleveland, and also at a later time sat upon the bench of the Superior Court of Cook County, to which latter position he declined a renomination, that he might devote his whole time and energy to the propagation of the tenets of Christian Science.

It gives me pleasure, therefore, to present him to this audience to whom he will lecture upon the subject: "Christian Science, the Religion of Jesus Christ."

Sandusky Register.

At Watertown, N. Y.

Carol Norton of New York, delivered an address on Christian Science at the City Opera House last night (Friday, March 8). There was a very large audience, notwithstanding the disagreeable weather. Mr. Norton was introduced by William H. Stevens, who in introducing him said, in part:—

When Whitfield went to Philadelphia his very plain speaking soon closed the doors of the churches to him, and Franklin procured to be built an assembly hall for him or any one else to address Philadelphia audiences, so that, says Franklin in his humorous and emphatic way: "If the mufti of Constantinople comes to Philadelphia and wants to address an audience, there will be a place for him to deliver his address." I think I owe it to myself and to you to say that I am here to-night on these grounds, because I am an enthusiastic admirer of free and untrammelled discussion, and at the invitation of your committee I am to introduce to my neighbors a stranger who has a message.

As to some of the peculiar tenets of the Christian Science faith, I am compelled to say that I still consider them entitled to the Scotch verdict, "not proven;" but I think there are some points upon which we can all agree.

First, I should say that even the most superficial reader of philosophy must regard the popular notion of matter as extremely crude. No thinker of standing to-day has any notion that matter agrees in any respect with the ordinary concept of it.

All Christians agree with Christian Scientists in the praise of such virtues as unselfishness, calmness, patience, and cheerfulness; and earnest Christians have endeavored to practise those virtues. It must be conceded that the efforts of Christian Scientists to realize an extremely spiritualized Christianity have brought blessings to many homes and many hearts, and has done much to hasten the time when "the kingdoms of this world" will be "the kingdoms of our Lord, and of his Christ."

Watertown Daily Times.

At Anderson, Ind.

Judge William G. Ewing of Chicago lectured at the Central Christian Church last evening (Friday, March 15), on Christian Science. It was the first public lecture in Anderson under the auspices of the few but zealous dis-

ciples of the new faith. The church was crowded and the audience evinced a deep interest from the beginning of the lecture to the end.

The speaker was introduced by Judge J. F. McClure. The latter is not a Christian Scientist. The part he took was because of the fact that Judge Ewing is a distinguished lawyer and a former judge, while the theme was interesting and the speaker entertaining.—*The Daily Herald.*

Literature Thankfully Received.

Fort Madison, Iowa, January 9, 1901.

To the Book Committee of Cattermole Memorial Library.

Greeting:—I wish to submit to your honorable committee the following offer: To donate to you our text-book, Science and Health by Mary Baker G. Eddy, Discoverer and Founder of Christian Science. Also one year's subscription to our monthly *Journal* and weekly *Sentinel*, if you will receive them and place them on file with your other reading matter.

Respectfully yours,

N. F. BLAIN.

CATTERMOLE MEMORIAL LIBRARY.

Fort Madison, Iowa, January 17, 1901.

Mr. N. F. Blain.

Dear Sir:—I was instructed by the Board of Trustees of the Cattermole Memorial Library to acknowledge the gift of books you tendered the library and to extend to you their thanks for the same.

Very truly yours,

JENNIE INGALLS, *Librarian.*

A Card of Thanks.

OFFICE OF THE NEVADA STATE PRISON.

Carson City, Nev., March 8, 1901.

Mr. F. A. McDermid, Cherry Creek, Nev.

My Dear Sir:—Yours of the 21st of February duly received, also all the Christian Science literature. I thank you very much for the same. Some of the inmates here are taking quite an interest in the works, and think they will be better men by so doing. Thanking you again, and with kindest regards, I am,

Yours very truly,

L. O. HENDERSON, *Warden.*

Mr. McKenzie at Stamford, Conn.

ON February 28, Mr. William P. McKenzie delivered an interesting address to the students of this school [Manor School, Stamford, Conn]. Mr. McKenzie talked informally to the boys for about half an hour. The subject of his talk was self-government, which he handled in a most interesting way. The subject of self-government is indeed a tender one with us, but it is safe to say no old sores were torn open. Several trials have already been given the students to govern themselves, and what has been the result? The number of transgressions has doubled, and the faculty have seen fit to do away with the privilege. We have yet to demonstrate our ability to govern ourselves, and when we do the better it will be for faculty and students.

In the Easter number will be published a synopsis of Mr. McKenzie's lecture.—*The Papyrus.*

There are seasons when to be still demands immeasurably higher strength than to act. Composure is often the highest result of power.—CHANNING.

Among the Churches.

Report of the Work in Grand Rapids, Mich.

At the annual meeting of First Church of Christ, Scientist, Grand Rapids, Mich., held January 18, 1901, the following reports of the clerk, Sunday School superintendent, and missionary committee were submitted.

REPORT OF CLERK.

The closing year of the century witnessed great advancement in the cause of Christian Science in every line of its ever-expanding work, and this means that humanity has been greatly uplifted and blessed. For these blessings, which far exceed our present conception of them, this church unites with all others in grateful acknowledgment to God for His loving benedictions.

The growth of our church has been steady and of that sturdy kind that speaks for its health and permanence. Kindness and brotherly love have marked all its steps during the year, and brought us helps and privileges that promise much for our future.

Our reading room has been opened since our last annual meeting. From this room have gone out many of those precious volumes which are rapidly transforming the universe and bringing to earth the treasures of heaven. The good that results from this branch of the work of the church cannot be justly measured or weighed by human tests.

From March 1, 1900, to the close of the year one hundred and fifty-eight copies of *Science and Health* were sold, and for the same period the total sales of Christian Science literature amounted to \$1,093.68.

A brief survey of the year gives us much encouragement for even more faithful and fervent work in building a church home for those who are restoring to the Christian Church through demonstration the Christ-healing established by our beloved Master nineteen hundred years ago.

ELIZABETH CEPERLEY, *Clerk.*

REPORT OF SUNDAY SCHOOL SUPERINTENDENT.

This last year has been a notable one for our Sunday School, indeed, each year of its organization has been marked by its own peculiar demonstrations, and to one who for the last four and one-half years has watched the individual progress of each child, the past year has shown the abundant fruit of the clear, practical, scientific teaching of the preceding years.

The divine Intelligence which reigns supreme over all, has been abundantly generous in its endowment of the child-mind, revealing unto these babes the mysteries which older ones have labored for years to understand. Their ready and practical application of Scriptural teachings denominates them our seniors in Christian Science. This same child-mind, with its freedom from errors of strife, hatred, malice, and envy, turns naturally to the secret utterance of divine Love. It needs no scholarly argument or labored effort to make them reflect Love. Their little faces show that to love is an unlabored action with them. The knowledge of Truth as Omnipotence is the keynote of our Sunday School teaching. To teach the little children to know that God—Good—is the only power or presence, is to lead them to a place of refuge.

Our teachers are aware of the grave responsibility resting on them, and know that through demonstration only are they enabled to lead their little flock; indeed, in many cases the Scripture has again been fulfilled, "A little child shall lead them." We have at present eleven classes, the majority of the members under the age of twelve. Eight having passed the limit mark have joined the alumni of our school.

This year there has been an entire enrolment of 119. The present membership is seventy-nine. Our largest single

attendance was seventy-nine. Our average attendance is fifty-three.

Our collections are good. The building fund has shown the same prosperity that characterizes the spiritual growth of our church.

Two substantial monuments of the children's generosity stand in the reading room, the davenport and the library table. I can remember the reception given the children at the opening of the reading rooms, the delight pictured on their faces, as they saw this substantial fruit of their collections.

Before closing this brief report I want to thank the teachers for their hearty support to the superintendent and assistant-superintendent, and also the Board of Directors for their ready co-operation in every advanced step we have taken.

We hope in the future to be of greater assistance both financially and spiritually, that this school may not be considered a mere adjunct of this church, but an indispensable element in all its future demonstrations.

Respectfully submitted,

GRACE H. WILMOT, *Superintendent.*

REPORT OF MISSIONARY COMMITTEE.

At our last annual meeting, the Missionary Committee reported on our six months' work. We have now added to that one year more, and what has been the result? From the visits to the Masonic Home some have become interested and are reading and have expressed a desire for the healing Truth. The ten engine houses have been supplied with literature, and have been visited by the committee who have ever received a pleasant welcome from the men. One of the houses did not care for the literature at first, but has now expressed a wish for a copy of *Science and Health*. The Soldiers' Home has been visited several times and literature given out. The jail has had service regularly each Sunday afternoon, consisting of hymns and reading of Scripture and *Science and Health*, and has been visited each Friday afternoon for personal talks with those who had expressed a wish to talk with us.

We can see that the seed sown has brought forth fruit. Many have been taught to know God—Good; have learned that they must be transformed by the renewing of the mind, that they must overcome in themselves anger, hatred, malice, and resentment, and learn to think good and love good. The text-book had been taken from one of the halls, and one young man was so anxious to learn the Lord's Prayer with Spiritual interpretation before he left the jail he had all the prisoners try to help him recall it. There has been some good healing done. Each one of us, I am sure, is thankful for the privilege of being a member of the Missionary Committee, for the great blessings received in helping so many to know the Truth as taught in "*Science and Health with Key to the Scriptures.*"

Very respectfully submitted,

MRS. MYRA NICHOLS,

Chairman of Missionary Committee.

What is being done in New Bedford, Mass.

With loving greeting to the fellow-workers for the Cause of Christian Science, First Church of Christ, Scientist, of New Bedford, Mass., sends this brief report of a branch of its present work.

The first of October, permission was given the church to place Christian Science literature in the County Jail and House of Correction. A copy of *Science and Health* and "Miscellaneous Writings," were already in circulation there, and the children of the Sunday School had been sending the *Journal* and *Sentinel* there for some time. This additional privilege was gladly accepted, and over five hundred copies of the *Journal* and *Sentinel* are now in the hands of

the prisoners, as well as a second copy of Science and Health, with a *Quarterly*, which was placed in the hospital department. This was followed by the privilege of a church member reading once a week to the women. This reading began October 11, and much good has already been done. Several women have expressed the desire to live purer and better lives. Physical as well as spiritual benefits have followed these uplifted desires. The Bible and Science and Health with the Sentinels and Journals are used in the readings. One of the inmates has borrowed a copy of Science and Health, and with the *Quarterly*, and Bible studies the Bible Lessons.

The next step was to the city almshouse, where permission was obtained for two church members to go once a week to read, one to the men, the other to the women. With touching gratitude the inmates express the thought that God must have sent the ladies to show them the Light in their seeming darkness. Recently a third lady has been allowed to go with them, to interest and instruct the little children in the simple Truth of God's love, as taught in Christian Science.

Permission was next given for a member to go to the New Bedford Home for the Aged, and every week the Gospel of peace on earth is preached to them from the Bible and the Christian Science text-book.

Then the church was given permission to send a member to the almshouse in Fairhaven, a little town across the river, about a mile from New Bedford. This member was received with the same love and gratitude, and the interest grows, as each week the word of God is read to the dear ones there.

During the first weeks of November the reading room connected with First Church was refitted. This reading room was first opened to the public seven years ago by the pioneer Scientist in New Bedford. It has accompanied the church in its movements into larger quarters, and is now situated in the church building. The walls are papered with a soft green shade, woodwork and curtains of ivory white. Crimson draperies separate the reading room from the directors' room beyond. The floor is covered with a neat matting. On a handsome old table placed in the middle of the room are to be found Mrs. Eddy's writings, the Bible, and various publications from The Christian Science Publishing Society. A neat book-case has recently been added to the room, in which is a goodly supply of literature for distribution. Since the middle of June, there have been over seven hundred visitors.

On January 28, 1901, Judge Ewing gave a lecture, under the auspices of this church, to a large and attentive audience. We feel that much good will come from this demonstration.—CORDIE F. HILLMAN, *Clerk*.

Reading Room at Saginaw, Mich.

When the order came to us as a church to open a reading room, we began our work at once, as we always have striven to be obedient. My experience in connection with this work has been blessed, and a new joy and larger sense of God's love has come to me in consequence. At a business meeting of the church, a reading room committee of three was appointed. I was not present at the time and when the news came to me that I was one of the number, I bowed my head in silence, and a deep sense of peace and joy came to me, to know that my dear brothers and sisters of the church had deemed me worthy of so sacred an office.

I stepped upon the street car on my way to make my daily calls upon the patients to whom God had directed me, and my heart was bounding with love. Tears of joy would come to my eyes in spite of my desire to keep them back. At the end of my walk was the home of one who had acted as Christian Science nurse for me, and to her I poured out my story, of how great a blessing I had received, so great

I could scarcely contain it,—a foretaste of heaven. A sense of ownership had come, as if some one had given me a home, a place of refuge, one that I was allowed to care for and enjoy forever. Indeed it has been to me ever since just such a place. We have had over three months of sweet, quiet, reading and conversation, and much Truth has gone out over our city from east to west and north to south. Surely a little leaven will leaven the whole lump.

Our room is very delightful, light, clean, and cheery, brightened by pictures and an urn filled with beautiful plants, furnished with desks, chairs, table, and divan. Voluntary weekly contributions pay all expenses, also furnish money to buy literature as fast as it is needed. Our sales of literature have been much greater than we ever dreamed. The call for Christian Science healing has increased as a result of our demonstration. We are situated in one of the best blocks, and in the heart of our city, opposite the Bancroft House in the Mason Building, corner of Genesee and Washington Avenues.

MARY SMART SYMONS,
Secretary Reading Room Committee.

Church Work in Austin, Minn.

First Church of Christ, Scientist, Austin, Minn., has opened reading rooms in the Annex to Elks Hall, Main Street.

Christian Science literature from The Christian Science Publishing Society, Boston, Mass., will be on sale at these rooms, as well as the works from the pen of our beloved Leader, Mary Baker G. Eddy.

The opening of these reading rooms is one more advancing step of this band of earnest workers in the Truth.

We organized in February, 1897, with five charter members. For about two years we occupied the M. W. A. Hall, with a good attendance. We next moved to the Hayes Bros. Hall, where we remained about one year, and when the Elks finished their new hall in January, 1900, we felt we were highly favored in securing the same for our services.

The Elks Hall is beautifully and elegantly furnished. The Annex to this hall consists of five nice office rooms finished under direction of First Church of Christ, Scientist. These rooms are very pleasantly located and are attractive.

From this band of five faithful workers the church has grown to a membership of fifty. There is a flourishing Sunday School of about forty children, with an average attendance of twenty.

By order of Board of Directors.

MRS. WINIFRED PARMENTER,
MRS. MARY A. ENGLE, *Committee.*

The Church Manual.

THE Church Manual of First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

The Shepherds led the Pilgrims to Mount Charity, where they showed them a man that had a bundle of cloth lying before him, out of which he cut coats and garments for the poor that stood about him; yet his bundle or roll of cloth was never the less. Then said they, "What should this be?" "This is," said the Shepherds, "to show you, that he who has a heart to give of his labor to the poor shall never want wherewithal. 'He that watereth shall be watered himself.' And the cake that the widow gave to the prophet did not cause that she had the less in her barrel.

BUNYAN.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Dedication of Churches.

INTERESTING dedicatory services of the Second Church of Christ, Scientist, of New York City will take place on Easter Sunday, April 7. We are authentically informed that an arrangement has been made whereby those desiring to attend these services can obtain reduced rates by applying for special certificates of their local agents at the time of procuring tickets.

It is not necessary to undertake here a description of this beautiful church structure, as that will come no doubt in connection with an account of the dedication services. The fact that this beautiful temple has progressed to the point where it is ready to be dedicated to the sacred purpose for which it was built is cause for deepest rejoicing and thankfulness.

SECOND CHURCH OF CHICAGO.

Also on Easter Sunday the Second Church of Christ, Scientist, of Chicago, Ill., will be dedicated. This beautiful structure, erected on the corner of Wrightwood and Pine Grove Avenues, Chicago, is also a notable achievement in connection with church building in our movement and in Chicago. We shall hope to publish in connection with the dedicatory services of that church a description of this fine edifice.

Our brethren in Chicago are entitled to the highest credit for the successful manner in which churches have been organized and conducted in that great city, as well as upon the building of tasteful, commodious, and handsome church buildings. These evidences of the onward movement of our great Cause are helpful and inspiring to those of our faith everywhere.

Editorial Comment on Proposed New York Legislation.

We publish herewith editorials from different papers upon the Medical Bill as amended, which is now pending in the New York legislature. These editorial remarks, taken as a whole, cover very fairly and fully the questions involved in this proposed medical legislation. They show very distinctly the inconsistencies and incongruities thereof. We might dilate at great length upon this legislative Bill, but others who are not of our sect are doing this for us so ably and valiantly that it seems scarcely necessary for us to undertake to add our opinion to theirs. For the present, at least, therefore, we are content to let this question rest where it is, so far as we are concerned.

The following is from the *Binghamton* (N. Y.) *Republic*:—

RELIGIOUS PERSECUTION.

The Bell Bill to persecute Christian Scientists manages to keep itself before the legislature. It has now been shorn of all its venom excepting that it prohibits the Christian Science physicians from accepting fees for their services. It has been given the shape of personal legislation of the worst description. Christian Scientists are persecuted for

their belief. An attempt is made by the legislature to crush their organization. They have organized in societies, erect churches at large expense, and are going ahead as a religious denomination. They have their grounded ideas about the practice of medicine. Whether the practice of medicine is or is not a religious matter is not up for discussion, but the constitutional right of every person to liberty, including the employment of what physician he pleases, is a matter which is always up for discussion.

A physician of one of the so-called schools must, by considerable hard study, become able to pass an examination before a board of physicians of his school. The Christian Scientists would be willing to have that rule applied to them. They are willing to have their candidates for medical examinations cited before physicians of their school. Any other rule would be in effect a persecution.

The Christian Science physicians are accused of losing patients. If a patient dies the fact is heralded in the newspapers and seized upon as a reason for condemning the school. If another physician loses twenty patients the misfortune is attributed to Providence. Agitation can only strengthen the Scientists.

The Salvation Army won its present honorable and respected position by being condemned, abused, and persecuted. "The blood of the martyrs is the seed of the church." If the Salvationists had not been molested they would not have become so prominent or so numerous.

Homœopaths have had their day of being persecuted, and it was only recently. Christian Scientists can stand legislative persecution, and perhaps thrive better than they would without it, but the legislature cannot afford to persecute them, and the people of the State of New York cannot afford to permit it.

No one wants the Bill to pass except a few physicians in the city of New York. No skilful or other physician of liberal mind will want to be a party to the passage of the Bell Bill. It is a good bill to slaughter as a prominent warning against crank legislation.

The *Sharon* (Penn.) *Telegraph* has the following to say:—

MAY KILL WITHOUT PAY.

The most inconsistent bit of legislation that has ever come under our notice is now pending in the New York State legislature, regarding the practising of healing by faith curists, not regularly licensed as physicians. This proposed law is directed at, and mentions in its preamble, that large body of intelligent people who, rightly or wrongly, have accepted the doctrines of Christian Science as embodying the best guiding rules for their life-work, and a power bringing the greatest good to both their spiritual and temporal natures.

The proposed enactment of the New York State Assembly provides in its amended form that the healing practice of Christian Scientists shall be prohibited within that commonwealth if a fee is charged for the services, but such practice shall be permitted "provided no fee or consideration is accepted by the so-called healer."

For the purpose of the comments we desire to make upon this proposed law, it is not necessary, neither do we care to enter into a discussion of the merits or demerits, the fallacy or truthfulness of the tenets and belief of this sect. Should we grant in the premise that the faith of the Christian Science people is fallacious; their practice pernicious; their healing, or professed healing, dangerous to health and life, it would only make, to our understanding, more viciously ridiculous the provisions of this law. If the practice of healing by these people places in jeopardy the health, happiness, and even life of their patients, then most certainly they should be forbidden from engaging in that practice, and the remunerative clause in the proposed act only makes its unfairness more disgustingly apparent to a reasonable

and unbiased mind. If the practice is wrong; if it does place in jeopardy the lives of those who come under its treatment, then it would be as consistent for the legislature of a state to legalize murder, providing the murderer was not paid for his crime, as it would be for that legislature to legalize this practice without fee or consideration for the services. A law like this, which first claims an existing wrong, but is willing to legalize that wrong, if it does not detract from the income of some other party or parties, is too evidently a piece of class legislation to admit of argument.

On the other hand, granting in the premise that the practice of these people is beneficial, is an exact science, what a despicable injustice would be worked against them by such a pauperizing of their profession. Let us be consistent, and in consistency no wrong, paid or unpaid, can rightly be legalized, and no body of law-makers, state or national, can in justice put the ban of error upon right in catering to the desire of any particular class.

The editor of the *Olean* (N. Y.) *Times* thus speaks out:

The amendment to the public health law which is seemingly calculated to legislate the Christian Scientists out of business will be reported back to the Assembly, from committee, this week, with some modifications. The committee, as the *Times* is informed, will permit the Scientists to practise as healers, but they are debarred under penalty, from accepting remuneration for such service as they may render. This is an absurdity. As well say that ministers shall not accept salaries, or that physicians can prescribe for the sick, but they must refuse a fee. If the Constitution permits the legislature to interfere with individual contracts, to the extent that it shall say that a person practising Christian Science healing, cannot accept pay, then there is no limit to its authority, and it might go still farther and regulate the price of a shave in the barber shops of the state, the price of milk per quart, the fees of doctors, and, in fact, issue a price list for every commodity, marketable or otherwise. Certainly if it can make Christian Science healers unworthy of their hire, there is no limit to legislative power. The wise law-makers evidently take the position that the Scientists must be tolerated, and the public health can permit the ministrations of the Science healers, but the Scientists become a menace to the state the moment a financial value is attached or accepted for the exercise of their alleged powers. In the presence of the dollar the Scientist stands condemned; one hundred cents, more or less, has changed his status from a law-abiding citizen to a law violator.

The editor of the *Syracuse* (N. Y.) *Journal* thus expresses his views:—

A SUBTERFUGE.

The Bell Bill, which was intended to prohibit Christian Scientists, osteopaths, eclectics, etc., from practising, has been amended to the effect that Christian Scientists may continue to do business provided they do not charge for their services, and the measure will be up for further consideration this week. It is hard to understand what the legislators are trying to get at, and their position seems ridiculous and inconsistent.

If the Christian Scientists can perform the miracles they claim they can they are certainly entitled to pay. If, on the other hand, they are responsible for much unnecessary suffering, and even for loss of life, they should not be allowed to practise whether they receive compensation or not. This would seem to be a common-sense view of the subject.

The supreme question involved, after all, is one of principle, not one of subterfuge and indirect methods. Is Christian Science what it is claimed to be? If it is, then it is entitled to the protection of the law; if it is an evil and a

menace to mankind, as is alleged by many people, then it should be under the ban of the law. If the legislators do not feel equal to determining this question at the present time they would do better to leave it alone until such time as somebody can act intelligently and authoritatively in the premises. Christian Science is either a blessing or an unmitigated evil, and the law must eventually look upon it either as the one or the other.

In a paragraph of the above article from the *Syracuse Journal*, which we do not republish, referring to the practice of Christian Scientists, our editorial friend uses the words "their incantations." We do not suppose this word was used in any unfriendly sense, but nevertheless it is improperly used in connection with Christian Science practice. The Christian Science method of healing is through prayer and communion with God as the Supreme Mind, the Father-Mother of all mankind—prayer in the highest and best sense of the term. **Prayer is not incantation** in any sense in which the latter word can be employed. We trust, therefore, our newspaper friends will cease to speak of Christian Science prayer as "incantation," because in doing so they not only do all Christian Scientists an injustice, but they cast, wittingly or unwittingly, a reproach upon Christian Science as a religious movement.

Legislation in Indiana.

THE legislature of Indiana, at their session just closed, passed a Bill, the purpose of which evidently is to prevent all kinds of healing practice not coming within the regularly established schools of medicine. We are informed this Bill was not signed by the governor of that state, but that under its constitution the Bill becomes a law after the expiration of a certain number of days, without the governor's signature. We suppose, therefore, this Bill is now a law upon the statute books of Indiana. A copy of that part of it prohibiting all but the regulars from practising, has been sent us, and is as follows:—

"Section 8. To open an office for such purpose or to announce to the public in any way, a readiness to practise medicine in any county of the state, or to prescribe for, or to give surgical assistance to, or to heal, cure, or relieve, or to attempt to heal, cure, or relieve those suffering from injury or deformity, or disease of mind or body, or to advertise, or to announce to the public in any manner a readiness or ability to heal, cure, or relieve those who may be suffering from injury or deformity, or disease of mind or body, shall be to engage in the practice of medicine within the meaning of this act.

"It shall also be regarded as practising medicine within the meaning of this act if any one shall use, in connection with his or her name, the words or letters, 'Dr.,' 'Doctor,' 'Professor,' 'M.D.,' or 'Healer,' or any other title, word, letter, or designation intending to imply or designate him or her as a practitioner of medicine or surgery in any of its branches.

"In charging any person in an affidavit, information, or indictment with a violation of this law by practising medicine, surgery, or obstetrics without license, it shall be sufficient to charge that he did, upon a certain day, in a certain county, engage in the practice of medicine, he not having any license to so do, without averring any further or more particular facts concerning the same."

We shall not now stop to discuss this Bill. That its provisions are extraordinary, no unbiased person will question. Whether or not it will be held to be constitutional, or what its effect will be if an effort is made to enforce it, remains for the future to disclose. We infer from newspaper accounts, as well as reliable private information, that the Bill, as it passed, is against the gen-

eral sentiment of the people of the state of Indiana; and well it may be, for it is proscriptive in the highest degree and comes distinctly under the head of class legislation.

The discussion upon this Bill in the legislature was earnest, prolonged, and unusually interesting. Some of the speeches delivered upon the occasion are well worthy of earnest perusal and of preservation for future reference as well as present uses. We, therefore, gladly give space to the following synopses of some of the more important and eloquent speeches delivered in the Senate of Indiana. Some of these speeches related to another Bill which did not pass, but all are in point.

Senator Fortune made the following pertinent and forceful remarks:—

"I desire to state the reasons for my having signed this minority report. I felt that I was between love and duty in this question, and I let duty prevail. I am not a Christian Scientist healer, neither am I an osteopath. I do not believe in the doctrines of the Christian Scientists. I presume that the Christian Scientist does not believe in the doctrine that I do. I am in favor of the doctrines of the Christian Scientist for the reason that if I should oppose them, it would be an abridgment of the rights of other people. I am in favor of a doctrine that where I respect the rights and opinions of my fellows and my brethren, I can ask, I can even demand, of them that they respect my opinions upon all questions. For that reason I think that these people should have the right to worship God according to the dictates of their own conscience. I admit to you, gentlemen, that this may be a peculiar form of worship, it may be a form of worship that you and I do not understand and cannot understand, yet it is a form of worship which they claim to understand and which they follow. I would not abridge or limit the right of any man to worship God according to the dictates of his own conscience, because it is a violation of the Constitution of the State of Indiana and the Constitution of the United States, and it is opposed to the very bulwark of freedom upon which our country stands. I want to call the attention of the gentlemen of this Senate to Section 3 of the Constitution of the State of Indiana, which I think is clearly violated if this bill should become a law: 'No law shall in any case whatever control the free exercise and enjoyment of all religious opinions or interfere with the rights of conscience.'

"I understand the decalogue of the Christian Scientist is that he or she who is a believer of this peculiar religious doctrine may enter into the sacred precincts of the sick-room and heal or relieve the person there afflicted. This is their religious belief, and I submit, gentlemen of the Senate, if you have the right to take from these Christian Scientists their religious belief in this particular, those of you who belong to the Methodist denomination had better look to your laurels. I think it is a transgression of the religious rights of the people and of this particular sect of people.

"If the legislature of the great State of Indiana can say that this peculiar sect, and I am not speaking for them in particular, because if I were sick, the first man I would go to would be some good doctor, but I say it is an intrusion upon their religious rights, and if the legislature of the State of Indiana can say to this handful of people in the state that they cannot worship God according to the dictates of their conscience, under the Constitution of the State of Indiana and under the statutes of this state, it will not be long before the legislature of Indiana will invade the sacred portals of every church that happens to have cast upon it some peculiar or particular odium. I hope that this Bill will not prevail because it is an abridgment and restriction of the religious rights of the people. I thank

God that I am a citizen of a state that allows a man to gather around the altar and worship God as he wishes, as he sees fit, and seek the seclusion and privacy of his home and there worship the Divine Creator according to the dictates of his conscience. This is the bulwark of Americans—one of the greatest rights—that was wrenched, if you please, from despotism years ago. This is the contradistinction of a republic as against a monarchy. People of our state and of our nation say you may worship God as you see fit, and I say here to-day to the Christian Scientist, You have the same right to worship your God that I have to worship mine, in what peculiar manner that may be."

Senator Kittinger also spoke with much force and eloquence as follows:—

"I know nothing about Christian Scientist healers or any other system of medicine, but I am against any bill or any law that restricts the rights and liberties of this people. I believe that if a man or woman is sick and they desire to be rubbed and pay for it, they have a right to be rubbed, that that is a constitutional and God-given right, and no doctor or medical profession or medical fraternity of this country ought to take it from them by the voice of any legislation.

"And I further believe that if I want to be prayed for, if I am sick in body or mind, and I want to hire somebody to pray for me, I believe that that is a God-given and a constitutional right that I have, that no man ought to have the right, or no assembly or legislature ought to have the right, to take it away from me. Now I am with the physicians as far as it is right. I believe there ought to be legislation as to all contagious diseases for the preservation of life and health in the community; but, as Senator Gard has said, this medical legislation in this state is no new thing. The doctors of the State of Indiana have been caged up with legislation for the last twenty-five years, and the poor lawyer, who hasn't a law upon the statute books to protect him, goes into the court of justice and he stands or falls upon his merits. Why, the doctor that got up this Bill here ought to go and hide it.

"I want to call the attention of this dignified body to some of the sections of this Bill. Why, I remember away back in 1897 and 1899, they got fifteen or twenty pages in the acts of the legislature here, all protecting the doctor and medical practitioner. Everything protects him. Legislation then and legislation prior to that time. You will find the books are full of it. I want to read section 8 here, and I want to say if there is any man who has any respect for his fellow-men—if there is any liberty-loving man or Senator in this body—if they can have any respect for such legislation, I would like to know it—legislation such as they propose in this Bill. Here is Section 8: 'To open an office for such purpose or to make known to the public in any way a readiness to practise medicine in any county of the state.'

"Now they have that in the law of 1897, for 'any one to prescribe for, or to give surgical assistance to, or to heal, cure, or relieve, or to attempt to heal, cure, or relieve, those suffering from injury or deformity or disease of the mind or body.' Now just think about that for a minute. That makes the practice of medicine unlawful. Why, if a child were sick with the croup and your mother-in-law was upstairs and you sent for her and she comes down and puts goose-grease on the child's throat, she is practising medicine unlawfully, and some little doctor comes and files an affidavit against her. If I go along a public street and a man's leg is broken and I straighten his leg out to relieve him, I am guilty of practising medicine without a license.

"If a doctor cannot stand upon his merits and practise medicine without every legislature protecting him, I should let him go down. Now as to this section again

It makes no difference under this Section 8 as to what relief you give the sick, as to what relief you give the injured, it makes no difference if I am only sick in mind, if I am perfectly strong and healthy and every organ of my body is healthy, but if I am sick in mind and I send for some good brother or some good sister of some good religious denomination to pray for me, to relieve my mind, a lot of these little doctors will say that it is practising medicine without a license, and they come here and undertake to legislate for the people. I tell you, Senators, that this practice of medicine has been for years a trust. I do not want a Senator here to believe that if I am sick I would not send for a doctor like Senator Gard. I would send for a regular physician. I would send for him if my family were sick, if my wife were sick; but because I believe in that and my neighbor wants to be rubbed or he wants to be prayed for, or they want to be talked to, that is a privilege they have, and I say a God-given and a constitutional right that I do not believe this body will ever take from them. I desire to say this relative to this Bill, that these doctors take up about half of the legislation, just about half of it, in legislating for them.

"If there is any science in medicine, if the doctors have any merit in them or any good in them, the intelligent people (and we are all intelligent in this country) everywhere will send for them and they will get the business and get the money for it. As Senator Fortune has said, and I desire to close the discussion here, this, to my mind, is a clear violation of the Constitution of the United States. No law should control the free enjoyment of religious opinions and the free conscience. If it is my opinion that I want somebody to pray for me or rub me, I want that privilege and I do not want any legislature to say whether it be the practice of medicine, and that it shall be a misdemeanor. I hope that this Bill will be killed, dead."

Senator Winfield thus kindly spoke in part:—

"In my city upon the Wabash we have a little church. That church is composed of the best people of Logansport. They have abandoned the church of their fathers. They have abandoned faith in the medical fraternity and have planted themselves upon the tenets of the Christian Science Church. They have come to me and asked me to oppose this Bill because they believe that this is a Bill that infringes upon the rights of conscience. Believing, as I do, that this is the tendency of this Bill, believing that it takes from the people of Indiana those rights which have been secured to them by the fundamental law of the state, that is, full liberty of conscience, I stand here ready to oppose this Bill. . . . While I am not a Christian Scientist,—in fact I belong to the broad church,—I believe in the fatherhood of God and the brotherhood of man. Yet I am unwilling on the floor of this Senate to vote to pass a bill that will restrict the liberty of conscience of any citizen of the State of Indiana.

"I am old enough to believe that *materia medica* is not an exact science. I have stood by the bedside of those who are near and dear to me and found a physician absolutely helpless. . . . Come back to the main proposition: These people believe that the Almighty God is the power in their hands to cure the sick and the diseased. They believe it is through Divine agency that the cure is brought about. They believe that it is a sin against the Almighty God to call any other agency than the Divine agency to cure the sick. What do you propose to do with this Bill? Why, you propose to say to these people, You cannot believe in the Almighty as your conscience tells you you have a right to believe. We propose to place a restriction upon you. You have no right to believe in your doctrine, but you must resort to the method pointed out by the law to relieve the sick. That is what this Bill means, and it means nothing else."

The Senator from Gibson County, in the course of his remarks said:—

"I do not believe in osteopathy. I do not believe in Christian Science, but I believe that there is a God in heaven, and I believe that I have a right, as one sinner, to call upon Him when sick either in body or in mind. I believe it is an inherent right of citizenship when suffering with disease, to gather around me my family, my friends, my Christian friends, and my wife, and I believe that no legislature has the right to take this from me. I submit that I dislike much to hear lawyers on the floor of the Senate talking about the validity of the statutes and the constitutionality of the law, but I cannot refrain from calling your attention to the fact that this identical law is copied after the Rhode Island law, which the supreme court of that state has declared to be unconstitutional, and Mr. Cooley, in his 'Limitations,' uses this language. 'Any law respecting an establishment of religious tenets shall not be constitutional. The legislatures have not been left at liberty to effect a union of Church and State or establish preference by law in favor of one religious persuasion or mode of worship.' I wish I had time to read to you, my friends, all that Mr. Cooley has said on that subject, and I will say that he is one of the greatest law writers in America.

"You say you want no man at your bedside when you are sick, in prayer, you say you want not your mother, your wife, your sister, your sweetheart. I oppose this law because it strikes a blow right at the sacredness of the home. If it had not been, let me say to the Senator from Daviess, for the fact that in his infancy when he dressed in his white night robe and nestled at his mother's knee, that she taught him, 'Now I lay me down to sleep,' he to-day perhaps would have been an agnostic. It may be, my friends, that that fact alone has kept him at this time from being an infidel or a follower of Ingersoll. You are not consistent. Years and years ago, there landed in this country from the Mayflower, a people who left their native land and came to America that they might worship God as they pleased and educate their children as they pleased. They built this great American republic of ours. This land which we are proud to say is the 'land of the free and the home of the brave.' Where is your freedom if you take from the people freedom of religious worship? What is freedom in America? Freedom of conscience, freedom of thought, freedom of speech, the right to worship God according to the dictates of your conscience. I submit, my friends, before I would support a measure that takes from me and mine the right to worship God as I please, I would rather get down on my knees before a monarchy. Why, my friends, all over this world wars have been waged, battles have been fought in the interests of liberty, religious liberty. . . . Tell me that liberty is to be voted away from the people of this country by an Indiana legislature! I resent it, my friends. I say that now and forever I protest against any act of this legislature that takes from me the right to worship God."

Senator Harrison spoke as follows:—

"As a member of the Senate, on yesterday, when the other medical bill went up, I voted for its advancement, but I think that this Bill is too sweeping in its nature. It asks too much. When we consider that the principal feature of the Bill is simply aimed at certain persons, it is taking exceptional cases. If you want to take exceptional cases, I can say to you, I can point out to you exceptional cases in the medical profession that ought to receive the condemnation of the people.

"Like the Senator from Porter who has cited cases, I have known cases where there has been a false diagnosis of the case and where persons really had nothing the matter with them and otherwise would be alive to-day. I know one case in particular. It occurred but a few months ago,

where there was a prominent lady in the city of Shelbyville who had nothing the matter with her that would cause death. There was a false diagnosis of the case. She was brought up to this city, taken to a hospital, and in one hour she was dead and the doctors admitted themselves that they did not know what was the matter with her, and if they had not made a false diagnosis of the case, she would have been well to-day.

"So you may take it through the whole medical profession. The doctors are like all other persons, and are liable to make mistakes. They are not superhuman, and when they are called to administer to children, I have known cases when they have made wrong prescriptions and the children have died, where, if they had been left alone and administered to by their mothers in the ordinary way that some old women know how to take care of children, they would have been alive to-day. Now, when you consider these facts, you must know that there are two sides to the question. Doctors make mistakes, they do things that are not always correct.

"I say that some of the arguments which have been made against Christian Science have not been fair. The argument that was made that a child that died up here at Valparaiso was in a Christian Scientist family, is not correct. It is not right. The Senator from Tippecanoe was mistaken in that case. Those people, I am informed, were not Christian Scientists. I am not a Christian Scientist myself. I do not believe in the doctrine of Christian Scientists, but I have some friends here in this city who believe in that sect, and for that reason I want to answer the argument that has been made against them. I say the argument when you state that prayer has no effect whatever or has no effect in these cases, when you make that assertion you make an assertion that breaks down the whole fabric of the Christian religion. That is the principle upon which the Christian religion is founded. Now, we fought this battle over a hundred years ago as to the liberty of conscience and the freedom of worship according to the dictates of one's own conscience, and I do not believe that the people want to fight it over again and get it mixed up in affairs of legislation. I believe it is well to leave it the way it is. Leave the laws the way they are.

"Now, the cases that have been spoken of are only isolated cases. The Christian Scientists are not a bad people and I want to say one word on the question of the treatment of children. You know that the human instinct and the instinct of the parent is so strong if a child is sick that the impulse is to do everything under heaven to save that child's life. I have seen that myself in numerous cases. I have seen persons send for doctors who were personal enemies of the family. I have seen them send for half a dozen, and I believe the instinct planted in the human soul to protect their offspring is so strong that there is no person living who would suffer his child to die if he thought there was anybody in the world who could do it the least bit of good."

The Senator from Washington County spoke in part as follows:—

"I feel that this minority report should be adopted, not that I agree with the measure, but to give an opportunity, if any law upon that subject is to be enacted here, that it be made the best possible law in that line. The measure itself, the Bill itself, is too drastic in its present condition. Even with the amendments I do not know then that I can support it, but if we go along with this matter and allow an opportunity to be made to amend it, then the whole matter will come before the Senate. Now if we, as a Christian people, believe the hymns that gladden our ears every Sunday morning, we surely have a great friend in Jesus. I believe it is Tom Moore's poem that has been used in every church, entitled, 'Come, ye disconsolate.' In all our

Christian churches they use that poem as one of the hymns, and one line of it says, 'Earth has no sorrow that Heaven cannot heal.' That may be Christian Science. We hear it every Sunday morning. Now, if we work an hour on Sunday in that line, let us work a little longer during the week or let us change the hymn books. Every Sunday almost in every church, in our Christian churches, we are told to take our cares to the Lord in prayer. Now, my Christian friends here, not my Christian Science friends here, we then should amend our hymns or else we should give greater liberty to the people. It strikes me that the present Bill makes it absolutely, as I understand it, impossible to make a conviction."

Senator Agnew also said in part:—

"I would like to invite this Senate to take a walk on *terra firma*. This is not a prayer-meeting; it is a plain, every-day session of the Senate of the great State of Indiana. There is a Bill pending which, in its plain, simple terms, compels every parent, every person having another dependent upon him, to call in a doctor whenever anybody is sick. It must be a certain kind of a doctor, too. He must be an allopath or a homœopath or some kind of a doctor. Now I fear that this Bill is going a little too far. If you consult the members of this profession themselves, and ask an allopathic physician what he thinks of a homœopathic, he tells you that so far as his medicines are effective, they are deadly poison and cause death. If you take the homœopathic, he tells you that the allopaths are all wrong, and that their doses are killing more people than disease. How much truth there is in this, I am not prepared to say, but this they will tell you. This Bill is not so much a question of what anybody believes. What have we to do with the effectiveness of prayer? There is nothing of the kind involved here. It is a question, and only a question, of whether you are compelled to call in Tom, Dick, or Harry with an M.D. to his name, who doses your child or your friend with something you know nothing about, and in nine cases out of ten nobody else does. I do not want it understood that I am an enemy to the profession, for my best friends are physicians, and the first thing I do when I get an ache or a pain is to send for the doctor. He is the first man I have confidence in.

"The scope of this bill is not what, perhaps, it is intended to be. If this medical science had reached that stage of exactness where there are no mistakes, it would be another matter. In many communities there dwell quacks with certificates, allowing them to practise medicine, who are not fit to go into any family. I should think that there ought to be some restriction thrown about them. But that is not the purpose and effect of this Bill. It is more far-reaching than that. It aims at a sect of people who call themselves Christian Scientists.

"As I understand it, I know very little about it and believe less, but as I understand it, they believe that by some sort of a mental process, whether prayer or aid from the Divinity, they can heal disease; and I want to tell you that there are instances where it seems to me they have absolutely done it. They never did for me, because I never had any faith in that kind, but my neighbors, people who are entirely trustworthy and whose word I am bound to take, men of the very highest intelligence, men who are not more than moderately religious, have told me that after physicians had failed in their families, and in a case where one was pronounced incurable, they called in the Christian Scientist and they were healed. I do not pretend to say that this is of my own knowledge, but I say that a Bill of this kind is far-reaching, and we should be very careful before we enact a law of this kind because it strikes at the liberty of the people of Indiana. It is something that has never been attempted before."

From our Contributors.

Abiding.

BY BERTHA WOODS.

ABIDE with me! Fast breaks the morning Light,
Our day-star rises, banishing all night;
Thou art our strength, oh Truth that maketh free!
We would unfailingly abide in Thee.

I know no fear, with Thee at hand to bless,
Sin hath no power and life no wretchedness;
Health, hope, and love in all around I see
For those who trustingly abide in Thee.

I know thy Presence every passing hour,
I know thy Peace, for Thou alone art power;
O Love Divine—abiding constantly—
I need not plead, thou dost abide with me.

Experience in Dealing with Contagious Diseases.

BY ANNIE M. KNOTT.

It may be of interest to the workers in the Field to know something of the experiences of others in dealing with so-called contagious diseases. After sixteen years' experience in Christian Science work I can unhesitatingly say that I have never known of a case of contagion follow in a household where the patient was treated in Christian Science; and I have never known within the range of my own experience or observation of but one case attended with fatal results, and in that case there were peculiar and unusual difficulties.

During the last few years I have recommended obedience to the state laws as advised by our Leader, Mrs. Eddy, and in one town there have been a number of severe ailments amongst children who were not Christian Scientists, but none had been reported by the physicians attending them.

At length a little child in a Christian Science family was taken ill, and it was recommended that the case be reported to the Health Board, as indications seemed to point strongly to scarlet fever. There were several children in the family, and when the doctor called he at once diagnosed the case as scarlet fever, and the house was ordered to be placarded and the family quarantined. It was then learned for the first time that this malady had been prevailing in the town for a considerable time, but had been concealed by the physicians, who were all believers in contagion, and this Christian Science household was the first to obey the requirements of the state law. The child was treated absently and progressed in a way that surprised every one, and none of the other children manifested any symptoms of the disease. The representative of the Health Board called daily, and although no drugs were employed in the case, he watched it with very great interest and was most kind and courteous all the time and took up the reading of our text-book, "Science and Health with Key to the Scriptures."

Another case was treated in this city under similar conditions, and with equally good results, although a great stir was made at the start, and a member of the Health Board threatened the mother of the child in case of a fatal result without the use of drugs.

When the child's mother was almost intimidated into yielding an unwilling consent to employ medicine, the little girl, about twelve years of age, who was a member of the Christian Science Sunday School, said to those who were present that if they compelled her to take drugs she would probably pass on in a short time, and she expressed the firm

assurance that God would heal her through Christian Science methods. The child's simple and beautiful faith brought the result which the Bible teaches us we have a right to expect, and in this case also the physician who came daily from the Health Board read from our text-book and expressed both surprise and pleasure at the excellent results of the treatment.

All this goes to show our need of remembering Christ's command, to be "wise as serpents and harmless as doves."

In many cases the most severe and marked types of so-called contagious diseases are overcome almost at once, and disappear wholly from consciousness, but it would seem that our Cause has gained rather than lost wherever we have been able to show the wonderful possibilities of Christian Science treatment, even under fire. Human opinions are changing so rapidly under the mighty influence of eternal Truth that we can afford to wait for better conditions in which to bring out without let or hinderance the Christ method of healing diseases, but even now we can say with Paul that in all things we are conquerors.

True Happiness.

BY ANNE DODGE.

WHAT joys compare with the sweet sense of security and peace that meditation upon the beauty and goodness of divine Spirit brings?

The restful knowledge that discord, disease, evil, even death itself, is unreal! Happiness! That hackneyed and much-abused expression! Of what does true happiness, true joy, consist? Is it not to keep our thoughts always right—to meditate on Him?

Until we have learned the great lessons of selflessness, purity, and unselfish love, we can never know the joy of doing good for the sake of good,—hoping for nothing in return, no present or future reward,—which is true happiness. To give, and not let the right hand know what the left hand doeth, to do thine alms in secret, this is indeed a taste of true happiness, and such deeds bring with them an understanding of Love that is sweet indeed to meditate upon. Our gratitude to Him "whose compassions fail not," whose mercies are "new every morning," can find sweet expression and restfulness in dwelling on Him; and we withdraw from this communing with the divine Spirit of grace and all-goodness revived and refreshed with the dews of heaven.

To meditate upon the mercies and goodness of God,—the uplifting, purifying, and consecrating power of His love,—the beauty and holiness of Peace,—and to live a life palpitating and throbbing with such thoughts, radiating above and beyond you to those who will come long after, this is the life "hid with Christ in God," which circles and circles from you till it ripples on the mighty sea of eternity, and leaves a name on the page of Truth which time cannot erase, nor the powers of darkness obliterate. This is true joy, true happiness, to keep our thoughts on the miracle of divine grace and goodness,—the wonder of His everlasting love,—to dwell in the shadow of that great Rock whose shadow, in His great mercy, is for the protection of the unthankful and evil if they will but seek it, for just and unjust alike.

How sweet indeed to meditate upon a Love that blesses its enemies, and yearns to save and to succor all alike! What joy and blessed security such meditation brings, a happiness born of the Spirit that abides with us always—the sweetness and permanence of a life at peace with God.

No man ever did or ever will become truly eloquent without being a constant reader of the Bible, and an admirer of the purity and sublimity of its language.

FISHER AMES.

Testimonies.

Touched the Hem of Christ's Garment.

In June, 1898, I was suffering from nervous prostration, and while sitting one afternoon with a neighbor she mentioned that her mother had been an invalid for fifteen years but was healed by Christian Science treatment. I remember that as quick as thought I decided what to do, but I very quietly asked what she meant by her mother being healed, as the word was a strange one to me. She told me a little about her mother's case, but she was not a Scientist and did not make anything plain to me only what I gathered from her first words. I believed her mother was healed by Christian Science, and I made up my mind that I would try it. The suggestion came that I did not believe it could reach me. Many thoughts flashed through my mind on my way from her house to Christian Science Hall, but I kept straight on and prayed with every step to be directed.

I found Mr. B. and introduced myself. I told him I could not stop for treatment then but wished to make an appointment for the next morning. I felt that he understood my condition, and I said, "Can you help me?" He replied, "I will try." With that I was satisfied. I kept my appointment the next morning, bought a copy of *Science and Health*, and arranged for treatment. This man silently communing with God in my behalf impressed me with a sense of the goodness of Christian Science and its true followers. I have never doubted a testimony in the *Journal*, *Sentinel*, or at the Wednesday evening meetings. I felt from the first that if I was not healed it would be no fault of Christian Science. The trouble would be with me.

When I came to page 162 in *Science and Health*, and the paragraph beginning with line six, I saw the state of mind I had been living in, I saw where I then stood, I saw what divine Love would do for me. I also saw that I had much to do, and the struggle began. I had two weeks' treatment, but did not acknowledge any benefit until the last of the second week.

I soon found many friends among the Scientists and I thank them again in this way for all their kindnesses to me.

All through my life when thinking of Christ Jesus on the earth I have wished I might have lived at that time and, mingling with the multitude, have touched his garment and been healed. I find in Christian Science we do touch the Christ garment and we are healed. I realize that my progress has been steady and that if I am obedient I shall sometime reach the goal for which we all are striving. I have never felt any prejudice against Christian Science or our Leader, and I acknowledge with deep gratitude the blessings that have come to me.

These passages of Scripture are particularly helpful to me: "Behold, I stand at the door, and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me." "And who is he that will harm you, if ye be followers of that which is good."—ALFARATA C. DANFORTH, Concord, N. H.

The Reflection of Ever-present Love.

One evening last winter, our little boy, four years old, was put to bed. I did not notice any discord, but a few hours later when I was making preparations to retire, his little cheeks were flushed, his temperature was very high, and he was twitching and muttering in his sleep. My first thought was, "God is here, I have nothing to fear." I simply forgot the erroneous belief, and was dwelling in the secret place of the most High, for the room seemed filled with the presence of Love. It was not ten minutes before

every indication of fever had vanished, and he was sleeping as sweetly as any healthy child should. I thought, "What have I done?" Nothing. I was simply a clear reflector for the ever-present Love; a willing instrument in God's hand. Then came the thought, why are not all my demonstrations instantaneous? But these words from "*Science and Health with Key to the Scriptures*" by Mary Baker Eddy, p. 409, followed: "Because you are not perfectly attuned to Divine Science, and need the arguments of Truth for reminders."

I have had many demonstrations which were instantaneous, some that seemed protracted, and there are yet a few which are not complete. But I know that if we "work—work—work—watch and pray," as our Mother bids us, for that Mind to be in us, which was also in Christ Jesus, our labors will be rewarded.

Before closing, I wish to express my heartfelt gratitude for good received, first, to our Father for His holy word; to His messenger of love, Mrs. Eddy, for *Science and Health*, which has illumined this holy Book for me, and made the rough places plain; for this text-book has been my only healer and teacher; to The Christian Science Publishing Society for the love-thoughts that are sent out to us weekly, monthly, and quarterly through *Sentinel*, *Journal*, and *Christian Science Quarterly*; to our Board of Lectureship for their unselfish toil in teaching and healing the multitudes; and last, to the dear brothers and sisters in Truth who have reflected to me, so many times, the Love that passeth all (human) understanding.

GERTRUDE BLACK, Kansas City, Mo.

Quickly Healed by Christian Science.

It is over three years since I was brought into Science through being healed of diabetes. My first intimation that I had the trouble was when I was examined for a life insurance policy. I had made application to one of New York City's most prominent life insurance companies for an endowment policy and was rejected. I subsequently made application to three other companies and met the same fate. The last examining physician informed me that I could not live six months unless I placed myself under the care of a specialist on diabetes, he even sent a specialist to examine me and try to save my life. I rejected his proffered assistance but did make application to our family physician, who placed me on diet and gave me a list of things I could not eat and a short list of things I could eat. I felt myself receding every day while under his treatment. He suggested a trip abroad, away from business cares, and I made up my mind to take it. About this time my family became interested in Christian Science, and they prevailed upon me to try it. I had very little confidence in its efficacy, but I yielded to their entreaties and placed my case in the hands of a practitioner, but I told her that I thought that it was only time and money wasted. Suffice it to say, however, that in eight treatments all symptoms of the disease disappeared and I am to-day as well as I ever was in my life. I have since been received in an insurance company without question.

I have also seen divine Love demonstrated in my environments at home. After my healing we dispensed with all drugs and have relied upon Truth and divine Love.

I hope this will reach some doubting Thomases, and bring to them the peace and love Christian Science has brought to me and my household.

H. A. LATOUR, New York, N. Y.

Goodness has ever been a stronger guard than valor. It is the surest policy always to have peace with God.

BISHOP HALL.

Religious Items.

The *Christian Endeavor World* says: "Half the battle of the spiritual life consists in keeping up a cheerful spirit. How many Christians fail at just this point! 'I can find a hundred zealous, working Christians,' says a recent writer, 'where I can find a single Christian who, under the o'erbrooding love of God, sits like a robin on its bough singing and swinging, without one trouble in its heart, one discord in its minstrelsy.' No one can contend successfully with spiritual foes so long as his heart is full of forebodings and his mind of prophecies of defeat. Faint heart never won anything worth winning, whereas victories have been won against fearful odds by troops that have suddenly been flushed with confidence by some good news. 'An ounce of cheerfulness,' says good Thomas Fuller, a pre-eminently cheerful man, 'is worth a pound of sadness to serve God with.' If we wish to help our fellow-men, we can hardly do them a greater service than by being so strong, earnest, and cheerful that the disheartened will take a new lease of hope from us, the doubting a new vision of faith, and the fallen a new impulse to get on their feet again."

A writer in the (Baptist) *Standard* furnishes the following suggestive anecdote: "An infidel squire was one day talking with an unlearned miller who now and then preached to the people of his neighborhood, and the squire expressed his opinion that one so ignorant should not try to lead the people in religious matters. The miller, pointing to a map on the wall, said, 'Squire, is not that a map of your possessions?' 'Yes,' replied he, 'those are my farms.' 'I suppose,' said the miller, 'you know all the roads very well.' 'Yes,' said the squire, 'I know them perfectly.' 'Well,' said the miller, 'you remember how when you could not find your way through the woods one day my little girl directed you?' 'Yes, I remember it very well, and she did it nicely, too.' 'You knew the road,' said the miller, 'on the map, but my little girl knew the road from walking in it, and could lead you safely through the woods.' As workers for Christ we must have this knowledge."

A writer in the (Baptist) *Standard* says: "Gladness is God's ideal for His children. He means them to be sunny-faced and happy-hearted. He does not wish them to be heavy and sad. He has made the world full of beauty and full of music. The mission of the gospel is to start songs wherever it goes. Its keynote is joy—it is good tidings of great joy to all people. We are commanded to rejoice always. This does not mean that the Christian's life is exempt from trouble, pain, and sorrow. The gospel does not give us a new set of conditions with the hard things left out. The Christian's home is not sheltered from life's storms any more than the worldly man's home. God's gladness is not the absence of sorrow, but divine comfort overcoming sorrow—sunshine striking through the black clouds, transfiguring them."

In an editorial on "Great Possessions," the (Baptist) *Watchman* says: "In these days when the glamour thrown about wealth is so seductive, it is wholesome for Christian men and women to reflect that happiness, content, and success in life are not bound up with the command of large financial resources. Perhaps there are few lessons that the pulpit needs to inculcate more insistently than that, while it is a Christian's duty to make all the money he can, legitimately, and with due regard to other interests, the contented, considerate, and patient disposition which the Scriptures denote by the word 'meekness' is the greatest of all possessions. Strange, enough, our Lord promised that 'the meek should inherit the earth.' What could he have meant?"

Some tax assessors are beginning to look upon the exemption of income-bearing property of churches and other religious institutions as a degree of state support that is inimical to the best interests of the general public. The *Congregationalist* says: "The Su-

preme Court of Illinois has just affirmed the opinion of a Chicago county court that property of McCormick Theological Seminary, not used by the Seminary for academic purposes, but on the contrary, rented so as to furnish income, must bear the regular rate of taxation. It will be a costly decision to not a few of the religious and educational institutions of Illinois."

The (Unitarian) *Christian Register* says: "We note with pleasure the increasing demand, coming from churches of the stricter sort, for the truth. When Dr. Briggs was tried, the question was not, 'Are his statements true?' but 'Do they conform to the standards of the Church?' The question now goes deeper. Do the standards of the Church conform to the truth as it is now received and understood by those best qualified to know? There is an encouraging demand for the exact truth about the Bible and the Church without regard to its effects upon ancient creeds and standards."

A sermon on "Prophecy in Action" by the Rev. Dr. J. H. W. Stuckenborg, published in the *Homiletic Review*, contains the following: "Jesus did not promise that his disciples should surpass him in word, but he did say: 'He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father.' Whatever we do is a prophecy in action. What a man sows is a prophecy of the harvest he is to reap. The effect is involved in the cause—is, in fact, its fulfillment."

A writer in the (Methodist) *Christian Advocate* says: "A hope that fails to awaken joy is a vain hope. No true Christian is unhappy. Of all the sour, discontented, murmuring, miserable creatures on the earth not one is a real Christian. Not one has a hope which is as an anchor of the soul. The Christian may weep bitter tears. He may have sorrow upon sorrow. He may be plunged into a sea of grief while the billows of trouble go over his soul. But deeper than the deepest grief is the joy of the Lord."

The *Watchman* says: "One of the difficulties with which ministers have to contend, is the ignorance of the Bible on the part of their congregations, which makes Scriptural allusion and illustration ineffective. The allusions and illustrations have to be explained at length in order to make them intelligible. A thoughtful man cannot help wonder how long the churches will be content with a system of Sunday School instruction that produces this result."

A writer in the *Universalist Leader* says: "It is good for every person to choose times for quiet meditation, for reviewing his experience and ascertaining wherein improvement may be made upon his own record. It is of great benefit to each one to go up higher in his thinking, his aspirations and resolves. Such moods or habits of mind are precursors of better conditions."

The *Congregationalist* quotes the following wise observation of Andrew Fuller: "Sin is to be overcome not so much by maintaining a direct opposition to it as by cultivating opposite principles. Would you kill the weeds in your garden? plant it with good seed; if the ground be well occupied there will be less need of the labor of the hoe."

The *Universalist Leader* says: "The test of a genuine, living, saving faith is that it moves a person to Christian service, to do something to lessen the sway of error and sin and to extend the reign of truth and righteousness. A faith that bears no fruit in Christian works is a dead faith, a mere theory in the head."

The *Sunday School Times* says: "Would you know who Christ is and what he can do for you? Obey him; do as he directs. Do not expect experience without experiment. 'Follow me' was Christ's way of saying: 'Taste and see that the Lord is good; blessed is the man that trusteth in him.'"

The (Unitarian) *Christian Register* says: "In France there has been formed a 'League of Sincerity.' Its aim is to encourage its members to teach their children in morals and religion nothing which they do not believe, all doctrines and institutions to the contrary notwithstanding."

"Those who dare not act upon their convictions of right and duty, for fear of evil consequences to themselves, but try to attain the desired end by some ingenious subterfuge, are sure to over-reach themselves," says the (Baptist) *Examiner*.

The *Congregationalist* says: "Recent regulations issued by the governments of Belgium, Switzerland, and Bavaria limiting the Sunday freight traffic have not lessened the receipts of the road either in freight or revenue."

The (Baptist) *Watchman* says: "There is such a thing as being too careful of one's influence or reputation. Let one go on and do right and noble things, and his influence will take care of itself."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfillment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is It Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60¢; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Are Christian Scientists Cranks? Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75

Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatorial Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Political and Governmental Notes.

Aguinaldo, the leader of the insurgent Filipinos, was captured on March 23 by an armed party under the command of General Frederick Funston. The party comprised 78 Macabebes in the American service dressed to represent insurgent troops, four American officers besides General Funston, and several ex-insurgent officers. The hiding place of Aguinaldo was betrayed by one of his trusted officers, who was captured with letters in his possession from his chief to generals in the field. The captured officer guided General Funston to the insurgent leader's stronghold in Isabella province, on the island of Luzon. General Funston and the other Americans were dressed to represent privates, and by means of forged letters purporting to be from General Luna, sent on ahead by courier, Aguinaldo was made to believe that the party was a body of reinforcements which had fallen in with an American engineering party and captured five of them. He sent them food and instructions to treat the Americans kindly. The party was received at Aguinaldo's camp without suspicion, his household guard of fifty men being drawn up to receive the party of supposed friends. When it was noticed that Aguinaldo's aide was watching the Americans suspiciously, a Spanish officer commanding the Macabebes for the Americans, ordered them to open fire, which they did, killing three of Aguinaldo's guards. When the firing began General Funston assumed command and without much difficulty captured the chief and all his supporters who did not flee. He was taken to Manila and put in jail. The general opinion in official circles is that Aguinaldo's capture will soon be followed by complete submission on the part of the insurgents.

Senator Platt, who has for years been the acknowledged "boss" of the Republican party in the State of New York, deferred to by governors and legislators and by the national party managers, has finally been compelled to yield to the will of Governor Odell, who has asserted his right to full authority, limited only by the legislature, and made his assertions good. Even Colonel Roosevelt, when governor, with all his independence of spirit, was not able to have his own way, but had to compromise with Senator Platt on many important matters. Governor Odell was put forward by Senator Platt himself, and was generally believed to be a subservient "machine" politician, but even before he was inaugurated it became apparent that he looked upon the office that he was called upon to fill as a sacred trust, not to be turned into an administrative branch of the party machine. After the inauguration Governor Odell showed in every act that he was the servant

of the whole people, and last week came the climax of the struggle with Senator Platt, when the latter attempted to coerce the governor into favoring a bill intended to deprive the city of New York of self-government in the matter of police administration. The governor flatly refused. Senator Platt called a conference of the party leaders from all parts of the State to support his demand, and the conference endorsed the action of the governor to the great humiliation of Mr. Platt.

Both Secretary Root and Adjutant-General Corbin expected to take part in the ceremonies in the Philippines incident to the establishment of civil government in the archipelago. Judge Taft will be the first civil governor. When the change is made General Chaffee will succeed General MacArthur in command of the United States troops in the Philippines, who will, it is expected, be employed only for police duty and garrison service.

During October, November, and December last year, 74,432 immigrants entered the United States by way of New York City. To the same port, counting from October 1, 1819, to December 31, 1900, there arrived by sea from foreign countries, an aggregate of 13,703,162 immigrants.

Attorney General Griggs handed the President his resignation on March 22, to take effect March 31. Mr. Griggs intends to leave Washington for his home in New Jersey, where hereafter he will reside. His intention is to resume immediately the practice of his profession.

The present plans of the War Department contemplate the maintenance of an army of fifty thousand men in the Philippines until order has been completely established under the proposed new civil government and the garrisons can be safely reduced to a peace-footing.

Boston's financial statement for the last fiscal year shows that on January 31, 1901, the net debt of the city amounted to \$53,847,593.75; the receipts were \$48,637,081.10, and the expenditures reached a total of \$45,391,700.41.

After a long deadlock the Nebraska Legislature on March 28, elected J. H. Millard and Governor Charles H. Dieterich to the United States Senate.

Foreign News.

It is said that the Czar of Russia is very much worried and uneasy on account of the student riots and the many threats against his life. It is reported in the European press that a mine was discovered last week under the Czar's palace at Tzarskoe-Selo, seventeen miles south of St. Petersburg, which was intended to wreck the palace and kill the Czar. It is said that persons who thoroughly understand the conditions in Russia take a very grave view of the present political troubles.

The Royal Insurance Company of Liverpool has acquired the Lancashire Insurance Company of England. Both companies do an "all world" business, and their combined actual available assets in the United States alone exceed ten million dollars. The deal is the largest transaction in the fire insurance world since the acquisition of the Palatine Insurance Company of Manchester by the Commercial Union Assurance Company of London last spring.

United States Consul General Guthrie, at Frankfort, reports that on account of the lack of land and increased taxation, the religious sects in the Caucasus have left that country and settled in Canada, and also that the residents at Transcaucasia wish to leave that country to come to North America. The total number of these immigrants, it is said, is about fifty thousand.

The British report an engagement with fifteen hundred Boers under General Delarey on March 24, in which the latter were routed with a loss of one hundred and forty taken prisoners and "many killed or wounded." The British captured twenty-four carts, fifty-three wagons, nine guns, one hundred and sixty rifles, and a quantity of ammunition.

United States Ambassador Choate and the other ambassadors and ministers to Great Britain presented their credentials to King Edward at Marlborough House at noon, March 18. Each member of the diplomatic corps arrived in a royal carriage drawn by two horses, and were attended by three royal servants attired in long scarlet cloaks.

A special dispatch from Berne, Switzerland, dated March 21, says a vast glacier slide from the Rossboden Alps has destroyed a street in Berne. For a distance of a mile and a quarter the forests were swept down and the valley was filled with block ice.

Press reports from London on March 27, stated that the weather in Europe at that time was very bitter, there being frost and snow everywhere, heavy snowstorms having swept over northern France and England.

Industry and Commerce.

At a special meeting of the New England Electric Vehicle Transportation Company, which operates 245 automobiles of various types in Boston and Newport, to be held April 29, the president and directors will recommend to the stockholders that the company be dissolved because the business has not paid expenses, and there seems to be no prospect of earning enough in the future to make satisfactory returns to the stockholders. Up to February 28, 1901, the company had expended \$769,036 in the purchase of vehicles and batteries.

The contract price for building the new Brunswick Hotel on the site of the present hotel of that name at the corner of Madison Square and Fifth Avenue, New York, N. Y., is six million dollars.

The savings banks of the world hold the immense aggregate of seven billions of dollars. More than one-third of this sum is the property of depositors in the United States.

General News.

The Parthenon at Athens is being restored in part. One end of the noble structure has been completed, and the work is well advanced on the other portions. The Parthenon was erected under the superintendence of Phidias in the fifth century B. C. Various have been the uses to which the Parthenon has been put, and considering its vicissitudes it is a marvel that it is as well preserved as it is. It was transformed into a church to the Virgin once, but its architectural glory did not suffer much until 1687, when, in a struggle between the Turks and Venetians, a bomb hurled by the latter exploded upon the roof of the temple, and the structure was torn asunder.

Chief Johnson of the Taku tribe, one of the most famous Indians in Alaska, was recently in Salem, says the *Oregon Statesman*. He has under his charge from five to six thousand Indians, and they look to him as their ruler. He has six or seven large stores located at Dyea, Juneau, and other points, and practically controls the trade of his people. Every three years Chief Johnson has a big potlatch, at which time he gives away thousands of blankets and other things useful to members of his tribe. He had a potlatch in 1896 and it cost him \$25,000, and the one held last year was almost as expensive.

It is said that the accidental discovery was made by two French chemists recently that bioxide of sodium will renew the oxygen in air, so that divers wearing helmets lined with bioxide of sodium could stay below water for an indefinite period.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Chinese Editors at Work.

Shanghai Native Dailies Keep their Readers Posted.

WHEN the managing editor of a Chinese daily reaches his office, at four o'clock in the afternoon, he has perhaps less trouble than foreigners in that station, but quite enough to interfere with the placid enjoyment of the cup of tea that awaits him, and to make him wish that his superior talent had been employed in some line less bothersome. He has no occasion to look over misprints of type or matter crowded out or omitted on any account, for he has himself been on duty until six o'clock in the morning, and knows every tooth point of the night's harrow; but he must reckon with his contemporaries, which give him concern that he feels to be ill compensated by a salary equivalent to one gold dollar per day.

He is accountable to the chief editor, who flashes off ideas that he is expected to phrase into the leading article; and to the proprietor, who moves in high society and has diversified political, commercial, and social interests, which must be respected in every line of the paper, and who is never pleased unless he has not only all the news that others print, but some striking feature besides. If the paper falls short of the expectations of the chief editor or the proprietor, the managing editor is fined from a day's to a week's pay. Consequently he holds the office force—the correspondents and the reporters—to strict account, and altogether the counting room derives quite an income from fines, and all hands manage to keep fairly deep in debt.

There is thus much to do daily in every office in seeing what other papers have been about and in noting effects. The excitement which attends this ordeal keeps the two cooks and four servants each office employs busy making and serving tea. At nine o'clock in the evening the round-up occurs, when fates are distributed and the preparation of copy begins for the next issue. Half an hour later teacups on every desk stimulate the tiny paint brushes that record the day's events and impressions.

Long before this time, naturally, a great amount of work has been done. While those in authority are arranging fines, the field outside must be thoroughly covered. This requires the utmost vigilance, for reporters and correspondents are held for the territory assigned to them, and they must keep alert to get all that happens in it. It will not do for a reporter to reside away from the district of his labor, for he must watch that district until the paper goes to press, and he takes chances with his position if he slips to bed before daylight. It is also necessary for him to be up early, so that he shall miss none of the morning happenings.

Being quite as nerveless as others of his race, and having no possessions worth mentioning except those on his back, it seems a waste of money for a Chinese reporter to hire lodgings. He may sleep when and where leisure and convenience suit, and eat promiscuously. A weekly visit to the barber provides all his toilet requirements. If he has

lodgings and tries natural rest, he must engage some one to rouse him if anything occurs needing his attention, and his pay of from eighteen to twenty-one Mexican dollars per month, less fines, the net average return per man certainly not exceeding two gold dollars per week, does not enable him to indulge in luxuries for personal service.

As in many other things, experience is not so bad as theory. Luckily for reporters, the native habit of retiring early and sleeping until morning is generally observed. If a reporter sleep near a fire alarm that will be sure to awaken him, he may take chances, and feel that the occasional fines for missing other late news bring the cost of regular rest to him about as cheap as it can be bought.

In Shanghai there are six daily native papers and one weekly. The local departments to be covered engage four reporters of the native city, one for the mixed court, and one each for the French, English, and American settlements. In the native city, one man looks after the movements of the taotai and news at his yamen, one after the yamens of inferior officials, and two watch for police and general news.

Every man is expected to become proficient in speed and condensation. He should learn how to write characters that express much in little, for the paper is not elastic, and the local field cannot have more than three thousand characters out of the eight thousand that compose the reading matter of the paper. Advertisements fill about three-fourths of each edition. A man is considered fast and No. 1 otherwise who can write a striking and graphic story in one hundred characters or less at the rate of five characters per minute. It is hard to conceive a piece of news worth more space, according to accepted local notions.

If a man is deficient in terse expression, the talented readers who handle his copy are expected to boil him down. Including the managing editor, there are eight readers, who must look after proofs, each of whom is charged with the proper adjustment and placing of all the reading matter that comes to him as copy. This fixes responsibility beyond question for every line in the paper. These eight men oversee correspondence and general news, as well as the local field.

Each paper has about twenty correspondents scattered over the country. A correspondent needs to have always about him not only his wits, but a code book, filled with characters, each of which stands for four when written out. Nothing may be sent by wire except in code, and a query must precede the dispatch.

If a correspondent at Sianfu should hear at four o'clock in the morning that the Empress had died, he must get out his code and ask the office if it will take the story. Unless he gets a reply ordering what he shall do, he is not privileged to send more under penalty of losing his billet, although he may be sure that the paper will wish as many details as it can get, and that the time for going to press will arrive quite as soon as he can file anything at the telegraph office, even should he prepare his code dis-

patch while awaiting an order from the office. The rule governing dispatches is inflexible. It is made to be obeyed, and in no office does it admit of exception.

A Chinese compositor cannot stand at his case and, remaining in erect posture, pick up type, as in a foreign office. He needs both arms and legs, a good stooping back, and, if the editor's vocabulary is specially rich, a step-ladder. There must be a pocket for every character, and as ordinary newspaper uses require about four thousand characters, one compositor needs almost enough room to live in. It is a mark of distinction to employ unusual characters. Every paper likes to appear learned. There are editors who seem to employ their leisure in devising combinations which, while original and distinctive, shall yet be self-explanatory.

As no merchant could anticipate or supply such demands, every office contains its own foundry. Two men attend to this. One of them keeps busy making steel dies, and the other melts and stamps out the type. The compositors make new pockets for all creations. It behooves them to burnish their memories frequently, or they may be hours in setting up a single article, which would never do. As the types are of soft lead and easily worn, one man has his hands full in sharpening their lines by picking out the ink that they gather, or in filing down the inequalities that are always appearing. When a type becomes worthless it is thrown into the pot, to be melted over for a fresh stamp.

There are a dozen men in the composing room, including the typemakers and repairers. As many more work in the press room. That work needs infinite care, for exceedingly thin paper is used, and it is necessary to watch every impression. In order that the pressmen may get themselves in trim for the crucial test of producing the main issue, they are set at work on early editions by ten o'clock in the evening.

Whenever a few columns of fresh matter are ready, the presses are stopped until the forms can be changed. Two papers of the same date may thus appear vastly different, and as the circulation is wholly local, it may happen that neighbors, subscribers to the same paper, may exchange sheets and get double reading. Early press work is necessary to the issue by daylight of a few thousand copies.

The publication office employs four men who attend to the folding of the paper, its distribution among carriers, sales over the counter, and to the advertising. The item of advertising is arranged mainly by compradores, who place yearly contracts. The transient advertisement costs five cash per character, equivalent in American money to five sixteenths of one cent, and single copies of the paper sell at twelve cash. Newspaper quarters are usually as good as the average business place. They have well polished teak desks, electric lights, comfortable chairs, and numberless small conveniences that may be found in well-appointed foreign offices.

An office is never closed. Some one has work to do there at every hour of the day. Native work means seven days a week. At the Chinese New Year, the newspaper business, like every other that is Chinese, shuts down for a week. Nothing could possibly happen to induce a newspaper to get out an extra at that time. On all other days the paper must be issued, and every person connected with it must be on duty. If there is a funeral, a wedding, sickness, or if on any account one wishes to remain away from the office, he is expected to provide a substitute to look after his department, subject to his hours and fines, and for such pay as may be agreed upon.

Literally rendered into English, the names of the local native dailies are New Hear, Shanghai Paper, Chinese-Foreign-Chinese News, Same News, Soochow News, and Chinese-Foreign Evening News. The issues generally

justify their titles. They have foreign press service which enables them to print enough outside matter to keep their readers informed on events of real importance, and they miss nothing of immediate concern to their people. In statements of fact they are usually most accurate, and the limited space at their command shuts off writing for effect and makes a newspaper a terse index of a day's record.

The papers printed for foreigners here, with one exception, are not nearly as good as straight news chroniclers. One may often read in a local English paper that something has occurred of which an account will appear in a subsequent issue. That would not be tolerated in a native office, which prints on time or lets a subject alone. Most of the foreign papers look to the native ones for Chinese news, and some of them are as apt to print it without credit as original with it, although it is special service to the native papers and paid for as such.

The Chinese may not know much about newspaper ethics, but what they print is their own, bought with coin of the realm. They do not wait for others to gather news, and then palm it off as the product of their own enterprise.

FREDERICK W. EDDY.

Special Correspondent for the *Boston Herald*.

Must we Lose our Birds?

THE most discouraging fact that can be proved against many intelligent women is the absolute indifference with which they seem to have met the appeals of artistic taste, of science, and of humanity to stop the wholesale slaughter of the birds. It is foolish and trifling to plead longer the excuse of ignorance. If women are still ignorant of the economic waste, of the loss to scientific study, of the suffering and destruction caused to gratify their vanity, then it is an impeachment of their intelligence and their common sense, if nothing worse. Every paper in the land has published the statistics of this trade in feathers; and there is hardly one that stands for anything more than reporting the daily news of the world that has not sent out again and again appeals to women to have mercy on these helpless creatures. Nevertheless everywhere one goes, the heart is saddened by the evidences that these appeals are unheeded. One cannot sit in church, and look around on the aigrettes, torn from mother-birds whose little ones were left to starve, and on the wings that might still be glancing in living beauty through the air, making the spring more lovely, without wondering what the gentle Nazarene, whose words we repeat, whose religion we profess, would say to this. He said once that not a sparrow can fall to the ground without the Father.

At first thought, it would seem as if every woman must refuse, even if only on grounds of artistic fitness, to wear that on her head which cannot fail to suggest suffering and death to those who look at her. Only a debased artistic sense can find beauty in a dead bird, or in a part of a dead bird, when thus used as decoration for a woman's hat. It is not as if she were asked to choose between such ornamentation and bare, unrelieved plainness. Is your milliner so poor in ideas that she has no other resources than those supplied by a trade which robs the earth of its music and gladness and life, giving nothing as a recompense? Then it is time to choose another milliner, for there are many who are glad to second the protest against this wrong.

The study of biology is practically just opening to students, and it is painfully instructive to hear the predictions of eminent scientists touching the influence that the war on birds must have on this department of knowledge. Already certain species are as extinct as the Mesozoic animals. Certain birds that were common within the memory of those not yet old are so rare that not a single specimen has

been seen for years. John Burroughs says that the bluebird has almost vanished from New York State, and the heron is nearly exterminated in Florida. The sea-birds along our coasts are disappearing, the wild pigeon has become almost a tradition, and the Smithsonian Institute predicts with authority that soon hardly any species of bird life will survive except such as are domesticated.

These words are written in the sad consciousness that the larger number of women who still wear bird-breasts and bird-wings are impervious to appeals and arguments alike. Unless the law intervenes to protect these helpless creatures, the reproach against womanhood will continue until the last bluebird has been shot, the last robin snared in the reed swamps of North Carolina, the last brood of nestlings starved, while the mother-bird dies with bleeding breast. It is true that woman is not alone to be blamed for this wholesale destruction, but one needs only to look around him to see that she must bear her full share of responsibility. Yet it must be that there are many who, though discouraged by the fruitlessness of twelve or fifteen years of agitation on this subject, still wish that they might openly prove themselves guiltless in this matter. It would be good to belong to a study class, a woman's club, a church, in which the women had placed themselves unitedly on the right side of this question. The Audubon Society has done much good, but joining it has been largely a matter of individual action. Is it not possible for our organizations of women to consider this matter before all the spring bonnets are bought? Where is the club, not formed expressly for the purpose of protecting the birds, which can claim that not a single member seeks beauty at the cost of a life? Or is there not one anywhere?

It is doubtless true that many women believe still in "the horse-hair kind of aigrettes, which look exactly like real ones;" and possibly, some women have even believed the milliner who assured an officer of the Audubon Society in Boston that all the feathers for sale in her store had been dropped by the birds in flight! It may be equally true, as the president of an association of women wrote last week, that "it is always the salt of the earth that insists on wearing them," and that "the saints are the worst offenders,—such good, lovely women!" If this is really true, is not the question most serious?

Pawtucket Gazette and Chronicle.

The Lectures.

At Washington, D. C.

Every seat, up stairs and down, in the National Theatre was occupied yesterday (Sunday, March 24) by an interested audience to listen to a lecture by Mrs. Livingston Mims of Atlanta, Ga. The speaker is one of the principal advocates of Christian Science. The lecture was entitled, "Jesus in Christian Science," and was most interesting. Mrs. Mims was introduced by Capt. John Freeman Linscott, First Reader of First Christian Science Church of this city.—*Washington Post.*

Captain Linscott said:—

Dear Friends:—The discovery, introduction, and demonstration of Christianity as a Science which heals from sin and disease by the same process, has startled both Christendom and the medical world. All Christian thinkers who have been trained in the law of human thought; in the law of hope and human faith; in the moral law; and in physical law, so-called, can see that these are but lower forms or shadowing manifestations of the one infinite Mind in action, the Creator of the universe and the human creature, which our Master called "the kingdom of God." Paul called it "the law of the Spirit of life in

Christ Jesus," which makes "free from the law of sin and death,"—the carnal mind, or our ignorance of God as Truth.

The spiritual understanding and demonstration of this spiritual law, gained through right reason and the revelation of Spirit, fulfils the moral law, the law of human hope and faith, the law of human thought, physical law, ecclesiastical law, civil law, commercial law, and all national and international law. This law of Spirit is the expression of the uncreated Mind and uncreated Wisdom, which is God, and His Christ, whom Jesus taught us to call Father. This law understood is Christian Science, and is defined by Mrs. Eddy, the Discoverer and Founder of the Science, as "the law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony."

We felt sure you would be pleased to hear a lecture on the subject, and this magnificent audience assures us. It is a very rare occasion for us all. First, because of the rare ability of the lecturer, and second, because she is a daughter of the sunny Southland, a descendant of old Georgia's intellectual and moral best, a former leader in social functions among statesmen and dignitaries, the wife of Major Mims, the Mayor of Atlanta, Ga.

It is my distinguished honor to introduce Mrs. Sue Harper Mims of Atlanta, Ga., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., who will discourse for us on the subject of "Jesus in Christian Science."—*Correspondence.*

At Auburn, N. Y.

"Christian Science is Scientific Christianity," was the subject of an interesting and timely address, yesterday (Sunday, March 3) at Music Hall under the auspices of the local First Church of Christ, Scientist, by Rev. Arthur R. Vosburgh, C.S.B., of Rochester. The hall was well filled and it is not paying too much honor to W. D. Baldwin, a quondam Auburnian now of New York, to say that many were attracted by the announcement that he would introduce the lecturer.

Mr. Baldwin's old friends, irrespective of church affiliations, were delighted to find that he had lost none of the graces that had endeared him to a wide circle of friends when a mere boy here in old Auburn. That was more than a quarter of a century ago.

He remarked in his introductory address that he had been well grounded in the orthodox belief and he little thought that he would some day be converted by the principles of Christian Science. Study and the observation of its healing power in his own family had convinced him it was the true faith. Everybody within sound of his voice probably believed in the Omnipotence of God, and yet in case of emergency how few were content to depend upon God alone without calling in outside aid. New ideas in science, politics, or religion always met with opposition, much of the time through ignorance. The Mother Church in Boston had formed a board of lectureship to disseminate information concerning Christian Science, and the Rev. Arthur R. Vosburgh, C.S.B., was one of the chosen lecturers. He was probably not unknown in Auburn, inasmuch as he had spent three years as a student in Auburn Theological Seminary.—*Auburn Daily Advertiser.*

Lectures at Other Places.

Fairbury, Ill.—William G. Ewing, February, 22.
Canton, O.—William G. Ewing, March 10.
Rome, N. Y.—Carol Norton, March 10.

The rest of Christ is not that of torpor, but of harmony. It is not refusing the struggle, but conquering in it; not resting from duty, but finding rest in duty.

F. W. ROBERTSON.

Among the Churches.

Christian Science in Dayton, O.

FROM the earth's remotest bound the hearts of every society of Christian Scientists beat in unison, rejoicing and exceedingly glad at every step of progress their brethren make. When Christian Science is introduced in any city or hamlet it first appears as a far-off star. Its rays of light are seen dispelling the darkness, calming fear, comforting the sorrowing, healing the sick, and reforming the sinner. Its work is done so quietly that it is almost unperceived. Thus starts the work of Christian Science in the home. Other demonstrations follow, and more people see the light, and then we behold a little band holding services in a private house. From thence they journey to a hall where their light may better be seen, and there tarry until divine Love opens the way to worship in a church edifice, where they are as a candle upon a candlestick; and giving light unto all that are in the house. This period of growth has at last been attained by First Church of Christ, Scientist, this city. Our first Sunday service was held January 6, in the edifice known as Congregational Church on the Boulevard, near Third.

In 1894 this church was organized. A charter was obtained from the state in January, 1898. Present membership 110. Twenty accessions to the church last communion. Many people have gone out from the church into other fields, some to Canada, others to the far west, and some to the east. The workers of our church have sown the seed in many of the adjoining cities and towns, proving by demonstration the power of the Word as revealed in Christian Science. If all those who have been benefited and healed by the faithful ones of this church could be assembled together at one time, we do not think there is a church in our city that could contain them. But wherever they may be, we are confident they will rejoice with us that we have made one more step of progress. In some instances the demonstrations of healing have been so convincing that physicians have acknowledged the superiority of Christian Science Mind Healing.

We have placed "Science and Health with Key to the Scriptures," in the library at the National Military Home, near this city, in the library at the National Cash Register Company, the City Library, and the Shaker village. Our Sunday School, as a Christmas gift, gave Science and Health to the County Jail for the prisoners to read. Our periodicals, *The Christian Science Journal* and *Sentinel*, as a free-will gift from our church, are received regularly at the Jail, County Infirmary, Young Women's League, Union Shaker Village, National Military Home, Hotel Atlas, and *The Herald* Publishing Company. From time to time we have been informed of the great good the literature alone has done in some of these institutions, and perhaps if we could hear from all of them, it would be the same old, old story. We shall take the liberty of referring to two. A few members of the Shaker Village, near Lebanon, O., acknowledge with hearts full of gratitude that our church brought Christian Science to them. A letter recently received from them states that every word in the *Journal* and *Sentinel* is read, and is a source of much encouragement, and has given them a better idea of God. It has been the means of relieving much suffering. A gentleman from the Soldiers' Home called at our reading room a few days ago and spoke as follows:—

"When I went to the Home I did not believe in any church and so informed the officials when asked as to my church relationship. I had traveled about the country, and knew of its vices. My attention was first directed to Christian Science in the library at the Home through *The Christian Science Journal*. Since reading the periodicals and studying the text-book, I am a changed man.

I have more love for my fellow-men and I find they treat me better. I value the spiritual uplifting above the physical healing."

This Scripture, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven," seems very appropriate to our present work.

Since opening our reading room to the public, we find that we are putting out more literature. The great good to be accomplished in this line is yet in its infancy.

It has been frequently stated "that there is scarcely a city or hamlet wherein living witnesses of Christian Science may not be found." It is very gratifying to know that throughout the country, Christian Science is spreading rapidly in the rural districts as well as in the cities.

At a recent Wednesday evening meeting the following testimonies were given:—

A gentleman stated that he recently visited two small towns. In the one he assisted in organizing a children's Sunday School, the society having succeeded in renting the Universalist Church. Here they have the same beautiful, inspiring sermon that the established churches have.

In the other town about fifty-five persons gathered at the home of one of the members. Here they had a testimony meeting. Among the investigators was the Episcopalian minister of the village. He desired to know of the relation of Science and Health to the Bible, and was informed that it is founded upon the Bible.

A lady stated that she had not known what it was to be well in forty-two years, and for twenty-four out of that number had been an invalid. Through the reading of Christian Science literature she was healed. She said that she could now do her work and walked to the meeting, something she had not done in twenty-four years before. Her joy seemed unbounded.

A Scientist spoke of a recent visit with a man who had for years been a practising physician, but is now a Christian Scientist. He was dreadfully afflicted, and the best medical aid was unable to reach his case. As a last resort he tried Christian Science and was healed. "All that I am to-night," he said, "is due to Christian Science; this wonderful result has been accomplished by the better concept of God which Christian Science presents. Then he spoke of an aged minister of the gospel who came to him for help. The minister had been preaching for forty years and occupied many prominent pulpits in the west. He was now bent and decrepit, a great sufferer from indigestion and dyspepsia. He said to me during the conversation, in connection with his suffering and Christian work: "Doctor, I feel that my mantle has been taken from me, and that I am on pastures thin and I have reached that point wherein I question the immortality of the soul!"

Why is this statement made? What would call it forth, except the longing of soul (spiritual sense) for something better than the theology he had been preaching; something to give proof of the promises of the Master? He listened attentively to the explanation of Christian Science from this doctor. As the Science of Life was presented to him he seemed to straighten up fully three inches in stature. To-day this minister is interested in Christian Science; his suffering is disappearing, and he no longer questions the immortality of man.

A lady contrasted her present experience in Christian Science with that of former years before she knew of this Truth. Some member of the family was always sick, and as the result, their family physician was in the home almost every week. He was looked upon as more necessary than the Bible. Now they have learned to know who the Great Physician is and trust Him. In their family, she said. "We have had many opportunities of testing Christian Science. One day a member of the family got her hand badly scalded with boiling water. In one half hour

thereafter the suffering was overcome, and no scar to mar the hand. Prior to knowing Christian Science, a similar incident occurred, and as the result, a scar remains." Then she referred to the practical benefit of Christian Science in overcoming the ills of children. She also told of having a severe attack of cholera morbus which was overcome in a short time, and for which she was very grateful.

A gentleman related the following instance of healing: "A very industrious farmer had for years been troubled with hemorrhoids. The suffering became so great that his physician advised a surgical operation. This was performed, but left him in a terrible condition. As soon as he recovered somewhat, a second was advised, but he did not think he could ever endure another.

About this time Christian Science was brought to his attention, and he decided to give it a trial. In a few weeks thereafter, he informed his neighbors that he was healed, and sound as a dollar. Only a few days since he informed me that from the third day after taking treatment he had been able to work, and enjoys better health than at any time within the past fifteen years.—*Dayton (O.) Herald.*

Prison Work at South Boston, Mass.

Perhaps an account of some work which has been done at the House of Correction, South Boston, will prove of interest to our readers. About a year and a half ago, the Commonwealth Institute placed in their library "Science and Health with Key to the Scriptures," "Miscellaneous Writings," the *Journal*, and the *Sentinel*. They were gladly received, the chaplain, who answered my letter, expressing a very kind thought. At the end of a year, in answer to my inquiry as to renewing the *Journal* and *Sentinel*, he thanked me for the interest taken in the work, and said he would be pleased to have anything I might send. It has been learned since that there was no call for the literature during the first year. Scripture says, "How shall they hear without a preacher? and how shall they preach, except they be sent?"

Some six months ago one was literally sent there who had known of Christian Science and been helped by it. He at once inquired if the books were there, and began to tell the men about it. The chaplain took a deep interest in him, so far as to go to a Christian Scientist to inquire about him. In a conversation about two months ago the man said twelve or fifteen of the prisoners were interested, one having read Science and Health two or three times. These men are permitted to speak one hour each Saturday afternoon, otherwise silence reigns.

When there, I talked with the chaplain, who was very desirous that the subject should be presented to the men some Sunday afternoon. I showed him our *Quarterly*, in which he appeared quite interested, and one has since been sent there at his request. Arrangement was made for the lesson to be read to the prisoners on the first Sunday in March. The subject, "Man," was most fitting for such a place and audience. The regular order was followed as nearly as possible, having the prayer, "Scientific Statement of Being," and benediction. The number present was about five hundred, mostly men, including the choir, officers, and superintendent of the institution.

A brief statement was made before the lesson, telling the men that the books were in the library at their disposal if they wished to use them. The chaplain expressed himself as much pleased at the spiritual idea of man which the lesson brought out. The men gave quite close attention to the reading. "When did we see you ill, or in prison, and come to visit you?" "I tell you," the King will reply, 'so far as you did so to one of these my brothers, however lowly, you did it to me'" (Matthew, 25 :39-40, Twentieth Century New Testament).

HENRY C. LAWRENCE, Roxbury, Mass.

Governor Jordan's Fast Day Proclamation.

THE following Fast Day proclamation has been issued by Chester B. Jordan, Governor of New Hampshire:—

Agreeably with a beautiful custom centuries ago established, and now in some form and to some extent adopted by all Christian peoples of the civilized world, and in accordance with what seem to be the necessities of the human race, I do appoint Thursday, the eighteenth day of April, 1901, a day of fasting, and indulge the hope that on that day all the people of our state will abstain from their usual avocations; from excessive eating and drinking; from pomp, pride, and vainglory; from all sports and festivities not in keeping with the spirit of the day as it has come down to us from the fathers; and that without sadness of countenance, hypocrisy, or cant, they will assemble at their respective places of public worship and there review their lives; recount their many departures from the path of right, justice, honor, truth, and virtue; recall, so far as they may, the great blessings of good government hourly and momentarily attending them in all their journeyings hitherto; the priceless legacies of church and state bequeathed us by the fathers; the numberless mercies of God constantly and abundantly showered upon nation, state, and individuals from an ever open hand in war and in peace, in tempest and in sunshine, from the time our pious and rugged ancestors touched Plymouth Rock until this very hour; and there, too, on bended knee, resolve that henceforth their lives shall be better and sweeter, fuller of help, labor, and sacrifice for their more unfortunate fellows; and that their remaining days on earth shall be their best ones.

Given at the Council Chamber in Concord, this thirteenth day of March, in the year of our Lord one thousand nine hundred and one, and of the Independence of the United States of America the one hundred and twenty-fifth.

CHESTER B. JORDAN, Governor.

By His Excellency the Governor, with advice of the Council,
EDWARD N. PEARSON, Secretary of State.

The Church Manual.

THE Church Manual of First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Control your Thoughts.

Until you have learned to control your thoughts you will never be able to live a godly and righteous life. As a man thinketh in his heart, so is he, and it is because the thoughts that we entertain in the hostelry of the soul are such worthless and vain ones that our words and acts often bring so heavy a disgrace on the name we love. Well might the wise man say: "Keep thy heart above all keeping, for out of it are the issues of life."

When the heart is right the ear and the eye and the mouth and the foot will necessarily obey its promptings; but when the heart is wrong, filled with tides of ink, like the cuttle-fish, it will envelop itself in the impurity to which it gives vent. . . . If you habitually permit evil things to have their right of way through you, or lodging within you, remember that, in God's sight, you are held equally guilty with those that indulge in evil acts, because you are withheld, not by your fear of Him, but by your desire to maintain your position among men.—REV. F. B. MEYER.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Church Dedication at Toledo.

FIRST CHURCH OF CHRIST, SCIENTIST, of Toledo, Ohio, will be dedicated on Easter Sunday, April 7, 1901.

This beautiful edifice, located on the corner of Monroe Street and Lawrence Avenue, is another evidence of the growth and progress of Christian Science.

The faithful workers of Toledo may well rejoice over this marked achievement, and are entitled to receive, and will receive, the sincere congratulations of their brethren everywhere.

The Indiana Bill.

LAST week we published a copy of that part of the Medical Bill recently passed by the Indiana legislature which affected Christian Scientists, and which has become a law in that state. We also published in connection therewith the remarks of several senators upon the Bill as passed and another Bill which was introduced, but did not pass.

We have received from Hon. Clarence A. Buskirk formerly attorney-general of Indiana and a leading lawyer of that state, a full copy of the Bill which has become a law. Mr. Buskirk was also good enough to send us his views and opinion of this law, with permission to publish it if we saw fit. We have much pleasure in doing so. It is a vigorous, able, and clear discussion of the provisions of the Bill, its unconstitutional aspects, and its probable effects in the event that an attempt is made to enforce it. We shall not at this time attempt to add to what Mr. Buskirk has so ably said; it seems unnecessary to do so, as he covers the ground fully. Neither shall we undertake to add our advice to his with reference to the course to be pursued by the Christian Scientists of Indiana. Mr. Buskirk being on the ground, and being himself an adherent of Christian Science, is better able to judge of the course to be pursued than we are at this distance.

Mr. Buskirk, Judge S. T. McConnell of Logansport, and other able lawyers of that state will be safe guides and counsellors upon this question. That the matter will be worked out wisely, we do not doubt.

Following is the opinion of Mr. Buskirk. We are glad of the opportunity to put so clear and strong a document into the permanent history of our movement:—

Enclosed will be found the Senate Bill which became, March 11, 1901, without the governor's signature, a statute of Indiana. It is amendatory of former statutes which create a State Medical Board, define its duties, etc., provide for licensing practitioners of medicine, dentistry, and surgery, define qualifications, etc., of applicants for such licenses, and establish penalties.

These statutes have been seriously questioned by many lawyers of Indiana because of the delegation therein to the State Medical Board and Examining Committee of very broad powers of discretion in deciding upon the standard of qualifications upon which applicants for licenses to practise medicine, dentistry, and surgery shall be tested. The Supreme Court of Indiana has decided that such objections are not well taken.

This amendatory statute of March 11, 1901, goes even farther than the amended statutes in the delegation by the General Assembly to the Examining Board of powers of discretion in granting and refusing licenses and legislating by its own rules and regulations as to the fitness or unfitness of applicants. But I pass this question, except as it may arise incidentally hereafter, because I wish to put my objections to the enclosed statute upon grounds which seem to me to be more important and vital.

I desire, first, to call attention to some very peculiar features in this statute of 1901, which, if I were permitted to be facetious in a discussion of this kind, I should call, *The Compulsory Medication Act*.

It will be observed that it does not prohibit the practice of Christian Science healing, or healing of any kind (except when osteopaths administer medicines). It provides: "To open an office for such purpose, or to announce to the public, in any way, a readiness to practise medicine, in any county of the state, or to prescribe for, or to give surgical assistance to, *or to heal, cure, or relieve*, or to attempt to heal, cure, or relieve those suffering from injury or deformity, or disease of mind or body, or to announce to the public in any manner a readiness or ability to heal, cure, or relieve those who may be suffering from injury or deformity, or disease of mind or body, shall be to engage in the practice of medicine within the meaning of this act: Provided, That nothing in this act shall be construed to apply to or limit in any manner the manufacture, advertisement, or sale of proprietary medicines.

"It shall also be regarded as practising medicine within the meaning of the act, if any one shall use in connection with his or her name the words or letters 'Dr.,' 'Doctor,' 'Professor,' 'M.D.,' or 'Healer,' or any other title, word, letter, or designation intending to imply or designate him or her as a practitioner of medicine or surgery in any of its branches: Provided, That this act shall not be construed to apply to non-itinerant opticians who are at this time engaged in, or who may hereafter engage in, the practice of optometry in this state, nor to professional or other nurses.

"In charging any person in an affidavit, information, or indictment with a violation of this law by practising medicine, surgery, or obstetrics without license, it shall be sufficient to charge that he did, upon a certain day and in a certain county, engage in the practice of medicine, he not having any license to do so, without averring any further or more particular facts concerning the same."

Then follows section 4, which provides that said board may grant "limited licenses" to practise "osteopathy only;" and that they "shall be issued on the same terms and conditions as others, except that the applicant therefor *shall not be required to pass an examination in materia medica*," and that "such license shall not authorize the holder thereof to administer or use on any one other than himself any drugs or medicines," etc.

The statute provides that to obtain a license to practise medicine, surgery, or obstetrics in Indiana, as defined above, the applicant shall apply to the State Board of Medical Examination and Registration, which board shall adopt its own rules as to what constitutes the proper standard of medical education to entitle the applicant to a license, with provisions in respect to medical colleges, etc., and providing that "said board shall not, in the establishment of the aforesaid schedule of requirements, *discriminate for or against any school or system of medicine*," etc. The act then further provides that the members of the board shall conduct the applicant's first examination in *materia medica*, therapeutics, theory and practice of medicine, surgery, obstetrics, and gynecology.

The above constitutes a summary of so much of the act as concerns Christian Scientists.

Before passing to the more serious questions as to the

constitutionality of this statute, I cannot forbear calling attention to some of its very remarkable features which may bear upon its validity.

1. It does not forbid the practice of Christian Science in Indiana. Any licensed physician can practise Christian Science whenever or wherever he pleases, without any restraints or safeguards. But no one else can practise it, no matter how well qualified according to its own standards. In order to heal the sick by Christian Science treatment one must pass an examination in *materia medica*, etc., but not in the system which he practises. Is there any reason in this? The authors of the act evidently did not dare to frame it so that it would openly prohibit the practice of Christian Science healing, knowing that it would be unconstitutional so to do, beyond any question. The Indiana Bill of Rights provides as follows: "The General Assembly shall not grant to any citizen or class of citizens, privileges or immunities which, upon the same terms, shall not equally belong to all citizens." Yet the act attempts to accomplish indirectly the same result in class legislation, because it provides that "there shall be no discrimination for or against any school of *medicine*" (not of *healing*), and provides that the board shall be constituted from the four leading medical schools or systems of the state.

2. "To heal, cure, or relieve, or to attempt to heal, cure, or relieve," etc., except by a licensed physician is made a crime in Indiana by this legislative monstrosity, "The prayer of faith shall heal the sick;" but not any more in Indiana now that the twentieth century has begun. "He that believeth on me, the works that I do shall he do also,"—but not in Indiana. The good Samaritan who crossed the street to "relieve" a fellow-being can no longer be held up to our children in Indiana as furnishing a good example. but we must admonish our children that they become *criminals* if they fail to imitate the example of the Pharisees instead. Jesus, the apostles, the early Christians, we must show our children,—in Indiana,—all did things in healing sickness and relieving the sick, which now are crimes, unless done by certain privileged classes of drug doctors.

3. The theory of the statute is that none but physicians educated in *materia medica* so as to know what drug medicines to administer, and in physiology, etc., so as to know how to diagnose diseases, are competent to heal the sick, yet it sets up a very poor standard for the medical profession when it provides that merely to name one's self an "M.D." shall be to practise medicine. No wonder that Dr. Oliver Wendell Holmes declared that if all drugs were cast into the sea it would be a blessed thing for the human race, however disastrous it might be to the fishes! But notice further:—

It provides that an applicant to practise osteopathy need not be examined in *materia medica*. Why not, pray? This is a legislative admission that a knowledge of *materia medica* is not needful in healing the sick. Again, to placate the large proprietary medicine interests, it provides that the statute does not apply to the manufacture, advertisement, or sale of proprietary medicines. Why not? Where is the need, then, of diagnosing the sick man's case? Where is the crime in praying for a sick man's recovery, without a diagnosis, when it is specially mentioned as not being a crime to sell him, perhaps, some unknown bottled poison, advertised to be good for every ill from toothache to tuberculosis? *Materia medica* and the diagnosis of disease are unnecessary studies, as confessed by statute.

Space, not a want of materials, forbids further comments on this line.

Is the law, in my opinion, unconstitutional, and what attitude should the Christian Scientists of Indiana take in respect to conforming to it?

These two propositions seem to me to be so intimately blended, that I prefer to discuss them together.

The Constitution of Indiana, Article I, Bill of Rights, contains the following:—

"We declare that all men are created equal; that they are endowed with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

"All men shall be secured in their natural right to worship God according to the dictates of their own consciences."

"No law shall, in any case whatever, control the free exercise and enjoyment of religious opinions, or interfere with the rights of conscience."

I solemnly and earnestly declare it to be my conviction that any Christian Scientist in Indiana who does not avail himself or herself of the above shield of religious and civil liberty, is recreant to the demands of an inexorable duty. One main purpose of our State Constitution is to prevent the majority from tyrannizing, by legislation or otherwise, over the rights and liberties of the minority. It is the duty, as well as the privilege, of every citizen to protect the rights and liberties thus guaranteed. The majority has its rights, and as law-abiding citizens we recognize them when we submit to and obey the statutes in respect to vaccination. The minority has its rights, and as law-abiding citizens as well as Christian Scientists, we are in duty bound not to abandon those rights, but to stand by them at all hazards.

It is the holy cause of civil and religious liberty which is involved in this matter, and we do well not to overlook its vast and far-reaching importance, forgetful, if need be, of ourselves and what may seem to us our personal ease and safety in the presence of a great and inspiring duty.

The Christian Scientist in this state has a right to "the free exercise and enjoyment of his religious opinions" in respect to the teachings of the Bible as to healing the sick without drugs. "No law shall interfere with his rights of conscience" when he believes it to be his Christian and humanitarian duty to *relieve*, and attempt to relieve, his fellow-man, as did the Samaritan of old, and to afford that relief according to such methods as his own conscience recommends.

The Christian Scientists of Indiana are "secured in their natural right to worship God according to the dictates of their own consciences;" and, therefore, they are secured in worshiping God as Spirit, Love, Life, Health, Harmony, or Good; as our Father in whose image and likeness we spiritually exist, and upon whose "loving-kindness" we can confidently rely in all our troubles, including what are termed physical ailments. This is our religion, these are the dictates of our consciences in our worship of God and belong to our "pursuit of happiness," and we are entitled to their "free exercise and enjoyment," free from interference by any law.

"The Legal Aspects of Christian Science" so ably discusses this branch, that I feel it unnecessary to go further in this direction. But I wish to call attention to the chapter on "Religious Liberty" in Judge Cooley's "Constitutional Limitations," which I have never seen cited in this connection. It illuminates the whole subject.

Also, I wish to call attention to what is said by our Leader in "Science and Health with Key to the Scriptures," p. 439, "Spiritual law is our only code; Life, Truth, and Love our government. 'Shall not the Judge of all the earth do right?'"

Let me also call attention to the stand taken by Dr. Simon Baruch, as stated in the *New York Herald* and copied thence into the *Christian Science Sentinel* of September 28, 1899. The question was under discussion by certain doctors as to their right to kill a patient whom they considered hopelessly ill, in order to relieve him from great suffering. Dr. Baruch affirmed that he had the right thus to kill a patient, and uses this language: "Whether it be lawful or not does not enter into the problem at all. It is my solemn duty to save life and alleviate suffering, and I try to do either according to the dictates of my judgment."

Here a drug doctor plainly declares that, contrary to the statute against murdering a fellow-man, he will take his life nevertheless when the dictates of his own judgment so direct. Many drug doctors are avowed infidels, and deny that Jesus ever healed the sick according to the New Testament narratives. On the other hand, Christian Scientists regard it as their duty not to take life, but to save it, as a gift from God, and that the healing was done as described in the Bible, and may still be done in conformity with the same laws and principles which were then utilized for the purpose. Will a Christian nation abet the doctors, many of them well known to be sceptics because of their professional habits in looking upon the physical man, rather than the spiritual man as the real man, in their attempted legislative tyranny over the religious and civil liberties of Christian Scientists? I do not believe it, I trust in God for our deliverance. But I say again that we have a solemn duty before us, and as God-fearing and self-respecting men and women living under the shield of American freedom, we must and will discharge that duty, come what may.

The Medical Bill in North Dakota.

MRS. MARTHA SUTTON THOMPSON of Grand Forks N. Dak., sends us the following account of the Medical Bill which was considered at the recent session of the legislature of that state:—

It is evident to all observers that a wide-spread effort is being made by the medical fraternity to legislate against the practice of Christian Science healing. The laws which they have attempted to place upon the statute books purport only to protect the medical profession from infringement by medical quacks; but this guise has proven a thin disguise.

Among other states North Dakota has just had such an experience, and, we are glad to say, right is victorious.

Dangers menacing the public welfare generally call from the people a demand for redress, and this demand is the natural basis for the framing of legislative measures; but no outcry for protection against the influence or effects of Christian Science has been heard in the state. On the contrary, Christian Science as a denominational society and a healing agency has steadily grown in favor. Even those who have no belief in it are found admitting its elevating effects upon the character and health of its adherents. Osteopathy and magnetic healing have their friends, and there is, in fact, a general sentiment that men have, and should exercise, the right to choose their own physician.

Imagine, then, the unexpected introduction into the Senate of a medical bill containing a clause which virtually prohibited the practice of any system of healing except that of drugging! Little wonder the Senators were caught napping and passed it without detecting its restrictive nature, which was neatly hidden in its wording.

The Scientist read, in a morning paper, simply that the medical bill 131, would, among other things, define what constitutes the practice of medicine without a license. That was enough. J. D. Bacon of the House was immediately wired to look out for 131, as it was believed to touch Christian Science. Investigation proved this to be the case. The text of the bill was first a requirement for medical practitioners in the state to pass examination before the State Medical Board. Then followed the penalty for practising medicine in the state without license from this Board, fine, imprisonment, or both, constituting the punishment. After this appeared the objectionable clause. This stated that any one should be considered as practising medicine who should publicly profess, or advertise, to be a physician, or who should, for a compensation, prescribe for or treat any person for any disease, physical or mental, etc.

The doctor who had introduced the proposed law "at the request of the State Medical Association," insisted it was not intended to interfere with the Christian Scientists, yet he steadily refused to change the word "physician" to "medical doctor," or insert the word "medicine" after the word "prescribe," or the word "medically" after the word "treat." But the crowning proof of "malice aforethought," was a letter written by the president of the State Medical Association, a copy of which was forwarded to each member of the legislature, urging them to support Bill 131, as a protection against "Christian Scientists, magnetic healers, and a lot of other what-nots who are filling their coffers at the expense of the people."

Mr. Bacon worked assiduously in pointing out to the members the well-woven net, and soon a number were arrayed against it. Christian Scientists and osteopaths appeared at the capital city in the interest of fair legislation. The doctor felt it best to recall his bill to the Senate and it was sent back to the medical committee. Without giving details of the tribulations of the now notorious 131, which was recommitted three times, suffice it to say the Senate passed it again after tacking on the amendment that nothing in the bill should be construed to include osteopaths, Christian Scientists, or magnetic healers.

Here was a dilemma for the medical fraternity. The enactment of the law as it now stood would legalize Christian Science and magnetic healing,—osteopathy being already legalized. This possibility called a rush of medical men from Fargo, to prevent its going to the House, where it would surely have passed. They succeeded, and the much-buffed measure died at the adjournment, *sine die*, of the legislative body.

An Important Step.

WE have great pleasure in publishing the following extracts from the *Nordiske Blade* (Brooklyn, N. Y.). The step taken by the Rev. Mr. Simonsen is indeed an important one. That it has not been hastily taken is apparent; that it has been wisely taken there is no doubt. It is a step in advance. It is no discredit to his former religious belief and affiliations to say this. As the result, not only of deep conviction but of actual proof, Mr. Simonsen has taken this step. When the Truth of the Bible has been proved to one, as the result of investigation and experience in Christian Science, in ways that were before unknown, and that proof is of such a character as to place it beyond the possibility of a question or a doubt, what is there left for one to do but accept it and govern his life accordingly? This was the experience of Mr. Simonsen, and this has been the experience of scores of other clergymen and thousands of laymen. We extend to our brother the right hand of fellowship and bid him God-speed in his new life—his new birth.

Following are the extracts referred to:—

About two weeks ago, the Rev. S. E. Simonsen, pastor of the Methodist Episcopal Church on Carroll Street, handed in his resignation as its pastor, and withdrew from the Methodist Episcopal Church.

This step was a complete surprise to all, and caused no little consternation and amazement among the people. In speaking of his resignation the pastor said: "While I am profoundly grateful for all that has come to me through the Methodist Episcopal Church, I now feel that the time has come when, in simple justice to the church as well as myself, I must withdraw from the ministry and membership of the said church, and ask that the same take effect just as soon as you can conveniently release me, which I hope will be at the close of this quarter."

As an honest and conscientious truth-seeker he chose to follow the light that his investigation had brought him.

We can perhaps imagine something of the tremendous struggle and agony of soul and mind that this pastor must have passed through before reaching so vital a conclusion as this.

To take so important a step as this, requires a developed and perfectly balanced character, and when it is carried out to its full extent, as in this case, it has a right to expect to be treated with the conscientiousness and respect, that men owe a dearly won conviction.

It is something over fourteen years since Mr. Simonsen first came in contact with Christian Science. At that time he was preaching in La Crosse, Wis., but was brought face to face with what appeared to be an abrupt termination of his ministry, on account of a sickness that several prominent physicians had given up all hope of curing. He was finally persuaded to try Christian Science, and was most wondrously healed in a few days, and received such health and strength that he has been able to work without interruption ever since, and that in some very hard and difficult fields. But no real change in his theological views took place at this time; he remained satisfied with the teachings of his church and faithfully stood on this foundation all these years, putting all his power and energy into the very important work intrusted to him. But during this year circumstances kindled anew the spark that had unconsciously laid smouldering in his heart. Circumstances were such that he had to seek help for one of his children, and as a last resort he went to Christian Science, and at the same time commenced anew to study their doctrine, life, and practice. He soon became convinced that he had found the Truth, and the sequel of it all was, that he withdrew from the Methodist Episcopal Church.

His resignation will be accepted as soon as the bishop can find a suitable man to take his place.

Mr. Simonsen has taken an active part in the work of his church for more than eighteen years. For more than nine years, he has been laboring here in Brooklyn, where he has been respected and honored as an earnest and faithful minister and a gifted speaker. In return he only holds the best thoughts and kindly feelings for all, both high and low, in the church where he has labored for so many years.

Nordiske Blade, December 14, 1900.

Next Sunday the Rev. Simonsen will preach his farewell sermon in the Methodist Episcopal Church in Carroll Street. He will be sure of a full house, for during all the years that Mr. Simonsen has labored here he has put his whole soul into the work and gained a large following. If there should be a few that are dissatisfied, we feel assured that all will have to unite in saying that the pastor has walked openly and frankly and taken the truth for his guide.

As he withdraws from the church that he has served for such a long time, we feel assured that all will wish him a good and successful future.

Nordiske Blade, December 28, 1900.

Last Sunday evening the Rev. Severin E. Simonsen preached his farewell sermon and withdrew from the Methodist Episcopal Church where he has been preaching so many years.

The church was packed to its utmost capacity, as we might have expected, because here was a unique and unparalleled case in the history of the community. A case that was to receive its explanation and culmination as well as unfolding a drama of a soul struggling for more light, laying itself open to public criticism, here was a problem to be solved that no doubt looked difficult and incomprehensible to many minds. After Mr. Simonsen had given a short sketch of his labors here, and the condition of the church, he told about his withdrawal from the Methodist Church and his determination to join the ranks of the Christian Scientists.

Our readers are fully conversant with the important step that Mr. Simonsen has just taken, and we think that his personal explanation last Sunday evening must have convinced every one present that his change must have been the fruit of an honest and candid searching for the truth, and that it became absolutely necessary for him to make this complete change if he would be true to his conscientious conviction. We feel confident that those who may have come with doubt in their minds as to his honesty of purpose went away convinced of his sincerity, and also that this difficult problem was cleared up in the minds of all, and that his many friends received another proof of Mr. Simonsen's honesty and fidelity to the truth.

It was a great sermon and one that no doubt brought all to feel that they had been privileged, partially at least, to enter into the struggle and victory of a soul searching for divine truth.—*Nordiske Blade*, January 4, 1901.

We also republish from the *New York Sun*, the following reference to Mr. Simonsen's change of views:—

The Rev. Severin Simonsen, for nearly twenty years a minister of the Methodist Church, has withdrawn from the denomination and resigned the pastorate of the Norwegian Methodist Mission in Carroll Street, Brooklyn, to become a Christian Scientist. The Rev. Mr. Simonsen has had charge of the Carroll Street Mission for the past ten years and was well known in religious circles. In his letter of resignation to the Rev. Dr. J. S. Chadwick, Presiding Elder of his district, he said:—

"I have been forced by circumstances to make an honest and impartial investigation into the teachings and practice of Christian Science, and I have found them to be in accordance with the teachings of Christ, and capable of such clear demonstration that to my mind no honest and impartial mind can conscientiously ignore or disregard them when once understood. I therefore must accept them, or do violence to my honest and best convictions that God has given me. I freely choose to follow this God-given light, for it was through Christian Science that I was given back my health, when a number of eminent physicians had given me up. And this was not all. There came to me a spiritual insight into the Word and power from God, the like of which I have never known till I came in touch with the truth as taught by these people."

The sickness to which the Rev. Mr. Simonsen refers, occurred, he said, about fourteen years ago when he was a minister in Wisconsin. He was at the point of death, he says, when he accepted the services of a Christian Science healer and quickly recovered. Four years later he was cured in a similar manner, he says, of an attack of scarlet fever.

An Uncut Block of Marble.

Its possibilities are limitless. You are the sculptor. An unseen hand places in yours the mallet and the chisel, and a voice whispers: "The marble waiteth; what will you do with it?"

In this same block the angel and the demon lie sleeping. Which will you call into life? Blows of some sort you must strike. The marble cannot be left uncut. From its crudity some shape must be evolved. Shall it be one of beauty or of deformity; an angel or a devil? Will you shape it into a statue of beauty which will enchant the world, or will you call out a hideous image which will demoralize every beholder?

What are your ideals, as you stand facing the dawn of this new century, with the promise and responsibility of the new year, the new life on which you have entered, awaiting you? Upon them depends the form which the rough block shall take. Every stroke of the chisel is guided by the ideal behind the blow.—O. S. MARDEN, in *Success*.

From Our Contributors.

Angels.

BY GEORGE I. WOOLLEY.

WE look not for the angels o'er the river
Circling in changless brightness round the Throne.
Think not our Father, of all blessings Giver
On earth withholds their presence from His own!

Each kind word in an hour of sorrow spoken,
Each hand outstretched to lift from human woe,
Each tender, pitying thought for the heart-broken,
Each smile that cheers our brothers as they go,

Becomes an angel, hovering in protection,
A proof of ever-present Love divine,
Guiding men always upward to perfection,
With heavenly light and glory e'er to shine.

Love is Interest.

BY ELINOR F. EDWARDS.

I AM so much indebted to a friend for a helpful thought that I gladly give it wings through our faithful carrier-dove, the *Sentinel*.

The desire to know what love is and how we can keep the commandment "love one another," was a prayer, and this is the way it was answered. A sister Scientist came from another city to spend the Christmas holidays, and she brought with her the priceless gifts of true thoughts. In the course of conversation one day she said, "Love is interest." Then the scales fell from my eyes, and I could see that many of us find it difficult to love because we do not know how to begin.

When Christian Science awakens us to the fact of our indifference to all the rest of the world except our own chosen circle of friends, we begin to ask, "What wilt Thou have me to do?" Who shall deliver me from this deadness? Then we hear the commands thou shalt *love*—God and thy neighbor. But we cannot at once demonstrate a divine affection which flows out in blessing to all mankind. Although we sometimes talk as if we could, this lofty height is not reached at a single bound. It is a gradual ascent, step by step, and the first step is interest in others, who, to our mortal sense, are not particularly attractive.

When we begin to feel this interest, which is regardless of person, but extends to all those who are yet in the bondage from which we ourselves have been delivered, we may well be encouraged, for we have begun to learn the a b c of love. If we continue in well doing, without looking for a reward in any return for what we freely give, we shall surely do better after a while, and ultimately we shall experience the joy of selfless love. Meanwhile there are many steps to be taken, but the first step must precede all the others.

We often say and think that we love the Church of Christ, Scientist, and the cause of Christian Science, but is this love anything more than an emotional bubble, unless it is manifested in a continued interest in the Sunday services? in gladness to attend these services, even at some personal inconvenience? and in a constant endeavor to speak the word of Truth at the Wednesday evening meetings, even though the sacrifice of pride and fear may require what seems to us a mighty effort? Love is interest, and interest that is never manifested is not of much account. So, too, with our invaluable publications, the loved *Journal* and *Sentinel*. If we eagerly devour their contents as often as they come, does not our professed interest call upon us to send the faithful workers at headquarters some expres-

sion of gratitude for all that we receive through their devotion to our Cause, and should we not rejoice in the opportunity afforded to us through our weekly and monthly messengers of the good news, to tell of our own experiences in gaining freedom, and the many blessings we have received through Science? Love is interest.

The Question of Money.

BY ANTON KRIEGHOFF.

PAUL says, "The love of money is the root of all evil."

Jesus tells us, "It is easier for a camel to go through the eye of a needle, than for a rich man to enter into the Kingdom of God."

The walled cities of the time of Jesus had one main entrance on each side of the city. Beside each of the main entrances there was one other passageway into the city. These smaller passages were just high enough for a man to walk through, and were about twenty feet long, that being the thickness of the walls. This little arched tunnel was known as the needle's eye.

If a traveler arrived after the gates were closed he must use the needle's eye. This was easy for a man, but not so for a camel; therefore, if a camel wished to go through he must first be relieved of his baggage and traps, *even to the saddle-bags which held the traveler's treasure*. Then the camel dropped on his knees—being trained to do so—and worked his way through the passage and into the city. But Jesus says that it is harder for a rich man to enter the Kingdom of Heaven.

Jesus said, however, that with God all things are possible. God is Love, and Love cannot accumulate material power; so if the rich man desires to enter he must first unload, unstrap his saddle-bags, get down on his knees in humility, and begin the work of life anew with the spirit of a little child, realizing that as he brought nothing into the world he can take nothing out.

Universal good can be expressed only through God's idea; therefore, we must awake to the wondrous light of brotherly love. Then God, Good, will be our direct supply.

Years ago I knew two boys who were such close friends that whatever one possessed in the way of jackknives, fish-hooks or any of the many treasures known to boyhood, the other was welcome to. We must awake to the fact that the children of God are free from the seeming bondage of limitation. The earth is the Lord's and the fulness thereof. "God knows that ye have need of these things."

Good will deliver its children out of seeming bondage. Then the song of the angels to the shepherds of old: "Glory to God in the highest, on earth peace, good will toward men," will be realized.

Love and Watchfulness.

BY LILIAN HARDING.

How much there is in the New Testament of admonition to love and watchfulness, two attributes that as Christian Scientists we should strive to make our very own. Love that is loyal to Truth; love that dares to point out an error; love that bears another's burden; the love that seeketh not its own, but another's good; the loving thought that yearns to share with others the blessings which come with one's understanding of God as revealed through Christian Science. Such love is expressed in watchfulness, and as Scientists we need to be watchful of our thoughts as well as of our actions.

Paul says, "Henceforth know we no man after the flesh;" i.e., we deny self, personality, materiality in all its forms; we affirm that all is Spirit. But do we live in accordance with this affirmation? Do we never think of sickness and sin as a reality?

Paul also says, "For if I build again the things which I destroyed, I make myself a transgressor." Does not Paul mean by this, that if we make a reality of the things which we have overcome, and by so doing make a reality of them to ourselves or others, we are building again those false claims? We are knowing again the man of the flesh. Mortal mind and its beliefs have dominion over us. We are entangled again with the yoke of bondage, and we must again tear down the belief of material life and intelligence, return to the starting-point of God's allness and man as His image and likeness.

Watchfulness involves praying without ceasing, denying error wherever we see it or hear it, and affirming Truth. If we are faithful we shall never relax our vigilance until the last trump has sounded and all the claims of sin are destroyed. My own experience has been that I am the most secure in the midst of conflict, for then I strive to have the whole armor on. When all seems peaceful and harmonious then error often creeps in, because I have forgotten to watch. If the good man of the house had known at what hour the thief was coming he would have watched. We never know at what moment the thief—mortal mind—will strive to break into our consciousness. Let us therefore watch, as well as pray, without ceasing.

Spiritual Health in our Churches.

BY W. B. D.

RECENTLY a little church of fifty members and an average attendance of fifty to one hundred, in a small city in northern Indiana, had twenty-three testimonies given in one Wednesday evening meeting. All the speakers took their places promptly, like minute men and women, spoke a few minutes only, and to the point. It was quite evident that not one speaker "waited for the spirit to move them," for the spirit of Christian Science had been with them throughout the day and had moved them before they came to the meeting. As the result, the meeting was extraordinary,—filled with light, love, and good cheer.

Every speaker talked well,—briefly, concisely, succinctly. There were no extravagant or exaggerated statements; just the simple, plain statements of Truth and its power, spoken in love; spiritual facts, helps, and experiences brought out, together with victorious cases of physical healing. Taken altogether the meeting was one complete sermon, full of faith, hope, love, truth, and spiritual understanding, each testimony being an acceptable paragraph in the complete divine whole.

Now these conditions indicate "spiritual health," and nothing will ever bring a like condition to each and every branch church save the constant, daily, devout study of our text-book, Science and Health. We all know that the daily study of our beloved "little book" illumines the understanding, quiets our materialism, opens the flood-gates of infinite Intelligence, awakens our divinity, brings spiritual health to each individual, to our churches, and to our services. It is impossible for a Scientist to study his text-book as he should and not be ready on Wednesday night to offer his share of heaven. Nor can pride, selfish fear, or a barren life keep him in his seat.

Ten things never to be regretted: Living a pure life. Hearing before judging. Thinking before speaking. Harboring clean thoughts. Standing by your principles. Being generous to an enemy. Stopping your ears to gossip. Bridling a slanderous tongue. Being square in business dealings. Putting the best construction on the acts of others.—*Selected.*

The nearer the soul is to God the less its perturbations, as the point nearest the centre of a circle is subject to the least motion.—*Anon.*

Testimonies.

Operation not Needed.

In October, 1900, I had my leg broken about two inches above the ankle. The doctor called it a compound fracture; the leg was so badly crushed the foot was only held on to the leg by the sinews; the bones of the leg protruded about three inches. The flesh and ossiferous tissue was all removed from the bone for about two inches. The first surgeon sent for refused to do anything more than bind up the leg and foot so that I could reach the hospital. He expected me to die on the way. I had been thrown fifty-two feet. The accident occurred about 3 P.M. I got to my room about 5.30 P.M., and sent for a Christian Scientist. I received treatment at once. Up to that time I treated myself.

We sent for one of the best surgeons in Memphis. He and his partner came (I had refused to go to the hospital) about 8 P.M. They examined the leg, pronounced it a very bad case, said they could only bandage it up for the night and have an operation in the morning. They informed me that I would have to lie in bed for at least two months, and that I could not walk for a year at least, and would always have a stiff ankle. I received another treatment about 10 P.M., and we all realized then and there that I was healed,—the bone had knitted together.

The surgeon came the following morning with four others to perform the operation, but I refused to have it done. The doctors said the foot would rot off, gangrene would set in, and more than likely I would lose my leg. But my faith in God never wavered. I knew He was omnipotent. The surgeon was, to say the least, angry. When he removed the bandage that was put on the night before he was a very much surprised man, the leg looked so well. The doctor, after laying the leg back in bed pulled hard enough on the toes of the broken foot for me to feel the sensation in the hip. Had he pulled as hard the night before he would have pulled the foot at least three inches away from the leg, as was done when they were cutting off the shoe after the accident occurred.

That was proof enough that I was healed. I did not suffer any pain from the first. There was no swelling in the foot or leg, and not even the slightest trace of fever. I missed but one meal, that was supper the first night. After the first day the bandaging was done by my room-mate. I had no plaster cast or any artificial support except a wooden splint that I whittled out to put on the leg after I got up, for I had some fear. No one lost one moment's sleep on account of it, for no one sat up with me, even the first night. I remained in bed eleven days; was on the street and attended our Wednesday evening meeting in four weeks; went to work in eight weeks, and to-day can walk without crutch or cane. My ankle is without flaw or blemish, every joint moves as freely as the other one. My health was and is perfect. No one except Christian Scientists expected me ever to walk again. I have ample proof for every statement made. There is no God like unto our God. My heart overflows with gratitude to God for Christian Science as revealed through "Science and Health with Key to the Scriptures."

ALBERT WHIFFEN, Memphis, Tenn.

Healed by Christian Science.

Christian Science was first presented to me about three years ago by a friend whose wife had been healed by it after all other means had failed, and who had himself experienced its power to save in more ways than one. While I was not disposed to deny the truth of his assertions in regard to what it had done for them, my first impression was that as I had passed the meridian of life and had tried so

many experiments for the betterment of my condition, all of which had ended in failure, it could do nothing for me. Like a drowning man, however, I was ready to clutch at a straw, and I concluded to give Christian Science a fair trial.

The blessings that have followed this decision are greater than I can express in a short article like this. Life, to me, had been unsatisfactory and discordant from childhood. In my early boyhood I had become addicted to the use of tobacco and alcoholic stimulants, and was a slave to both of these habits before I reached manhood. For many years I had struggled vainly to rid myself of these habits, praying earnestly for deliverance and availing myself of various kinds of medical treatment, none of which gave permanent relief. When Christian Science came to my aid the cure was radical. Not only was the appetite for liquor and tobacco destroyed, but the underlying mental suggestion was destroyed also; so that for the first time in my life I knew that I was a free man.

Christian Science has also healed me of physical troubles, such as nervous dyspepsia and sleeplessness, and my general health has shown a constant and continuous improvement. It has also benefited me spiritually, and this is the greatest gain of all, giving me a clearer and higher knowledge of God and man and their mutual relationship. I now find both pleasure and profit in the study of the Bible in the light of the Christian Science text-book, which I never found before. It has also helped me greatly in my business and all other details of my daily life. In a word, Christian Science has benefited me spiritually, morally, physically, and financially; bringing health and harmony in place of disease and discord, thus demonstrating by signs following that God is an ever-present help, and that Christian Science is the Christ-Truth.

CHARLES SINGLETON, Binghamton, N. Y.

Saved from Invalidism and Despair.

I would like to express my gratitude for the article entitled, "The Scientifically Correct Point of View," in the *Sentinel* of May 17. An old habit of criticising, of being impetuous and outspoken, has been broken to a great degree by endeavoring to look at everything and everybody from the right standpoint. I find the desire to judge has often melted away, and a sense of love taken its place. I know that only through Christian Science could this have been done, for I had deceived myself into thinking it was being especially honest and candid, and therefore right.

Christian Science has saved me from invalidism, and what is far more, from such mental darkness and despair that only the fear of unknown consequences had kept me from taking my life.

Each day as I gain more of the understanding of Truth and the great blessing it bestows on all, does my gratitude and love for our Mother and Leader grow.

On November 22, six Scientists, five of whom were members of the Mother Church, organized, and obtained a church charter. For several Sabbaths at the afternoon services, there would be only the two Readers and the organist present. The interest has grown steadily, and the attendance numbers from twenty to thirty. We have before us now seven applications for membership in June.

IDES A. JOHNSON, Birmingham, Ala.

Physical and Moral Healing Realized.

As I look back over the past seven years,—how happy they have been, and all through Christian Science,—the thought comes to me why do you not tell it? It may help some one just as I am helped each week by our dear *Sentinel*.

Seven years ago I was a great sufferer from what the

doctors called cancer of the stomach, and had sinking spells. I tried many remedies and many physicians. Finally, after eight years of such a life, the doctor told me that I had only one chance out of ten to live, and that through an operation. I, like all mothers, wanted to live and raise my little girl,—a delicate child.

Some said, "Why don't you pray?" I did pray and got worse right along, finally I said, "I am like Bob Ingersoll. If there is a God He has no thought of me, and I cannot pray," yet was half afraid not to try.

Some dear friends told me I could be healed if I wanted to be by Christian Science. They said, "Throw away your medicines." I did so and was healed in about two weeks.

The healing of sickness was the smallest part of the work. Hate, envy, jealousy, evil of many kinds, were destroyed, and others are still going as I gain more of Christian Science.

Our daughter is now a strong, healthy girl. My husband was healed of deafness. I am so happy to find God a "present help," and feel now that I have all to live for, when before we just existed. Words can never express my gratitude to God for benefits received from Christian Science.—MRS. BUNNIE DEINER, Chicago, Ill.

An Impromptu Service.

A group of travelers, embracing salesmen, newspaper men, and others, was gathered in the rotunda of a large hotel talking about various kinds of cures, and made faith healing the point of the talk. Christian Science was referred to as being like all other methods, and one objected to the comparison. He was at once asked to explain. A very interesting and instructive conversation followed. Many practical and sincere questions were asked. Very soon an elderly man entered the circle and said that he was a Christian Scientist from London, Eng. Our conversation went on, getting more interesting and the number of listeners and participants constantly growing.

There was no church service held in that town, and as it was Sunday evening all were invited to a private parlor, and after singing from the hymnal the Lesson-Sermon was read to them, after which they remained till nearly 11 P.M., listening to the Bible explained, and asking many questions. When they left they said it had been a most interesting evening, and that they had benefited by it.

They knew much about the Bible, and asked only sincere and practical questions. They were eager to learn of it and seemed to keep all that was told, thus building up a fair idea of that which they had heard only very fragmentarily.

C. E. JONES, Chicago, Ill.

A Few Words of Greeting.

Just a few words of loving greeting to the dear *Sentinel* at this blessed Easter-tide.

Eleven years ago Easter brought me nothing but heart-breaking fears and a hopelessness concerning life that was slowly paralyzing every effort and desire toward usefulness and happiness.

To-day, through the sunlight of Christian Science as taught through the Bible with its countless promises and Science and Health, so full of God's Truth and Love that in every paragraph and sentence are pearls of great price, I am rejoicing in a joy and peace that is possible only to one who catches even a small glimpse of the spiritual meaning of Resurrection—that for which Easter stands in the heart of every loyal Christian Scientist.

H. F. R. NORWOOD, Beverly, Mass.

The Lord of the seed-field takes care of his own,
And the world shall yet reap what our sowers have sown.

WHITTIER.

Religious Items.

The following extracts are from an article in one of the editorial departments of the (Methodist) *Christian Advocate*, entitled "The Touch of Christ:"—

"The wonderful works of Jesus of Nazareth were wrought with perfect naturalness, simplicity, and ease. We see no pompous marshaling of the forces of the universe to bear down opposition, surmount obstacles, and produce astonishing effects. There is no tedious and painful process of surgery or medicine when the sick are to be healed. A word, a touch, a look was sufficient. . . . He took Peter's wife's mother by the hand, and the fever left her. He touched the eyes of two blind men sitting by the wayside, and immediately they received their sight. He touched the tongue of the deaf-mute of Decapolis, and he spake plainly. A woman faint with disease and trembling with fear crept up behind him and touched the hem of his garment, and immediately she was made every whit whole. . . .

"There is power in a touch, provided there be a fountain of life back of the outstretched hand. . . . One, by touching a leper, may contract the malady himself, and communicate it to others in the same way. His touch heals not, but spreads the disease. But in Jesus there was such fulness of life that his touch communicated life and health. When he touched the leper he overcame evil with good. He conquered disease with health. He destroyed death with life.

"In a similar way the great Physician imparted mental and spiritual life and health. He came in contact with the insane and their reason was restored. He met the lost and their souls were saved. The spirit of the sinner wrecked by sin was made whole by contact with 'the Spirit of life in Christ Jesus.'"

The (Unitarian) *Christian Register* has the following: "In sending a definition of 'the Church' from Oxford, Eng., Dr. C. R. Weld, speaking of the three great ends of the Church,—namely, worship, instruction, and service,—says: 'The true Church of Christ should keep these three great ends equally in view. One or another of these three ends is usually wanting. To illustrate: A broad distinction may be made between Roman Catholics and Protestants. The first lay the greater emphasis upon worship; the second, upon instruction. The tendency of the Unitarian Church is to emphasize the third great end, service, to the exclusion of worship and instruction. For this reason the Unitarian Church is often wanting in the sense of worship. The true Church will combine these three great ends with equal emphasis. This combination is the test of genuine orthodoxy. We are the orthodox Church of Christendom whenever we lead in the worship of the true God, whenever we clearly instruct as to the way of life, whenever we personally labor for the coming of the divine kingdom.'"

Concerning the unhappy results of discussion regarding the letter of the Scriptures, the *Congregationalist* says: "It is not only among ministers that conflicting views of religious truth appear because of results of modern scholarship. One cannot go about among the churches without being impressed by changed condition of thinking among laymen. One class refuses to consider or tolerate any other than the traditional view of the Bible and insists on the acceptance of extended theological creeds formulated a century or more ago. Another class welcomes almost any new theory of the Bible which results from the study of it as literature compared with contemporary writings, and is impatient of any except the most general expressions of faith. Still another and larger class is composed of intelligent and devout men and women who have not much time for study, who are confused and distressed by opposing opinions, finding their faith weakened and their spiritual life disturbed by discussions in pulpit, Bible class, and home concerning the authority for belief and conduct."

Count Leo Tolstol received the news of

his excommunication [from the Greek Church] without complaint. His wife, however, has written a striking letter to the procurator of the holy Synod and the metropolitan bishops, protesting against the Synod's action. The countess declares her indignation and grief, and says: "Not that owing to this document the spiritual death of my husband follows. That is God's concern; not man's. The life of the soul is not within the jurisdiction of the powers that be, but when I see this excommunication delivered by the Church to which I belong, established by Christ in order to hallow the solemn acts of a man's life—birth, marriage, and death—whose mission is to proclaim the law of charity, the remission of sins and the love of our enemies, whose duty toward all is to pray for all, then I am at a loss to understand."—Moscow correspondence to the *Boston Transcript*.

The British Imperial Protestant Federation, which is composed of twenty-seven churches and societies of the United Kingdom, has passed resolutions declaring that it is essential for the preservation of civil and religious liberties, and for the freedom of the empire from the influence of the Vatican, that the sovereign's coronation oath be maintained unimpaired and rejecting the decision of the government to appoint a Parliamentary committee to consider the revision of the declaration against Romish doctrines. The resolutions add that the Protestants are convinced that the oath should not be altered merely to please the sentimental feelings of a section of his majesty's subjects.

The (Episcopalian) *Church Standard* says: "It would hardly be possible to conceive a more anomalous ecclesiastical situation than that of the Church of England. Though it has held the position of a strictly national church for more than three hundred and fifty years, it is still subject to mediæval laws and ordinances which are no longer applicable to existing conditions of society, but which it has no power to change. Indeed, without one important change in its ecclesiastical constitution, the Church of England, if it were absolutely freed from parliamentary control, would not be competent to legislate as a national church."

The (Baptist) *Standard* publishes the following anecdote: "It is said that Matthew Poole spent sixteen years compiling his 'Synopsis of Biblical Criticism,' during which time he rose at five and never dined out but once. Having finished the work, he went out to enjoy a little rest, when his wife, in a fit of bad temper, destroyed the manuscripts. On his return, grieved as he was, he simply said: 'My dear, thou hast done very wrong,' and the next morning rose at four to recommence his labor, and never relaxed till his task was finished the second time."

President Thwing of the Western Reserve University, says in the (Baptist) *Examiner*: "All condemnation of the church for its rationalism is misdirected. Man cannot be too rational. He cannot know truth too largely or too accurately. He cannot reason with a profoundness too deep, or an exactness too fine, or a comprehensiveness too large. What we need fear is too little reason, not too much. Partial knowledge, not comprehensive, foolish methods of inquiry, not wise, are to be dreaded."

The *Congregationalist* in one of its editorials says: "The child's confession followed by the Father's pardon never hurts the child's true dignity. And to be conscious of the child's place in a loving father's heart, and to be trusted with his work and honor, is no incentive to a foolish pride. 'In all lowliness and meekness'—that is the very secret of the Christlike life, which is the life of joy and power and honorable self-respect."

Commander Booth-Tucker of the Salvation Army begins his little pamphlet "How to Help the Poor to Help Themselves" with an estimate that the paupers of the United States cost the country no less than forty millions of dollars a year, while the criminals in jails and prisons cost sixteen mil-

lions more, to say nothing of the great waste by idleness.

Grace F. White says in the *Universalist Leader*: "The prophet Isaiah voices his thought that there should be fasting from sin, and tender ministries to the needy and the sorrowful. His words are suggested to us who are so many hundreds of years away from him in point of time. His wise utterance is not yet outgrown."

The *New-Church Messenger* says: "Truth must be lived; so we must turn away from the route which seems near and go the way of the wilderness; we must pass through many inward temptations and strivings of soul before we can come to our home eternal in the heavens."

"The Methodist, Baptist, Presbyterian, and Congregationalist churches, having over seventy-five thousand ministers, and eleven million members, are exhorted to combine for a great revival effort to redeem the twentieth century," says the *Christian Register*.

The *Pacific* asks: "Is not living the most serious thing about which we can concern ourselves? Just every-day living, the kind that begins with commonplace duty in the morning and ends with quiet fireside rest and simple prayer at night. What day is holier than every day?"

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*. Exchange on *Chicago* or cities other than *Boston* or *New York* will not be accepted.

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

- Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D. CAMILLA HANNA, C.S.D.
Editor. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

The findings of the military court of inquiry which investigated the treatment alleged to have been accorded to the late Oscar L. Booz, a former cadet at West Point Military Academy, have been given out at the War Department. They are summed up in a letter written by Secretary Root, which accompanies the report. This letter says: "The findings of this court of inquiry, which are sustained by the evidence, show that the statements which led to the convening of the court, to the effect that former Cadet Oscar L. Booz came to his death by reason of injuries received by hazing at the academy, were not true."

General MacArthur notified the Secretary of War in an official dispatch, April 2, that Aguinaldo had voluntarily taken the oath of allegiance to the United States, and had made proposals looking to the surrender of all the insurgent forces. General MacArthur transmitted these proposals to the War Department, and after a Cabinet meeting, instructions regarding them were cabled to Manila, but the specific nature of Aguinaldo's proposition was not made public.

Municipal elections were held in all the larger cities of Kansas, April 2. In many places the issue was prohibition, Mrs. Nation's crusade having aroused the temperance people to demand enforcement of the law against liquor selling. At Wichita, where Mrs. Nation began her crusade, the temperance ticket was overwhelmingly defeated.

President McKinley has promoted General Funston to be a brigadier general of the regular army as a reward for his exploit in capturing Aguinaldo. He was merely a brigadier general of United States volunteers, and had by this time received orders to return home for muster out, but he will now probably remain in the army.

Ex-Congressman Tom L. Johnson, the leading single tax advocate of the country, was elected mayor of Cleveland, O., on April 1, by a majority of between four and six thousand. He was a candidate on the regular Democratic ticket.

Carter H. Harrison was elected mayor of Chicago for the third consecutive term on April 2, by a majority of 28,073. Mayor Harrison headed the Democratic ticket.

Sam Jones was re-elected mayor of Toledo, O., on April 1, by a majority of from two to three thousand. Mayor Jones is a Socialist.

Foreign News.

In spite of threats from Russia and concurrent advice from Li Hung Chang, the Chinese Emperor, or whoever constitutes the actual head of the Chinese government, has

obstinately refused to authorize the confirmation of the treaty giving Russia practical sovereignty over Manchuria. Japan is reported to have definitely promised to support the Chinese government in its resistance to Russian encroachment, even to the extent of going to war; and the United States, Great Britain, and Germany, though making no official protest against Russia's action, have given ample cause to China and Japan to believe they would have the moral support of those three powers in the event of war with Russia. It is becoming evident that Russia will not press the matter offensively, but her present position of unauthorized control in Manchuria is not likely to be changed without war, and she will wait for a more convenient time to have her title to the province confirmed by China.

Li Hung Chang, as Chinese plenipotentiary, has been a persistent advocate of Russia's scheme, and has wearied the court with his appeals for authority to sign the treaty. It is reported that the Emperor has sent Li Hung Chang back to his province and has appointed a man in his place who is not so partial to Russia.

The work of laying the Pacific cable to connect British America with Australia will begin immediately. The cable will extend from Victoria, B. C., to Queensland, by way of Fanning, Norfolk Islands, and New Zealand. The longest stretch between stations will be that from Victoria to Fanning Island, a distance of thirty-five hundred miles.

A St. Petersburg press dispatch of April 1, stated that the Russian government had caused the arrest of three thousand persons connected with the present revolutionary movement started by the university students. The dispatch also says it is reported that some of the ministers now wear steel cuirasses.

British financial experts estimate that at least \$100,000,000 must be raised by fresh taxation next year, even if \$650,000,000 can reasonably be expected from the existing basis of taxation, and another \$250,000,000 be added to the national debt. These figures forecast a budget of \$1,000,000,000.

The Prussian Minister of the Interior has issued the following decree: "All American citizens of German birth who return to Prussia in the military service age, after having avoided army service here, will not be allowed, under any conditions, to reside in Prussia permanently."

A press dispatch says that the London County Council will purchase 225 acres of land, on which to build workmen's houses to accommodate forty-two thousand persons. The cost will be £1,500,000.

Oxford defeated Cambridge by two-fifths of a boat's length in the great annual English university race on the Thames River, on March 30.

Industry and Commerce.

The organization and management of the great steel trust will be constituted as follows: Directors, J. Pierpont Morgan, John D. Rockefeller, Francis H. Peabody, Henry H. Rogers, Charles M. Schwab, Elbert H. Gary, Robert Bacon, Charles Steele, Marshall Field, Norman B. Ream, P. A. B. Widener, William H. Moore, James H. Reed, Henry C. Frick, Daniel G. Reid, E. C. Converse, Percival Roberts, John D. Rockefeller, Jr., Alfred Clifford, William E. Dodge, Nathaniel Thayer, William Edenborn, Abram S. Hewlee, and Clement A. Griscom; president, Charles M. Schwab; treasurer, Arthur F. Luke; secretary, Richard Trimble.

The American Bridge Company is reported to have recently been awarded several more important foreign contracts. The largest is for twenty thousand tons of structural material for bridges and trestle work on the Guayaquil & Quito Railroad of Ecuador, the whole contract involving about two million dollars. Negotiations have also been

closed by this company with the Jamaica Government Railways Company for a number of steel bridges.

The White Star Line steamer Celtic, said to be the largest vessel ever built, was launched at Belfast, Ireland, on April 4. The Celtic's dimensions are as follows: Length, 680.9 feet; beam, 75 feet; depth, 44.1 feet; gross tonnage, 20,880 tons; displacement, 33,000 tons. She has nine decks and has a capacity of 2,859 emigrant passengers. Her displacement is 10,300 tons over that of the Great Eastern.

A Salt Lake City press dispatch reports that the Standard Oil Company has agreed to pay five million dollars to a Utah man for a patent he controls by which crude oil can be converted into a gas which gives a light of much greater intensity than an arc lamp or calcium light, and the gas generated from one barrel of oil is said to equal the heat producing power of a car load of coal.

It is said that the native and European residents of India have subscribed hundreds of thousands of dollars toward a fund for an immense system of canals to irrigate the famine-stricken country, which will probably be made the lasting tribute to the honored name of the late Empress of India.

A new line of transatlantic steamships will be put in operation this month between Chicago and Hamburg, Germany. It is expected that the entire voyage down the lakes, the St. Lawrence, and across the Atlantic will take twenty-two days.

General News.

As the result of a recent exploration made by the Crown Lands Department of Ontario, it has been ascertained that there exists an immense valuable district in the northern part of the province. It consists of a tract of arable land stretching from Quebec boundary west across the districts of Nipissing and Thunder Bay, and comprising an area of 15,680,000 acres. The soil is nearly all suitable for farming purposes and the region is well watered. The climate is reported to be favorable to the growing of grain and root crops. One of the most important discoveries made by the explorers was the location of a great pulp wood forest north of the ridge extending across the districts of Nipissing, Algoma, and Thunder Bay.

A series of investigations carried on in the famous zoological laboratory at Naples is described in the *Jahrbucher fur wissenschaftliche Botanik*, by Hans Winkler. "The experiments were made upon a flowerless aquatic plant that grows normally with its roots in the sand and its leaves in the water. For example, plants having roots and stems already developed were placed upside down with leaves buried in the sand and roots floating in the water in strong light. The roots changed to stems and leaves, while the parts buried in the sand became roots."

The native prime minister states that the Uganda natives have paid their taxes for the current year, amounting approximately to \$300,000. This includes payments in kind, consisting of five elephants, one zebra, twenty chimpanzees, several wart hogs, water antelopes, porcupines, snakes and cranes, and numerous monkeys. All these creatures have been received at the Government headquarters at Port Alice.

The registrar of Columbia University has compiled the following registration of the nine largest American universities: Harvard, 5,740; Columbia, 4,392; Michigan, 3,813; Chicago, 3,774; Minnesota, 3,423; California, 3,216; Cornell, 3,004; Pennsylvania, 2,573; and Yale, 2,544.

California has adopted a measure providing for the preservation of the grove of enormous redwood trees in the big basin in Santa Cruz County, as a state park. The State has appropriated \$250,000 for the purchase of the grove.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Brotherhood, with the Golden Rule as Guide.

Men of all Creeds Gather to Indorse its Efficacy.

THE PLEA OF WU TING FANG.

A Movement to Form a Universal Union, as a Part of the Great De Hirsch Philanthropies.

CHRISTIAN, Jew, and the believer in the teachings of Confucius met on equal terms last night [Tuesday, March 26], at Calvary Baptist Church, West Fifty-seventh Street, between Sixth and Seventh Avenues, to discuss the Golden Rule. The gathering was held under the auspices of the Baron and Baroness de Hirsch Monument Association. Nearly all races and creeds were represented in the audience, which, despite the inclement weather, filled the church and did not even leave standing room. Gen. Thomas L. James presided at the meeting. His first announcement was that Dr. MacArthur, the pastor of the church, desired him to say that as the meeting was not strictly religious in character, and as it was not held on Sunday, the audience was at liberty to applaud the speakers.

The exercises began with the singing of the one hundredth Psalm. Dr. MacArthur then led responsive reading by the audience in selections from the ninety-eighth and one hundredth Psalms. The Rev. Dr. Joseph Silverman of Temple Emanu-El led in prayer. Letters of regret from President McKinley and Vice President Roosevelt were then read by Secretary Seward, after which General James began his introductory address. In part he said:—

"Our metropolis has never witnessed a more impressive demonstration than this. A larger or more representative audience has never gathered within the walls of this temple consecrated to Almighty God, 'whose service is perfect freedom.'

"The platform on which we stand is unique; it is the Golden Rule. It gives me, therefore, greater pleasure than can be expressed in words, to be with you and share in the sentiments the occasion inspires.

"During the past year the character and the influence of Baron and Baroness de Hirsch have been made specially prominent by reason of the great benefactions of distinguished and wealthy citizens of the United States who have followed their example. The philanthropies of these noble men and women are among the choicest evidences of the growth of tolerance.

"While we rejoice at these munificent benefactions for the establishment of hospitals for the relief of the suffering, and for the endowment of universities, colleges, libraries, and other institutions of learning, as well as for the pensioning of faithful workmen by their employers, still, it must be admitted that Baron and Baroness de Hirsch met a problem greater than any that confronted the philanthropists whose names have been conspicuous during the past year. They clearly saw that the day was approaching when no man or woman is to be judged or

prejudged by reason of his or her nationality or religious belief."

WU TING FANG'S ADDRESS.

General James, at the close of his address, introduced Wu Ting Fang, the Chinese Minister. It was some time after Wu Ting Fang was introduced before he could make himself heard by the audience, owing to the applause which greeted him. He began his speech by saying:—

"Some weeks ago the energetic secretary of this movement wrote me requesting me to come here to take part in this meeting, saying that the object of the movement was to eradicate racial prejudice. I must say right here that I am thoroughly in sympathy with this movement.

"When the secretary informed me that the meeting was to be held, about a month ago, here in this church, this temple of God, and that prominent speakers and eminent divines were to be present and take part, I became nervous. I wrote him that I had another engagement. [Laughter.] He wrote back to me saying that the meeting had been postponed and that I must be present.

"Racial prejudice and religious intolerance are two monsters of barbarism. In former days they seemed to stalk hand in hand. They set nation against nation, and people against people. Oh! what a destruction of life and property there was on account of race and religious prejudices. What good came from the Crusades or the Thirty Years' War? Not any; they only inflicted trouble on Christian and Mohammedan alike. The most striking religious persecutions were those of the Huguenots in France and the expulsion of the Moors from Spain. After the revocation of the edict of Nantes five hundred thousand inhabitants of France sought refuge elsewhere, and the commercial industry of the country was impaired. When the Moors were expelled from Spain that country lost its best agriculturists.

"I might cite many other incidents of olden times. Such things, I am happy to say, will no longer be tolerated in our day. Liberal education and enlightenment have removed prejudice. There are, though, on the statute books in many countries, laws directed against some people on account of race or religion. This cannot be considered satisfactory. The sooner these laws are abolished the better it will be for the people and for mankind in general, as well as for the progress of the nations.

"I can scarcely recall a war between China and her neighbors over religion. During the four thousand years China has existed she has grown up by building up within and not by accession from without. There need be no fear but that China will fairly meet the Western nations on the question of religious prejudice. Ignorance is the basis of all religious prejudice. Remove the cause by education. Some people have an antipathy for snakes. They consider all snakes venomous. The naturalist acts differently. He goes to the haunts of the snakes and studies their habits. He finds that a few are venomous, but that the greater number are harmless. If he can overcome the prejudice as to snakes there is no reason why we cannot overcome the prejudice of race or religion. We can do so by acquainting ourselves with the language,

Digitized by Google

The Rev. Dr. MacArthur, speaking of the Golden Rule and racial prejudice, said:—

"The dominance of the Golden Rule as the law of life is hastening forward. Let us have a Golden Rule Day once a year for the schools on Friday, for the synagogues on Saturday, and for the churches on Sunday."

The Rev. Dr. Charles T. Walker, speaking of the Golden Rule from the point of view of the negro, said:—

"This motto will prepare us for the grand reunion of the human family. The sons of Noah that separated in the Plain of Shinar will hold a family reunion."

The Rev. Charles H. Eaton, the last speaker, urged the Golden Rule as the basis of equality.

During the meeting Secretary Theodore F. Seward of the Monument Association announced that the Park Board had just granted the association a site for the monument in Central Park, near the Fifth Avenue and Seventy-eighth Street entrance.—*The New York Times*.

Selected Articles.

Christian Science Candidly Considered.

WHENEVER an idea is advanced that is not in harmony with the popular notion of the time, there is a general tendency to fight against it. This is not a peculiarity of the present age but has been true in all times past. As far back as history goes we find that those who proposed anything new were fought bitterly by a majority of the people. It was less than three hundred years ago that Galileo advanced the idea that the world was round, and moved while the sun remained in a fixed position. For this he was tried and convicted as a heretic. It was about the same time that Harvey advanced the theory of the circulation of the blood. He was bitterly opposed not only by the general public but by the leading scientists. The year that Galileo died, there was born another original thinker, Newton. His discovery of the law of gravitation was not accepted without strong opposition.

But to come down to our own time, we all know the ridicule that was heaped upon the head of the man who proposed to draw cars with an engine. It is told of a school board in this state, that when some young men wanted the schoolhouse for the purpose of having a discussion on the subject, that one of the directors said that they might have the schoolhouse for any reasonable discussion, but not to talk about such an unreasonable idea as a railroad. "Why," he said, "if God had ever intended that people should ever travel at such a frightful speed (fifteen miles an hour) it would have been prophesied in the Bible." This man was no doubt sincere in his belief that railroads were "a device of the devil," as he called them; but now, to the present generation, he appears to have been a very silly old man.

We might go on at great length citing cases of opposition to what has since been adopted as correct, but these few instances will be enough to show that an idea is not necessarily foolish because it is new. In order to consider candidly any subject it is first necessary to lay aside our prejudice as far as possible, and in this consideration of the subject of Christian Science the idea is to be fair, regardless of preconceived notions and prejudices. A belief, or religion, or theory, or whatever it may be termed, that is accepted by over half a million persons, who have established five hundred churches, is not to be dismissed with a sneer or declared to be absurd. The time may come when sneerers will be looked upon as we view the old man who thought that God never intended that people should travel at the rate of fifteen miles an hour.

In 1866 a woman living in Lynn, Mass., met with a

severe accident. The doctors had given her up and her death was expected at any moment. On Sunday morning the pastor came to bid her good-bye before going to service. The woman requested those with her to withdraw. Thinking her delirious they did so with reluctance. In a short time she walked into the adjoining room. This incident in the life of the woman who is now known as Rev. Mary Baker G. Eddy, was the beginning of Christian Science. She was a highly educated woman and began immediately a thorough study of what seemed to her to be the secret of health. After three years' study of the Scriptures she advanced the idea of Christian Science. It was called Christian because she believed it to be the same method that was used by Jesus in the healing of the sick, and Science because she believed it to be founded upon a fundamental Principle of nature, or scientific certainty; that is, that all things are caused by Mind and that the only realities are the spiritual. Beginning with this Principle, she reasons that Mind being the only reality, and Mind is God, Good, all realities must be good, and that evil or sin is not a reality, and consequently disease, which is evidence of sin, can be overcome by Mind.

To the average man or woman who hears this for the first time it seems as absurd as fifteen miles an hour did to the old man on the school board, and a great many persons dismiss the subject without further thought as a vagary of some demented creature with a vivid imagination, but those who go deeper into the matter are often convinced that there is truth in the theory, and thousands have become so thoroughly filled with this subject that their lives are devoted to telling the facts to others. It is too large a subject to be handled in an article of this length, and we will touch upon some details rather than go into an analysis of the principle. It may be said, however, that the principle is in harmony with the teachings of Jesus as they might be interpreted. One of the criticisms made by a certain class of thinkers is that the Christian Scientists take the sayings of Jesus too literally.

Perhaps the first question that will arise in the minds of many is: Do they heal? In view of all the facts there can be but one answer, and that is that they do. From where the writer sits he can see one of the prominent business men of this city who has been greatly benefited, as he sincerely believes, through Christian Science. In almost every city in this country and in many parts of Europe there are cases of health following treatment by Christian Science healers or practitioners as they call themselves.

Many of these cases are of persons who have been given up as incurable by the regular doctors. In fact, most of the patients are persons who have been doctored for years. But not all of the cases treated have been successful, and it is the failures that the public hear of. For instance, the old man eighty-two years of age, who died in this city a short time ago, has been more talked of than all the successful cases.

A few years ago a Christian Science healer in Beatrice, Neb., was arrested on account of the death of a child under his care. It was brought out in the trial that he had treated over a hundred cases and had lost but two, a better record than any doctor in the place could show. After a long trial he was acquitted. In the charge to the jury the judge said: "The court instructs the jury that if they believe from the evidence beyond a doubt that the defendant, when at the bedside of the sick, relying upon the power of God, the Ruler of this universe, to heal mortal man of ailments which the flesh is heir to, prayed to that God in sincerity to invoke his Divine power, and that he made no profession himself to heal the sick, then you are instructed that the defendant for such praying would not be liable therefor under the law as explained in these instructions."

This brings up the subject of stringent legislation against the Scientists. Every time there is a death under the treatment there is demand for legislation to prevent them from carrying on their work. It is so in the case in this city. As a general thing the proposed laws come from the ranks of the physicians. While they may be honest in their professed desires to protect the public, there is a suspicion that there is considerable of protection to themselves included. A law was proposed in this state two years ago that was aimed at the Scientists, but when the hearing was held in the Assembly chamber there were over a thousand men and women there to protest, and at the close of the hearing the assemblyman who introduced the bill withdrew it.

Inasmuch as the Scientists do not use any medicine and do not claim to heal of their own power, the law would be practically one to prevent prayer, and that is something that few believe in doing. If there is truth in the claim that the mind can be so influenced spiritually as to have an effect upon the body, it is something that will be of great good. The only way to determine the truth or falsity of the assertion is to put it to the test. If any person desires to use such a method they certainly have the right to do so, and as long as there is no way of compelling any one to have a Science healer it is purely a matter for each individual to decide for himself. One thing is certain, the teaching of the Scientists is highly spiritual and has a tendency to develop righteous thinking.

A regular physician whom we asked what should be done with the Scientists, said that they should be let alone. He further stated that every doctor attempted to influence the mind of his patient, and that there was no doubt of the fact that the mind has a great deal to do with disease. The Scientists make a distinction, however, between mind healing and their method. They claim that as generally practised the mind cures are simply the influence of one mortal mind over another, while their method is the power of the divine Mind, or God.

Like all devotees of a new theory the Scientists claim a great deal more than they can at all times prove. It was so in the early history of Christian Science more than at present. Claims and statements were made by those who were but slightly informed that were not essential and not even true. While a great many think that the claims now made are not reasonable, it is a fact that as the subject is presented now there is something attractive about it, even to those who do not accept all the philosophy. The idea that the something that all realize and none can explain, which we call God, or Nature, or Eternal Energy, or Goodness, can be invoked to free our bodies from the pains and aches with which they are too often afflicted, is one that appeals to the higher thought, and if it comes to be demonstrated beyond question the human race will feel most grateful to the one who first advanced the idea.

The subject is so large that we have only touched a few points. There is no danger in thorough investigation, and there may be good. All the Scientists ask, is a respectful hearing, to which the work they have already done, entitles them. If they are right nothing can stop the advance of their ideas, and if they are wrong nothing can make their theory a success. Persecution will only make the growth more rapid. Toleration will prove its merit. Time only can determine whether it is in harmony with the laws of the universe, which can neither be amended or repealed, no matter what men and women attempt. If Christian Science is good it will live and be adopted; if it is bad it will die a natural death. The subject should be considered by all in a reasonable way, without bigotry or prejudice. The Golden Rule will apply to it as to everything else, "Do unto others as you would that they should do unto you."—*The Independent*, Binghamton, N. Y.

Science as Applied to Healing.

A NUMBER of years ago the late Professor Huxley said that the next great discovery would be in the realm of mind.

That prophecy was being fulfilled at the time it was made, although the great scientist was not aware of it, and here and there thinkers whose names stood high in the annals of science jotted down and gave to the world the results of their observations.

Perhaps very few people were deeply impressed with this highly interesting statement, because its relation to the underlying principle was not perceived, and the writers themselves had not come to understand that the "Reign of law" begins in Mind and extends to and controls all the phenomena of being.

One of the most profound thinkers of this age gave expression to this idea when he said: "One of the aptest descriptions of the human being is that he is a mirror," and then he goes on to point out with scientific accuracy how human beings reflect both mentally and physically the conditions, mental and physical, which surround them.

No thinking person would deny this, and yet few can see the intense practical significance of this universal fact. During the past week many have been compelled to recognize it, however, and to see at the same time what a serious thing it is to receive into thought impressions of anything which we do not desire to perpetuate.

Twenty years ago a number of England's clear-sighted reformers saw the undesirability of giving to the world through the press the records of crime, because of the impressions likely to be made upon the young, if not upon older people.

This is recognized and admitted very generally, and it is somewhat singular that those who are ready to concede it do not see that it is equally important to obliterate from the press the harrowing descriptions of disease when it is so well known that nearly all are affected by them in a greater or less degree, and that fear which ought to be guarded against is induced by this means.

Only a day or two ago one of our newspapers had a cartoon with a ghastly figure labeled "La Grippe" standing and knocking at the door, while the legend beneath read, "From door to door."

There were some thinking people who wondered what its effect might be in the community, and the remark was made that perhaps the Christian Scientists had the advantage over those who believe that evil has as much power as good. In such times Christian Scientists go to the Bible and learn therein how God has dealt with his people in all ages, how they were preserved in Egypt in the midst of the plagues, and we see this thought perpetuated in later days, for in the 91st Psalm, 7th verse, it is said, "A thousand shall fall at thy side, and ten thousand at thy right hand: but it shall not come nigh thee." In the following verses the reason is set forth, and we are told in no uncertain terms that no plague shall come nigh the dwelling of those who make the Lord their refuge.

There are many worthy Christian people who complain that they are unable to avail themselves of the protection thus offered. We Christian Scientists are deeply and humbly thankful that we can, for we learn from our textbook, "Science and Health with Key to the Scriptures," how fear in the human mind is overcome by the healing currents of divine Truth, and each day unfolds more and more of the limitless treasures of God's word.

The medicine of Truth comes from above, and it is well to ponder often the psalmist's words, "Oh, taste and see that the Lord is good," and again, "God is our refuge and strength, a very present help in trouble."

What need then to fear or believe in a dark shadow haunting our threshold, when we know that Christ stands

and knocks at our door, offering us health, peace, and security, or to quote the beautiful lines from "In Memoriam":—

And hear at times a sentinel
Who moves about from place to place,
And whispers to the worlds of space,
In the deep night, that all is well.

That these doctrines are attracting general attention is evident to any one who chooses to attend the church on Alexandrine Avenue either at the Sunday morning service or at the Wednesday evening experience meeting. No one could fail to be impressed by the deep earnestness of the large audience representing "the gentle and simple," the cultured and the unlearned, all eager alike to grasp and hold the message of the Christ-Truth to this age, and to themselves as individuals. There are between five and six hundred organized churches in this country, with a number in Europe, many having beautiful edifices.

These churches, in order to extend their usefulness, have established reading rooms in the various towns and cities, where all interested in the subject may read the extensive literature of Christian Science, and these rooms are as free to all as the public libraries.

Here, in the Chamber of Commerce Building, may be seen at any hour some earnest students quietly perusing the books which bring into the clearest light the words and deathless deeds of the great prophet of Nazareth.

Very recently Christian Science was the theme of discussion at an Episcopal convention in the East, and many clergymen were free to admit that its teachings were bringing God nearer to the heart of humanity than He had ever been; in brief, that a new impetus has been given to Christianity, for say what we will, and believe what we may, the one vital consideration for man is to know God, and thus truly know himself.—*The Detroit News-Tribune*.

Very Apocryphal.

Editor of *The Scrantonian*.

Sir:—In your issue of March 17, you represent the Rev. Braddon Hamilton, a New York clergyman of distinction, in an attack upon Christian Science, as saying, "I will quote a few verses from the Bible and ask what they mean. 'Honor a physician with the honor due unto him, for the uses you may have of him, for the Lord hath created him.' 'The Lord hath created medicines out of the earth, and he that is wise will not abhor them.' 'My son, in thy sickness, be not negligent, but give place to the physician, for the Lord hath created him. Let him not go from thee, for thou hast need of him.' 'Of such doth the apothecary make a confection, and of his works there is no end, and from him there is peace over all the earth.—Eccles.'"

That a clergyman should say the above quotation is from the Bible is surprising, because the statement is a mistake.

The abbreviation "Eccles." apparently indicates that the reader is expected to believe the quotation is from the book of Ecclesiastes, in the Bible, but it is not in or from the Bible at all. The quotation is found in a thoroughly apocryphal old manuscript, known to scholars as *Ecclesiasticus*. The abbreviation for this book is "Ecclus." This book was never a part of the Bible; was never a part of the accepted canon of Scripture, and the quotation from it never had any claim to inspiration, among either Jews or Christians. Although it would be extraordinary if a popular preacher were so unfamiliar with the Scriptures as to be capable of being deceived as to Bible quotations, yet it would be a discourtesy to an eminent clergyman to suppose that, through the public press, he purposely misrepresented the Bible in order to make it seem to discredit and attack Christian Science, yet the fact that Mr. Hamilton has published so manifest a misrepresentation of the Bible debars

the public from considering, without investigation, any of his statements in regard to the great subject of Christian Science, hence every point of his attack will be found fully covered in the following statement:—

Note carefully this, namely, that the sense of God's actual presence and control which comes to many while reading "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, has permanently healed them after *materia medica* has failed.

Note also that from First Church of Christ, Scientist, at 519 Adams Avenue, this book is now and will continue to be loaned absolutely free of any charges whatever to the sick and to inquirers in Scranton and vicinity. This affords the widest opportunity for personal investigation. This places Christian Science squarely on its merits in individual judgment, and this removes every occasion for baseless conjecture and misrepresentation.

Respectfully,

DAVID N. MCKEE.
In *The Scrantonian*.

All's Well.

As the ship speeds beneath the silent sky,
O'er the vast spaces of the moonlit sea,
And one lies quiet, listening dreamily,
How sweet it is to hear the watchman's cry:
"All's well—the lights are burning bright!"
And then to sleep in safety thro' the night.

When the ship fights her gallant, steadfast way,
Amid the sounds of tempest and of rain,
'Tis sweet to hear the watchman's voice again,
As one lies sleepless, longing for the day:
"All's well—the lights are burning bright!"
Ah, what a comfort in the stormy night!

Three lamps there are—Faith, Hope, and Charity—
Which we may light to keep our souls from harm
In our long voyaging through storm and calm;
And sweet it is, while on life's restless sea,
To hear the watcher, Conscience, in the night,
Whisper: "All's well—the lights are burning bright!"

MARY E. SIMS.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

The Church Manual.

THE Church Manual of First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Notice.

REMITTANCES should be made by post-office money order, express money order, or exchange on Boston or New York. Exchange on Chicago and other cities not named above, will not be accepted.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Churches Opened at New York and Chicago.

THE Second Church of Christ, Scientist, of New York City, was opened Easter Sunday, April 7, and the Second Church of Christ, Scientist, of Chicago, was dedicated. In both churches the services were repeated several times to accommodate the thousands who desired to participate.

A full account of these interesting services, including the addresses, will appear in the *Journal*.

In this issue of the *Sentinel* it is our great pleasure to publish the following letters from our Leader, the Rev. Mary Baker G. Eddy, which were sent to the churches at New York and Chicago, and read at each of the services.

To Second Church of Christ, Scientist, New York City, N. Y.

Beloved Brethren:—Please accept a line from me in lieu of my presence on this auspicious occasion. Hope springs exultant on this blest morn. May its white wings widen over this white temple and soar above it, pointing the path from earth to heaven; from human ambition, fear, or distrust, to the faith, meekness and might of him who hallowed this Easter morn.

Now may his salvation draw near, for the night is far spent, and the day is at hand. In the words of St. Paul: "Render therefore to all their dues: tribute to whom tribute is due; custom to whom custom; honor to whom honor. Owe no man anything, but to love one another: for he that loveth another hath fulfilled the law."

May the benediction of "well done, good and faithful," rest worthily on the builders of this beautiful temple, and the glory of the resurrection morn burst upon the spiritual sense of this people with renewed vision, infinite meanings, endless hopes, and glad victories in the onward and upward chain of being.

With love,

MARY B. G. EDDY.

Pleasant View, Concord, N. H., April 5, 1901.

Mrs. Eddy's letter to the Church at Chicago was as follows:—

Pleasant View, Concord, N. H., April 4, 1901.
To the Second Church of Christ, Scientist, Chicago, Ill.

My Beloved Brethren:—Your card of invitation to this feast of soul was duly received—accept my thanks.

Ye sit not in the idol's temple. Ye build not to an unknown God. Ye worship Him whom ye serve. Boast not thyself, thou ransomed of divine Love, but press on unto the possession of unburdened bliss. Heal the sick, make spotless the blemished, raise the living dead, cast out fashionable lunacy.

The ideal robe of Christ is seamless. Thou hast touched its hem and art being healed. The risen Christ is thine. The haunting mystery and gloom of his glory rule not this century. Thine is the upspringing hope, the conquest over sin and mortality, that lights the living way to Life, not death.

May the God of our fathers, the infinite Person whom we worship, be and abide with you; may the blessing of divine Love rest with you. My heart hovers around your

churches in Chicago, for the dove of peace sits smilingly on these branches and sings of our Redeemer.

Lovingly yours,

MARY BAKER EDDY.

Christian Scientists and Compensation.

ONE of the results of the legislation which has been urged against Christian Science practice in several of the states is a quite general expression of opinion as to whether Christian Scientists are entitled to compensation for their healing services. So far as we have heard the expression of private opinion, it is to all intents and purposes one-sided: that is, that Christian Scientists are as fairly entitled to reasonable compensation for their services as any other class of citizens. As to the opinion of the press, so far as it has come to our notice, it is all to the same effect. This is true whether the newspapers commenting thereon were friendly or unfriendly to Christian Science. In either case they unite in the opinion that persons who employ Christian Scientists and rely upon their method of healing, should be willing to give them fair remuneration therefor.

This is so sensible and logical that one is amazed ever to find it questioned. When it is questioned—as it sometimes is—the questioning seems to rest on the supposition that because it is spiritual truth it should be absolutely free, in the world's sense of freedom. Such a sense of freedom is too apt to be that all obligation rests on the side of the giver of spiritual truth and none on the side of the receiver. This would be a most uneven balance, an inequitable condition of things that exists in no other department of life. There is no Scriptural warrant for such a doctrine. A careful student of the Bible will find that in every instance of spiritual benefit there must be some act or deed on the part of the one seeking it. The Bible abounds with statements to this effect: If ye keep my commandments and obey my statutes ye shall receive the things of God or Truth, but not otherwise. There is an inevitable condition attached to the impartation of Divine Truth. It does not follow in all cases that the evidence of willingness to receive or of obedience must be in the form of monetary compensation; but, as the world goes, this is one of the legitimate means whereby the beneficiary may acknowledge the benefit received. Christian Scientists must live and meet their material obligations as well as others. Surely it would be neither wise nor Christianly to put them out upon the world as an army of paupers. No reasonable person would expect this.

Therefore, we are glad to note such sensible expressions of opinion as the following from the *Buffalo Courier*. Commenting upon the proposed Bill presented to the New York legislature which provided that Christian Scientists might practise provided they did not charge for their services, the *Courier* says:—

"It was amended, some time ago, so that faith-cure healers were to be permitted to practise without pay, but this was met by the very logical objection that if those healers do perform cures, they are as well entitled to their fees as physicians. Those who believe in it, have a moral right to employ healers of that kind and to pay them for their services. To prohibit them from doing so would be an unjustifiable interference with personal liberty, and it is well that the bill is dead."

The *Sharon Daily Telegraph*, of Sharon, Penn., referring to the same Bill, also makes the following sensible comment:—

"On the other hand, granting in the premise that the practice of these people is beneficial, is an exact science, what a despicable injustice would be worked against them by such a pauperizing of their profession. Let us be consistent, and in consistency no wrong, paid or unpaid, can

rightly be legalized, and no body of law-makers, state or national, can in justice put the ban of error upon right in catering to the desire of any particular class."

The Missouri Bill.

WE have carefully read the Act to regulate the practice of medicine, surgery, and midwifery, recently passed by the Missouri legislature, and which has now become a law. We do not see that it affects Christian Scientists or Christian Science practice at all. It relates solely to the practice of medicine, surgery, and midwifery, as those terms are defined and understood. Christian Scientists use no medicines or material or physical means whatever, nor do they use any surgical apparatus or appliances of any kind or nature. They heal through prayer, that is, through a knowledge and realization of the all-power and all-presence of the Divine Mind—God—to heal all diseases to which humanity is subject. Therefore, in no possible sense of the terms medicine, surgery, or midwifery, do they come within the provisions of said Act.

There is only one clause of the Bill which by the most extreme construction possible to language could be held to relate in any way to Christian Science practice; it is as follows: "Any person, except physicians now registered, practising medicine or surgery in this state, and any person attempting to treat the sick or others afflicted with bodily or mental infirmities without first obtaining a license from the State Board of Health, as provided in this Act, shall be deemed guilty of a misdemeanor," etc. The words "and any person attempting to treat the sick or others afflicted with bodily or mental infirmities" would have to be taken out of the context and out of the force and effect of the Bill as a whole, in order to make them applicable to Christian Science practice in any view of the question; but we do not hesitate to say that, even standing alone and disconnected from the words medicine and surgery, they would bear no construction which would make them applicable to Christian Science healing.

We think it entirely safe to say, therefore, that there is nothing whatever in this Act about which Christian Scientists need concern themselves.

We would say this on general principles of law and common sense, independently of any judicial decisions, but the courts of some of the states have already construed similar language as having no application to Christian Science practice; in other words, that the practice of Christian Science is not the practice of medicine or surgery. A leading case upon this point is that of the State *v.* Mylod decided by the Supreme Court of Rhode Island. That case stands as authority of such great respectability and soundness that we doubt not, whenever a similar question is raised in other states, the courts will follow the Rhode Island decision as a precedent.

Why should Orthodox Medicine Dread Competition?

THE above pertinent inquiry is submitted by way of an editorial in the *New York Journal* of April 1, 1901. Why, indeed, should a profession of over four thousand years' standing dread competition in this morning of the twentieth century? If it ever is to be securely based, it surely should be by this time. Its foundation should be well and permanently laid. The people should understand it to be a great healing agency. Its efficacy should no longer be open to question. Its votaries should be above admitting even the possibility of successful competition. The fact that this is not true is food for earnest and serious thinking along this line. Of one thing we may be sure, if there were not a supreme need of better and more

efficient means of coping with disease than that represented by any material system of healing, Christian Science would have no place in the world's thought to-day, and could not and would not have made the great strides that have caused a percentage of the members of the medical profession to take a defensive attitude toward it.

In this connection we are glad of the privilege of quoting the editorial from so great a daily as the *New York Journal*:—

"Irregular practitioners of healing arts are finding at Albany that eternal vigilance is the price of toleration. A little while ago it was Christian Science that was to be rooted out; then it was osteopathy, and now it is hypnotism and suggestive therapeutics.

"No doubt there is much quackery in all these schools. 'It is not entirely unknown in the regular practice of medicine. But such progress as has been made thus far in the knowledge of the human body and of the art of treating its diseases has been made through the liberty of the individual to subject himself to experiment.

"And when the regular physicians make medicine a true science they will not find it necessary to run to the legislature for laws to protect themselves against the competition of heretical outsiders. The astronomers do not have to work for statutes to keep the public from deserting them for the expounders of the doctrine that the sun *do* move."

Medical Legislation in Colorado.

MRS. FRANCES MACK MANN, C.S.B., of Denver, Colorado, writes us that the Medical Bill brought before the legislature of that state failed to pass. Mrs. Mann says: "This result has been gained by quietly presenting to the individual legislator the fact that should the Bill pass it would be an injustice to several thousand of the best citizens of the state."

The legislature of the great and progressive State of Colorado—that state of almost limitless resources and magnificent scenery—are to be congratulated upon the spirit of liberality, justice, and good sense prevailing in its legislative councils.

The Lecture at Washington, D. C.

IN our last issue we published an account of the lecture of Mrs. Sue H. Mims, C.S.B., in Washington, D. C., and also of Captain Linscott's introduction. Too late for publication in that number we received a copy of Mrs. Mims' remarks prefatory to her lecture. We herewith gladly publish the same, as they contain sentiments that should find lodgment in the thoughts of people everywhere, regardless of creed or condition in life.

Mrs. Mims' words were as follows:—

There seems to me a certain majesty in speaking the words of Christian Science in the heart of this great capital. How insignificant may perhaps be the speaker; how poor, perhaps the utterance; yet the place, the hour, the theme, are all great.

This beautiful capital stands before the world as the expression of humanity's highest ideal in progress toward the universal freedom of the "sons of men," the largest and fullest visible expression yet of the pure democratic idea, a basis on which may be built a still higher freedom, the freedom of the sons of God, individual and universal emancipation from sin, disease, and, eventually, death.

The hour is the beginning of a new cycle of time, ushered in by such strides in the realms of physics and material sciences, so strange and wonderful that if we, in prophetic vision, had breathed of such possibilities twenty years ago, the world would have said, "Behold, another dreamer, away with him!" The theme, the Science of Christ, the

full-orbed Truth, the absolute, a Science that every one in this audience can prove for himself, if it be of God or of men. The world is tired of themes, of thread-bare philosophies; it demands practical, demonstrable Truth; and this Science, so transcendental, yet so infinitely practical, is Christian Science, the Science of divine spiritual knowing, which brings the "freedom of the sons of God." This Christ-Science comes to every community with an olive branch in its hand. The angels have always borne the same gospel to humanity, "Peace on earth, good-will to men." The very word gospel means good-spell, the spell, the marvel, of Good.

In the Carnegie Library at Atlanta.

THERE was recently placed in the Carnegie Library at Atlanta, Ga., all the works and writings of the Rev. Mary Baker G. Eddy, and the following courteous note of acknowledgment of the gift was promptly received:—

CARNEGIE LIBRARY OF ATLANTA.

Anne Wallace, Librarian.

March 6, 1901.

Mrs. Sue H. Mims, Atlanta.

My Dear Mrs. Mims:—At the last meeting of the Board of Trustees of the Carnegie Library of Atlanta a unanimous vote was passed thanking you for your generous gift to the Library.

It gives me pleasure to notify you of this action.

Very truly yours,

THOS. J. DAY, *Secretary.*

This library building is described as an elegant marble structure. It is one of the many monuments of Mr. Andrew Carnegie's benevolence.

It is a pleasure to note that the above gift was made in response to a request from the librarian for books published by The Christian Science Publishing Society.

The Obstetric Class.

IN reply to inquiries we will say that under the By-law a class in obstetrics cannot be held until six months after the close of the general college term.

Beginning with this year the term for teaching obstetrics commences six months from the June term, or about the middle of December, 1901. See page 74, revised Church Manual.

Due notice of the time will be given.

Among the Churches.

From Springfield, Ohio.

It is with pleasure we report a growing interest in Christian Science in this part of the Field. Two years ago we were in a small room, had a small membership, and the press would not recognize us. It became apparent that we should bestir ourselves, so we began to look for more suitable quarters and to get the press interested in our behalf. About a year ago the leading paper of our city gave us the privilege of their columns. One of the editors visited Boston and the Mother Church, and he came home with quite a friendly feeling for Christian Science.

We were not able to find a suitable place until last November. In the mean time some of our members had moved away and the thought of poverty seemed to prevail, but realizing that Mind was all, and that divine Love supplied all human needs, we unanimously voted to move to our present quarters. The demonstration was made, and the thought of poverty was overcome. We now pay double the rent that we previously paid, besides furnishing our new rooms.

The following description of our new rooms appeared in the *Press Republic*:—

"The Christian Scientists have engaged a commodious suite of rooms on the second floor at No. 7 East Main Street. The suite consists of three rooms, modernly furnished and admirably equipped for carrying on the Christian Science work.

"The first room on entering from the street is the reading room; Christian Science literature of every description is available for the accommodation of visitors and members of the church. Many well-known Christian Science works are on sale, notable among which is 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy. Beautiful pictures adorn the walls; one, exceptionally pleasing, bears the title, 'A Little Child shall lead Them;' another engraving, 'Daniel's Answer to the King,' is also noticeable for its beauty.

"From the reading room one enters the room known as the practitioners' room. Thence one passes to the audience room, which is admirably arranged for the accommodation of this growing congregation. Two handsome quartered oak pulpits, for the First and Second Readers respectively, stand on the south side.

"On the walls of the audience room are suitable mottoes one reading, 'And ye shall know the truth, and the truth shall make you free.' In the practitioners' room is exhibited the charter of the congregation, which was received last July.

"The local branch of Christian Scientists is certainly to be congratulated on the progress it has made in recent years, and although it is so comfortably located in its new quarters, it is stated that many other improvements are planned for the near future.

"In conclusion, the *Press* is requested to announce that any one who wishes to investigate Christian Science is welcome to call at the reading rooms, and read the literature. There is also a copy of their text-book, *Science and Health*, in the Warder Library."

W. H. ALDRICH.

Property Purchased at Green Bay, Wis.

The members of the Church of Christ, Scientist, have purchased property in this city preparatory to building a temple in which to hold services in the future. The property purchased is on Cherry Street in the block between Madison and Munroe, and is located on the north side of the street, between the house occupied by Frank Ellsworth and the alley. The property is sixty-five feet in width and one hundred and twenty feet in depth, and was purchased from the former owner, Frank Ellsworth.

It was at first rumored that the church was about to build at once, and if possible occupy the building by next fall, but this is untrue. The church will build at some time in the future, and it is with this intention that the purchase was made, but there is nothing immediate in their plans.

In speaking of the condition of the church, H. McDonald said, "It is in a flourishing condition. We are gaining members steadily and it is only a matter of time when we shall be crowded out of our present quarters, and it is with this in view that we made the purchase. Our meetings are always well attended."—*Green Bay Gazette.*

Faith is in itself a light that lightens even the intellect, and hence the shield of the complete soldier of God, the shield of faith, is represented by Spenser as "framed all of diamond, perfect, pure, and clean" (the power of the diamond to absorb and again radiate light being no poetic fiction, but a well-known scientific fact), whose light falling upon any enchantment or false appearance, destroys it utterly.—MACDONALD.

From our Contributors.**My Prayer.**

BY BELLE BALLOU.

I PRAY Thee, Lord, bring to my mind
The consciousness of present Good!
Guide thou my erring steps aright!
Teach me to live more as I should.

Whate'er the months may bring to me,
I pray with earnest heart to-night
For inner strength to tread my path,
For daily guidance toward the Right.

For knowledge absolute of Thee
Since Thou art Love, and Truth, and Mind,
'Twill mean abandonment of self,
And greater love for all mankind.

"Health is the consciousness of Good;"
Its atmosphere is Spiritual light;
It chases all the clouds away,
And brings the day, where once was night.

Oh may I learn to *live* the Truth!
The way is pointed out to me,
And with Thee ever at my side,
This Truth at last shall make me free.

All bitterness will then be gone,
All pride, and sense of wrong will cease,
Immortal Mind alone will reign,
And God will yield the great increase.

Christian Science Applied to Business.

BY WILLIAM E. BROWN.

HAVING experienced so much practical benefit in my business life, resulting from the application of Christian Science, I am impelled to relate a little of my experience for the benefit of others. To begin with, my natural inclination was to think out and plan ahead every step I desired to take. This method caused me at times much weariness and frequently the particular work I had planned never was accomplished, hence in such cases all my mental work and worry had been for naught. After coming into Christian Science I had been reading the instruction of Jesus to his disciples, wherein he instructs them not to premeditate what they shall say, but tells them in that hour it shall be given them. Then the voice of Truth suggested to me that the promise "in that hour it shall be given you" was applicable to every condition of life.

I began to work along that line and was gradually enabled to lessen the mental tension and trust more to the leading of divine Principle. It seemed so clear to me that if I could bring myself under control of divine Wisdom that my actions would become more intelligent and hence more successful. It is a self-evident fact that all mistakes and failures are due to a lack of wisdom, and it is also evident that if we were possessed of wisdom we would not make mistakes. Then the question arises, how and where shall we obtain wisdom, and we find our answer in Psalm 111:10: "The fear of the Lord is the beginning of wisdom."

From the moment I began to realize that divine Mind was the only governing power, I began to be more successful. It gradually dawned upon me that I was making better connections in my business calls. I noticed that I generally called at the right place at the right time to do successful business.

Now if a slight knowledge of Christian Science will make the business day more successful, what will be accomplished by a greater knowledge and growth which will bring us into perfect adjustment with infinite Intelligence? The realization that the divine Mind contains all wisdom, all harmony, all success, all of everything worth having, and that we, through a knowledge of Christian Science, can draw from this Infinite Source as we need, makes life worth living and frees us from anxiety, worry, and care. This recalls another promise of the Master which shows the simple way of gaining everything that is worth possessing, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you."

Be Patient and Faithful.

BY ROSA REED.

REMEMBERING the first years of daily, yes, hourly effort in overcoming many persistent errors my thought goes out to those dear ones who are taking their first steps in the upward way that is so gently and gradually leading us all away from earth's shadows into the glories of spiritual consciousness.

I do not remember a perfectly well day until I was freed through the Truth as revealed in Science and Health, and I have great cause for gratitude and rejoicing with the many who were once in darkness but now, see a "great light."

Supposed weak constitution with constant headache and a fear of weak lungs, unfitted me for a life of usefulness either as a girl or mother. My sufferings increased each year until there were weeks at a time when I could not speak aloud, finally growing too weak to sit up all day unless under great excitement. The nights were passed in a state of unrest and fear of losing my reason under the terrible darkened mental condition and constant bodily suffering. I could not eat without experiencing pain, even a swallow of water would produce suffering. Other troubles made their appearance, among which were erysipelas, constant neuralgia, dyspepsia, sore throat, severe cough with frequent chills and fever, all of which combined to make this life a burden, while the future seemed most dark and dreadful.

When I had changed climate three times, done all that could be done in the way of material means, was living on a diet of cod-liver oil, and found my weight to be only eighty-seven pounds, I felt indeed helpless and hopeless.

A friend recommended what was thought to be Christian Science, advising me to take treatment. I was afraid it was mesmerism, but joined a class then ready to be taught. I am sure the teacher earnestly tried to turn our thoughts from materiality to the loving Father, but having been wrongly taught herself she lacked the keynote to true harmony. She advised us not to read Science and Health, as it was too hard to be understood by beginners.

For over a year I groped blindly, trying to demonstrate by the use of formulas and mortal mind methods, until the way again grew unsatisfactory and vague. At this time an acquaintance told me she was receiving much help from the study of Science and Health. She wished me to read it for a week, and very indifferently I accepted it, supposing it to be only one more in the same line with books I had been reading in search of Truth, such as Swedenborg, Mind Science, Mental Therapeutics, etc.

Never can I forget the great fascination the revealed Truth had for my longing, hungering, thought. It was with reluctance laid aside for the few duties during the day, and was pored over until away in the night. It seemed to be leading me into a new existence where old things were fading away. I felt sure the true way was at last being

revealed, and was impressed that it was my sacred duty to demonstrate it for myself that I might *know* the help came directly from God.

I soon procured a copy of Science and Health and began earnestly to study and faithfully try to put into practice each day what I gained from the book. About that time I had the opportunity to take instructions of a dear loyal Scientist, and I owe much to her gentle patience in showing the way to help undo the past mistaken ideas and to turn my weary steps in the right way. As by the study of Science and Health the consciousness of a God of love as *all* power became clearer, error's claims became less real, and gradually through five or six years, hope and faith became understanding, which could be *proven*, peace and health appeared to the darkened senses and Love became more near and more real, until I realized happiness and health. I could never tell when the change took place, as it was the gradual dawning of spiritual consciousness. The way at times seemed dark and long.

Soon after beginning the study of Science and Health we moved to a little town on the edge of the Mojave Desert where for five years we did not see a Christian Scientist and had no help but impersonal Truth and Love. There were many different forms of error to be destroyed during that time for my family: congestion of lungs, malarial fever, ulcerated sore throat, fractured ankle bone, and wounds from the teeth and claws of a young catamount being only a few of them. But the Love light was never entirely dimmed, and every trial was only another upward step, so now, after twelve years of test and having been able to reflect a little of the infinite Love to help others, I would say to all striving to overcome error in *any form*, be patient and faithful, you shall wear the crown to-morrow though you bear the cross to-day. We will say with the dear, patient, faithful Mother, "I enter the path. It may be smooth, or it may be rugged; but it is always straight and narrow; and if it be up-hill all the way the ascent is easy, and the summit is gained. . . . Those who know no will but His take His hand, and from the night He leads to light" (Miscellaneous Writings, p. 347). Then let us be patient and faithful, not for a day, a month, or a year, but to the *end*.

Claims.

BY F. A. G.

WE are asked by those who have no understanding of Christian Science the meaning of the word "claim" as used in Christian Science. We are taught in Christian Science that God is Love, Truth, Life, Intelligence, etc., and that man is His "image and likeness." Then when something unlike God and His attributes claims to be real and a part of us, or belonging to us, we can readily ascertain if it has a right to its claim, by seeing if it in any way is a part of God or His creation. If not found in God it cannot be found in man, His image and likeness. It is a false claim and we cannot afford to let it remain one instant in our consciousness.

Some years ago my father owned some land in New York City in a part not then populated to any great extent. On this land a man built a small house or hut and remained so many years without being molested that he concluded he would lay claim to the property and refused to go away when requested to do so. After going to law and considerable expense, he was forced to vacate. His was a false claim, but he nearly obtained possession because of being allowed to remain so long.

Just so with the false claims in our thought. We have allowed sin, sickness, laws of heredity, etc., to come and occupy our ground or thought until they claim the right to stay. Now it is our task to prove them false claimants and take possession, having no mind but the divine Mind.

In illustration of the different thoughts we entertain, I received a useful lesson from a magic lantern. Some of the pictures were joyous and gay, while others were distressed and discordant, and as I watched the slides being run into the lantern and the picture appear on the screen my thought seemed to see the working of mortal mind. "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 410, says: "Whatever is cherished in mortal mind as the physical condition is imaged forth on the body." So it seemed to me. I would watch more closely my thoughts, and instead of allowing mortal mind to set up pictures of sickness, discord, and inharmony, I would strive for that Mind to be in me which was in Christ Jesus. Let us examine each thought as it enters our consciousness and allow only the good, for thus shall we bring health and happiness to ourselves, and joy to the world.

Semper Paratus.

BY HENRY A. MANNING.

THIS was the motto of Lord Clifford, and we are reminded in our text-book that it is also Truth's motto. It has struck me as peculiarly fitting to define one of the most salient features of Christian Science.

Always ready! What can be so inestimable in value to man, as that divine Principle of Being *which is ever at hand* to relieve every human need? At the very beginning of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, a profound and impressive truth is stated in these words: "This apodictical Principle points to the revelation of Immanuel, 'God with us,' the sovereign Ever-presence, delivering the children of men from every ill 'that flesh is heir to.'" Again, on page 43: "To-day the healing power of Truth is demonstrated to be an immanent, eternal quality, or Principle, instead of a phenomenal exhibition."

Always ready! "Behold, I stand at the door, and knock." The Mind which is in Christ seeks an entrance into the human consciousness in every age, and Christian Science is swinging wide the door of mortal thought upon its rusty hinges, enabling many thousands to welcome the guest who has been so long misunderstood.

Always ready! Let us not forget the injunction of our beloved Leader, on page 37 of Science and Health: "If Mind was first chronologically, is first potentially, and must be first eternally, then give to Mind the glory, honor, dominion, and power everlastingly due unto its holy name."

Semper paratus! Are we also ready?

Keep the Sunshine Shining On.

BY A. C. CLARK.

KEEP the sunshine shining on
In the Soul.
Though around you angry tempests
Seem to roll,
It is only in the seeming,
Through it all God's light is beaming
He will help us see the meaning
Of it all.

Keep the sunshine shining on
Day by day,
Christ will help us every step
Of the way,
Though we oft feel sad and dreary,
He will make the pathway cheery,
In his love we'll never weary,
Or dismay.

Testimonies.

Testimonies from Germany.

As a small token of the deep gratitude I feel for the immeasurable blessing Christian Science has brought to me, I should like to tell about our work here in Dresden. The Truth came to us about three years ago through a loyal student, and although we are all very young in Science, our work is growing beautifully. We have a German service on Sundays, followed by an English one; besides, we have our regular German meetings on Mondays and the usual English mid-weekly meeting on Wednesdays. Until recently we have held all the services in our Second Reader's drawing-rooms, but we now have engaged larger rooms, as the congregation has outgrown the former quarters. There are often between forty and fifty people present, men, women, and children, particularly at the German meetings, and it is delightful to see with what deep earnestness and interest they listen to the words of Truth and Love.

Several of us, myself included, have enjoyed the great boon of going through a class with the teacher who brought us the blessed Light. We have six healers among us, and many beautiful demonstrations have been made, some of which I desire to relate.

A young girl was freed from a tapeworm accompanied by sickness and want of appetite. She soon enjoyed health; she was also cured in a few days of influenza.

One woman whom the doctor wanted to operate upon, was healed of female trouble. A hard-working woman of about seventy, who went about selling flowers, suffered from varicose veins which had caused many wounds in her legs; besides this, she had asthma. The doctor had said that she could never be cured or even relieved unless she took a thorough rest, which she was unable to do, being obliged to work for her livelihood. Christian Science healed her of both troubles without her missing a single day's work.

Another woman, a mother of eight children, was healed of nervous headaches and was helped in childbirth. Her husband, who works in a factory, was healed of eczema which had been under the doctor's treatment for years without improvement.

This woman has had some beautiful demonstrations herself. Her baby boy fell backward into a pot full of very hot water. The mother immediately began to treat him, and in half an hour he slept quietly. When he woke up he had no pain, and next day there were no traces of the accident.

A gentleman, entirely crippled with spinal meningitis, unable to stand or move by himself and given up by the doctors, is entirely well and strong, able to attend to all his business and even to ride a bicycle.

A woman was healed of sick headaches which had troubled her for many years, by simply coming to listen to the German Sunday's services, she understanding no English. Her friends call her case a miracle.

A man who had lost his eyesight through an explosion in a factory, and whom the doctors had not been able to cure, recovered his sight through Christian Science treatment and was able to take up work again in a very short time.

A gentleman who had sought relief for years for heart and lung trouble is now well and strong, rejoicing in the healing that Christian Science has brought him.

Another gentleman who had been operated upon more than once for a tumor in the neck, but which had again taken large proportions, was relieved in five days, the tumor opening and gradually disappearing without pain.

One woman who herself had been helped by Christian Science, had a beautiful demonstration. Her little niece had fallen in the yard on a heap of sticks, one of which

entered her mouth and cut the uvula. Without having recourse to a doctor, the woman treated her, and the little girl was healed in two days, so that she could eat a hearty meal on the second day.

A young lady who was pronounced incurable by the doctors, and threatened with loss of sight, has been healed in one treatment. She was transformed into a new being, all her sadness turned into joy. She is now as happy and bright and studies as earnestly as any other young girl.

A young woman who had several troubles, among which were nervous prostration in a severe form, polypus in the nose, and female trouble, was entirely cured. Moreover, harmony was restored to her home by the blessed Truth, and she is now a happy woman.

A lady who had been treated by different doctors without success, and whom the doctors wanted to operate upon for serious liver and stomach trouble as well as gall-stones, was entirely healed by Christian Science.

I could mention a great many more cases, but these are sufficient to show that the healing work is going on here as elsewhere.

Every morning when I awake, my heart goes out in gratitude to our dear Mother who has brought this great blessing to us. I also wish to thank my teacher and all the Scientists who give us such help by the articles and testimonies in the *Journal* and *Sentinel*.

ALMA BIENE, Dresden, Saxony, Ger.

Quickly Restored to Health.

Easter time has a doubly sacred significance to me, inasmuch as it marks the resurrection of our Lord and Saviour, Jesus Christ, and the time of my being brought from darkness into light, and from a bed of suffering and pain to perfect health, joy, and peace.

January 30, 1898, error laid me low with several different troubles, some of which had been my constant companions for twenty-five years. It laid a seemingly strong hand on me and held me firmly for nine weeks, during which time I was under the care of three of Fort Wayne's best physicians, that city being my home at that time. It was finally decided that two surgical operations would be necessary before I could be well, and the arrangements were partly made, but as I had been unable either to eat or to sleep, I had become very much reduced, and the physicians concluded it best to defer the operations until I regained my strength, at least in part.

However, all material remedies and the best of care and nursing failed to restore this lost strength. Nine weeks came and went, and finally, on Wednesday night, April 6, I suffered a very severe relapse when peritonitis developed. Our faithful doctor was sent for, and after two hours of earnest work left me very little better. I continued in this condition until the following Friday afternoon, when a very dear friend, a Christian Scientist, called, not to talk Science to me, however, as she had tried that before and been ridiculed. But "through suffering we are purified," and the soil was ready for the planting of the seed.

This friend talked to me in a general way, and in a very short time, without my knowledge, the suffering and pain had all vanished. I did not understand Christian Science, or care to, and loath to acknowledge any benefit, even when I was free from pain. However, after a little conversation on the subject, I asked for treatment, which was given. Treatment continued for three weeks, but the healing was almost instantaneous, as the next morning I arose and dressed myself, and had no desire to return to my bed until I retired for the night at 9.30 P.M.

The next day being Easter Sunday, I attended church services at the Presbyterian Church, of which I was a member at that time. Two daughters and myself compose my family, and after the wonderful demonstration of the

power of Truth over error in my healing we together took up the study of Science and Health. My daughters both received treatment also, and were wonderfully healed of several different troubles.

It is now three years since we found this great Truth, and during this time the Bible and Science and Health have been our only physician. While the way has not been altogether smooth, yet we have been greatly blest. For twenty-five years we were all steeped in medical theories and errors of every sort, but Science and Health has opened the Bible to us in a way we never could have found otherwise. It has enabled us to discern the real from the unreal, and has pointed out to us the true Life which is God, Good. It has lifted us from the depths of error to a higher plane of thought, for which we sing praises to God every day. We are more thankful each day, not only for the physical errors we are enabled to overcome, but for the spiritual uplifting and understanding of this great Truth. We are indeed thankful to God that He has blessed the world by giving to us our dear Mother, Mrs. Mary Baker Eddy, through whose wonderful writings the way is so beautifully illumined for us.

MRS. S. A. HILTEBRAND, Huntington, Ind.

Questions Answered in Christian Science.

Three years ago Science and Health was loaned me upon asking for something to read, and from reading a few pages at random, I was well enough pleased with the book to ask for it again, and received with it a copy of the *Journal*. Since then I have been a constant student of all Christian Science literature, finding it an answer to the endless amount of questions which ever confront mortals. I was an agnostic, not knowing what or where God was, and not being able to arrive at a satisfactory conclusion as to the why or wherefore of this existence. My thought was filled with doubt and fear, making existence far from happy.

While I have had many demonstrations of the power of Mind to restore harmony, I am most sincerely grateful to Christian Science for the answers it has given to the questions: What are Life and death? What is this world and man? etc.

Christian Science gives rational and satisfactory answers to all such questions, and proves its truth, by bringing one more happiness, health, and harmony in every line. To any one looking for a solution of all problems I can heartily recommend the reading of the Christian Science text-book, "Science and Health with Key to the Scriptures." I can safely say it is worth many times its weight in gold. These few lines from "Pulpit and Press" by Mary Baker G. Eddy, found on page 5, have been a wonderful help to me lately: "Know then that you possess sovereign power to think and act rightly,—and that nothing can dispossess you of this heritage and trespass on Love."

Engaged in the bustle of ordinary work one is almost hourly confronted with situations where it seems hard to decide just what the best course is, but if one keeps awake to this "sovereign power to think and act rightly," it dissolves all perplexities, bringing harmony here and now.—J. M. M., Seattle, Wash.

From Atheism to Understanding.

I had no faith in Christian Science when I first went for treatment, and I was therefore surprised when I found relief after the first treatment from an incessant and severe backache with which I had suffered for many years. But as I learned to know something of the Science I was not surprised when this trouble disappeared entirely.

Before coming into Christian Science I was an atheist. Now I not only believe in God, but it is my privilege to understand Him in a measure. This understanding of God, as revealed in Christian Science, I have found to be a powerful agency in dispelling errors of every sort in my daily life, and I would like to add for the benefit of those who are just turning to Christian Science, that even a very little understanding is more powerful than anything you have ever used to destroy the ills of the flesh and mind. Do not fail to use what you know, and it will surprise you with its power.

As an illustration of this fact I will say that when I was very young in Science, I was able to heal a girl of inflammatory rheumatism of long standing; and I think I knew at the time little more than the statement: God being infinite Good there is no room for anything else; but I was so well convinced of this fact that her trouble was destroyed. Try it yourselves, dear friends, and see what it will do for you.

In the past I had no desire to be spiritually minded, thinking, in my ignorance, it meant religious enthusiasm or something of the sort, but now I find to be spiritually minded means simply to be truthfully minded, and in this way, I can be as spiritually minded when adding up an account as I can be in singing a hymn.

E. S. F., Chicago, Ill.

A Case of Instantaneous Healing

When in a very despondent thought, I was led to look into Christian Science by having a sign of the healing power of Truth shown me, through a case of instantaneous healing of a physical trouble.

I had suffered much pain in my back, the result of a severe fall, and material remedies had failed to give me relief. At this period I was directed by what seemed then a mysterious circumstance, to meet an old friend whom I had not seen for several years, and while I was wholly ignorant of the subject of Christian Science, I knew she was a successful practitioner of Christian Science healing. She saw at once I needed help; the sweet words of Truth spoken at that time appealed to me, and when I asked if Christian Science could heal my trouble, my answer was the disappearance of the trouble and it has never returned.

This little sign led me to study Christian Science with my healer (a loyal student of Mrs. Eddy) to learn of its beauties.

While going through class I was able through the understanding of Christian Science to heal a case of dyspepsia in one treatment.

My first demonstration in the dentist's chair was a case of very sensitive nerves. When the dentist had finished my work he remarked, if all patients were as free from nerves as I seemed to be, his work would be made very easy. Not long after a patient came for the same help I had demonstrated in my own case, and the fear was met and mastered for her, as in her previous visits to the dentist she had suffered much.

I am grateful to God and to Mrs. Eddy for all that Christian Science has done for me.

C. F. V., Winchester, Mass.

They that sleep do not know that they are sleeping, and they take the figments of their own fancies for solid realities. Christians are the only people that are really awake, but even for them it is uncommonly hard, as John Bunyan taught us long ago, to keep their eyes open in the enchanted ground, and in touch with realities, and seeing through the dreams of other men.

DR. ALEXANDER MACLAREN.

Religious Items.

George Frederick Wright, professor of geology of Oberlin College, arrived home from the old world on March 22. He has been making explorations in Asia and Africa and he claims to have made an interesting discovery, which he tells about as follows: "It has hitherto been supposed that the children of Israel crossed the Red Sea at Suez, but it has been found difficult to reconcile this supposition with the fact that a million persons crossed the sea in a single night, which would necessitate a very wide division of the waters. My explorations north of Suez have convinced me that the point of crossing was twenty miles north of Suez, because at that point the conditions are all fulfilled. The waters at that time were about four feet in depth there and the mountains are in the west just as related, and an east wind would have swept bare a place at least five miles wide."

In an editorial article on "Is moral Evil Endless?" *The Congregationalist* says: "This question, in various forms, is presented frequently in the examination of candidates for ordination to the ministry. A generation ago in Congregational councils only the affirmative answer was admissible. The Andover Creed was unchallenged which declared that 'the wicked will . . . with devils be plunged into the lake that burneth with fire and brimstone forever and ever.'"

"But concerning the problem of endless moral evil they [many Christian teachers] would say that they cannot reconcile it with the revelation of the omnipotent love of the Father. They decline to interpret dogmatically the words of Christ as declaring that sinners persist forever in resisting the will of God. They leave the problem unsolved, with hope."

A writer in the *New-Church Messenger* says: "To live in eternal ease and idleness, to feast the eyes on rapturous scenes of beauty, to occupy an exalted place, and to receive the homage paid to the great and powerful, to sing perpetual songs of praise to the Most High; these, one and all, have been supposed to constitute the blessedness of heaven. But a state of life which had nothing else to offer would soon grow wearisome and pall upon the taste. The pleasures of self-love soon wear themselves out, and turn to pains. Ah no; it is only a life of active and unselfish usefulness which can bring lasting satisfaction. And that life we can begin here and now. Even amid the toils and trials of this world, we can, if we will, have a foretaste of heavenly joys, and prove their surpassing excellence."

In a recent letter Andrew Carnegie says: "My resolve was made in youth to retire before old age. From what I have seen around me I cannot doubt the wisdom of this course, although the change is great, even serious, and seldom brings the happiness expected. But this is because so many, having abundance to retire upon, have so little to retire to. The fathers in olden days taught that a man should have time before the end of his career for the 'making of his soul.' I have always felt that old age should be spent, not as the Scotch say, in 'making mickle mair,' but in making a good use of what has been acquired, and I hope my friends in Pittsburg will approve of my action of retiring while still in full health and vigor, and I can reasonably expect many years for usefulness in fields which have other than personal aims."

M. Rhodes, D.D., says in the *Lutheran Observer*: "One who has given careful study to the Pauline writings has hardly failed to be impressed with the apostle's full knowledge and appreciation of the grace of God in Christ Jesus. Herein lay his marvelous power as a preacher, his strong character as a witness to the Truth. In our strange limitation here it is easy to detect the weakness of the Church to-day. The measure of our strength as Christians or preachers of the word will be the measure of our knowledge of what we have in Christ. Many live,

alas! as though their resources in Christ were very spare."

In an article in *The Congregationalist* on the "Right and Wrong Use of the Tongue," we find the following: "The faithful Christian's manner of words as well as of life already has the mark of heaven's purity and truth upon it. Speaking the truth in love, men trust him. Seeking not his own, men come to speak unselfishly in his presence. Considering others, they in turn become considerate. Cherishing no resentments, he awakens no angry feelings. Such a Christian self-control is not easily attained, but it is worth striving for, and by God's help it is not out of reach."

The (Methodist) *Christian Advocate* says: "If there is a bitter thought within us, let us never bear our testimony to the power of divine grace again until we have first made confession that we are in the gall of bitterness ourselves. Mere repression of this evil principle will not answer. This is no remedy. The love of God shed abroad in the heart by the Holy Ghost will expel the bitterness and make the heart as sweet and pure as love itself. Then shall brotherly love be established. Then shall prayer be effectual."

In an article on "Universalism and Free Will" in the *Universalist Leader*, the Rev. Walter A. Tuttle says: "The way of the transgressor is hard." Difficulties are piled up in the path of the sinner till he is glad to turn round and seek an easier path. Those difficulties are God's compulsion; but it does not seize the sinner by the shoulders and march him into the right road; it makes the wrong one so hard and so unpleasant that he is ready of his own free will to march himself into it."

A writer in the (Unitarian) *Christian Register* says: "It is one of the familiar sayings of our day that theology is obsolete or, at least, obsolescent. In scholastic theology itself there is undoubtedly a greatly diminished interest. But the theologizing process is one of those human instincts that persist. It disappears in one form only to reappear in another. And its reappearance at the present time is in rather of an unexpected locality; namely, in modern fiction."

One of the contributors to the columns of the (Baptist) *Standard* says: "Bacon, in one of his essays, describes a serene mountain height, above the reach of cloud and storm. Morning comes quickly and the night lingers. No miasma ever disturbs the matchless purity of the air. The fabled summit is an emblem of the heights where dwell those who have made the largest ingathering of the fruits of the spirit."

A writer in the (Baptist) *Examiner*: "Unless one is born again he cannot discern spiritual things, of the 'lively hope,' the 'joy unspeakable,' the certainty of having passed 'from death unto life,' the sonship, and the witness of the Spirit, he can know nothing. The meaning of words can be found in the lexicon; but the carnal mind, the heart unrenewed, cannot discern them."

In an article warning its readers against begrudging time to spiritual things, the (Methodist) *Christian Advocate* says: "Think of spending all one's time on the things that perish, while the things which are eternal are within our reach. Think of the folly of devoting ten hours each day to money-making and only ten minutes to the good work of laying up treasures in heaven."

The *Universalist Leader* says: "To set each one right in regard to the outward and the inward life is the aim of the Gospel. Christ's teaching and example are the great incentives to this end to every mind that studies his words and life attentively. He denied himself, made the greatest sacrifices in the world's behalf, and in so doing revealed his constant fellowship with the Father."

The proprietors of *The Congregationalist* and

Christian World announce to their subscribers and patrons that they have sold their property to the Congregational Sunday School and Publishing Society, which corporation will hereafter own and publish the paper, and conduct the business.

The (Baptist) *Watchman* says: "If most of us were as eager to exemplify in character and conduct the religion we profess, as we are to confute those who do not like our religion, what eminent saints we should be! Perhaps then there would be less need of confuting gainsayers."

The *Friends' Intelligencer* says whatever else may be believed or disbelieved, denied or declared, regarded or neglected, how is it possible to put aside the plain evidence that Christianity is to be Christ-like, that to serve the Master is to follow him.

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75

Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Political and Governmental Notes.

According to the press dispatches, Tom L. Johnson, the new mayor of Cleveland, O., who is the leading single taxer of the country, is losing no time in carrying his promises of reform into effect. One dispatch says: "The first thing he did was to set a local reformer to work with a force of one hundred clerks and nearly one thousand maps to make a tax valuation of every piece of land in Cleveland. Johnson proposes a complete readjustment of taxation here. Then the mayor started out in earnest to tear down all old and shaky buildings in the city. He also says no more frame buildings shall be erected in the fire limits. He sent a fire department truck with a building inspector to 121 Erie Street, where a frame structure, owned by County Examiner Black, has just been completed. This was torn down. Another building, on Vermont Street, was also torn down. Notices to tear down their buildings were served on hundreds of land-owners yesterday. If, at the expiration of twenty-four hours the buildings are not removed, the fire department has orders to pull them down. All the enormous sign-boards on vacant lots—signs that are eyesores—are being removed by order of the mayor."

The Cuban constitutional convention re-assembled on April 12, and voted to reject the terms of self-government offered by the United States as embodied in the Platt amendment to the army bill. Governor-General Wood has all along predicted that the Convention would accept the Platt amendment and the contrary action was a surprise to President McKinley. Some of the President's advisers urge him to withdraw the troops from Cuba anyhow, as they believe this action would bring about an understanding satisfactory to both nations much sooner than would be possible while the United States backs its claims by force.

Felipe Janer, the Porto Rican who sought to take a civil service examination and thereby raised the question whether a native of that island is a United States citizen, has been notified that he does not come within the requirements of eligibles for examination, probably on account of the citizenship question. It is expected he will lay the whole matter before the President.

It is said that Aguinaldo has prepared a brief manifesto to the Filipinos in which he advises them to submit, and gives the reasons therefor. He acknowledges the incapacity of the Filipinos to govern themselves, and advises the leaders, as for their best interest, to give in. This manifesto is being translated into Tagalog, Spanish, and English.

Secretary Long has cabled instructions to Rear Admiral Remey, commander-in-chief

of the Asiatic station, to enlist five hundred natives of the Philippines for service on the former Spanish gunboats and other small vessels which are to be maintained exclusively in the Philippines. These men will form the nucleus of an important service composed solely of enlisted men.

N. F. Chamberlain of Chicago has signed a contract to remove the wreck of the United States battleship Maine, agreeing to give the Government three per cent of the proceeds. The contractors expect to realize \$2,000,000 from the undertaking if the vessel can be patched up, or about \$1,000,000 if she has to be broken up.

The officials of the United States War Department estimate the casualties sustained by the Filipinos in their war with the Americans at fifty thousand men. Over twenty thousand Filipinos have either surrendered or been captured since the war began.

An equestrian statue of Major-General John A. Logan was unveiled in Washington, D. C., on April 9. The statue is the work of Franklin Simmons and was made at the expense of the United States.

Foreign News.

London press dispatches say that reports are being circulated among persons near the throne that King Edward recently summoned Mr. Chamberlain and Mr. Broderick to express to them his displeasure at the unsatisfactory outcome of the Botha-Kitchener negotiations, which, King Edward said, were conducted in too peremptory a manner. The king, so the report says, insisted on Mr. Chamberlain and Mr. Broderick submitting to him the minutest details of the negotiations, and emphatically made known his desire to end hostilities in the Transvaal, and his express wish that instructions be sent to Lord Kitchener to find a basis for reopening negotiations with Botha, which will be backed this time by the king's moral influence.

General Tung Fu Siang, the famous commander of the Chinese northern army, is leading a serious revolt in Mongolia and Shensi against the imperial authority. It is supposed that Prince Tuan is co-operating with him. General Tung was one of the number whose execution was demanded by the foreign powers, but the demand was not pressed for the reason that he had a large force of trained soldiery obedient to his will and the government could not touch him.

According to estimates made by the newspapers, the claims on China for indemnity which are to be filed by the foreign powers will aggregate about \$500,000,000.

The official report of emigration for Ireland shows that 17,107 persons left that country in 1900. This is 10.5 per thousand of the estimated population. The emigrants were equally divided between the sexes.

According to Shanghai advices of April 12, the Chinese court will soon leave Si Ngan for Peking.

Industry and Commerce.

Under the direction of J. P. Morgan & Co. a company has been formed to take hold of some of the largest wholesale and retail dry goods houses in New York City. The company is to be known as the Associated Merchants Company. It will have a capital of \$20,000,000 and will control the H. B. Claffin Company's wholesale dry goods store, said to be the largest house of its kind in the world; the Adams Dry Goods Company, and the great Twenty-third Street house of James McCreery & Co. The Adams and McCreery houses are retail department stores.

The British War Office states that it is going to try the experiment of supplying the army with only home-grown beef. The experiment will extend six months from June

1. The director of contracts said: "The new rule applies only to refrigerated beef hitherto bought in the open market in London. It will not seriously affect the American trade, as the total weekly supply for the army is only 200,000 pounds, which is barely two per cent of the weekly imports of refrigerated beef into England from the United States."

The stockholders of the Pennsylvania canal—a portion of the State's system of interior waterways, and an important factor in early transportation, have decided to abandon it and to dispose of the property. The part of the canal affected extends from Columbia to Nanticoke, a distance of 144 miles, and from Northumberland to Loyal Rock, about thirty miles, and was constructed by the State under an act of the Legislature approved by Governor Shulzer in 1826.

The Pennsylvania Steel Company has bought the entire stock of the Spanish-American Iron Company, and thus became the owner on April 1 of the iron mines at Dalquiri, Santiago de Cuba. The Pennsylvania Steel Company is now in course of reorganization, and is to have a capital stock of \$24,000,000.

The Royal Bavarian Railway Administration has issued an explanation regarding the recent order for four locomotives from the United States, asserting that the order was not given because of the low price, but merely to enable an examination into American methods of construction.

The New York World figures that since election ninety-four New York stocks have advanced in market value \$1,076,078,830.

The Boston elevated railway structure was completed on April 13. The system has been under construction for three years.

General News.

A dispatch from Butte, Mont., dated April 12, says: "A portion of this city, believed to embrace the larger part of the big hill upon which some of the Anaconda mines are located, has made a very perceptible movement southwestward during the past few days. At the foot of the Anaconda hill the slide pushed the tracks of the street railway line about six inches for a distance of three hundred feet. Geologists say the entire range of mountains about Butte is constantly moving, but no danger is apprehended."

Mr. Frederic Harrison, the great English author, on his return to London after a nine weeks' tour of America, said: "I shall spend the rest of my life trying to stimulate friendly relations between America and England. Already the leading men and women of both nations feel the strongest mutual sympathy and affection. They realize many powerful reasons why Americans and Britons should co-operate with each other, and intend to promote such co-operation to the best of their ability."

An order has just been filled in Connecticut for a million pounds of trolley wire for an electrical road in India. It is hard drawn copper wire, and is the largest export order for this material ever received in the State. The reels upon which the wire was wound required nearly one hundred thousand feet of lumber for their construction, and the reels and wire combined will weigh one and one-half million pounds. Twenty-seven cars and two engines will be used in transporting the shipment to tidewater.

On April 11, M. Cambon, the French Ambassador to the United States, and a party of officers and cadets from the French training ship Duguay Trouin, visited the tomb of Washington at Mt. Vernon and placed a wreath of flowers upon it. The French visitors inspected the house and grounds, lingering for a long time in the room which the Marquis de Lafayette occupied while a guest at Mt. Vernon.

Forest Reservations and a Tree Museum.

The Work that has been done at the Arnold Arboretum to Preserve the Western Forests.

THE very considerable amount of discussion which is now being carried on regarding forestry and the necessity of national or state regulation of our remaining important forest areas, makes timely a note of the movement which began twenty-one years ago at the Arnold Arboretum in Boston, Mass., and ended in the reservation by presidential proclamation of a total of about forty-five million acres of the public lands as governmental forest preserves. President Cleveland's proclamation, dated Washington's Birthday, 1897, set apart over twenty-one million acres. The creation of these great public reservations has been aptly likened to some modern miracle of the loaves and fishes, in that so great a public benefit has been directly derived from the little piece of land in Massachusetts, which Harvard University and the city of Boston had set apart for the cultivation and study of the forest trees of the north temperate zone.

The taking of the tenth census was entrusted, by a fortunate choice, to the late Francis A. Walker, afterwards president of the Massachusetts Institute of Technology, and one of the best and ablest men that Massachusetts or the country has produced—a soldier, an economist, a statistician, an educator, and, above all, a wise and public-spirited citizen. The result of this selection was that the Tenth Census was the most satisfactory to the public, the most accurate, and the most valuable in its results of any census that had ever been taken in the United States.

General Walker had the foresight and breadth of mind to make a special feature of an investigation of the forests of the country, placing Mr. Charles S. Sargent, Arnold Professor of Arboriculture at Harvard and director of the Arnold Arboretum, in charge of the work. In the course of the task which he thus undertook, Mr. Sargent traveled from one end of the country to another. He examined the conditions and character of the tree growth in every important locality, and gathered a vast amount of wholly new information. The resulting volume was of monumental importance in the history of American forestry. It told of our forests, of their bibliographical history, economic worth and uses; described the different woods and their commercial value; gave an account of the lumber industry, and the accident of forest fires, with other details almost too numerous to mention; and contained a remarkable series of colored maps showing forest growth and density in different states. In addition, accurate studies were made of all species of trees growing in the country, with careful note of all the districts in which particular species predominated.

For the first time the people of the United States were able to realize the vast extent and value of their forest resources. It was shown by careful statistics, elaborated in great detail, that the annual forest crop of the country

far exceeded in value that of any other crop grown—whether wheat, corn, or cotton. It was made clear that a resource of such value, which had been wholly neglected in so far as any consideration of its staple character was concerned, involved a problem deserving of serious attention.

The report, which was several years in preparation, owing to the labor required to work up the accumulation of material, proved to possess immediate practical value in the highest degree. It has been said that if a man does not know that he has property, to all intents and purposes he does not possess it so far as its service as an asset is concerned. The same is true of a nation. The United States became aware for the first time of how rich it was in forest resources—rich beyond comparison with any other part of the civilized world, and the statement of the facts gave immediately a great impetus to well-considered investments in timber lands, and to the development of the national resources of extensive sections of the country.

The report showed, for example, that the white pine supply of Michigan and the few other parts of the country to which that useful tree was limited, in any commercial quantity, was approaching exhaustion. It had been believed to be practically inexhaustible, and lumber operations had been characterized by the most wasteful methods. The prediction was scoffed at, and the author of it was even accused of being in league with speculative interests that had schemed to bull the lumber market. But his words were too soon proved true. Had other kinds of timber not been substituted for white pine in most of the purposes for which it was used, there would before now have been an absolute famine in that product. Again, Mr. Sargent called attention to the wonderful timber resources of the Southern States; and his discussion of their value was the prime cause of the remarkable development of the lumber interests that soon began in the South.

But the most important part of the report lay in its demonstration of the necessity for guarding the timber lands owned by the government in the far West against destruction. It was made evident that the preservation of the forests in those regions was largely essential to the protection of the dependent country and the maintenance of a permanent population over the greater part of the area west of the Missouri. It is well known that trees will grow only where there is a sufficient rainfall, and west of the one hundredth meridian precipitation is so unevenly distributed through the year that forests are confined to the slopes of high mountain ranges or to the elevated plains, the other portions of the country being practically treeless. These mountain forests serve to collect the rainfall and to regulate the flow of the streams, which in turn are essential to the work of reclaiming the so-called desert lands by irrigation. Furthermore, it was shown that the dry seasons are here so long that, if forest destruction is even slightly encouraged, it will be well-nigh impossible to restore the limited tree-covering that now

exists, and that the entire lower region will suffer desolation.

The importance of the facts thus was realized more and more, until, in 1891, a law was passed enabling the President to set apart as forest reservations any suitable portion of the public domain. In 1896 the Secretary of the Interior requested the National Academy of Sciences to make an investigation of the whole subject and to report upon a definite national policy. The Academy accordingly appointed a committee of its members to make the investigation desired, with Mr. Sargent as its active head. His report, presented by the whole committee, recommended the addition of thirteen new forest reserves, most of them covering high mountain ranges where important streams had their head-waters, and including nearly 21,400,000 acres, which were set apart by President Cleveland's proclamation, previously referred to.

The committee of the National Academy suggested that the work of policing national forestry property and protecting it against fire and encroachment might properly be devolved upon the army, pending the organization of a fully developed forestry service. But nothing has been done to carry out this recommendation. It is felt by all competent students of forestry that the reservations should be administered through permanent organization in accordance with a forest policy intended to continue for generations. But at all events an enormous area of land for forestry purposes has been set aside; and it seems likely that other reserves will be made in certain other parts of the country—as, for instance, the proposed Appalachian reserve in the mountains of North Carolina and Tennessee. As Mr. Sargent says, in a recent statement, such a reservation, held as a national park, would preserve for the future a typical portion of forest which is admittedly the richest and most interesting collection of deciduous trees in the world, both for the varieties represented and for the development of the individual specimens of which it is composed—comparing in quality only with the equally remarkable coniferous forests of the Sierra Nevada on the other side of the continent.—*Dayton (O.) Herald*.

Biggest Dam in the World.

WHILE a water famine scare is being raised in various quarters, and while public attention is being directed in this city, Albany, and elsewhere, to schemes to secure to private parties the right to supply the metropolis with more water, the fact has escaped notice that the finishing touches are now being put on immense public works, planned a decade ago, which will more than double the city's supply at a single stroke.

The present supply stored in the Croton district and elsewhere is about thirty-four billion gallons. When the works are open which are now nearing completion the supply will be increased to seventy billion gallons.

At this moment a document which reveals the cheerful news is in type on the desk of Chief Engineer Hill, in the office of the Aqueduct Commission, in this city, and it only awaits a resolution of the Board to be made public in the columns of the City Record. This resolution must be adopted without delay, for the time for final action has come. The paper referred to is a call for bids to clean up the Croton valley for a distance of eighteen miles from Croton Landing to a point at the head of the valley in the hilly country in the interior. Houses, fences, orchards, everything must go to make place for a new Croton lake. This paper is in effect an official declaration that a gigantic work which has been in progress more than eight years is practically complete.

The purpose of the new Croton dam is to save and utilize the vast volume of water that has been running waste over

the seven hundred square miles of territory included in the Croton watershed. There are six reservoirs, great and small, now on the watershed, the largest of which is now known as the old Croton reservoir. The waters of all will empty into the new lake which the dam will form. The old Croton reservoir itself will disappear from view forever. It stands on much lower ground than any of the others, and when the new lake is filled up to the height of the dam the top of the old reservoir will, in fact, be submerged.

Making a new lake big enough and deep enough for a fleet of war ships to manœuvre on is not an every-day affair, and the nature of the job will best be understood by comparison. Central Park contains eight hundred and forty acres, while the new lake, when filled to its limits, will have a surface of more than five thousand acres. The area of Central Park could be taken from the area of the new lake five times over, with enough space to spare to include all the small parks on Manhattan island. The lake will be eighteen miles long, with an average width of half a mile.

The dam is a barrier of granite, two hundred and sixteen feet thick at the widest point of the base and three hundred and five feet high to the top of the cornice. Its length is twenty-six hundred feet. The work will serve as a most picturesque driveway and pedestrian route, for the roadway will be twenty feet wide over the structure proper, with projections of two feet on either side. It will command an enchanting view of the Hudson and the Palisades, and will rank not the least among the wonders of the world. It is estimated that eight million cubic yards of solid granite will be used in the structure.

Facts and figures prove that it is no misuse of language to class the new dam among the wonders of this planet. It is by far the largest dam in existence, and no other structure on earth, except the Pyramids of Egypt and the great wall of China, exceeds it in magnitude.

There are at present nine hundred mechanics and laborers engaged on the job. They make a good-sized colony, for all live in the vicinity, and many of them maintain their families in the neighborhood. Contractor Coleman built a church close to the dam, where a priest from Croton Landing celebrates mass every Sunday.

The granite for the dam is quarried in a mountain six miles distant and is conveyed by railroad, and sixteen miles of rails are in operation from various points. A dozen locomotives, with one hundred cars, are used in the work. There are also about one hundred horse and mule teams engaged in hauling. The "travelers" which convey the great granite blocks over steel ropes from the hills above to the dam are huge affairs. The capacity of the travelers now in use along the line of the rapid transit subway in this city is less than one thousand pounds, while those in use at the Croton dam each can carry ten tons.

Since the foundations were laid all has been pretty easy sailing. The interruption caused by bad weather was of small account, for the cement used is subjected to the influence of steam and boiling water in frosty weather, and can be placed in position in any condition of the thermometer. During the strike last spring, when the national guard was called out, work was suspended for less than two weeks.

The "spillway," which will top the dam on the right side of the river, will be one of the interesting features. This portion will be ten feet lower than the highest level of the dam, and any overflow that may result from heavy rains or other causes will pass over the spillway into the river bed below, and not over the main dam. The roadway across the dam, for vehicles and pedestrians, will be continued over the spillway on a uniform level. The last work to be done before the storage of water is commenced will be the closing of the two archways below.

United States Postal Cards.

THERE are many millions of postal cards used in the United States every year, and it will surprise the majority of people to learn that the centre of the postal cards industry—the only place, in fact, where they are made—is a little village in the mountains of West Virginia. The town is Piedmont, and here, six days in every week, an army is busily at work making the little oblong sheets of cardboard on which so many messages of all sorts and kinds are written by all conditions of people. Here the cardboard is made from the fresh, sweet spruce-trees; here it is cut into the requisite sizes, and here the cards are printed, packed, and shipped, eventually finding their way into every state, city, town, and hamlet in the country, and to Cuba, Porto Rico, Hawaii, and the Philippine Islands.

Piedmont, as the name indicates, is at the "foot of the mountains," and the range is the well-known Appalachian. It is also the commencement of the famous seventeen-mile grade on the main line of the Baltimore & Ohio Railroad to Altamont, in Garret County, Md. The elevation of Piedmont above tidewater is nine hundred and thirty feet.

The size of the sheets of paper used on these presses is fifty by thirty inches, and each sheet contains ninety postal cards ready to be cut and packed when it comes from the press. The dies used on these presses are furnished by the government. Four men work the presses. The men each work eight hours a day. One man is used in the casing part of this room to put together the knock-down pine boxes in which the cards are packed for shipment. The boxes are made of pine grown in West Virginia and are shipped "knocked down" to the contractor. The boxes vary in sizes, holding five, ten, twenty-five, and one hundred thousand cards respectively.

The contractor has to pay the government for the use of the dies and also give bond for the care and custody of these plates. The size of the "H" card (the card in general use by the public) is three and one fourth by five and one half inches; the "D" or double reply postal card is five and one half by six and one half inches; the "K," or "ladies' card," the smallest postal card manufactured, is 2 15-16x4 15-16 inches; the international "F," or double card, is five and one half by six and one half inches, and sells to consumers at four cents each, and the "E" international card is three and one fourth by five and one half inches, and is sold at two cents each. The "H" card weighs six pounds and three ounces per one thousand cards, and the "F," or return postal cards, weighs twelve pounds and six ounces per one thousand cards.

Everything appertaining to the postal works is under the direction and charge of Edwin C. Madden, third assistant postmaster-general at Washington.

On the second floor of the works are located three cutting machines and one "slitter." The cutters are operated by young lady experts and the "slitter" by male experts. The "slitter" first cuts into single strips the sheets of ninety postal cards as received from the presses on the first floor, and then into strips of ten postal cards. Afterward these strips of ten cards each are taken to the cutting machines, which are in close proximity to the "slitter," and are there cut into single postal cards. The cards are twice automatically counted into packages of twenty-five cards each as they come from the machines. At the cutting machines the cards are received by a young lady, who places a paper band around the packages of twenty-five, and these packages are put into pasteboard boxes, five hundred cards to the box.

One young lady is engaged in putting together "knock-down" pasteboard boxes and in one day of eight hours this employee will put together more than four thousand boxes ready to receive the packages of cards. These boxes are made by a box factory in Connecticut.

There is a fire-proof vault on this floor which has a

capacity for holding in reserve more than forty million postal cards. The daily cutting capacity of the cutting machines, running for the period of eight hours, is eight hundred thousand postal cards per machine, or 2,400,000 postal cards for the three machines a day. But the present daily average is a fraction over two million cards. The official report of the third assistant postmaster-general states that there were issued during the year ending June 30, 1897 postal cards as follows:—

Single cards, domestic.....	517,700,500
Single cards, international.....	433,250
Double cards, domestic.....	5,477,500
Double cards, international.....	7,000

Total 523,618,250

The largest shipment of postal cards ever made from the Piedmont works was on June 16, 1900, when it reached the large number of twenty-four million.

The cards were shipped to various large city post-offices and to the sub-agencies. The sub-postal card agencies are located at Cincinnati, St. Louis, Troy, New York, and Washington, D. C., and are technically known as distributing offices, where requisitions are filled on orders of the stamp division and of the third assistant postmaster-general.

The number of employees necessary to work this plant is only forty, of which number twenty are males and twenty are females—a small number when the value and volume of this vast business are taken into consideration. All are expert at their work. It is especially interesting to see the quick manipulations of the stock by the lady experts at the cutting machines and the packing of the cards in the pasteboard boxes. R. L. Nicholson, a son of Commander Nicholson, on the retired list of the navy, is superintendent of the works for the contractor, and is thoroughly familiar with the responsible duties of his position.

The postal cards for use in the Philippines are also manufactured at this plant, and are like the domestic cards, but are surcharged with the word "Philippines" just below the vignette. It is the same with the postal cards manufactured for use in Cuba and Porto Rico. Those in use in the island of Hawaii are now the same as the domestic cards.—*Selected.*

Some of Washington's Maxims.

Undertake not what you cannot perform, but be careful to keep your promises.

Vile words should not be spoken in jest or earnest.

Scoff at none, although they give occasion.

Haste not to relate news if you know not the truth thereof.

In talking of things you have heard, name not your author always.

Associate yourself with men of good quality if you value your reputation, for it is better to be alone than in bad company.

Speak not when others speak; sit not when others stand; walk not when others stop.

Strive to keep alive in your breast that little spark of celestial fire called conscience.

Example is more powerful than precept; whereof you reprove another be unblamable yourself.

Never be forward, but be friendly and courteous; the first to salute, hear, and answer, and not pensive when it is time to converse.—*Selected.*

Between the great things that we cannot do and the small things we will not do, the danger is that we shall do nothing.—ADOLPHE MONOD.

Selected Articles.

From Old Mexico.

To the Editor of *The Mexican Herald*.

Sir:—I have been interested in Christian Science study and practice only about three years, and do not pretend to know enough about it to rush into print with any explanations as to its operations. However, with but a limited experience I have found it to be the most soul-satisfying, helpful element that has ever possessed my consciousness. It has saved me from what was called mortal sickness; it has broken the chains of life-long habit and secret sin; and it is doing the same thing every day for thousands of men and women the wide world over. Its mission is to help people, not to hurt them, and even during its brief history of two years in Mexico, Christian Science has helped scores of persons who could get help nowhere else.

Therefore it has pained me, as I am sure it would pain any one who is trying to live up to the standard of Jesus Christ, as insisted upon in Christian Science, to see, in the columns of *The Mexican Herald*, criticisms upon our religion and our mental therapeutics. Is it too much because we insist upon the full salvation made possible by our Master? He came to show men and women the way out of sin into holiness and the way out of sickness into health, at the same time. It was the undivided garment. Because people do not understand the theories of Christian Science should these be discarded? There are millions of people who do not understand what electricity is, yet it is an accomplished fact in the demonstrations of Edison and Tesla. People may not know what the world's axis or the equator is, but Galileo was merely a pioneer in that line and the world has to accept both in the appraisal of the world material. Why criticise Christian Science simply because we cannot understand it, when we have to accept thousands of other unexplainable things every day in our battle with life? The story is told of the old Quaker who reproved the atheist who was boasting that he did not believe in God, because he had never seen Him. "Thou hast never seen thine own brains, so I presume thou hast none."

The references to Christian Science in the daily newspapers in connection with the Brush will case and the contests over so-called medical bills in various states of the American Union, are, as a rule, misleading and misrepresentative, and would seem to show up Christian Science in a ridiculous light. But mortal mind has always tried to do that. Let me submit, that it is impossible to explain Christian Science intellectually and it cannot be assimilated as mere words. The heart not the head can appreciate the wonderful laws of reflection, receptivity, and manifestation that form so important a part of Christian Science. It is something to be felt, not seen. It is the genius of Christian Science, not the mere theory, that is doing marvelous work in Christian Science in almost every country on the globe. Can a man who knows the taste of oatmeal explain that taste to another man who has never tasted oatmeal? Can any one explain to the African savage what ice is? Not draw diagrams or write out detailed descriptions, but explain it; make it part of his consciousness, so that that naked savage would be chilled to the bone? We cannot adequately explain what Christian Science is. We can live it, but if we confine ourselves to talking it we shall fail to give to the hungry heart the bread and water of Life. Speaking of the inadequacy of the English language rightly to express spiritual ideas, Mrs. Eddy says in our text-book, "Science and Health with Key to the Scriptures," on page eight: "In expressing the new tongue we must sometimes recur to the old and

imperfect, and the new wine of the Spirit has to be poured into the old bottles of the letter." We read (and we believe), "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life." This saying of Jesus was the basis of the statement of Paul: "The letter killeth, but the spirit giveth life."

Judged by the proper standard, that of results, any one who will look up the record honestly, dispassionately, and understandingly, will find that Christian Scientists live clean, pure lives. They cannot do otherwise if loyal to their God-given guidance and faithful to their pledge: "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and pure" (Science and Health with Key to the Scriptures, p. 493).

In this morning's issue of *The Mexican Herald*, we read a two-line leader: "Mrs. Eddy tells her followers to submit to vaccination. Common sense." Why, yes; Christian Science is simply common sense. A Christian Scientist who would stand out in the rain needlessly ought to get wet, but a Christian Scientist who is caught in a storm need not, and does not, suffer from that storm, if he but knows his birthright of dominion. Every man and woman has to work out his or her own salvation, so no arbitrary rule is laid down for us, but we submit to vaccination, as we do to surgery, dentistry, quarantine, disinfection, etc.

CHRISTIAN SCIENTIST.

Mexico, March 22, 1901.

The Divinity of Christian Science.

WE make the following extracts from an article on the above subject by Rev. George H. Peeke of Sandusky, O., who was formerly a minister of the Congregational Church. The article was published in a recent issue of the *Sandusky Register*.

After nineteen hundred years of Christian teaching in the world, suddenly there has arisen a sect which is attracting peculiarly the educated mind of our civilization. In other words, Christian Science seems to appeal peculiarly to the thoughtful and cultured, with all its alleged illogical and unscientific methods. Christian Science is erecting many churches among the most refined people of our land. There are few, if any, congregations among the sects to be compared with the adherents of Christian Science, for general intelligence, good conduct, and thrift. Christian Science has built large churches in Chicago, Boston, and several large cities without debt and with a harmony and business tact and conduct which is unfortunately the very opposite of that generally witnessed among Christian sects.

In saying this I am merely relating well known facts. Christian Science, whether scientific and Christian or not, has something in it so evidently vital that it is growing and growing among those whom the church is always anxious to have and to hold with a firm grip.

Being good and doing good is Christian. "Blessed are the pure in heart: for they shall see God" cannot be submitted to a scientific test. And "Blessed are they who hunger and thirst after righteousness: for theirs is the kingdom of heaven," is fundamental to all religion. In his judgment scene Jesus makes the final decision turn upon the words, "Inasmuch as ye have done it unto one of the least of these my brethren ye have done it unto me." To see a want, a vital need in poor suffering human nature and to heal and help it is vital, final, divine, and just here lies the kernel of the whole subject.

Christian Science does something to meet the sickness of the world and it works by mutual help. Every member helps and works. What does any sect do to surpass it? It is worse than useless to say they do not heal, for they

do. They heal multitudes. What they do has been a wonder to me and to many.

"What would Jesus have us do?" Jesus did personal work and won souls, and Christian Science has a wonderful zeal in seeking and helping personally and wins on the Master's lines. Christian Science has come to stay, because it has the spirit of Christ in large measure. And what can be more Christian or more divine? Ponder it well, that the rapid growth of Christian Science among the intelligent classes is remarkable.

It is certain we shall not be able to stay the progress of this new sect. It has come to stay. Its fruits are blessed. And "by their fruits ye shall know them." It is comforting its thousands. It will turn the mourning of many to joy and delight in living, and this is most God-like and truly divine. It is doing the work the Christian church has too long neglected. It is religion applied. A working gospel. A welcome message to a long suffering world. The angels sing their hallelujahs over it. It is of God and ye cannot overthrow it.

Wednesday Evening Meeting at Hoopeston, Ill.

THE following testimonies were given at a recent Wednesday evening meeting in Hoopeston, Ill., and published in the *Hoopeston Herald*:—

A lady told of the great help she had received from Christian Science in the care of children, how absolute dependence upon the Father's care had made the crooked straight for her, and rough places smooth.

Another lady related how she had been saved to her family by Christian Science, when medical skill had failed, that she had been a well woman for the last five years, but that dearer than physical health was the spiritual uplifting which this new-old religion gives, and the peace and joy that accompanies it. She had never been satisfied with the religious teachings of the schools, but in this Science had found the higher understanding which she had longed for.

Another told how vainly she had striven to be good before she found Christian Science. Try as she might, and seeming to succeed perhaps for a time, she would find herself going back to the old selfishness and worldliness, only to repent, and try again, with repeated failures and discouragements. When she came to learn from Christian Science, what goodness is, that God alone is Good, that Jesus refused to be called good, saying, "Why callest thou me good? there is none good but one, that is God," and that mortal man cannot be good—then she learned to put aside self and its vain strivings, and to let the one Mind govern, and be manifested. This had brought the "peace which passeth all understanding."

A visiting Scientist told of a wonderful healing which had come to him. His wife had been an invalid for years and thousands of dollars had been expended in trying to bring relief. Surgical operations had failed to help, and, as a last resort, hearing of Christian Science through a friend, they decided to try it. This was five years ago, and she had been a well woman ever since, and no material remedies had been used in their family during that time. He was a drinking man at the time of his wife's healing, and chewed and smoked tobacco. His attention now being roused to seek to know what this power is which heals, he bought "Science and Health with Key to the Scriptures," and commenced to study it. As the light of Truth came to him the appetite for intoxicants disappeared, then the desire for chewing tobacco was destroyed, but the smoking habit seemed harder to cure. He strove to conquer it for a long time, but was still its captive, then he was treated by a healer, and for a time thought he was cured, when

a friend asked him to have a cigar with him, and he yielded. Then the foe seemed stronger than ever. He smoked incessantly and seemed powerless for a time to resist it.

His teacher told him that when he studied and gained more light and spiritual understanding, it would destroy this error. He then began to study with renewed zeal, and put into practice his understanding of Truth, and it was in this way that this last bad habit was destroyed. It quietly left him free to enjoy better things. He seemed filled with joy in the light of Truth, and said Christian Science had brought him not only health, but harmony in his family and prosperity in his business, and that every day he found new ways in which it helped him. He had been able to heal both his mother and sister, and had received very beautiful letters of acknowledgment from them of their healing.—S. F. S.

Easter Services at Concord, N. H.

THE Easter services at First Church of Christ, Scientist, were largely attended, morning and evening. The floral decorations were numerous and beautifully arranged. Among these was a beautiful azalea from Pleasant View. The subject of the sermon for the day was "Are Sin, Disease, and Death Real?" and consisted of readings from the Bible and from the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. In addition to the inspiring congregational singing three beautiful Easter solos were given by Miss Villa Whitney White. In the congregation were several visitors from out of the city.—*The Daily Patriot*.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

The Church Manual.

The Church Manual of The First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

Applications for membership with the Mother Church to be presented at the June meeting for the admission of applicants, must be in the hands of the Clerk on or before May 20, 1901.

What Constitutes Success?

True success, the success at which we aim who are banding ourselves together for the world's practical betterment, is not the satisfying of any one passion, such as the exaltation of the saint or the avarice of the miser, but the complete life, joyous and useful, equipped with the wealth and power to spread our joy and usefulness over as wide an area as possible. Wealth of character, of knowledge, and of joy, must keep pace with increase in wealth of material things, else the very capacity for joy and usefulness, the only rational end of money wealth, is destroyed.

Men often think they are getting the earth, when, in fact, the earth is getting them.

WALTER VROOMAN, in *Success*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Easter Largess.

Beloved Students:—One and all from North to South, from East to West, please receive through our columns Mother's best thanks for your varied, multiform, beautiful, useful Easter gifts—all unexpected and lovingly appreciated.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., April 13, 1901.

Opening and Dedication of Churches.

THE opening and dedication of a Christian Science Church is a most important event. It places the work on a firmer foundation and at the same time it brings renewed hope and courage to the faithful workers who have labored and sacrificed for so noble a purpose. They have heard the "well done," and their cup of joy is full to overflowing. Not only those who helped directly or indirectly in the building of a particular church have cause for rejoicing, but all Christian Scientists, wherever they may be, in this or foreign lands, rejoice with their brethren in Christ who are permitted to worship under their own vine and fig-tree.

Soon after the organization of a Church of Christ, Scientist, the desire and purpose of the members to have a suitable house of worship is manifest in the starting of a Building Fund. By means of the voluntary contributions of loving friends and faithful adherents to the teachings of Christian Science, this fund grows until it is sufficient to provide a suitable church home.

These churches, wherever erected, have been a credit to the community. They are enduring monuments to the fact that divine Love is "the same yesterday, and to-day, and forever," a present help in every time of need. The members of these churches have experienced God's presence and power to heal disease, many of them after they had been pronounced incurable. They have in a measure gained the understanding of Truth and are making a practical use of it in all the affairs of life. This is drawing them nearer to God and causing them to realize their absolute dependence upon Him. They know that they must continue to work out their own salvation until all error is overcome by the might of Omnipotence.

To these faithful and earnest disciples of Truth the opening and dedication of their church edifice does not mean that they have reached the place where they may cease from their labors. Rather is the reverse true. They have but been preparing themselves to do valiant service for the cause of Truth. They have put on the armor of God, and, armed with the sword of the Spirit, they go forth conquering and to conquer.

If they have been called upon to practise self-denial and to sacrifice personal opinions in the building of their material temple, how much more is this necessary as they continue the grand work of proclaiming the gospel of salvation, demonstrating that unity of thought and action which is the basis of true and lasting harmony. They must become more Christ-like and be guided by that Love which

is universal. Thus doing they will hold aloft the banner of Truth, and sick and suffering humanity everywhere will turn to Him who is able to save to the uttermost.

Easter Sunday, April 7, 1901, three new church edifices were formally opened for use. Opening services were held in the Second Church of Christ, Scientist, New York City; and the Second Church of Christ, Scientist, Chicago, and First Church of Christ, Scientist, Toledo, Ohio, were dedicated on that day. Interesting services were held in each of these churches, and it was necessary to repeat them two and three times to accommodate all who desired to participate. Complete and interesting reports appeared in all the prominent local papers.

We rejoice with our brethren who have been so successful in their undertakings. We hope to give in the May number of the *Journal* a full account of these services, including the addresses delivered.

Unsolved Problems of Science.

THE following extract is from an article, on the above-named subject, which appeared in a recent issue of the *Chicago Tribune*. The article was written by Dr. Wilhelm Mueller, a German traveler and scientist. The doctor has evidently given much time and thought to the subject, and it would seem that he had almost reached the conclusion that, from a material basis at least, the problem of matter is inexplicable. Thus, even in the researches of natural science, we see illustrated the truth of the Scriptural declaration that "the things which are seen are temporal; but the things which are not seen are eternal."

All such conclusions which are being reached by natural scientists, are preparing the human thought for the reception of the teachings of the Christian Science text-book, "Science and Health with Key to the Scriptures." The statement contained therein that "All is infinite Mind and its infinite manifestation," furnishes a basis, which is both Scriptural and Scientific, for the solution of all the problems of life.

The extract from Dr. Mueller's article is as follows:—

"No theory, however ingenious it may be, can explain to us the mutual relations between mind and matter. We do not even know whether matter really exists, or whether it is not merely a creation of our active mind. We perceive that matter constantly undergoes changes, but we do not know whether those changes actually take place, or whether they are merely the reflection of changes in our perception. The attempt to dispose of matter by putting force or energy in its place is merely an acknowledgment of the impossibility of solving the mystery of matter. It means a change of the problem, but not its solution. The theory of causality may explain the transformation of one motion into another, but it does not lead us to the reason of the motion itself. Even in attempting to solve apparently more tangible problems we soon reach the barrier of our limitations. Chemistry teaches us that matter consists of various chemical and mechanical combinations of certain primary substances called elements. The study of chemical combinations led to the establishment of the atomistic theory. The latter is undoubtedly ingenious and apparently perfectly logical, but, if we follow it out in its consequences, we soon find ourselves in a dilemma. If the atom is indivisible it cannot occupy any space, for everything that fills space, no matter how small, can be thought divisible, and must be divisible *ad infinitum*. But, on the other hand, if the atom is really indivisible and does, therefore, occupy no space, it can never be a part, however small, of matter. *o plus o plus o plus o . . . to infinity will always be equal to o.* The total is equal to the sum of its components. Inasmuch as the total, in this case matter, occupies space, that equality must essentially pertain to every part, however small, of the whole. The logical deduction would be that

matter is composed of parts which are not matter, a theory which is obviously unsound.

"Thus we continue to grope through the labyrinth of mysteries surrounding us, always hopeful, notwithstanding the fact that at every turn the gigantic interrogation point of the 'unknowable' stares in our face."

Dr. Mueller's statement that the addition or even multiplication of atoms which occupy no space, could not result in that which does occupy space, is very suggestive. However, for the purpose of presenting another view of the question, let us suppose that the atom, although infinitesimal, does occupy space. Even with this admission the atom has little to do with what natural science calls substance. Scientists tell us that no two atoms really touch. They are drawn toward each other, but an opposing force prevents them from touching. Be it understood, however, that we are now dealing with infinitesimals. The atom is infinitesimal and the space between the atoms is also infinitesimal, but according to the teaching of natural science the space between the atoms is as much a constituent part of matter as the atom itself.

There is a force or power which prevents the atoms falling apart. If it were not so, the hardest substance would crumble to pieces. This force is called cohesion, and because it is not understood it is termed a property of matter. The strength, substantiality, and durability of matter is dependent, not upon the atoms, but upon the force which holds the atoms in place. This force is strongest in those substances which are hardest to break and weakest in those which are easiest pulled apart. It is almost if not altogether absent in gases.

This force constitutes the strength of the steel beam or the granite pillar. When the steel beam is broken the atoms are not broken, but a force greater than that which held them together has pulled them apart. Thus it is seen that this force is a most important factor in that which is called matter. Take away this force and matter would no longer be substance even to the material sense of things.

So clearly is this seen that some scientists have attempted to solve the problem of matter by substituting force, but this has not proven satisfactory even from a material point of view. As Dr. Mueller states it "is merely an acknowledgment of the impossibility of solving the mystery of matter."

The problems of science must remain unsolved so long as creation is considered independently of its Creator. Only that investigation and research which starts with the Creator will prove satisfactory. It will answer all questions as to man's origin and destiny, and explain all the phenomena of existence.

On page 18 of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, we read:—

"Adhesion, cohesion, and attraction are properties of Mind. They belong to Principle, and but support the equipoise of that thought-force which launched the earth in its orbit, and saith to the proud wave, 'Thus far and no farther.'

"Spirit is the Life, Substance, and continuity of all things. We tread on forces. Withdraw them, and creation must collapse. Human knowledge calls them forces of matter; but Divine Science declares that they belong wholly to Mind, are inherent in Mind, and so restores them to their rightful home and classification."

The Lectures.

At Cornell University, Ithaca, N. Y.

At the invitation of President Schurman, of Cornell University, and under the auspices of the university, presided over by Dean Crane, who represented the president

in his absence, Carol Norton, C.S.D., of New York City, representing the Christian Science Board of Lectureship, delivered his lecture, "A Third of a Century of Christian Science," at Barnes Hall, Cornell University, on Tuesday evening, April 2. The *Cornell Daily Sun*, the regular daily university paper, published and edited by the students, thus refers to the lecture and the introduction of Dean Crane.

Last evening in Barnes Hall, Mr. Carol Norton of New York lectured before a large audience on the subject, "A Third of a Century of Christian Science."

In introducing the speaker Dean Crane said:—

"I presume there is no one present here this evening who has not formed an impression more or less distinct of the ethical and remedial system known as Christian Science. It has occupied a great part of the discussion of the public press, and what is of peculiar moment to citizens of this state, it is the subject of proposed legislation at the capitol. Under these circumstances it cannot fail to be interesting and instructive for you to hear a history and explanation of the system from one who can speak with authority, and I am sure you will give him your courteous and earnest attention.

"The function of a university is to investigate truth in all its forms, and to foster in its students that impartial and judicial frame of mind without which no valuable acquirements in any field of learning are possible. At the same time it must not be forgotten that while the university encourages the greatest freedom of investigation and discussion, it does not itself take sides in the debated questions of the day, and it will be unfair to use hospitality as an excuse to drag it into partisan strife.

"It was in this spirit, I have no doubt, that the president of the university courteously gave permission for the delivery of this lecture in this place, and requested me to present to your kind attention the speaker of the evening."

At the close of Dean Crane's courteous introduction, Mr. Norton prefaced his lecture by the following brief statement, after which he delivered his address, which was received with marked attention by the large audience:—

"By way of brief preface to our lecture this evening, I beg to say that I come here as a representative of the Christian Science denomination or movement, a member of its Board of Lectureship. I come not as one wishing to proselyte in the ordinary sense of that term. It is of no personal or individual moment to me whether you are converted to the doctrines that I shall present, or whether the direct result in your minds may be simply the opening of an impartial, judicial, middle way position or attitude of thought. We cannot, in this impartial investigation, within the precincts of a university widely noted as is Cornell for its liberality, its impartiality, and its progressive life, for an instant abuse such a liberal and kind courtesy as has been extended by the chief officer of this university. Cornell is the first great American university to hear one of the authorized lectures on this subject, which is at once a religious topic, a therapeutical subject, and a scientific question before the men and women of twentieth-century Christendom. Oxford, in England, through one of its philosophical societies a few months ago, opened its doors to Christian Science in a similar way.

"If I seem partisan in presenting these tenets, you may know that I have come to explain the distinctive thought of Christian Science and, therefore, must strongly adhere to my text to make such arguments as will go to prove the truth of the cardinal deduction, which is the primary deduction of Christian Science,—that the allness of God means the allness of the divine Mind, and the divinity of Christ means the divinity of the Christ-life in us all as well as in Christ Jesus."

A large percentage of those present were the students of the university, together with professors and university

officers. The lecturer treated his subject in a way conspicuous for its impartiality and tolerance, and brought prominently forth the higher educational value of Christian Science in its relation not only to religion, health, and Scriptural interpretation, but to scientific progress, language, art, education, drama, co-education, and sex-equality; and showed in a sympathetic and frank way the great spiritual and reform work of the Rev. Mary Baker Eddy. He laid especial stress upon the re-construction of thought in relation to religion, health, and science that has already been wrought by the applications of the teachings of the Christian Science text-book. While President Schurman and Dean Crane with dignified impartiality disclaimed any partisan or even sympathetic approval of the doctrines of Christian Science, both showed a most commendable spirit of liberality in sanctioning and facilitating this official utterance on the most talked of Christian philosophy of the hour. Christian Scientists will appreciate this expression of fair-mindedness and true Americanism.

Correspondence.

At Winchester, Mass.

A lecture on Christian Science was given Tuesday evening, April 2, in the Town Hall, by Rev. Irving C. Tomlinson, C.S.B.

The large audience gave strict attention and manifested a keen interest in all that was said.

The Rev. William I. Lawrance introduced the lecturer in the following kindly manner:—

"Members of First Church of Christ, Scientist, Ladies and Gentlemen:—My first word shall be by way of appreciation of the courtesy you have shown in asking me, though not a member of your society, to perform this office. My next word shall be of congratulation upon your growth, both local and throughout the world. The progress of Christian Science is one of the marked phenomena of our modern religious history.

"I bespeak for you a cordial welcome in the fellowship of Christian churches. And I plead for that spirit on your part which shall make you acceptable in that larger brotherhood. The day is happily gone when we should expect to find the ground of fellowship and co-operation in the results of thought. Our creeds are as various as our minds; and, however closely guarded, are as changeable as knowledge.

"Creeds have never furnished a satisfactory basis of union and never will. But there is a better foundation upon which we can meet. It is that spirit, at once Christian and scientific, in which we should both think and live. In that spirit there are, I take it, two chief elements. One is the love of truth for its own sake: study, profound and unbiased; a willingness to accept truth though it may come from an unwelcome source, and though it disturb our preconceived notions. The other element in this Christian, this scientific, spirit, is modesty in holding our opinions. Profound learning is always modest, as is profound thought. This is because the process of culture acquaints us with that vast field of knowledge which we can never hope to make our own, and because we learn, at the same time, to what an extent our conclusions result from our idiosyncracies, our personal limitations. In this spirit, at once earnest and modest, let us pursue our various ways; and in that spirit we shall find ourselves one.

"But you have assembled to hear an accredited speaker upon themes of high moment; and I have now the privilege of introducing the Rev. Irving C. Tomlinson, the lecturer of the evening."—*The Winchester Star.*

At Marion, Ind.

Judge William G. Ewing of Chicago, Ill., lectured at the Opera House, Sunday evening, March 17, on "Christian Science: the Religion of Jesus Christ."

The Opera House was filled with a large and intelligent audience and unusual interest was evinced throughout the lecture. The lecturer was introduced by Richard E. Breed, who spoke in part as follows:—

"Ladies and Gentlemen:—In a letter written about eighteen hundred and forty years ago by a Greek physician named *Lucas* to his friend, one *Theophilus*, he asserted that all the Athenians and strangers who were there spent their time in nothing else, but either to tell or to hear some new thing.

"Also, that when a certain itinerant preacher, who hailed from Tarsus in Asia Minor, was delayed in Athens, awaiting the arrival of his friends Silas and Timotheus, his spirit was stirred in him by what he saw; and therefore disputed he in the synagogue with the Jews, and with the devout persons, and in the market daily with them that met with him. So these people, becoming interested, brought him into the court room of the place, saying, May we know what this new doctrine, whereof thou speakest, is? For thou bringest certain strange things to our ears: we would know therefore what these things mean.

"So, now, history is making one of those repetitions for which it is noted, and we come here to-day to hear what this new doctrine, which is called 'Christian Science,' is.

"I have been requested to introduce the eminent lecturer who will address us to-day, not because I am a Christian Scientist, but rather in spite of the fact that I am not of that cult. As I understand it, the adherents of Christian Science claim that it is a 'Holy thing' given by inspiration of God, to a woman, about thirty-five years ago. I, in common with others, come here to-day to hear the grounds for such claim set forth by one of the most eminent exponents of this doctrine, the Honorable Judge William G. Ewing of Chicago, whom I now have the pleasure of introducing."

Lectures at Other Places.

Bucyrus, O.—William G. Ewing, March 8.
Albany, N. Y.—Carol Norton, March 31.

Extract from a Letter.

Rixford, Pa., March 29, 1901.

Next month will bring to us dwellers of these dear hills of McKean, the sweet-scented, hope-inspiring, trailing arbutus,—nature's first floral herald of the Resurrection.

Even now it is struggling up from the cold earth, only to find, in most instances, that while it is above the ground, it still has a dark covering which separates it from the longed-for warmth and light. But it feels the warmth and knows that the sun is there, and knowing this, it is developing a cluster of flowerets for its crown. Thus, lovingly, quietly, the little flower waits, in serene confidence and calm faith, understanding that the "Light is come," even though its presence may not yet be apparent until some kind hand removes the dead leaves to discover the pale but precious blossom, or until, by its own patient continuance, it is one day flushed with surprise and worthy exultation, to find that it has risen above the gloom cast by last year's faded foliage and escaped from earth's tomb.

As God's children, having been "born again," having risen to some extent above what is "of the earth, earthy," do we sometimes wonder why any more gloom should appear? Let us be patient, and joyful in tribulation, for God is searching for His own, for all who seek to realize His truth and power. And when His hand lifts the dun of materialism which has fallen on us from the past,—dead forms, traditions and customs, interlaced and moulded together to constitute our bonds and hide from us the light of Spirit,—when, in answer to our fervent desire for our true inheritance His hand rolls back this dark but flimsy blind, we shall know it to have been "nothing but leaves."

MINNIE HANNA.

From Our Contributors.

From Psalm Eighteenth.

BY MARY B. DODGE.

ABOVE the flooding of the waves
God is my great, high tower:
My rock, my fortress and defence,
In every tempted hour.
I plead my cause, and presently
With strange, sweet peace he comforts me.

Upon his holy name I call
In darkness of distress;
He hears my voice, nor turns his ear
From simple trustfulness.
His way so very perfect is,
It leadeth mine to turn to his.

With strength he girdeth what is weak;
His gentleness makes great;
And sure deliverance giveth he
To them who watch and wait:
Who patient seek the open door,
The door that closes nevermore.

Ay, verily, is God a Tower
Where floods besiege in vain;
And blest are they who steadfastly
Within that tower remain,
Until the sea recedes, and Light
Proclaims the passing of the Night.

Mountain Climbing.

BY BURT S. GALE.

IN many localities there may be seen now and then towering upward in majestic grandeur, lofty mountains, whose summits seem to be lost in the azure robe about them, or, perchance, obscured in a veil of mist. To make the ascent of one of these monarchs, with its rough and jagged sides and many overhanging cliffs, seems to present a hopeless task. Yet, with all its defiant crags, shelving rocks, and hidden chasms, the pedestrian may find a path, a winding way, or a hidden trail, which leads on and up to its topmost peak. To make the ascent by this path is easy. It leads past the dangerous precipices and away from the yawning steeps. Its course is certain and its end the summit.

Not a little unlike mountain climbing is the pathway of mankind. Childhood, fraught with innocence, affection, purity, and confidence, marks the deep rich valley, or unencumbered plane at its base. Manhood, face to face with all the great and ever-changing problems of existence, sees rising before him a great mountain of antagonism, veiled in a mist of doubt, whose summit is lost in a deep cloud of uncertainty. Thus life seems to be one continuous struggle in which time and sense try to play an important part. With his "days of work and nights of worry" man finds but little to cheer his heart and to brighten his pathway. Possibly something is being neglected, forgotten, or remaining undone, which prevents the finding of that little trail running up the mountain side.

Too often is it a fact that life's journey is begun with little thought given to true character-building, and to those eternal principles whose objects and aims are one universal good. Do we not pause and sigh that the "Great Giver of every good and perfect gift" should so often become the last instead of the first consideration of His children? How often

do special blessings come, and with each day a blessing, and still they go by unheeded with no thought of gratitude returned. Let there be an awakening of consciousness, a turning to the narrow way where every step is secure,—guarded and guided by the hand of Love. Fear and uncertainty no longer cloud the pathway. The sunshine of righteousness now appears and with its rich and mellow light makes each stepping-stone a victory, and each height gained a greater cause for rejoicing.

As the unfaltering journey toward the summit is continued the dark clouds become scattered, the way becomes more distinct. From stolid indifference to hope, and from hope to faith has each step been made till pre-eminently stands the Mount of Understanding with the light of Divine Science fast breaking upon it. It speaks to us with an eloquence which words fail to express. The heights cannot be scaled, they must be climbed. Christian Science is the narrow path leading from the deep shadows of the valley, the pampering of mortal thought, up the hillside and mountain height. How have the weary and heavy laden sought out this ascending way, and following its course been borne from sorrow, sickness, and sin, into that spiritual atmosphere of the Christ-Love which overcometh all error and setteth at naught all that is unlike God. Surely a great people are seeking this pathway, and many there are who are rejoicing in its course, conscious of the blessings that come with each advancing step.

When we can stand aloof from the world, clad in the vesture of Love, conscious of the allness of God and of Life as ever-present, then, and not till then, can it be said that we have reached the glorified heights,—the summit,—and in the language of the Scriptures, hear these words: "In this place will I give peace, saith the Lord of hosts." "My peace I give unto you." Let us hasten towards those heights, following each way-mark of Divine Science as revealed to us in demonstration and spiritualized thought, until, in the full sunlight of Truth, we stand upon the topmost peak, where "the Lord shall be unto thee an everlasting light, and thy God thy glory."

Analysis of the Lessons.

BY WILLIAM P. MCKENZIE.

THERE are some students of the weekly lessons who seek, and so find for themselves, the teaching of each section; and others again would like to be told what it is without having to search for it. The spiritual truth enfolded in the passages from Scripture and unfolded in the correlative selections from our text-book, "Science and Health with Key to the Scriptures," when revealed to the student, will have from him such individual expression that no one else could phrase it exactly for him. Yet in listening to the analysis of different students, one cannot fail to see the essential unity of thought though its expression is varied, and indicative of individual experience. By such study,—in the search for the thought first, and then for words to give it adequate expression,—freshness of interest is maintained in the student, and the formality and dreariness of instruction by catechism is avoided. Should the sections of the lesson be formally designated like the heads of a sermon, the student might be apt to give aimless agreement to the form of words, without grasping their substance.

An illustration comes to hand in a letter from a western Christian Scientist, who says:—

"I enclose a slip of paper that may be of interest to you. I go to the penitentiary each Sunday afternoon and read the lesson to about thirty. They give the topic of each citation before I read the references. They do not often have paper to write them down, as they are not allowed paper, but this man, who is an Indian, uses his *Sentinel*

wrapper. Some of their citations are very simple and beautiful."

Before quoting the analysis given by this prisoner, who is indeed becoming God's freeman, let me give as short and pithy an analysis of the lesson referred to, as could be chosen. The subject of the lesson was Soul, and the sections could be designated as follows:—

1. Soul is God.
2. Soul is manifested through man.
3. Man's likeness, identity, is in Soul.
4. Soul reverses material sense.
5. Soul blesses man.
6. Soul's immortality makes man immortal.

Notice how the condition of the prisoner colors the expression of his thought, and how Freedom is the keynote—freedom from sense in Soul.

1. Soul is Spirit, the divine Principle of man.
2. Real affection, spiritually understood and obeyed, determines in our lives the liberty of the children of God.
3. Through the transparency of Science man learns and recognizes his perfect and eternal estate as God's reflection.
4. When the true idea and Principle of man is discerned, physical discords will be resolved into spiritual concord, and man will be governed by Soul not sense.
5. Spiritual knowledge, not material, transforms man's thoughts, and crowns them with infinite blessings of Life.
6. When the false finite sense of Soul is destroyed through Christian Science, man will behold the harmony and immortality of his being.

As We Think.

BY ANNIE JESSEN.

For as he thinketh in his heart, so is he.—*Proverbs, 23: 7.*

THE meaning of the above text became clear to me a few days ago. It had bothered me ever since I began studying Christian Science. It seemed to give the impression that it said if we think ourselves good, or great, or wise, we would then be so, and I suppose we all have had the experience of meeting people who were so satisfied with their own goodness, or greatness, or wisdom, that they could see nothing else, reminding us of what Paul said to the Galatians, "If a man think himself to be something, when he is nothing, he deceiveth himself."

Now I see that Solomon's words mean not thinking of ourselves as good, or great, or wise,—in fact, not thinking of ourselves at all, but thinking good and great and pure and wise thoughts would of necessity produce their sure results and we would manifest goodness, purity, wisdom, etc.; while small, selfish, unkind, criticising thoughts must result in just that kind of a person, just as healthy, harmonious, happy thoughts are reflected in health, harmony, happiness; while sick, discordant thoughts produce their like.

It is not as we think we are, we are; but *as we think*, so we are. This never was, is not now, nor ever will be, a mere personal opinion, but an eternal, scientific truth, as true as that two and two are four. We used to think, in the old way of looking at things, that we thought certain things and in a certain way, because outside circumstances or surroundings were thus and so, making materiality superior to mind, just as at one time it was honestly thought that the earth was the centre of the universe and the sun revolved around it. As nothing but the science of astronomy could have cleared up the mistake in regard to the solar system, so nothing but Science—Christian Science—the Science of all sciences, the Science of Life and Being, could ever have brought us to see that our surroundings, our every-day life and tasks; our friends and associates, are the result of the thoughts we hold, and that we must be transformed by the renewing of our minds, just as Paul taught so many hundred years ago.

A Word of Thanksgiving for the Lectures.

BY K. R.

"CHRISTIAN SCIENCE is Scientific Christianity." This is the title of the lecture delivered by Rev. Arthur R. Vosburgh in First Church of Christ, Scientist, Toronto, on October 25.

Of late, in my casual reading of current events my eye almost invariably alights upon some cry for help—for light—for deliverance.

Couched in varied language, the tone is unmistakably the same, whether it come from ecclesiastical convention, philanthropic association, or from college halls, as well as from the annals of crime and disease.

"The whole creation groaneth." What, then, was my delight, on taking up the morning paper last Wednesday to read in large letters, and side by side with the very errors it has come to correct "Christian Science is Scientific Christianity."

It was the announcement of our lecture. How it illuminated the sordid columns of accidents and errors innumerable. That positive affirmation of Truth seemed to ring out clear and strong, as the Divine answer to the blind cry of the world. The picture rose before me of the weary Israelites laboriously endeavoring to make bricks without straw, and I seemed to hear the announcement, "I have seen their affliction . . . I have heard their cry . . . and am come down to deliver them."

Next day a crowded house had the great pleasure and profit of listening to Mr. Vosburgh. To both Scientists and non-Scientists the lecture was an uplifting and a benediction. Four lectures have now been delivered in Toronto, and the effect is visible in the breaking down of much prejudice.

From Darwinism to Christian Science.

BY P.

COMING home from college a few years ago, I boastingly proclaimed to my friends that I had learned the true explanation of life. There I had taken a course of lectures on evolution and Darwinism, delivered by a certain famous materialist of this country, and had, so I thought, been "converted" by the truth of these teachings. The survival of the fittest, the extinction of the individual, and other preachings of this hopeless "faith" had been accepted as the only true doctrine. But what a doctrine of despair!

When I examined myself, I found I was most unhappy. I was not satisfied. Many tormenting doubts began to present themselves. Perhaps Darwinism was not the whole truth. Then what was true? From this despairing consciousness there went forth an unformulated prayer to the unknown God to reveal His truth, be it cruel or kind.

Not long after this my prayer was answered. I was persuaded to put myself under Christian Science treatment and was surprised to find that it relieved me from this great mental depression. Slowly I awoke to the fact that Christian Science was the Truth—and a beneficent Truth. What a relief to know that God, the loving Father, was the only Creator, and that none of His ideas could be annihilated! It was a joy to learn that death was not the end of all, and that the cruel, mad strife of the world was unreal and only in the dream existence. One finds, however, that in Christian Science there is a law of the survival of the fittest; but this law does not mean that the stronger man must crush his weaker brother to the wall, but it does mean that all selfishness and sensualism in human nature is to be blotted out, leaving only that which is fit to live,—purity and unselfishness. This is indeed the survival of the fittest.

Testimonies.

Dawn of a New Hope.

Some seven years ago I began to investigate Christian Science. For three or four years previous the subject had forced itself into my consciousness through various cases of healing among my acquaintances. These were not nervous or hysterical cases, and some of them were cases of long standing. One of these was that of a married lady who had not walked for many years, the daughter of an eminent physician. A few treatments completely restored her, and the following year she made a tour of Europe with her husband. This demonstration interested me very much, and every time I thought of it something within said, "Investigate." But for a long time I resisted this appeal from the "still, small voice," because I was not yet ready for this precious Truth which heals and saves.

About this time I secured the text-book, "Science and Health with Key to the Scriptures," and began its perusal. My first impressions of the book were not favorable, but I was determined to give it a fair hearing, and as I persistently continued the investigation, the light soon began to dawn. I want to say here that I did not undertake the investigation simply to get relief from physical suffering although I had been a mild sufferer from several chronic ailments for years, but I took up the study mainly because I was very much dissatisfied with the life I had been living for the previous quarter of a century. It was not satisfying. I longed for that peace which passeth understanding, but which I had not found.

For many years I had been impressed with the thought that there was something lacking in the accepted religious teachings of the day; that there must of necessity be something better, higher, and more glorious in the Christianity of the risen Christ than had been revealed to this age, but just what that something was, was above and beyond my understanding. So I, like thousands of others of the spiritually hungry, continued to grope in the darkness of mortal belief until the glorious light of Christian Science ushered in the dawn of a new hope, when I saw for the first time what had all along been lacking. I then realized, in a measure, the illimitable vastness of the kingdom of Mind, and the nothingness of matter.

During the twenty odd years that I was a member of the Presbyterian Church I was never entirely free from doubt and fear. The gaunt spectre of these twin errors reigned constantly in my consciousness. I had doubts as to whether I had really chosen that straight and narrow way which the Master said would lead to life eternal. I was almost constantly in fear of suffering from sickness, accidents, business reverses, and above all I had an awful fear of death. Christian Science has removed this sense of fear and doubt by showing me that "God is Love," that He is an ever-present help, that He healeth all our diseases, that He is our Life, and that Life is eternal, and in nowise dependent upon material conditions.

When I began reading the text-book, I had been afflicted with a serious case of nasal catarrh for about thirty years. This was accompanied by partial deafness, impaired sense of smell, catarrhal headaches, frequent colds, etc. For over twenty years I had been a sufferer from stomach and bowel troubles, neuralgia, frequent malarial attacks, and other minor difficulties. With a view to getting relief from these various ailments, all of which had become chronic, I had taken medicine almost constantly during all these years.

By the time I had read the text-book through the first time, these various troubles commenced to assume a milder form, and presently began to disappear, one by one, until all were gone. Thus I was healed physically as well as spiritually. These splendid results were not obtained

in any miraculous way, or in a brief space of time, but they were the fruits of a systematic course of study as laid down in the text-book, regular attendance at the services, reading Christian Science literature, a gradual growth in grace, a gradual putting off of the old and putting on the new.

In addition to my own healing there were two remarkable demonstrations in our family. A large tumor of three years' growth was removed from the neck of our son, a young man of twenty-five, by two or three months' treatment in Science. This tumor was as large as a man's clinched hand and exceedingly hard. One of our daughters was cured of an abscess in her head, the result of a severe cold, by two treatments, after many days and nights of suffering before she would accept Science.

During the few years that I have been a student in Christian Science I have witnessed the overcoming and casting out of many evil spirits (impure and unrighteous thoughts), and know what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free." Those only who have been released from the bondage of material beliefs, can realize what this means. But while I am very grateful for the physical blessings which have come to me through this uplifting thought, I count this of little moment compared to the grand and glorious awakening that comes to the individual consciousness when the Comforter, who is guiding us into all Truth, is realized and becomes a living presence. How can we ever be sufficiently grateful to the Discoverer and Founder of Christian Science, Mary Baker Eddy, for unlocking these vast storehouses of spiritual Truth, so that the spiritually hungry of this and future ages may be fed with that bread which cometh down out of heaven.

W. A. SPENCER, Omaha, Neb.

One Man's Experience.

Perhaps the gravest trial of my earlier days was being made to go to church and Sunday School when my week-day companions made fun of me. At fifteen years of age a Presbyterian revival interested me very much. The wisdom of not joining the church under the influence of excitement was soon apparent to me. At eighteen years of age I joined the Episcopal Church, hoping that the vows would help me to become a better man. The result was a more serious study of religious questions.

I had accepted belief in God as I had the love of my parents, until reading Paley's "Natural Theology," doubts began to creep in. Then evolution seemed to be the most rational belief; though I realized that the eastern fable applied to my case,—the fable being that the world rested upon an elephant, the elephant upon a wolf, and the wolf upon a terrapin, and the priests cut your head off if you asked further questions.

Most theories seemed to set upon the same basis. The Old Testament appeared to portray a God of vengeance instead of love; and I was able to make but little of St. Paul and Revelation, so I eliminated all three from my Bible, and tried to believe that I understood the four Gospels.

As many sermons are based upon St. Paul and Revelation, this placed me out of sympathy with the churches. In the mean time I read the works of Voltaire, Paine, Ingersoll, Renan, and similar writers, and had accepted evil in the world as I had accepted punishment from my parents, on the ground that they knew more than I did, and objection upon my part brought a second application of the rod.

I believed that miracles were miraculous only to those who were unused to them, and based upon the Scriptural statement, "He that believeth on me, the works that I do, shall he do also, and greater," and that God was unchangeable. I was fully convinced that if Christ healed it could be done to-day; but had doubts as to whether he had healed.

Then to communicate with those who had passed away, I became anxious to believe in spiritualism; but reading the "Law of Psychic Phenomena" left no base for spiritualism to stand upon.

In 1893 I read "Science and Health with Key to the Scriptures," and it seemed obscure. My wife joined the Christian Science Church and I began to believe that cures were made, but still thought Science and Health was useless verbiage, that could be replaced by the sentence, that faith would move mountains. I consented to be treated to please my wife, trusting that failure would relieve me of her importunities. Our teacher led me gently along, and when I encountered the idea that evil, and not the evil doer, was forever punished, and awakened to the fact that I had attended services twice a week for months with pleasure, and recalled that for twenty-six years I had not attended a church service with entire willingness, I became interested. Result, next Sunday I became a member of the church, with much gratitude to all who have helped to place before me a rational interpretation of the Bible.—R. R. BRIDGERS, Macon, Ga.

A Wonderful Case of Healing.

About two years ago I was in a terrible state on account of drinking. I tried every way I knew to stop. When I retired I prayed that I might give up drinking, and in the morning I tried to keep away from it. I could hold out until about nine o'clock, and then I would shake so I could hardly hold myself together and felt so badly that I thought I would die. Then I would have to drink. I had drunk off and on for about forty-three years and for two years before April 25, 1899, I drank on an average more than a quart a day. At that time a friend who lived about thirty miles from me and who used occasionally to drink with me came to see me. I asked him to have a drink. He said he had stopped drinking. I asked him how he stopped; he said through Christian Science. I said, "Give me Christian Science quick; I want to stop." He replied, "I have come to ask you to go with me to a Christian Science lecture in Ames Memorial Hall in Salem by Rev. William P. McKenzie." I said, "You know I will go but I shall have to carry half a pint of whiskey with me. If I don't I shall faint in the cars." He said, "I don't care if you carry a pint, if you will only go."

I went, and during the lecture it seemed to me as though a great wave swept over me and I felt terribly. My friend said, "Hold on if you can; don't go out." Before the lecture was through I felt first rate and remarked to my friend, "Something has been at work on me. I don't know what." When I returned home I had plenty of whiskey in the house, but I had no desire to drink.

I went to bed and slept like a baby and awoke the next morning without a shake or a pain.

I took my last drink about half past three in the afternoon of April 25, 1899, and have never had a desire to drink since. I know that it is through that lecture on Christian Science that I was healed.

J. M. A. S., Marblehead, Mass.

The following letter relates to the above man and will be read with interest:—

Salem, Mass., March 8, 1901.

My Dear Mr. McKenzie:—I am thinking you will be interested to hear of the man who was so wonderfully and thoroughly healed of intemperance, in the form of liquor habit of forty-three years' standing, I think, through your lecture.

It is nearly two years since he was healed and he has been a regular attendant at our Sunday and Wednesday services. He reads faithfully Mrs. Eddy's writings, and

with great interest studies the Sunday lessons, often under difficulties. His old companions come in, and if they remain too long he will go to his table and tell them he wants to study his lesson, and will commence to read, when they disperse. They have taunted him with being a Christian Scientist and suffering with rheumatism.

Last Wednesday he came to see me; said he *had* to come, he wanted to tell me of the great seeming he had passed through. These were his words:—

"I was very suddenly seized last Wednesday with a violent attack of the grip; it utterly prostrated me. As I was alone my companions came in to minister to me, in their way. They urged me to take medicine and implored me to take whiskey which they had brought with them. It was hard enough to deal with my claim, without dealing with them. I said, 'Take away your medicine; when I take medicine I give up my religion. Do you suppose I will do that? Take away your whiskey, if I knew I should die in ten minutes, and that would save me, I would not touch it.' For a few minutes after this declaration, I thought I should be insane, but God spared me.

"O Mrs. S.! I do not regret this struggle, for through it I have come nearer my God. I am a changed man. Once, I was the great swearer in Marblehead, now, to hear a person swear is like the sting of a wasp, it hurts me so.

"Once, I could not endure to be alone, now, the happiest moments of my life are when I am alone with God and my dear books. I love our dear meetings. I love each one of our little band. I want most of anything to be a true Christian Scientist."

Very sincerely yours,

S. W. S.

Astigmatism and Other Troubles Healed.

Three years ago last June, I commenced to read Christian Science. Previous to this, my health had been poor for many years, and I had given up all hope of ever being well again. Some nine years before, I went through a serious operation. The physicians told me I would be a well woman in a year's time. As the years went by one after another, and I found their words were not true, I became discouraged, and was very unhappy. I longed to die, as I thought this would free me from suffering.

I was in this state of mind when Christian Science was brought to my notice by a dear friend who had just commenced to look into it. I had no idea that I could be helped by reading Science and Health, but as I read, I found there was a great deal in it for me. In three months' time, I laid aside the glasses I had worn for six years. A specialist told me I would have to wear them the rest of my life, as I had astigmatism and was far-sighted, and if I attempted to go without them, I would injure my eyes. I have never worn them since the day I first left them off, and have not suffered with headache, neither have I had any trouble with my eyes. I sew, read, and do lace work by gaslight, and feel no ill effects from it. As I continued to read, one ailment after another left me. Now I can say, I am well; I am not only well but happy.

I am very thankful to Mrs. Eddy for giving us this Truth. I love her for it. Christian Science is indeed the Comforter. It is everything to me. How did I ever live without it!

The only way I can show my gratitude is by living the life of a Christian Scientist—to keep God's commandments, to love my neighbor as myself, etc. This I am trying to do.—A. L. O., North Adams, Mass.

Leaning on him, make with reverent meekness

His own thy will,

And with strength from Him shall thy utter weakness
Life's task fulfil.

Religious Items.

The following sentences are brought together from an article in the (Baptist) *Watchman*, written by Lemuel Moss, the title of which is "Sin is Unnatural." "The Sinless life of Christ, in the environment and conditions of his earthly career, demonstrated the wonderful fact that sin is not an essential and necessary part of human nature. . . . Here is a human life of constant activity, full of controversy, contradiction, strife, persecution from ungodly and ignorant men, and yet not a deed or word or emotion or thought that even God can disapprove. . . . Such a phenomenon in the history of humanity would of itself attract the attention of angels and men. But it was something more than a bare and barren phenomenon, isolated and insulated, out of touch with ordinary human experience. Christ was bone of our bone and flesh of our flesh. . . . Christ, being sinless within, conquered the sin without. . . . It is not necessary to commit sin in order to prove our permanent manhood. Rather do we demonstrate our manhood, and our kinship with God, by the conquest and expulsion of sin."

A writer in the (Unitarian) *Christian Register* says: "It is often said that to labor is to pray. That is a half truth depending upon the application. An ox labors. A steam-engine toils terribly. Man may be as industrious as ox or steam engine, and never lift a thought heavenward or recognize God in his life. Such mechanical labor is no prayer. Prayer is conscious appeal for divine grace, devout recognition of God's living force in the world and in our own souls. It is 'the soul's sincere desire, uttered or unexpressed.' Yet, whether in silence or in word, it is that desire going forth Godward. In this high sense it may be that to labor is to pray. Noble work may be the best part or expression of genuine prayer. Whether as confession of convicted conscience or sinking of deep humility, consecration of high purpose or adoring gratitude of a thankful heart, submission to God's will or request for divine help, this spiritual communion with the Fount of all blessing, this aspiration Godward, is prayer."

In a sermon on "Prayer," published in the (Unitarian) *Christian Register*, the Rev. Rush R. Shippen says: "Prayer of consecration touches the soul with a new sense of dependence and fidelity, reminds us that all we have and are belongs to God, that our blessings are not given, but lent, that we are but stewards of the divine bounty, not to be selfish in our prosperity, that we are called to be servants of the truth and right, co-workers with the Most High. With such pledge of fidelity come new light, strength, and inspiration. Prayer of thanksgiving moves the heart with grateful thought of the infinite loving-kindness amid which we live. We cease our selfish begging for more favor, feeling that we already enjoy more than we deserve or rightly use. With untroubled trust serenely we commit our future into the loving Father's guidance and care, in whose good-keeping we are forever safe, whose benefits are new every morning and fresh every evening, countless as the stars."

Judson Kempton says in the (Baptist) *Standard*: "I am told that there are along the banks of the Rhine ruined castles, centuries old, whose tottering walls would have crumbled away hundreds of years ago but for the ivy and climbing vines. So I have seen characters with no great force that yet were strong as well as beautiful because they were graced with gentleness. Such characters are often, I am not sure but always, more influential for good than those which have force without gentleness. Those beautiful ivy-clad castles on the Rhine draw to themselves hundreds of thousands of travelers from all the world over. I am not sure but that, by their silent influence, they do more good to-day than when they were stern and grim and had no ivy on them."

In its department "For Endeavorers" *The*

Congregationalist says: "It is hard to love souls in the midst of their squalor, their poverty and their sins, but the Son of God loved just such persons, and he loved the weak and unresponsive men in his own circle of disciples. How tried he must have been with them—with the fickleness of Peter, and the gloomy temperament of Thomas, and the denseness of Philip, and the fiery vindictiveness of the sons of Zebedee; but he kept on loving them to the end, and loved them out of their follies and their shortcomings. Here is the test for us. It is no great credit to us if we are fond of brilliant and lovable souls; what do we think of the man who is dull and besotted and uninteresting?"

In a baccalaureate sermon at Hamilton College on "Optimism and Pessimism," which is published in the *Homiletic Review* for April, President M. W. Stryker says: "Apart from the intervention of God in Christ, human affairs are as dry of consolation as the breasts of the sphinx. The plaint is everywhere: 'I am pained so that I cannot hear; I am dismayed so that I cannot see. My heart panteth, horror hath affrighted me: the twilight that I desired hath been turned into trembling' (Isaiah, 21:4, 5, R.V.). If from things only, without moral force or fulcrum, we have hope, we are of all men most miserable. No misanthropy could devise worse than to feed the heart with such ashes."

The *Universalist Leader* quotes the following from the "Easter Message" of a Universalist pastor to his flock: "Fear spiritual poverty more than material loss; and sin more than punishment. Fear God as you would your best friend; fear to deceive or to be unworthy. Be righteous, but not self-righteous. Have faith in that which transcends reason, but reject all which opposes reason. Be honest in your convictions rather than consistent with your past belief; grow up and out. Be true though not popular, guided by principle rather than policy. Be discontented with what you are but contented with what you have; satisfied, but not self-satisfied. Have a mind open to God's thoughts, a heart open to God's love."

The (Unitarian) *Christian Register* quotes the following from Charles Beard: "If we are wise with the true wisdom of souls, our first need of patience sends us to God to ask for it. We seek a refuge from disquietude in His peace: our haunting weakness drives us back upon his strength till presently we find that our incapacity, with God's help, is stronger far than our completest energy without it, and that, with the thorn still fretting the flesh, we can do all things through Him that strengtheneth us."

In one of its Easter articles the (Swedenborgian) *New-Church Messenger* says: "This spiritual resurrection is ever and always taking place. Now and here, at this very moment, the Lord may rise, and we may be the ones to visit his tomb and find not the body of the Lord Jesus, and may have the vision of angels and later may see the Lord himself in a more divine light than we have ever seen him before. May this spiritual resurrection be given us, in the individual and in the church, as the special fruit of this season."

A writer in the (Unitarian) *Christian Register* says: "We are educated 'by illusion to the truth.' We make the business of our life the translation of the illusive appearances of things into the verified facts of experience. Nothing is what it seems. We have never seen the reality of anything whatever. We walk in a world of shows. The phenomena are what we see: the reality is what we believe; and we are educated by converse with the phenomenal to know that there is a reality of which it is the mask and show."

A writer in the *New-Church Messenger* says: "We believe in the divine Love, at least there is no portion of our creed that we can more earnestly affirm and more eagerly ac-

fend than this, but do we believe it in our heart? Do we show by our actions, by the love which we have for others, by our devotion to what is right and true, that we trust and believe in the divine Love, and thus that we say in our hearts: 'We believe that God is Love'?"

The (Baptist) *Standard* says: "There is no more water in the lake when its surface rolls up in waves than when in a dead calm. So there is not less vital force in Christianity than formerly. It is even now gathering strength and we shall soon see a gracious season of refreshing from God, and men will turn to God in larger numbers than ever."

An editorial in the *Universalist Leader* contains the following: "By transmuting the perception, the apprehension, the conviction that is true, clear, and righteous—that bears the seal of the everlasting Gospel—into life, there comes . . . a demonstration of things eternal, a consciousness of the abiding presence of God."

The (Baptist) *Watchman* says: "Christianity is an atmosphere as well as a doctrine. You go into a Christian home and at once you are conscious of a standard of life, a tone of feeling, and a type of purpose at a wide remove from the prevalent temper of the ungodly and the purely worldly household."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*. Exchange on *Chicago* or cities other than *Boston* or *New York* will not be accepted.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem, Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.	
--	--

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17, pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

Political and Governmental Notes.

A statement setting forth the origin and extent of immigration at the port of Havana, Cuba, for the last half of the calendar year of 1900 has been made public by the division of insular affairs of the War Department. The total number of immigrants arriving at that port during the period named, was 14,578. The Chinese immigrants numbered 226—106 coming from China direct and 62 from Mexico. The most extensive immigration was Spanish, the total being 12,935, of whom 12,094 were from Spain, 396 from Mexico, and 346 from the United States. The immigration from others of the principal nations was as follows: English, 148; French, 125; Italian, 304; Mexican, 225, and Germans, 99.

Thirty years ago New Jersey had a balance of only \$2,760 in the State treasury. Her State buildings were in a shameful condition and affairs generally were run down. To-day her State buildings compare favorably with those of her sister States, she has \$1,000,000 in the treasury and a fair promise of incorporations—the source of her revenue—reaching the two billion dollar mark this year. Last year the total ran up to \$1,350,298,485, and this has already been exceeded during the current year.

Aguinaldo's manifesto to the Filipino people urging them to submit to the government of the United States was made public last week. In closing his address, the leader of the insurrection says: "By acknowledging and accepting the sovereignty of the United States throughout the Philippine archipelago, as I now do, and without any reservation whatsoever, I believe that I am serving thee, my beloved country; may happiness be thine."

During the Spanish-American War, out of a total force of 22,828, the total of native-born sailors in the United States Navy was 15,406, and of foreign-born 7,422. The percentage of native-born sailors was 65, and including foreigners who had become Americans by naturalization the percentage was 80. This statement also shows that of the foreign-born sailors more than one-half have become naturalized or have declared their intention of becoming citizens.

President Taft of the Philippine commission says that Mgr. Chapelle, the papal delegate to the Philippines, told him the friars were not to return to the provinces, and that only a sufficient number of them were now in Manila to act as instructors in the colleges. This disposes of the troublesome "friar question."

For the first time in the history of the United States the Government's aggregate

gold holdings passed the half billion mark, standing at \$500,278,506 at the close of business April 16. On February 10, 1896, the gold in the United States Treasury fell to \$94,239,542.

The Postmaster General has promulgated an order so modifying the postal regulations as to permit letter carriers to wear blouse shirts during the heated term, in place of coats and waistcoats.

Foreign News.

Sir Michael Hicks-Beach, chancellor of the exchequer, made a statement in the British Parliament on April 18, showing the financial condition of the government. The statement showed that the expenses for 1901-1902 would be, according to official estimates, £183,592,000, of which £65,000,000 will be required for the war in South Africa and £3,000,000 for China. The chancellor proposed to raise about £11,000,000 from new taxation, and about £40,000,000 by the sale of bonds, but he asked permission to raise £60,000,000 worth of bonds if necessary. He also proposed suspending the sinking fund. It was announced that the South African colonies could not share any of the war expenses at present.

The most remarkable of recent developments in Russia is a proposal to despatch to the Czar an address begging him to grant a constitution. Fifteen thousand signatures have already been secured, including those of many land-owners, merchants, and literary men. The address is generally regarded as a most daring step. The full text of Count Tolstoi's address to the Czar on March 28, has been made public. He submits a long programme of reforms. The whole document is full of the plainest speaking.

At various times the municipal corporation of Liverpool has obtained powers from Parliament to borrow sums (amounting altogether to \$2,000,000) for the demolition and improvement of property found to be unsanitary. This large amount has already been expended, with the exception of about \$35,000. The number of houses which have thus far been demolished by the municipal council as unfit for habitation is sixty-five hundred. Liverpool has now in course of erection 183 houses for the poor.

It is announced that the coronation of King Edward will take place at the end of June, 1902. Westminster Abbey will be entirely closed to the public for four months prior to the event, and all services will be suspended in order to prepare the interior for the ceremony. One of the pillars in Westminster Abbey fell recently, and was shattered into small pieces. Investigation showed that another pillar was in an unsafe condition.

It is announced that King Edward will witness the trial races between Shamrock I. and Shamrock II. in the Solent at the end of the first week in May from the deck of Sir Thomas Lipton's steam yacht Erin.

Mexico has signed the convention of the Peace Conference. China, Luxemburg, and Turkey are now the only countries which have not signed the Peace Convention.

Industry and Commerce.

A New York press dispatch says: "The foundation for one of the largest combinations to be operated in connection with the billion dollar steel trust has been laid by the purchase of the Cook Locomotive Works of Paterson for \$2,000,000 in cash. The purchase was made by the Morgan and Rockefeller syndicate, which, it is said, contemplates the amalgamation of all the locomotive interests east of the Missouri River within the next six months."

The Eastern Shipbuilding Company of New London, Conn., is now constructing two steamships for the Great Northern Steam-

ship Company to ply between Seattle and the Orient, that will outstrip the mammoth Celtic, recently launched at Belfast, Ire., and which is now the largest ship that was ever afloat. The Great Northern ships will each have a displacement of 38,400 tons. against the Celtic's 36,700 tons.

An organization composed of about five hundred negro families has been effected, whose members propose to purchase a tract of land in Georgia large enough for a town, with a view to the establishment of an independent self-governing community. Various industrial enterprises are to be undertaken.

The United States is now patronizing the banana plantations of the West Indies and of Central America to the amount of about \$8,000,000 a year. That is the exporting, not the retail value. The island of Jamaica alone is sending to this country over four million bunches a year.

General News.

A dispatch from Constantinople to the New York *Daily News* says: "Abdul Hamid is preparing a revival of Mahomedanism for the strengthening of his own position as chief of the Moslem world. A great pilgrimage to Constantinople is being organized, with the encouragement of the Turkish Government, from the various Moslem communities in Europe, Asia, and Africa. The pilgrims are expected to salute Abdul Hamid as the successor of Mahomet. Coupled with the movement for a pilgrimage is an earnest revival of proselytism in behalf of the Mahomedan creed, not to be undertaken with the sword, but by missionaries after the Christian fashion, who will be sent everywhere throughout the Orient. It is also stated that an alliance will be arranged between Turkey, Persia, and Afghanistan for mutual defence against the Christian Powers."

In Sweden the State owns and cares for over eighteen million acres of forest lands. Schools of forestry are maintained, and the timber lands are efficiently cared for by the graduates of the schools, who understand how to farm the lands, by preventing waste and profitably manufacturing the product of the forest, carefully replanting where trees are cut down. As a result of forestry so managed, all the cost of schools and caretakers is defrayed out of the product sold by the State, and the net profits are four times greater than the expenditure.

Cleveland has a home gardening association, which encourages children to cultivate flowers at home. Last spring the association distributed to children fifty thousand penny packages of flower seeds, with printed instructions how to prepare the soil, plant, and water. The teachers supplemented these instructions by talks. In the fall exhibitions were held in many schools which revealed the fact that about seventy-five per cent of the efforts of the children were successful.

Sir Robert Ball of the Royal Institution of England says the sun is growing nine inches smaller every day. In twenty years it has shrunk a mile. At the beginning of the century the sun was five miles bigger, and at the beginning of the Christian era 100 miles bigger than it is now. The diameter of the sun is 860,000 miles, and 40,000 years hence the sun will have lost 2,000 miles. But there is no occasion for anxiety on the part of those now living, as it will look exactly the same 40,000 years hence as it does to-day.

There probably are over one hundred thousand students in the various universities and colleges of America at present, and the whole number of persons who are being educated in the schools and colleges combined is given as 16,738,363.

If the United States, exclusive of Alaska and island territory, were as densely populated as Belgium, it is stated that the number of inhabitants would be 1,776,060,000.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Mutual Helpfulness.

Interesting Address by Justice P. E. Tillinghast.

THE following address was delivered in the Fourth Baptist Church, Providence, R. I., Sunday evening, March 17, 1901, by Justice P. E. Tillinghast, who for twenty years has occupied a seat on the bench of the Supreme Court of Rhode Island. Many of our readers will recall that it was this court which decided a most important question affecting Christian Science practice in the case of the State *v.* Mylod, which went before that court on appeal.

The subject of the address is so pertinent that we regret the necessity of abridging it somewhat in adjusting it to our space limitations, but it has been our endeavor to do this without marring the continuity of thought or impairing the force of its expression.

We are indebted to Book Notes of Providence, R. I., for the privilege of republication.

One of the chief duties devolved upon us, by the great and beneficent Father of us all, is that of mutual helpfulness,—of striving, in all good ways to assist and sustain each other in the ups and downs, the successes and reverses, of our worldly life. And that man, who does the most with the powers which God has given him to aid and bless his fellow-men, comes nearest to the fulfilment of the end and purpose of his existence.

He who spake as never man spake, said, "A new commandment I give unto you, That ye love one another." And how can this heaven-born precept be more fully complied with and exemplified than by acts of mutual helpfulness,—by doing those things which minister to each other's comfort and happiness? "Bear ye one another's burdens, and so fulfil the law of Christ," is the divine injunction. We are all burden-bearers; and sometimes our burdens are so heavy that we cannot bear them alone. Like Christ, struggling in the Slough of Despond and unable to get out, "until a man came to him whose name was Help, who gave him his hand and drew him out and set him upon sound ground and bid him go on his way," so we are sometimes almost ready to despair until some kind soul extends a helping hand, or speaks an encouraging word, and then, O how quickly the burden lightens and the heavy heart becomes light and joyous! Byron says:—

The drying up a single tear has more
Of honest fame, than shedding seas of gore.

To a very large extent, we are all mutually dependent upon each other,—the children upon the parents, the parents upon the children, the wife upon the husband, the husband upon the wife, the neighbor upon the neighbor, the citizen upon the citizen. This is as true also of classes as of individuals. The great army of wage-workers in our mills and manufacturing establishments, on the one hand are dependent upon the manufacturers and employers for

their daily bread and the comforts of their cheerful homes; while on the other hand the manufacturers and employers are dependent upon the wage-workers for the brawn and muscle, the diligence and skill, which are indispensably necessary to the prosperity and success of the enterprise.

After applying this thought to the mutually dependent relation of the capitalist and laborer, producer and consumer, merchant and tradesman, professionalist and layman, our author says:—

We might thus proceed in detail through all the relations and ramifications of society, and we should find that this rule of interdependence everywhere prevails. It is indeed true that no man liveth unto himself, and no man dieth unto himself.

Each one of us is a link in the great chain of human society, owing certain duties to every other member of that society; and whenever either fails in the performance thereof, both must suffer loss. With all these duties performed this world would be transformed into a paradise.

We should be mutually helpful to each other because we are all members of one common family.

God is our Father, and we are all brethren. But alas! how few there are, comparatively, who accept and adopt this great truth as the basis of their relations with each other.

"Every man for himself," is the cold and heartless maxim of the world which is too often heard and acted on in the marts of trade, in the halls of legislation, and even in the private affairs of every-day life. "I must succeed in business, amass wealth, and revel in luxury, no matter if it be at the cost of driving sharp bargains with my neighbors, grinding the faces of the poor, and sacrificing my own God-given sense of justice and humanity." Worse even than this, "I must succeed in my business, notwithstanding the fact that that business itself consists in undermining the health, prosperity, and happiness of all who purchase my wares, and in disturbing the peace and blighting the morals of the community."

In the unseemly scramble for political preferment and position, "I must win, no matter if the victory be obtained by traducing and vilifying the character of my opponent and the bartering away of my own self-respect." "I must win, even though it be by trampling under foot the most sacred rights of our common humanity."

Even in the family, not infrequently, is the overweening spirit of selfishness painfully apparent. The most sacred relations of life are desecrated and set at naught, and the sweetest and tenderest emotions of which the human heart is capable, are blighted and withered. About six hundred petitions for divorce are now filed in a single year, and about four hundred are granted in the same time. One divorce out of about every ten marriages! What a record for the Christian State of Rhode Island!

Hundreds of families are thus broken up every year, and society is thereby perceptibly demoralized; and the marital relations are coming to be regarded by many as a mere

contract-at-will, and hence subject to be annulled at the pleasure of either party thereto. We seem to forget that the family is the unit of society,—the unit of the State; and that in the proportion that the family is undermined and its healthful influence weakened, in that proportion must society, which is the State, suffer loss and become imperiled. The home is the most sacred place on the face of the earth.

The home is the very centre and fountain of its existence. If the home is preserved in its integrity, if purity and love dominate there, we need have no misgivings as to the stability and perpetuity of our cherished institutions. But if, on the other hand, the home is neglected and its refining influences dissipated, it may well be feared that the institutions which our ancestors founded, and our fathers and brothers defended, may suffer irreparable loss and decay.

The root trouble and underlying cause of the un-Christian and even unmanly kinds of conduct to which I have thus referred, is *selfishness*. The spirit of commercialism enters so largely into our planning and our giving that we become *purblind* to the demands of Christianity. By constant contact with the things of time and sense, we cultivate the materialistic view of life at the expense of the spiritual.

One of the greatest hindrances to the progress of Christianity in this bustling, utilitarian age, is the insatiable greed for gain which dominates so largely in all the affairs of life. We *worship* the *almighty dollar*. The piling up of riches has become a *mania* with large numbers of our people. "Get rich," is their watchword. "Get all you can, and keep all you get." And, what is worst of all, in too many cases, the methods by which riches are obtained are of the utmost indifference, so long as they succeed. Shall Goldsmith's familiar words ever be true of our beloved country, that

Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay?

Shall the mammon of unrighteousness supplant the once lowly but now exalted Christ in our affections? Shall we eat, drink, and be merry, and flatter ourselves that the acme of human happiness has thereby been reached? Nay, nay. Happiness, real happiness, cometh not from things which perish with the using, but from those which are spiritual and eternal.

We can no more violate the laws of health, and expect to be vigorous and strong, than we can violate the laws of God and expect to be useful and happy. Violated law *always* brings its penalty. It is one of the maxims of the Chinese that "Punishment follows sin as surely as the cart-wheel follows the ox."

Selfishness dwarfs a man. It circumscribes his limit of vision and makes him nearsighted. It narrows and blunts his sympathies and gradually dries up the fountain of his affections.

Unselfishness, on the other hand, broadens, uplifts, and ennoble a man, and makes him reflect in some degree the crowning characteristics of him who gave *himself* for others.

Mutual helpfulness should not only be the motto as between individuals, neighbors, and adjacent communities, but between states and nations as well.

The brotherhood of man, like the Fatherhood of God, is not limited to the family, the church, the state, or the nation, but is universal and all-embracing.

And when each individual shall have learned to discharge his brotherly duty to every other individual, then, and not till then, will wars and fightings wholly cease, and the mild sceptre of the Prince of Peace everywhere hold sway.

When a person is down in the world, an ounce of help is better than a pound of preaching. And it is one of the

most beautiful compensations of this life that no man can sincerely try to help another without helping himself also.

"There are two kinds of charity, remedial and preventive. The former is often injurious in its tendency, the latter is praiseworthy and beneficial." Our helpfulness, so far as it relates to the poor, should be of the character which helps them to help themselves. Ruskin says: "It is written, not blessed is he that *feedeth* the poor, but blessed is he that *considereth* the poor."

President Andrews says: "Usually food and clothing ought to be given to none but the sick and incapable. The thing to do for others is to find or furnish them something to do."

Every man, as a rule of course, must and should provide for himself as to material things. But while this is so, it does not absolve us from the duty which we owe to him, of being helpful in other ways, and especially of helping him to cultivate and develop those higher qualities of the mind and heart which constitute the nobler part of his being.

But it is social, moral, and religious help that is most needed in the present advanced and complex state of our American civilization, and this is specially true with regard to young people. For, their pride and ambition, their desire to secure the respect and confidence of the community, and their innate sense of propriety, will prompt them to be outwardly prudent and discreet, but at the same time these motives fail utterly in very many cases to make them pure within.

They need a higher motive than any or all of these in order to strengthen and develop the soul power that is within them. They need to be made to feel and understand that the life is indeed "more than meat, and the body than raiment," that "it is not all of life to live, nor all of death to die," and that he only who acts in accordance with the principles of truth, virtue, and righteousness, and the dictates of that spark of divinity within, called conscience, accomplishes the mission of his existence.

Some men live in the upper story of their earthly tenements while many, very many, alas! are content to occupy the basements. The former cultivate a love for whatever is pure, virtuous, ennobling, manly; while the latter cultivate the baser passions of our poor human nature, living only for the things of time and sense, and wasting all their God-given powers in a vain attempt to find happiness in mere worldly pleasure. To help one of the latter class to a higher and better life, to turn his wandering feet into the paths of virtue and righteousness, is to save a soul from death and hide a multitude of sins. Moreover, what is more Christlike than striving to be helpful to those who have gone astray? Did not the Good Shepherd leave "the ninety and nine," who needed no repentance, and patiently seek out the one lost sheep?

We ought especially to help the young to shun the insidious temptations of youth by teaching them the beauty of virtue and the profit of godliness. For is it not written that "Godliness is profitable unto all things, having promise of the life that now is and of that which is to come"? Teach them that the reward of well-doing in this life is thirty, sixty, and an hundred fold, and in the world to come life everlasting. Beecher said: "A helping word to one in trouble is often like a switch on a railroad track—but one inch between wreck and smooth rolling prosperity."

To help one morally and spiritually is to do him the greatest possible amount of good. For when the fountain of one's life is purified, the stream must necessarily be pure also. If the heart, the mainspring of human action, be impure, the action flowing therefrom must be tainted with evil. For as a man "thinketh in his heart, so is he." All our efforts at reform, therefore, should be primarily

directed at reforming from within, and not from without the man. We should be honest in business, not because it is the best policy, but because it is right to be honest, and wrong to be dishonest. We should adopt the Golden Rule even, not merely because it is a wise, economic maxim, but because it is the God-given rule of conduct between man and man, because the bed-rock of love is its chief corner-stone. Outward laws and customs cannot make men inwardly right. Virtue never was *legislated* into the heart of a single human being.

When a man's heart is right he becomes a law unto himself, and needs no outward law to govern him. He **does right from mere choice**. He does right because it is natural for him to do right. His conduct is simply love in action. He shuns the wrong because he hates the wrong, and it therefore appeals to no responsive chord in his heart. Listen to the divine injunction to "keep thy heart with all diligence; for out of it are the issues of life." It is that which cometh from within that defileth the man, and not that which cometh from without.

Finally, the spirit of the gospel of Jesus Christ is the spirit of mutual helpfulness. The religion which we profess is not an abstract principle, a theory, or a mere speculation, but an *actuality—on intensely practical thing*.

It lifts men up and makes them wiser, purer, nobler. It makes better fathers and mothers, better husbands and wives, better children, better neighbors, better citizens. Take notice that I do not assert that religion in the abstract—theoretical religion, merely, or even theology—accomplishes these results, but religion in the *concrete*,—that religion which takes hold of a man's *life* and enters into and controls his daily conduct. *Not a creed, but Christianity*.

Let us strive to emulate the example of the Great Teacher who came into this world to lift men up, to take them out of their selfish selves and ally them with himself; to teach them that there is something higher and nobler than merely seeking their own profit and pleasure, and that real happiness is only found in loving God with all our hearts and our neighbor as ourself.

And he not only preached this doctrine, but he practised it as well. He fed the hungry, healed the sick, cleansed the lepers, gave sight to the blind, unstopped the ears of the deaf, comforted the afflicted, raised the fallen, and gave peace to those who were distracted by evil spirits. He went *about*, doing good. He gave himself that others might be filled.

The *most* helpful service which we, as Christians, can render to our fellow-men, is that of turning their steps from the ways of unbelief and sin into the paths of righteousness and peace. Of bringing them to a saving knowledge of the truth as it is in Jesus. To this end let us earnestly and continuously labor. And let me assure you that when the church—and by this I mean Christians everywhere, no matter by what name—comes to occupy the exalted position in society which the Master intended that it should, the forces of evil will be vanquished, and the kingdoms of this world will become the kingdoms of Our Lord and of His Christ.

Good natured people are a blessing wherever they be. They may not set the world on fire; they may not make the most money, but they leave an aroma of happiness in their wake that is better than anything in this world. To feel good toward your fellows and to be able to express that feeling at the proper time and as often as need be is a gift more precious than gold and jewels. It is also as rare as great riches.—*Xenia Gazette*.

Selected Articles.

Dr. Schurman on Religious Creed.

PRESIDENT SCHURMAN addressed a large audience in Sage Chapel recently on "Religious Thought in the New Century."

In his introduction President Schurman said that the religious thought of the new century must necessarily depend upon that of the last century. The change of religious thought during the last century has been most marked. The fact of the existence of a non-denominational university like Cornell is a striking evidence of such a change. The change has been from a dogmatic, uninquiring position at the beginning of the century to one of anxious questioning and perplexity at the close.

"This has been," said President Schurman, "pre-eminently the period of science." The present generation has a greater fund of knowledge than any previous generation. This knowledge has had a remarkable effect on religious thought. The science of astronomy has greatly influenced it by the modern apprehension of the vastness of space. Geology and biology in their present form have also given much food for thought.

As a result of these discoveries in science, the first part of the century had a decidedly materialistic tendency. This tendency disturbed faith, encouraged scepticism, and engendered pessimism. Matter was considered to be at the root of the universe and thinkers endeavored to bring mind and will to the level of matter.

A reaction has, however, set in. Matter is no longer considered to be at the root of the universe. Physics seeks no longer to reduce mind and spirit to matter, but rather to raise matter to the level of mind and spirit, making God All-in-all. Within its own sphere, science must be accepted; but that is not the whole sphere, nor must results achieved there make war with the deeper feelings and emotions.

Thus the progress of the nineteenth century has been from dogmatism to scepticism and beyond to emancipation. The tendency of this century has not been toward an elaboration of creeds. The intellectual side has not been prominent. Rather has the tendency been to an acceptance of facts without any theorizing. "I predict," said the speaker, "that in the new century, the church with shorter creeds and less emphatic doctrine will be favored in the struggle for existence."

This is surely a change in religious thought. Religion must no longer be considered merely intellectual; it appeals also to the emotional side. The realization of this truth is the crowning achievement of religion in the last century. So long as we have evidence of the Lord and the testimony of those who have lived religion, so long must we believe it. The maxim of the religion of the twentieth century is: Do justice, love mercy, and walk humbly in the sight of thy God.—*Cornell Daily Sun*.

Count Tolstoi to his Foes.

THE Berlin *Tageblatt* publishes a letter received from Count Tolstoi in reply to a request from the editor as to his sentiments toward the action of the Greek Catholic Church in banishing him from the communion of the faithful. The great philosopher at the same time speaks of a number of threatening letters which have reached him from all parts of Russia, in which fanatic votaries of the Russian Church call him a Judas, and urge him to take the example of the betrayer of Christ and commit suicide. The sage of Jasnaja Poljana replies in part as follows:—

"The threats which I receive daily by mail demanding that I should make an end to my life because my agitation

is alleged to be hurtful to the Christian church make very little impression on me. They fill me with astonishment, since I learn through them that there are men who really hate without a cause.

"Oh, that the world would know that life is vain without faith. It is faith that teaches us the object of our existence. This is the most important question for every individual in the world. The church has ousted me, but not Christ. The church objects because I want every man to probe the word of God individually and to learn the goal of his life. I appeal to the world to take the words of priests and preachers only in so far as they agree with the living word, and I found my assertions on the saying of the Saviour himself, who says: 'Prove my doctrine and you will know whether or not it is of God.'

"I defy any man to point out one word in any of my writings of recent date which disagrees with Holy Writ.

"My faith consists in the belief that our life is not ours, nor the state's nor does it belong to the church, but to God alone, to whom as good stewards we are responsible.

"It must, therefore, be the aim of our existence to do His will, and to do that of others only when it does not clash with the command of the Almighty. It is His will above all things that we shall love all men with all our hearts, which is the fulfilment of the Mosaic law."

Bangor Commercial.

A Clock without a Dial.

A REFORM in our present antiquated method of time-indication has been introduced by Samuel P. Thrasher, of New Haven, Conn., who has devised a simple form of clock in which the dial is replaced with moving figure-wheels, indicating the time as a cyclometer indicates miles. When one thinks of it, our present clock dial is as mediæval as would be a circular cryptogram for the sign over a store. It might do for the days of astrology, but it has survived too long. *The American Inventor* (March 1), describing the new form of clock in an article entitled "A Twentieth-Century Time System," says:—

"Instead of the old way, which does not tell the time, but presents a group of signs by which one contrives to calculate it, the new dial will actually tell the exact time without any calculation whatever. It will no longer be necessary, many times a day, to solve a mental problem—the hour and minute hands being respectively in such and such positions relatively to such and such figures, what must the time be—for a glance at the clock shows the time unmistakably announced in plain Arabic numerals. We are so used to the mental calculations referred to that we hardly realize they are a nuisance. There are seven hundred and twenty minute combinations formed by the passage of the hands on the dial. Some persons never become so used to calculating them that they do not make an appreciable pause before stating the time. Often mistakes are made, as when one says it is twenty-four minutes past eight, when it is really nineteen past. But in reading the new clock no one need pause, calculate, or mistake, and a child will have no difficulty. When the hour hand of the old-fashioned time-piece is dangling in one direction between VI and VII and the minute hand is losing itself in another somewhere between XI and XII, the new timepiece will read simply and conclusively 6.58. In another minute the last figure magically disappears and 9 takes its place, and in another all the figures vanish, and in their place appears 7.00. That is, time will be told as the railroad time-tables tell it. And with the general introduction of this system would go such bungling expressions—entailed by the old circular dial-plate with its wreath of figures—as twenty minutes past nine, fourteen minutes of twelve. Instead we shall adopt the crisp, accurate terminology of the time-table and say, nine-twenty, eleven forty-six.

"Another advantage of Mr. Thrasher's clock is that time may be discerned by it at a much greater distance and a more difficult angle. The reason is obvious. There are twenty-eight figures on the ordinary dial and only one is perfectly upright. The greatest number appearing on the new dial is four and all are upright. The figures of a tower-clock, for example, may be made several feet long and thus discernible at a great distance.

"The seconds are indicated by a hand following a graduated arc instead of a complete circle. This device makes the figures easier to read than where many of them are upside down. The second hand is the only one on the dial.

"Among Mr. Thrasher's patents are some covering electrical devices which insure greater regularity and accuracy of movement than has hitherto been attained, together with a simplicity of construction which makes the consumption of battery power exceedingly small. Moreover, these improvements in electrical clocks render it practicable to have a 'system' of accurate time-indication on a scale however great. For example, the hundred rooms of an office-building may each have its indicator set in the wall, all controlled by one 'master-clock,' which in turn is synchronized from the observatory, thus insuring accurate time wherever the indicators are placed. Hotels, public buildings, factories, office-buildings, and railroads, will probably be among the first to introduce the system.

"There is a feature in regard to tower-clocks which ought to be noted. Unless very expensive precautions are taken, the vibration of the tower, changes of temperature, and other influences seriously impair their accuracy. But by this system the time mechanism may be located in any convenient place away from disturbing influences, and the figures upon the tower dial controlled by the electrical connections. The inventor believes his scheme is capable of and will receive great expansion, that the time will come when large houses will be fitted up with indicators in every room, when the 'time' will be reckoned among the 'modern improvements' along with lighting and heating, hot and cold water, and rented with the building. Finally, he expects, a whole city will be arranged on a 'time system,' every building whose owner desires it being electrically connected with the 'master-clock,' and inaccurate time becoming a relic of the past. This is a Napoleonic idea, but is only another step in the process of organizing the conveniences of urban life which has been long going on. It is worthy of the twentieth century."

Bible Most Popular Book.

The Rev. R. S. MacArthur said in a sermon on "The Instructive Voice of Biblical Research:"—

"The Bible is the most popular book in the world. As a mere literary monument the English version is one of the grandest triumphs of the English tongue. It did more to fix the form of the English language than any one literary influence.

"Seven million copies are printed every year. The marvel is that this wonderful output goes right on, and is likely to continue through unnumbered years in the future. One great gain in recent times is that we have given proper prominence to the human element in the Bible. The recognition of this element strengthens, and not weakens, the power of the Bible. The recent scholarship, to all right-minded persons, gives additional dignity and glory to the old Bible. It never had so mighty a grip alike on the educated classes and the simple-minded folk as it has at this hour.

"The twentieth century opened with the highest honors paid by the noblest scholarship to the glorious old Bible as God's fullest revelation and as man's greatest literary benediction."

The Lectures.

At Memphis, Tenn.

Judge William G. Ewing of Chicago addressed an audience of more than one thousand people at the Grand Opera House yesterday afternoon (Sunday, March 31) on Christian Science. He spoke for an hour and thirty minutes, and during that time it is safe to assert that there was not a moment when he did not have the undivided attention of his hearers. It was what might be fittingly termed a beautiful discourse, for it was beautiful: beautiful in its lofty thought; beautiful in its moral precepts and high Christian purpose, and beautiful in the earnest simplicity and impressive sincerity of the speaker, as well as in its orate rhetoric.

Judge Ewing did not speak from the standpoint of one who seeks to proselyte, but as one whose purpose is to enlighten. It was not an argument to persuade to belief in the principles he represented, so much as it was a plea for fairness and candor. He spoke in defence of principles which he showed were wronged in the popular conception, and he sought to remove these errors, in justice not only to his creed, but to the mind honestly misled by popular prejudice or error. He sought not to make converts, but to excite honest thought and to encourage candid inquiry into the principles of Christian Science, and to place it where he contended it belongs, in the category of Christian creeds; to offer it as his conviction of the truest exponent of the religion of Christ—the most perfect and most efficacious application of the doctrines which he taught on earth.

Judge Ewing spoke with such a deep sense of conviction, with such earnestness of faith and manifest sincerity as warmed the hearts of his hearers and won for him their sympathetic attention. There was not one among them who could help feeling that, if he did not hear the truth itself, he at least heard an honest man's honest conception of it.

Memphis Commercial Appeal.

Mr. W. S. Rosebrough, a very prominent lawyer of Memphis, introduced Judge Ewing in the following liberal and courteous speech:—

Ladies and Gentlemen:—I am a Methodist, I was born a Methodist, and I expect to die a Methodist. But I would be untrue to that great church and false to its founder if I thought for one moment that all goodness and wisdom were revealed to members of that church only. The fact is, that there is but one church, the church of the living and true God. This church is like unto a tree having many branches; Methodism is one branch, and if I am correctly informed the Church of Christ, Scientist, is another branch.

It affords me much pleasure to see eminent lawyers, members of my chosen profession, teaching the fatherhood of God and the brotherhood of man; especially so, when they are gentlemen of culture, refinement, and scholarly attainments. Such a one we have with us to-day. He comes under the auspices of Second Church of Christ, Scientist, of this city. He is duly authorized by the Mother Church at Boston; he speaks with authority. If he teaches false doctrine, it will soon wither and pass away; but if he teaches the truth, that is immortal and will live forever.

Broad-minded and liberal Memphis is not afraid of the truth. She loves freedom of speech: she loves freedom of thought. Ladies and gentlemen, in the absence of Col. Patterson, I have the honor to present to you, Judge Ewing of Chicago.

With the copy of his address which Mr. Rosebrough sent to the local committee in response to its request, he said: "I thank you for the honor. I am always glad to assist a cause which is doing so much for humanity and for the glory of the Prince of Peace."—*Correspondence.*

At Jamestown, N. Y.

An audience which completely filled the lower portion of the house and a part of the first balcony in Samuels' Opera House Sunday afternoon (April 14), greeted Judge William G. Ewing of Chicago, who came to Jamestown under the auspices of First Church of Christ, Scientist, of this city, to lecture upon the subject of Christian Science. With the speaker sat the Rev. Walter A. Taylor, pastor of the First Unitarian Congregational Church of Jamestown, who presided over the meeting. In introducing Judge Ewing the Rev. Mr. Taylor read from a Chicago paper a tribute to the high character of the speaker and of his able work on the federal court bench, and supplemented what the paper said with his own strong words of endorsement.

Jamestown Evening Journal.

Lectures at Other Places.

Nashville, Tenn.—William G. Ewing, March 28.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

The Church Manual.

The Church Manual of The First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

APPLICATIONS for membership with the Mother Church to be presented at the June meeting for the admission of applicants, must be in the hands of the Clerk on or before May 20, 1901.

A Word to Inviters.

INVITERS of applicants to membership with the Mother Church will confer a favor on the Clerk and save disappointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date set for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

To Open a School of Prayer.

Reports from Southern Illinois recently announced that a Rev. H. L. Derr, a Baptist minister, was about to establish a school of prayer, to be a department of Ewing College, a Baptist institution, located in the district known as Egypt. The purpose of the minister is to give a two years' course in the nature, purposes, and conditions of effectiveness of prayer, treating it from a historical and scientific point, for the purpose of enabling Christian workers and others to understand better its nature and scope. It is proposed to open the institution if the necessary funds can be secured at the opening of the next scholastic bi-year.—*Cincinnati Commercial Tribune.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Word to the Wise.

BY MARY BAKER G. EDDY.

THE hour is imminent. Upon it lie burdens that time will remove. Just now divine Love and wisdom saith "Be still and know that I am God." Do all Christian Scientists see or understand the importance of that demand at the moment when human wisdom is inadequate to meet the exigencies of the hour, and they should wait on the logic of events?

I respectfully call your attention thereto, knowing a little as I ought the human need, the Divine demand, and the blessing and the bane which follow obedience and disobedience. Hurried conclusions as to the public thought are not apt to be correctly drawn. The public sentiment is helpful, or dangerous only in proportion to its right, or its wrong concept, and the forward footsteps it impels, or the prejudice it instills which the future must disclose and dispel. Avoid for the immediate present, public debating clubs. Also be sure that you are not caught in some author's net, or made blind to his loss of the Golden Rule of which Christian Science is the predicate and postulate—when borrowing the thoughts, words, and classification of one author, without quotation marks; and giving full credit to another more fashionable but less correct. My books state Christian Science correctly. They may not be as taking to those ignorant of this Science as books less correct—and therefore less profound. But it is not safe to accept the latter as standards. We would not deny their authors a hearing since the Scripture declares: "He that is not against us is on our part." And we would also speak in loving terms of their efforts, but we cannot afford to recommend any literature as wholly Christian Science, that is not absolutely genuine.

Beloved students, just now let us adopt the classic saying,—"They also serve who only stand and wait." Our cause is growing apace under the present persecution thereof. This is a crucial hour wherein the coward and the hypocrite come to the surface to pass off; while the loyal at heart and the worker in the spirit of Truth are rising to the zenith of success,—the "well done good and faithful"—spoken by our Master.

Church By-law.

THE Christian Science Board of Directors shall elect annually, subject to the approval or the disapproval of the Pastor Emeritus, a "Committee on Debate," consisting of not less than four members. A member of this Church shall not debate on Christian Science in public debating assemblies, who is not a member of this Committee.

Faith and Science.

IN a recent issue of the *New York Sun*, Prof. William Osler of Johns Hopkins University, had an interesting paper on the progress of medicine during the past century. The professor shows how faith enters into the practice of medicine in a much greater degree than physicians are gen-

erally willing to admit. He argues that the element of faith should not be ignored, but its power should be duly recognized and employed in the physician's efforts to heal the sick.

We make the following excerpt from the paper:—

"After all, faith is the great lever of life. Without it man can do nothing; with it, even with a fragment, as a grain of mustard seed, all things are possible to him. Faith in us, faith in our drugs and methods, is the great stock in trade of the profession. In one pan of the balance put the pharmacopœias of the world, all the editions from Dioscorides to the last issue of the United States Dispensatory; heap them on the scales as did Euripides, his books in the celebrated contest in the 'Frogs';" in the other put the simple faith with which from the days of the Pharaohs until now the children of men have swallowed the mixtures these works describe, and the bulky tomes will kick the beam. It is the *aurum potabile*, the touchstone of success in medicine. As Galen says, confidence and hope do more good than physic—he cures most in whom most are confident.' That strange compound of charlatan and philosopher, Paracelsus, encouraged his patients 'to have a good faith, a strong imagination, and they shall find the effects' (Burton). While we often overlook or are ignorant of our own faith cures, doctors are just a wee bit too sensitive about those performed outside our ranks. They have never had, and cannot expect to have, a monopoly in this panacea, which is open to all, free as the sun, and which may make of every one in certain cases, as was the Lacedæmon of Homer's day, 'a good physician out of nature's grace.' Faith in the gods or in the saints cures one, faith in little pills another, hypnotic suggestion a third, faith in a plain, common doctor a fourth. In all ages the prayer of faith has healed the sick, and the mental attitude of the suppliant seems to be of more consequence than the powers to which the prayer is addressed. The cures in the temples of Æsculapius, the miracles of the saints, the remarkable cures of those noble men, the Jesuit missionaries, in this country, the modern miracles at Lourdes and at St. Anne de Beaupre in Quebec, and the wonder workings of the so-called Christian Scientists, are often genuine, and must be considered in discussing the foundations of therapeutics. We physicians use the same power every day."

The great majority of people need look no further than personal experience and observation to find satisfactory evidence of the correctness of Professor Osler's position regarding the power of faith to produce a desirable change in the physical condition of the sick. The powerlessness of drugs and other material means to heal disease, when faith in the drug or the physician is lacking, is equally evident.

In the practice of healing disease through faith in material means and methods, the divine element has no part. Here is where the professor makes a serious mistake in classing Christian Science with faith cures. To one who does not so understand the Principle of Christian Science as to be able to heal by its means, it may be difficult to see wherein it differs from other systems, but this does not change the fact that faith cure, meaning thereby faith in anything other than divine Mind, has no place in legitimate Christian Science practice.

As we understand it, it is not argued that faith cure has an underlying principle, and there are no rules for its application. The faith which exists to-day may be gone to-morrow. Its basis is the belief that power to heal inheres in a drug or some other material thing, when in reality the remedy does not possess the power it is supposed to have. Looking in another direction faith may believe that a certain person has power to heal. This faith has no foundation or support outside itself. The person or thing in which it trusts to-day is not the one upon which it relied yesterday nor the one to which it will look

for help to-morrow. Such faith as this is not the faith that heals in Christian Science practice.

God is the underlying Principle of Christian Science healing. It is understood that God is the only Healer. One may have faith in that which he does not understand, and even where he does understand he finds his faith reaching out further and further, calling upon him to strive diligently for the understanding of that in which he now has faith.

It is true that the Christian Scientist's faith in God exceeds his understanding of Him. The mathematician's faith in mathematics exceeds his understanding, and likewise the musician's faith in music exceeds his understanding. If this were not so, neither would have a desire to increase his understanding. But because neither the mathematician nor the physician can demonstrate one step further than he understands, and because faith reveals greater possibilities, he has a practical reason for striving to gain a higher, and consequently a more perfect, understanding of that which he desires to demonstrate.

The Christian Scientist can demonstrate, not that in which he merely has faith, but that which he understands. However much faith in God may inspire the Scientist to greater efforts, and however much faith on the part of the patient may cause him to turn to Christian Science for help, yet it is understanding, and not faith, that heals the sick and reforms the sinner. Understanding is not here to-day and there to-morrow. It is forever permanent. Only that which is true and real can be understood, and if a thing is understood to-day it cannot be viewed in a different light to-morrow.

Faith in God is not in vain, for God possesses infinitely greater power, intelligence, and love than human faith has attributed or ever can attribute to Him. But faith must grow into understanding before one can intelligently work out his salvation from sickness and sin. Jesus gave the keynote of Christian Science theory and practice when he said, "Ye shall *know* the truth, and the truth shall make you free." It is evident that one can *know* only that which is true and real. He may believe many things to be true and real, but unless they are so, he cannot know them. The scientific fact of what man knows is outside and above himself, but that which he merely believes may have no other reality than that bestowed by his own false concept.

Truth is and can be known or understood. The existence and power of Truth is in no sense dependent upon the human consciousness. Mathematics was just as true and real before man discovered its rules and applied them as it is to-day, but it is the *knowing* that gives to the world the blessings and benefits of a system which possesses an underlying principle which is no respecter of persons, but can be understood and applied by all.

Thus it is the *knowing* of the Truth which Jesus declared would make free indeed, that heals the sick and reforms the sinner in the practice of Christian Science. This knowing may, and does, increase, but it can in no wise depart from the first and simplest statement of Truth. Faith is ever reaching out for a broader and higher understanding of that which is known in part, and thus it is that faith and Science can work hand in hand for the uplifting of humanity. Faith in this sense is the forerunner of Science and never departs from its Principle but daily rises to a higher and more spiritual consciousness of God and man who was created in God's image and likeness, and has never fallen from his high estate.

Legislation in Arkansas.

A CORRESPONDENT from Fort Smith, Ark., sends us the following regarding the defeat of the medical bill which was introduced at the recent session of the legislature of that state.

The bill which was introduced at the recent session of the legislature for the regulation of the practice of medicine, and which attempted, among other things, to prohibit the practice of Christian Science for remuneration, was defeated in the Senate, April 5, by a vote of fourteen to thirteen.

We feel that God has wonderfully manifested His power and blessed us. There are hardly more than seventy-five Scientists in the state, and we knew we would have to depend on Truth to guide and guard us. We realized how the word of Truth would make a man mighty for that Truth, and did our work quietly and humbly.

Two Christian Scientists went from Fort Smith to the capital, and Judge C. G. White, a non-Scientist but a widely known attorney, went from Eureka Springs and appeared for the cause without fee. All the Scientists of Eureka Springs, Fort Smith, and Little Rock were at their posts.

The entire Senate was quietly canvassed and found, as we always may, that with God we were in the majority. Considerable literature was distributed among the senators.

For this demonstration of God's loving care and protection, we are sure that all the brethren will be glad to join us in humble gratefulness and joy. This demonstration has made us know and love each other better as workers for Truth in Arkansas. It is also true that since we were brought to the necessity of this work, demonstrations of healing have appeared with abundance and power as never before.

Christian Science and the Business Life.

WE append some extracts from a letter to our Leader, which illustrate the ever-increasing significance of the welcome of the Field, which is everywhere extended to traveling men.—ED.

My business calls me to travel a good deal and I find that the hours otherwise spent at hotels or waiting rooms, are most profitably devoted to visiting the local Scientists at the reading rooms and churches, and talking with them of the one subject of mutual and unfailing interest.

Having spent a Sunday in Ottawa, Canada, recently, I enjoyed the services very much, and found that both here and in Montreal the church is making rapid advancement. The next Sunday I attended church at Norfolk, Va., where through Miss Way's earnest work many are being brought into the "Light." Later I passed a pleasant hour at the reading rooms at Wilmington, N. C., where Miss Bridges, and Mrs. Fishplate are located. They make one's wait-over there a happy anticipation.

The work at Richmond, Va., under Mrs. Alice M. Bernard has met with great success. She started there alone last fall, and on a recent Wednesday evening there were fifty at the meeting. The time seemed very short in Richmond.

What shall I say of the pleasant chapel of the Second Church in Baltimore, Md., and the hearty welcome to all that call there, and at the reading rooms of the First Church? They are winning the "well done" and gladdening all who meet there.

I attended the First Church at Washington, D. C., last Sunday and also on Wednesday evening. Seven or eight testimonies were given, some from representatives of other cities, as to the healing and uplifting that had come to them through Science. At the Sunday service two friends were with me who had never been to such a service before, and one is to take treatment this summer for hay fever.

The cheerful thought of the reading rooms at Pittsburg would impress every one, Mrs. Guthrie is a demonstration herself. In Cleveland, where Mrs. Adams is in charge of the reading rooms, I had the pleasure of attending a

Wednesday evening meeting and gave my testimony. At Toledo, I had only time to call at the rooms, which are interesting. Wherever one finds a Scientist there he finds the same welcome. Sunday found me at church in Detroit, and that afternoon seventy-three went out to Ann Arbor to hear Judge Ewing's lecture. All were well paid for the trip, if one may judge by the expressions of pleasure and good feeling on the train. In Chicago, the business men of all classes meet at a noon lunch Club, and Science is being demonstrated in the turmoil of business. Men stop you in the hotel to talk Science, and enquire where it can be found, and I was permitted to show several the reading rooms and talk with them.

The dedication of the Second Church, and the Third that will so soon follow, tell of the harmony and progress of the work in that great city.

At St. Louis, I met Mr. Howard, Mr. Hubbell, and others, and attended a Wednesday evening meeting. The first five testimonies were from business men. Had a few minutes with the lady in charge of the rooms in Springfield, Mo., and all is well there.

The next Sunday was spent at the new hall in Louisville where the two churches have united, and where I met a member of our First Church in N. Y., so that the day was passed most pleasantly.

The reading rooms at Cincinnati, are conducted by a very fine force of ladies, whom it was a pleasure to meet.

I had only time for a short call upon the two reading rooms in Buffalo, but I found them all of One Mind. After this long absence from home you can imagine my pleasure in being at my own, the First Church in New York, last Wednesday evening, where, as in all the Field, the Truth is so earnestly and helpfully presented.

I cannot tell of the satisfaction and Love that has come to me in thus being brought into touch with all the kindly thought I have met, or how it helps me to overlook the petty inharmonies of daily business life, and declare in the words of our text-book that "Christian Science brings to light, Truth and its supremacy, universal harmony, the entireness of God, and the nothingness of matter or error."

I was thinking the other day, what happiness it must bring you to know that, and as the earth revolves, each succeeding hour new peoples waken to realize and express their gratitude to you. In distant lands, and in the isles of the sea, you are lovingly remembered.

Accept my heartfelt gratitude, for what your teachings have brought to me and mine.

I cannot close without expressing what I found to be the feeling throughout the West. All Scientists that I met desired to hold up those in New York who were called upon to stand for the Truth, and who have endured the trial so calmly. These trials we know will bring many to the fold, and there shall be one fold and one Shepherd.

Respectfully,

CHARLES F. PIERCE.

Letter to Mrs. Eddy.

Port Angeles, Wash., April 13, 1901.

Dear Mother:—Allow me to send you an Easter greeting from the northwest corner of our country, consisting of a picture of the interior of our little church, showing the desk and organ with Easter decoration. We have a little hall here which we use for services on Sunday and Wednesday evenings, and for a reading room.

We had about seventy at the Easter service and more than half stayed to the Sunday School. We have twenty-three members and the glorious Truth you have taught us is slowly spreading and finding a firm foothold.

With love, affectionately yours in Truth,

LEMUEL POPE.

Among the Churches.

Organization at Lewiston, Idaho.

A little over a year ago a band of faithful workers organized First Church of Christ, Scientist, of Lewiston, Idaho, with thirteen charter members. A charter was obtained in due time. Three other members have since united with our church.

A Sunday School was maintained from the beginning, with an average attendance of fifteen, having three classes.

Our reading room is open daily from 2 to 5 P.M. Members of the church, each in their turn, give an afternoon to this part of the work.

The organization of the church brought with it a conviction of the permanency of Christian Science in the community. Organization meant also expansion to our little church. Our room became too small by the increase in attendance at our services. Not being able to rent a suitable hall, centrally located, our First Reader erected a building which we now occupy. It is twenty by forty feet and located on Main Street, the principal business street.

We held the anniversary of the organization of our church in the new hall. It is now comfortably filled, since strangers are more free to enter and take part in our services.

Other churches have their rallying days, their annual revival meetings, and home-missionary conventions, and why not we? Because we are young and few we feel we need to avail ourselves of this extraordinary help and means of spreading the knowledge of the Truth in Christian Science.—M. G. MANN, *Clerk*.

Easter Service at San Jose, Cal.

At the Easter service in San Jose, the hall was beautifully decorated, and was taxed by the congregation to its utmost capacity—the largest congregation ever assembled here at a Christian Science service. The appropriate sermon for the day, showing the unreality of sin, disease, and death, and the eternal reality of Love, divine Mind, spoke in language that reached the heart, spoke of that daily resurrection from all materiality which must precede an understanding of the wondrous Power that says to discord of every nature, "Peace, be still." It had been announced at previous services that the collection at the Easter service would be an Easter offering to the Church building fund, and the sum of \$1707.40 was contributed. This was increased by the Sunday School collection, and one or two other donations. We feel that the good work now begun must be carried on bravely and vigorously.

Our church has grown in the past year in membership from seventy-one to eighty-five, and our Sunday School, under its able superintendent and earnest corps of teachers, now numbers thirty-five. It is training up a body of young Scientists who will be an honor and blessing to the world. Some of the demonstrations of our children are wonderful, perfectly natural and yet so amazingly unnatural to material sense.—HERBERT W. EUSTACE.

Reading Room in Provo City, Utah.

The First Christian Science Society of this city has now a pleasantly located reading room in the Hines Building. The rooms are bright and cheerful, well warmed and lighted, and situated in the centre of the business portion of the town. They were opened to the public for the first time on April 8. The hours are from 2 to 5 and from 7 to 9 P.M., Sundays and Wednesday evenings excepted. The regular church services will also be held here. There is manifested a growing interest in Christian Science. Our average attendance is about twelve.—L. G. B.

From our Contributors.

Verses from the Eighty-sixth Psalm.

BY G. P. NICOLAI.

Bow down thine ear, O Lord,
And hear my humble prayer;
I poor and needy am,
And ever need thy care.

Preserve me from all fear
Of any seeming foe;
That thou, O God, art ever near,
Thy mercies daily show.

Teach me thy way to know,
That I may walk therein.
Unite my heart and voice in praise—
Forsaking every sin.

I'll praise thee, O my God,
With all my heart and voice;
And ever glorify thy name
And in thy Love rejoice.

"Until Seventy Times Seven."

BY V. D.

Soon after coming into Christian Science I was grievously offended with my brother. To my sense he had done me an injustice, and he repeatedly did all he could to offend and hurt me. One beautiful Sunday morning I arose with a deep consciousness of the great love of God, and, I thought, with my heart overflowing to God and man, but again this personality appeared like a dark cloud to obscure my sense of God's beautiful sunlight, and began to abuse me, until I thought, what is the use? I have tried hard to live in love and harmony, and I cannot while my brother is here. I must go away where he can never see me or worry me any more. He is God's child, but he must work out his own salvation, I will have nothing more to do with him. Just then I was conscious of the still, small voice saying, "Seventy times seven." This disturbed me, and material sense answered back, I have already forgiven more than "seventy times seven," and with him patience has ceased to be a virtue. I must go away. I forgive him, but I do not want him where I can see him any more.

I went to church, but could hear nothing but "seventy times seven" wherever I turned. All this time I was making my plans to go away. I came home, and still the words were with me. I had no peace of mind, so I said, Truth must guide me. I will open my Bible and the words that I read must decide this for me. Prayerfully and earnestly I opened my Bible and these are the words I read: "See, saith he, that thou make all things according to the pattern shewed thee in the mount." Then the thought from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 473: "The Saviour saw God's own image and likeness, and this healed the sick." Then I had a momentary struggle with error, and the demonstration was made. I realized the Truth of Being and the one creation. The dark cloud passed away and the glorious light of God's eternal love shone around me and my brother's sin was blotted out. Since then he has been a better man, trying to live a better life.

It is the sin-bound that we must free, those who are slaves to jealousy, malice, passion, and appetite; and, thanks be to God, this can be done through the Christ, Truth, which has been revealed to us through Christian Science.

Through this blessed Truth we know that "the tabernacle of God is with men, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away." Wonderful words these, and yet true, as thousands are testifying to-day that God is with them, and with tender love and merciful kindness He wipes all tears away.

The Greatest Book of the Nineteenth Century.

BY BEATRIX ISABEL BEST.

NEAR the close of 1900 *The Outlook* gave a list of books which had been voted to be the greatest of all books of the nineteenth century. There were ten, I believe, and heading the list was Darwin's "Origin of Species," given that position as being considered the greatest of the great ten.

Reading this caused me to think back several years to a time when my mind was filled with questions and doubts; when the Bible was fast becoming an unused book with me, because I could not understand it, could not get at its meaning for the cordage of human opinions which was wrapped about it. At that time I read "Origin of Species." Did it answer any of my questions? No. It simply seemed more readable to me than the orthodox explanation of the first chapter of Genesis; but it left me as it found me, restless, unsatisfied, with an unknowable Great First Cause as God.

Often in those days I have repeated this prayer of an old British sailor: "Lord, not my grip of Thee, but Thy grip of me." How clearly I see now that this prayer was answered; that I was indeed held "in the hollow of His hand," and brought "into the haven where I would be"—the haven of Christian Science, where God is revealed!

About this time I went to Europe, where the peaceful British Sabbaths made me long still more to have again the faith that was mine in childhood. I heard sermons in Dean Stanley's loved Westminster Abbey, in cathedrals of lesser note, and in the old "kirk," where generations of my people had worshiped; but the old questions reigned. I had several physical troubles at this time, one of which had been with me almost always, and none were of less than two years' standing. For some months after returning to the United States, I seemed helped physically in some ways by the change, but the improvement did not last.

At this juncture I read part of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Then I became the possessor of "Unity of Good" by the same author. This I read and re-read, and my heart kept singing, "God is, God is," for the darkness was beginning to vanish. In a little while I bought Science and Health also. My Bible was dusted and brought once more into daily use, and I began to partake somewhat of that "peace of God which passeth all understanding." The unknowable Great First Cause, the unknown God, was declared unto me as to the Athenians on Mars Hill; God began to be known as Mind, Life, Truth, Love. And while this spiritual light was being cast upon my pathway through the study of this book, physical troubles were dropping away, although I had not taken up the study with the thought of getting help in that way for myself.

"Origin of Species" is a great book, no one will question that. It has influenced thought greatly in the nineteenth century; but has it answered anything? No. Has it been of the practical value to the whole world that Science and Health has been to me? No. And I am only one of many thousands who have received like blessings from the "little book," only one of many who will say that not "Origin of Species," not even the wonderful inventions,

but "Science and Health with Key to the Scriptures," is the nineteenth century's most precious gift to the twentieth; and the twentieth will so declare.

To the one who has bravely voiced Truth to this age we owe a debt of boundless gratitude. For her and her great work, so lovingly and unselfishly done, I often thank God.

The Fruit of Adversity.

BY J. O. SIMONDS.

AN illustration of the all-pervading omnipotence of Truth is to be found in the fact discerned and understood through the teaching of Christian Science that not one of our experiences is without its lesson and fruit; and so as we bring to our publications and our testimonial meetings our sheaves, the fruits of success, may not a word rightly be said regarding the fruit that is sometimes born, not through sunshine, but of adversity?

Shakespeare wrote:—

Sweet are the uses of adversity,
Which like the toad, ugly and venomous,
Wears yet a precious jewel in his head.

He also makes one of his characters speak these words: "Happy is your grace who can thus translate the stubbornness of fortune into so quiet and so sweet a style." Our Leader tells us in "Science and Health with Key to the Scriptures," p. 344, that as we search for Truth, we shall have "doubts and defeats as well as triumphs." This does not convey a sense of the necessity for error, for by the law of opposites it is seen that doubt and defeat stand only for incentive.

The mere sense of defeat carries no inspiration and can never help us, but abiding in our teaching and searching for the hidden meaning of defeat, we may find the experience only points the true path and thus urges us to a greater effort, a greater striving for a knowledge of the Truth that, as Jesus said, will make us free.

Our text-book tells us, "Trials are proofs of God's care;" and, "Every trial of our faith in God makes us stronger;" but this can be so to us only as we turn opposition into opportunity and meet defeat with the desire to know more about God and more about man as His image and likeness. In this way we shall find our experience bearing the fruit of adversity in the striving for and gaining of a greater understanding of what life really is, the reflection of Truth and Love, remembering that Jesus in his manifestation of divine Love was never appealed to in vain, that it enabled him to heal all manner of disease instantly.

The Christian Scientist knows that the Truth that enabled Jesus to do this healing work is his to-day through this teaching. He knows that through the knowledge of this Truth the coming years will witness better work and greater results than the world has ever seen, results to which it is already awakening as the dawn of "the light that never was on sea or land."

When it is known that the Principle of Christian Science is God, Infinite Good; when its practice is found bringing the fruits of Truth, Love, and healing all over the land; when it is thus proven to be a teaching reasonable, righteous, and demonstrably true, does it not commend itself to all humanity as God's message in truth and in deed?

"Let the Heathen Rage."

BY MARY SELDEN McCOBB.

I HAVE been especially impressed by one paragraph in the article written by A. K. Frain, M.D., printed in the October *Christian Science Journal*. He says, on page 420:

"Our conversations on Christian Science were frequent, the remarkable feature attending them being that, as soon as they entered the field of disputation, I seemed to be

left alone to do all the talking, and it grew monotonous dogmatically to set up men of straw, and have no effort made to knock them down."

Do we not sometimes forget that while "speech is silver" "silence is golden"? Is not speech always useless when the "heathen" begin to "rage"? By "heathen" is meant the captious, impersonal thought which virulently hurls itself against the ramparts of Truth. Does controversy ever do good when bitterness arises? Is it not always wise to let wrath foam itself out and spend its fury unchecked by opposition? It is only the honest desire which is capable of accepting Truth.

Merely to get the better of another in argument, profits nothing. But to abide in the serenity which a clear understanding imparts, that, the tempest of contention being past, one may become the mouthpiece of Love, is not this forever the better way?

Absolute quiet, sweet-tempered calm, a selflessness which lacks the irritating qualities of mere self-control—these have the beneficent effect upon the "heathen" to which Dr. Frain refers:—

"But, somehow, I was led to read again the 'little book,' for the purpose, this time, of utilizing its statements instead of combating them."

"God was not in the fire," nor yet "in the earthquake." God is not in the determination of mortal mind to make itself heard, nor yet in the heat of disputation.

"The still, small voice" can be discerned only when silence holds mortal thought in abeyance, and its "Peace, be still" can take effect only when human will is ready to submit to the Divine.

The Coming of Spring.

BY GRACE STAFFORD FARRINGTON.

NOW is the touch of spring in the air. Winds may blow, skies darken with threatening clouds, but we know the currents of life are flooding back and naught can stay their progress.

We catch the promise of this new awakening in a bit of blue sky, in the robin's note, and in the warmer touch of the sun. We quite forget the barren past in the joy we feel as we watch these first, faint signs. "Everything is happy now. Everything is upward striving."

Already preparations are being made for the new birth. The gardeners are busy removing the accumulation of rubbish; raking away the faded leaves and carrying off to destroy all that would retard or prevent the joyful expression of the tender, new life which so soon will spring forth with joy and gladness.

It is good to watch God's promise blossom over all the land. Good to watch and learn thereby. 'Are we, too, making ready for our spiritual birth? Are we removing the old accumulations of self-pride, envy, jealousy, hatred, fear, and malice? Are we raking away the faded leaves of discontent, weariness, and self-seeking? Are we willing to destroy all that will retard or prevent us from being pure reflections of God? Science shows us the way. Are we willing to follow?

Divine Love has opened wide the door that this new spiritual life may be possible to all. O, let us then, with a deep thrill of gratitude, accept our blessing and meekly as a "little child" enter the promised land of flower and fruitage.

"Now is the accepted time." "Now let us put off the old man with his deeds." "For old things are passed away, behold: all things are become new."

I would have you see God in the awful mountain and the tranquil valley, but more, much more, in the clear judgment, the moral energy, the disinterested purpose, the pious gratitude, the immortal hope of a good man.

W. E. CHANNING.

Testimonies.

Curvature of the Spine Healed.

The manifold blessings that have come to me through Christian Science, cannot be numbered, but three circumstances, during the past five years, stand out with a particular brightness, and from a grateful heart I send them to the *Sentinel* as jewels to place in Love's casket of Truth.

My little boy, when two years and a half old, ate a large-sized capsule filled with morphine that had been purchased by a colored servant and left in the kitchen table drawer a few days before. I was upstairs, and seemingly for no reason whatever, I went downstairs, and out on the back porch where my little boy was playing. I found him eating something and making wry faces. Opening his mouth I found the small end of the empty capsule, and some of the powder on his tongue.

Realizing the All-power of Truth, the drug had no more effect than if it had been so much flour. "Know therefore this day, and consider it in thine heart, that the Lord He is God in Heaven above, and upon the earth beneath: there is none else."

While walking along the street one evening with a friend, she asked me to stop for a minute and see a person who was interested in Christian Science and was reading Science and Health. We went in and the lady came to meet us with a little boy in her arms. The child looked very fragile and I took him from the mother. She seemed a little surprised that he came to me, as he would not go to a stranger. He was a little over two years old and could not walk. The head was drawn to one side, and spine curved enough for me to feel through his clothes, that the spine was not straight. My heart cried out for the little one, and the next afternoon I went to them and asked the mother to let me take her little boy home with me for a few hours. She did not think he would go, as he had never been away from home, or even out on the streets. Within an hour, however, he was at my home, and I was reading to him from Science and Health. For about five weeks he was brought to my house nearly every day. During this time my husband became very much interested in the little one, and would make inquiries about him every day.

When the child had been making us his visits, sometimes staying all day, for about five weeks, my husband was away from home several days on business. The day he returned, we were walking down the street and met this little boy coming to see us in his buggy, accompanied by his older sister. My husband took the child from his buggy, and as usual put his hand on the little one's back to support him. Turning quickly to me, with a surprised look he said, "Why, Clyde is straight! Did you know it?" With tears in my eyes and a heart almost too full to speak, I replied, "Yes; he is straight." The little head was no longer drawn to one side and the spine was perfectly erect. The shackles were broken that would bind the little child and send one more cripple into the world. "The Lord He is God, there is none else."

A few weeks since, my husband was stricken with erysipelas. It spread itself over his hands and one side of his face and neck, and presented a fearful appearance.

He is connected with a large college, and there was great commotion over his illness. His pupils were discussing what they would do if he should die, and one of the professors from the college came to the house, went into my husband's room, and asked him to "let that Christian Science alone and have something done." Blood-poisoning now appeared, and it was war in earnest. During one night as I sat alone with him, and the shadows seemed creeping nearer and nearer, I found myself continually singing, "I know that my Redeemer liveth." Even when a sense of numbness began to creep over him, I felt no fear.

Once he turned to me and said, "You must do something for me, or I shan't last much longer." I replied, "I can do nothing for you. God is All-power,—there is none else. I know that my Redeemer liveth." In a few minutes he was quietly sleeping, and within a few hours was sitting up in a chair. He suffered not more than three days, and the disease showed itself about fourteen days, while he lost only one week from his work. During this siege I had but little sleep, and would forget to eat, but grew stronger under the pressure, and felt no weariness.

No words can express the gratitude I feel for our Leader, Mary Baker Eddy, who has taught us Christian Science; and my teacher, a loyal student of Mrs. Eddy; and for the dear *Journal*, *Sentinel*, and *Quarterly*.

FRANCES M. NAGEL, Des Moines, Iowa.

A Testimony of Gratitude.

As one of a multitude whom no man can number, one who has felt the healing touch of Christian Science, I give glad and grateful testimony.

For many years I was held as in chains by physical pain and weakness with consequent mental depression and suffering. Many years were spent in earnest efforts to get well, consulting physicians, trying many remedies, and constantly praying meanwhile that God would heal me. At last, weary with the struggle, I knew not what to do, and there seemed nothing left for me to try; but God heard my prayer. While I was at a sanatorium some persons who were studying Science and Health brought Christian Science to my notice.

I began to read the book, and soon the glimmerings of the true light began to dawn upon me. I saw that the words of Scripture met fulfilment in the teachings of Science and Health. That health came through Mind,—Spirit,—not through matter, or conditions of matter. I had sought long and vainly for health through material means.

These words from Zechariah seemed to speak to me, "Not by might, nor by power, but by my Spirit, saith the Lord." Then it was that I began to learn the truth of the statement from Science and Health, "Matter can afford you no aid."

Materia medica, material means and appliances, had seemed only to beckon on to disappointment after disappointment, will-o'-the-wisp fashion. According to theories of matter, or of the flesh, I could not be well, but according to the law of God, Good, the law of Spirit, which is the law of health, holiness, wholeness, I could be well and whole. Christian Science meant turning to God alone, to Spirit, away from the body, away from matter.

To trust God alone to make man harmonious and whole, was new and strange, when all previous education and training had taught reliance upon drugs and material remedies.

I left the sanatorium and went to a neighboring city where a dear friend resided, who had spoken to me of Christian Science. There I received treatment, and improvement began at once. At first the statement of Science could be accepted only by degrees. Old theological views were tenacious, and yielded slowly to the more perfect conception and understanding of God. Mine has been a gradual healing, a constant turning toward the Truth, discerning the Christ, as available for salvation from sickness, as well as from sin.

Christian Science has lifted me out of invalidism, breaking the fetters of disease, dispelling the clouds of mortal belief, giving me "the oil of joy for mourning, the garment of praise for the spirit of heaviness." Nothing else can so lift one above the depressing shades of this mortal existence, because this is the only teaching that shows the unreality of sin, sickness, and death, by showing us that they

are not of God. Every other teaching or interpretation of Scripture makes evil and disease a part of, or belong to, God's creation.

Truly Jesus' words are verified in the teachings of Science and Health. He said, "It is the spirit that quickeneth; the flesh profiteth nothing; the words that I speak unto you, *they* are spirit, and *they* are life."

Like the woman whom Jesus healed, of whom he said Satan had bound her those eighteen years, so his healing—the Christ-healing—has come to me through Christian Science, freeing me from an infirmity wherein I was bound for an equal number of years. Christian Science teaches us that salvation is a full salvation, not merely pardon for sin and hope of future happiness, but a present redemption from sin and disease.

My gladness and thankfulness for the priceless blessings received through this Christ Truth, are as daily incense to God with loving loyalty to the one whom He has appointed, to show us this Christ way of full salvation.

S. F. T., Boston, Mass.

Found Light, Life, Love, and Liberty.

About three years ago I learned of Christian Science and a few days after was healed in one treatment of various troubles of some years' standing. I had for years been under the care of one doctor or another, only to gain temporary relief. My last physician informed my husband that he did not think I would ever be well or strong, for I had so many ailments, and was likely to pass into consumption.

When the light of this blessed Truth that makes free, was brought to me, I was just convalescing from a severe attack of pneumonia and could not seem to gain any strength at all, being scarce able to walk. Then neuralgia in my hips came on and caused much pain and sleeplessness. It was then that I asked the friend with whom I was staying to send for my doctor. She had previously told me of Christian Science, and how much she and her family had been benefited by it, and now asked me if I would not like to try a Scientist instead, who she assured me would help me very quickly. I consented, saying I must have help of some kind, for I could bear the suffering no longer.

The Scientist came, and, in a kind and simple way, told me about God and His love for me,—His child,—gave me a treatment, and left, saying nothing about coming again. My friend called to ask him if he would come again. He replied that he did not think it necessary, for I would be all right.

I slept some that night, but the new light in which God and His love for me was presented, gave me so much food for thought that I could not sleep for wondering why I had not realized it before, and rejoicing in the knowledge that God was my All-in-all,—my life,—for He is the Fountain of Life and Creator of all; my light, for in Him is no darkness at all; my love, ever enfolding and sustaining me; my liberty, for did He not send His own dear Son to teach me and all His children of this Truth that sets the captive free? I certainly had been a captive in bondage to this mortal body all the time.

A few days after my treatment I was able to go home and take up my household duties and have not been confined to my bed for a day since.

I secured the text-book, "Science and Health with Key to the Scriptures," and by studying it and knowing that God was my light, was enabled in a few weeks to dispense with glasses and have not used them since. Also nervousness and sick headaches have been overcome. With the understanding of God which I have gained I have been able to make several good demonstrations.

I had always been trying to serve God and study His word, but got very little satisfaction and made poor progress until led to study it with the aid of Science. I now

know that God's promises are all true and will be fulfilled in us if we but come as little children and trust implicitly in Him who is our Father and tells us to "Ask, and ye shall receive; seek, and ye shall find; knock, and it shall be opened.

There is no limit to the good in store for me and all God's children if we are only faithful in studying and working as Truth guides.

Out of gratitude and praise to God and to our Leader, who strove so patiently and persistently to present to us God, the perfect Principle governing all, I submit this little testimony.—MRS. W. N. S., Milwaukee, Wis.

The Christ Revealed in Christian Science.

When Christian Science was brought to me three years ago, I was ready and very much in need of it. The physical suffering was nothing compared with the hunger for soul-food, which no money could purchase.

From early childhood I had a deep desire for righteousness and love to God, but I did not see the necessity of knowing the Christ, nor was I pointed to Jesus as an example.

So I went out into the world, always praying to the "unknown God," thinking, in my ignorance, that what little I had read of Jesus could not be true. Even so dense was my darkness, that I destroyed a steel engraving representing the Lord's last supper and used the frame, for something better as I then thought. This very frame came again into my hands, and has led me to write this.

It was but natural that at that time I should go from one church to another; from a German Lutheran, to a Catholic, a Baptist, or Jewish Temple when I made my home with a lovely Jewish family. I never united with any church. However, the Christian Science meeting here in the Jewish Temple on the west side, at once satisfied me, and I am now a happy member there.

How well do I remember when, in my early study of "Science and Health with Key to the Scriptures," I in tears asked God to reveal the Christ to me. Do I need to say that my prayer was fully answered? And through this wonderful, priceless "little book" I have also learned to read and understand the Bible.

Science and Health has also taught me the English language. It took me over nine months to read Science and Health through once, with the steady help of a German-English dictionary. I have not had class instruction, but I am now able to help myself and others. With all our Leader's writings at hand I am very grateful for this privilege, and indeed no seeming burden is too heavy to bear for this blessed Christ-Truth.

MRS. KATHERINE RUDOLPHI, Chicago, Ill.

Chronic Diseases Healed.

I was a great sufferer for years with a chronic trouble the doctors called catarrh of the bowels; there were many other troubles beside. There came a time when I was confined to my bed for fourteen months. During that time I had eight of the best doctors that could be found, and although they did all in their power, they could not heal me, and gave me very little hope of ever being anything but an invalid, if I could gain strength enough to get up at all. Many of them thought I could never leave my bed. I did get up and kept around for several months, but I was very miserable all the time, and when the relapse came, it left me so crushed in mind and body, there seemed to be nothing left to build on.

About this time Christian Science was mentioned to me. I had no faith in it, but promised I would try it as medicine could do me no good. I went to one of Mrs. Eddy's faithful students and was healed in eleven weeks. That was several years ago, and since then, I have seen my children brought through attacks of diphtheria and other troubles that seemed quite serious. F. E. W., Dorchester, Mass.

Religious Items.

In its description of the Easter celebration in the churches the *Boston Herald* of April 8, said:—

"There pealed forth from the mist-enveloped belfry of the Old North Episcopal Church on Salem Street, at ten o'clock yesterday morning, in the cadence of the clear and sonorous chimes, that joyous message to all the Christian world: 'Christ, the Lord, is risen to-day.'"

"Over the Public Garden, quiet as a country churchyard, where the mist lay low upon the water, and back over the homes of wealth and fashion, there floated from the belfry of the Unitarian Church on Arlington Street, the music of the same old theme in the notes of Easter carols.

"As if to proclaim their kinship with all Christendom, the complement of so strange a trinity, the bells, in cadence sweet, in the belfry of The First Church of Christ, Scientist, rang gladly forth: 'Christ, the Lord, is risen to-day.' In minor key there came back from the peaceful slopes of Elm Hill, from the belfry of the picturesque little church there, the echo of the tidings, in the bells' unfaltering notes: 'Christ, the Lord, is risen to-day.' And everywhere the groups of bells that can peal but cannot chime, took it up. From the bells of the Advent that sent it across the still waters of the Charles to Cambridge, and from those in the church in Charlestown that sent it back across the still waters to Boston, the message came and went, sounding and resounding and accentuated here and there by single bells like the bell Paul Revere made that hangs in the belfry of old St. Stephen's on Hanover Street, until the very mists vibrated with it and the ecstasy of it all penetrated almost to the bottom grooves of Salem Street itself."

A writer in the *Universalist Leader* says: "It is good to give a measure of trust to our fellow-men. Better be disappointed once in a while than to be suspicious of everyone. When in so frequent need of others' mercy we may well be careful how we deny it to others. How often have we been encouraged to noble deed by some one's faith in us! And we can easily recall our disheartenment when our honesty of purpose has been called in question. One's life from day to day is a good index of character. But if we have a doubt in our minds, it is just as well that we should not voice it at once. Silence is often justified, and kindness demands delay of judgment. To cultivate caution until it becomes suspicion is to drive the sunshine out of the sky for ourselves, and often for others. To believe in one's fellows, and to deserve their belief in us, is a much happier plan."

The *Boston Herald* publishes the following account of an unusually large collection taken up on Easter Sunday in a New York church: "When the collection plates were passed at the Easter Sunday service in Grace Church they returned to the altar containing a neat fortune. Yet so quietly, so easily, and so unostentatiously was it all done that it was not until the church treasurer had counted the offerings that anybody realized that they had almost reached the unusual total of \$100,000. This is said to be the largest single collection ever taken in the history of Grace Church. The offering was the congregation's spontaneous response to the rector's simple statement of what was needed for the proposed expansion of parish work."

From an article by Theodore L. Cuyler, D.D., the *Christian* quotes the following: "The sincere prayer of the Christian is a breathing of the heart's desire into an ear that is close at hand. I do not believe that ear is ever deaf to the humble, honest prayer of faith. Every proper desire from the heart of God's child obtains recognition and a proper answer in the heart of God Himself. Our prayer may not seem to move the everlasting throne, but—like the pull on a line from the bow of a boat, it may draw us into closer fellowship

with God and into fuller harmony with His wise and holy will. When our desires chime with the will of God we are sure to receive some blessing."

The following is from an article in the (Baptist) *Standard*: "We know that love is in the world, the love of God, the love of Christ, the love of men for one another; that it has in the past made the world a happier and better place to live in, and we believe that in the century to come, though clouds and darkness may for a time be about us, it will surely shine out at last in its full effulgence, its glory will dissipate the clouds and darkness, men will be bound together in stronger bonds of brotherhood than heretofore, and, more than ever, they will bow with reverent affection before our Father which is in heaven."

A writer in the (Baptist) *Standard* says: "It requires less grace in reality to be a martyr for Christ on a public stage than to be kind and considerate in the familiar intercourse of domestic life, or to maintain a guileless integrity in the ordinary transactions of business. The Christianity that is faithful in that which is least is a more difficult Christianity than that which glows and triumphs on grand occasions. Little love can perform great actions; but it requires great love to present, like little children, small offerings, and to devote every moment and task of our life to God."

A writer in the *Homiletic Review* says: "If your faith is in God's comprehension of you, not in yours of Him, you can surmount all menace and survive all alarm. Let things flow or ebb, the chain will hold to the anchor. The promises will not ravel. Sombre hours, like some birds of dingiest plumage, will burst into the brightest carol. The harvests need the night as well as the day to ripen them. It takes the whole quartet of the seasons to utter the frugal year."

The *Universalist Leader* says: "It is estimated (how or by whom we know not) that the value of church property in the world is \$6,000,000,000. This includes church edifices only, and not the great number of parsonages and other institutions owned by the Church. The sum invested last year in Christian work of all kinds, including church buildings, is estimated at \$1,009,369,494. Both these sums are almost beyond comprehension."

Amory H. Bradford, writing for the (Baptist) *Examiner*, says: "Contrast the Oxford and Cambridge, and the Harvard, the Yale, and the Princeton of a hundred years ago with the same institutions to-day, and there will be no doubt concerning which way the tides are moving. They are all setting toward righteousness and manliness, toward a realization of the duty of intelligence and culture to devote themselves to the kingdom of God."

A writer in the *New Church Independent* says: "Like the locomotive we are merely forms capable of receiving inflowing life. All our anger is from hell, all our peace, our joy, our love, from heaven. So knowing this, why do we forget it? If, when in a fit of anger, we were to remember this fact and inwardly say: 'It is not I, but the devil,' how quickly the anger would disappear!"

The (Baptist) *Watchman* says: "The art of meditation is a topic upon which we have never heard a sermon, and yet there are constant references to it in the Scriptures. The hour of meditation will be found to be the source of most of the best impulses and outlooks. Prayer, in its highest phase of communion with God, is a species of meditation."

A writer, signing herself "A Grandmother," says in the *Congregationalist*: "Don't let us sadden the small folks with our gloomy forebodings or any dreary views of life. The world is rose-colored to them, and we had better look through their spectacles than let them use ours."

The (Methodist) *Christian Advocate* says: "One may possess brilliant talents and liberal education, but if with superior intellectual qualities he does not unite a generous, benevolent, and warm heart, he lacks the most essential element of manhood."

The (Methodist) *Christian Advocate* says: "Sin is a bitter thing. Its roots, its stalk, and its fruits are all bitter. Sin is responsible for all the bitter words, all the bitter thoughts, and all the bitter feelings in the world."

Professor William J. C. Thiel, in a sermon published in the *New Church Evangelist*, says: "There is no such a thing as death. Man's life is eternal; and eternity knows of no end."

Rev. H. A. Bridgman says in the *Congregationalist*: "We are seeing that Christianity, if it means anything, must touch and color all our thinking, all our living."

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfillment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75

Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

William J. Bryan last week made a public announcement in his paper, the *Commoner*, of his intention not to be a candidate for renomination at the hands of the Democratic party. "I have twice received at the hands of my party," said Mr. Bryan, "the highest honor it can bestow, and twice has my nomination been endorsed by our allies, the Populists and Silver Republicans. I am not planning for another presidential nomination—if so, I would not be editing a paper; if I ever become a candidate again it will be because it seems necessary for the advancement of the principles to which I adhere, and that does not now seem probable. I shall, however, take an interest in politics for several years yet, if I live, and can be relied upon to support those who as candidates advocate Democratic principles, and also can be trusted to enforce them if elected."

A committee appointed by the Cuban Constitutional Convention to visit Washington and present to the President the reasons why the convention could not accept the terms of the Platt amendment, reached the capital on April 24, and was officially received by President McKinley the following day. The press reports state that the Cubans were given to understand that the terms of the Platt amendment are not likely to be modified. A state dinner was given at the White House in honor of the Cubans, at which were present, besides President and Mrs. McKinley, distinguished leaders of both the leading political parties from both branches of Congress.

Governor-General Wood, on his arrival in the United States last week, to attend the conference of the Cuban Commissioners with the President, gave to the press the following partial summary of conditions in Cuba: "Less than two years ago the army was distributing 200,000 rations a day. Now not a single ration is being distributed. There is not a beggar to be found in Havana. When we took charge there were but a few schools on the island. Now there are plenty of schools, with 180,000 children enrolled and a daily attendance of 132,000. The schools cost \$330,000 a month to run, but all the districts are self-sustaining."

A decrease of \$226,081 in the customs receipts of Cuba for the months of January and February, 1901, as compared with the same period of 1900, is shown in a statement issued by the division of insular affairs, War Department, on April 23. Cuba's trade with the outside world has decreased over \$1,500,000 in imports and over \$2,000,000 in exports for the first three-quarters of 1900, as compared with the same period of 1899.

The trade with the United States during these periods showed a decrease of about \$4,000,000 in imports and \$8,000,000 in exports.

The present New York General Assembly will go down into state political history as one of the few legislatures that has accomplished at least nine-tenths of the work which the chief executive of the State outlined for it in his message, and Governor Odell will be the first governor in many years whose dominance over the component branches of government has been so great that ninety per cent of his recommendations have been carried out.

The Secretary of War has announced that it has about been decided to adopt General Miles' recommendation for an army of 76,000 men, based on the proportion of one soldier to every thousand of population. Under this plan it will be necessary to enlist only five thousand more men to complete the quota.

According to a report made recently by Comptroller Coler of New York, the sum spent during 1900 for running expenses and improvements by the great metropolis was \$135,000,000. Including the balances turned over from the preceding year, the income of the city for 1900 was \$178,877,296.33.

E. H. Conger, United States minister to China, arrived at San Francisco April 25, on six months' leave of absence.

Foreign News.

It is reported in the New York press that the New York Central railway interests, through the Rutland Railway Company, have obtained control of the Montreal Bridge Company, which proposes to build a bridge over the St. Lawrence River, and by this means the New York road will gain an entrance into Montreal. The new bridge will cost \$6,000,000 and a \$4,000,000 railway station will be built in a central portion of the city. It is expected that work on the bridge will be started without delay.

It is officially announced that the Empress Dowager of China has appointed a board of national administration to relieve her of her public functions. Li Hung Chang and Prince Ching, together with four other high Chinese dignitaries, constitute the board. Foreign diplomats regard this action as an important concession to the reformers and to foreign influence. At least three of the members of the board, however, are likely to be unfriendly to foreign interests.

The British have not made any important headway in their war operations in South Africa lately. Lord Kitchener has reported the capture of Boer supplies and arms, and of small parties of Boer soldiers, but nothing has been accomplished that seems likely to bring the close of the war a day nearer.

Industry and Commerce.

Representative Tawney of Minnesota, chairman of the Committee on the Louisiana Purchase Centennial, says the St. Louis fair starts off with a larger financial backing than any previous exposition in the history of the world. Its managers have \$16,000,000 at their disposal, five million of which comes from the Government, five from the city, five from individual subscribers, and one from the State of Missouri. Illinois recently appropriated a quarter of a million dollars for a State building there, which is \$100,000 more than Missouri sent to Chicago for the same purpose. The fair will not only be an industrial exposition, but will show, by its collection of plants and animals and of descendants of the aboriginal tribes, how the territory was occupied at the time of the purchase, and what has been done since.

The figures of the treasury bureau of statistics indicate that the coal exports of the fiscal year, which ends June 30, will amount

to about 8,000,000 tons, as against less than 2,000,000 in 1890, 3,772,192 in 1895 and 7,188,648 in 1900. The relative growth of coal exports from the United States by far exceeds that of any other country, while it now holds third place in actual exportation. In production the United States has within the last two years taken first rank, her total coal production in 1899, the latest available year, being 226,553,564 tons, against 220,094,781 by the United Kingdom; while in 1890 the production of the United Kingdom was 181,614,288 tons, and that of the United States 140,882,729.

It is estimated that something like a million dollars was spent for revenue stamps by the United States Steel Corporation. The transference of the interests of the various concerns amalgamated involved the cancellation of \$200,000 worth of stamps; \$250,000 worth more were used on the new issue of stock and bonds, and the conveyance of real estate used up \$300,000 worth more. Besides these items, there were other taxable transactions which would bring the total well up to a million dollars.

A new cotton print-works is being built in Manchester, N. H., for the Manchester Mills Corporation, which, it is said, will be the largest single mill building in the world. It will have a frontage on the river side of 770 feet and two wings of 330 feet each, making a total length of 1,430 feet. The average width is to be 100 feet and the total floor space will be 706,958 square feet. The building will be four stories high, with a basement besides.

General News.

April, 1901, will have a large space in the records of the weather bureau. It has been a month of tempest, snow, and deluge. Around Denver and throughout the Rocky Mountain region snow fell almost continuously for four days and nights, and when it melted the streams were flooded and city streets became bogs. In Cleveland, Toledo, Cincinnati, Buffalo, Pittsburg, and throughout the region from the Alleghenies to Chicago, a terrific storm of wind, snow, and rain prevailed for several days, prostrating telegraph and telephone wires, tying up the railroads and forcing mills and factories to close because of floods. In Pittsburg alone fifty thousand workmen had to quit work because of high water. The storm reached New England with considerable remaining violence April 20, and caused damaging floods in western Massachusetts and in Connecticut. A storm, a week or so earlier, visited Maine and swept away thousands of dollars worth of logs, besides destroying bridges and other property.

George Cadbury, the well-known Quaker, has given to the city of Birmingham, England, a residential estate valued at \$900,000, on which model villages for Birmingham artisans are to be built, the net proceeds of the rent roll of the estate to be devoted to the steady extension of the scheme. The estate is one of 416 acres and already has 439 cottages for artisans upon it. Each home plot has its garden, and classes in gardening for the benefit of tenants are provided, a provision of the title being that no house shall occupy more than one-fourth of the plot on which it is erected.

The Pan-American exposition exhibit of agatized and petrified woods from the stone forest of Arizona, will be the most extensive display of the kind ever attempted. Sections of large trees, sound and perfect from bark to heart, will be shown, the hardness of which is only three degrees from that of a diamond. Steel cannot scratch it, nor ink stain it.

While the city of Hartford, with a population of 80,000, and a valuation of \$78,000,000, has two representatives in the Legislature, there are sixty-two towns in the State with a combined population of 50,000 and a valuation of \$22,000,000, which send seventy-nine representatives to the Legislature.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Noblest American Forest.

Pacific Slope Reservation of "Big Trees."

THE recent action of the State of California in appropriating \$250,000 to purchase a tract of redwood forest near Santa Cruz for a public reservation has aroused interest in every part of the country, perhaps nowhere more than in this city, where for years an intelligent body of tree-lovers have urged the necessity of some such step if any part of the redwood lands was to be preserved to future generations in its original glory.
